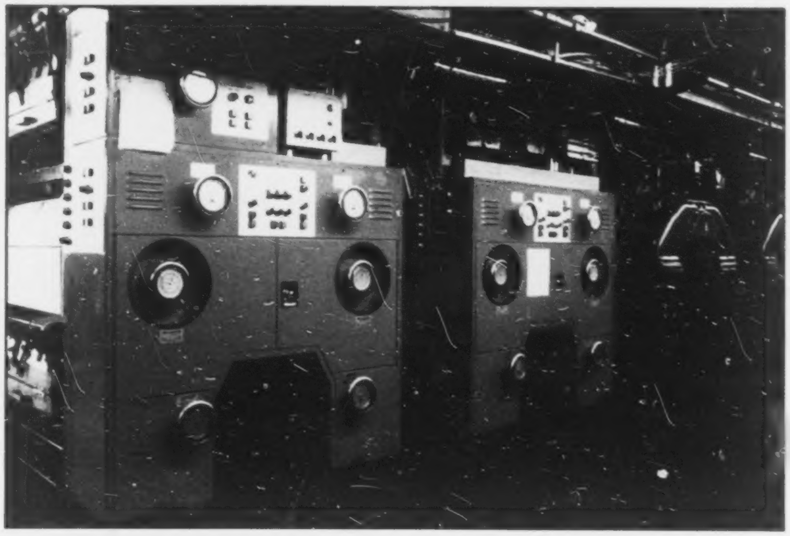
New Creativity Sparks Changes In Newspaper Ads

Thomson Is North America's Little-known Newspaper Giant

MOTTER

FLEXO

Cost Control Plus Superior Printing



FM-1 units in operation at the Press Telegram, Long Beach, CA.

Your newspaper printed on a Motter Flexo Press System will be cheaper and simpler to print. Plus, it can look better than offset alternatives. But Motter Flexo is more than just improved production. The flexo process lets you generate greater advertising revenue by offering bright, snappy spot and process color on a regular basis. And your readers will prefer the "clean-hands" easy-to-read results. By combining flexo cost control with a superior product you'll have the edge to survive in today's newspaper industry.

Why Motter Flexo Systems? Because the entire system, including folders, angle bars, and reels, is specifically designed for our newspaper flexo press. Single source supply assures you that every part of the system complements the operation of the next. Motter machine design has proven itself throughout North America. And the Motter Flexo Systems are every bit as durable and efficient as the rotogravure products on which we have built our reputation.

Both slip-in press units and complete Motter Flexo Press Systems are backed by the Motter technical support team. Each installation is on-site monitored by an experienced factory pressman assuring superior flexo performance. In addition, our training program prepares your personnel on the operation and service of your Motter Flexo System. In addition to operating manuals, an audio-visual program is available for training. As a Motter Flexo customer you also have access to our team of specialists who can answer questions on flexo color separations, plate making, inks, press operation, and other technical topics.

Motter Flexo Press Systems Benefits

Management	Press Crew	Consumer / Advertiser
Lower capital cost Lower installation cost Low operating cost Lower materials cost Less paper waste Lower training cost Low environmental impact	Easy to operate Keyless inking Fast start-ups Less maintenance Quick, easy folder changes	Cleaner — no rub off Easier to read — no show-through or set-off Colorful — helps build ad sales

QUESOS FUNDIDO
MENUDO
(FIN DE SEMANA)
FISH

For too many years, El Paso, Texas, has balanced on a borderline between economic stagnation and growth.

The city lies just across the border from the Third-World city of Juarez, Mexico, and is the poorest major urban area in the U.S. Despite many bold ideas for capitalizing on its Tex-Mex cultural mix and other assets, El Paso has been immobilized by the failure of different groups to reach accord—on almost everything.

But the El Paso Herald-Post is making a difference.

Editor Jay Ambrose and his staff produced a series of articles on the city's economic opportunities. The paper then joined with the University of Texas at El Paso in sponsoring an economic conference to help get the city moving. Appropriately named "Si Se Puede," Spanish for "Yes You Can," the conference brought together a broad cross-section of city residents and bolstered enthusiasm for the city's economic future.

Ambrose and his colleagues are continuing to press for economic development through committees that identify specific goals and hold public hearings. Providing a forum for an exchange of ideas among diverse factions exemplifies the best of American journalism.

To Ambrose, his paper and his community, we emphatically say, "Si se puede."

Involvement. The Spirit That Moves Us.

Introducing The Mycro-Comp™ 550 From Mycro-Tek.

Our new Mycro-Comp 550 is a newspaper publishing system specifically designed for weeklies and small dailies — and the limited budgets they have to work with.

A Real Front-End System.

The Mycro-Comp 550 is a totally integrated system — with a PC price tag. For only $136 a week, you can have: four terminals, a network controller, typesetter interface that works with the new LaserSetter, width tables, and a spare parts kit. You also receive three days of system training and four days on on-site consultation.

A System That Grows With You.

The Mycro-Comp 550 is completely upgradeable, so your system can grow as your needs grow. Because Mycro-Tek designs, manufactures, services and supports everything we sell, you have added assurance your system will never become an orphan.

A System You Can Trust.

Perhaps the 550's biggest plus is that it's a Mycro-Tek product. For 10 years, Mycro-Tek has developed hardware and software for the newspaper industry. So you deal with one source — for everything — all the time.

If you'd like to know how we can put the Mycro-Comp 550 System to work for your publication — or only $136* a week — call us today.

INDEX VOLUME 7, NUMBER 11 NOVEMBER 1985

Special Report *Creativity has been called the "Holy Grail" of advertising. And, at last, newspapers are joining the quest. As the newspaper industry attempts to increase the use of newspapers as a creative medium, it is running into a perception among many in the advertising community that newspapers don't lend themselves to creative campaigns. But newspapers are overcoming that image by hiring more "creatives" on their own staffs, making ad agencies and clients more aware of newspapers' creative possibilities, and improving printing quality.* **22**

Quiet giant *While media mega-mergers grab headlines, Thomson Newspapers Ltd. keeps quietly buying papers. It owns 131 U.S. and Canadian dailies.* **6**

Small and colorful *Some smaller dailies are gaining reputations for their excellent four-color reproduction. Management commitment is credited.* **10**

Arbitration *Newspaper labor arbitration has changed and improved over the years, but problems remain; among them are long delays and high costs.* **14**

Fears for La Prensa *The publisher of an independent daily in Panama says it is "crisis time" for his struggling newspaper.* **18**

Newspapers are neighbors, too *Newspapers are adding to their community service programs in many imaginative ways.* **32**

'Brand' loyalty *Just like soap and soda pop, newspapers can develop product loyalty among readers. Burl Osborne has been there and tells how to do it.* **34**

Profile: James R. (Mike) Hughes *Others may tout television, but the creative director of an advertising agency in Richmond, Va., praises print.* **37**

Essay: Open government *Compared with London, Washington is brimming with helpful bureaucrats, says British journalist Lionel Barber.* **38**

Dazzling diodes *The introduction of new products using low-cost laser diodes may mean the beginning of a new era of high-resolution imagesetters.* **50**

Credibility: journalists' view *U.S. journalists are worried about newspapers' "credibility problem," but they trust newspapers more than the public does.* **56**

Pre-employment drug tests *More newspapers are screening job applicants for drug use as part of pre-employment physicals.* **58**

CHAIRMAN'S CORNER

Training Can Help Newspapers Prevail in the Competition For Readers and Advertisers

Real competition has a way of getting our attention and shaping our priorities, and there isn't one newspaper in North America today that doesn't have competition for its readers and its advertising revenue.

The two markets we serve—readers and advertisers—have been telling us they want higher quality, better service, reasonable cost and a mass audience. And ANPA has been working in many ways to help you satisfy those needs.

Richard J. V. Johnson

But we need to remind ourselves from time to time that in any kind of competition, the winners are those who have the best individual skills and the best team skills. And that means training that will help focus the talents inherent in all our staffs on the challenges of today and of the future.

We use ANPA training for Houston Chronicle people because it helps us to do our job better. And there are many other newspapers that regularly send people to ANPA seminars and workshops for the same reason. If you're not taking regular advantage of ANPA training programs, you should take another look at what you're missing.

ANPA's regular training programs stress management skills, marketing and strategic planning, labor negotiations and hands-on technical seminars. From time to time, there are also special sessions on health and safety, newsprint, libel, single copy sales, telecommunications and presses.

Our membership's use of the ANPA training program continues to be strong. For 1986, in fact, new seminars and additional sessions of current seminars, workshops and conferences are being scheduled. Additional sessions of the management development workshop sponsored with ASNE and APME, "Leadership in the Newsroom," and of our Newspaper Executives Marketing Seminar, a session sponsored with INPA, will be offered. New programs include an Advanced Management Workshop, Negotiating Strategy Seminar and a Budgeting Workshop. If you would like a 1986 catalog of ANPA seminars, workshops and conferences, contact Steve Palmedo, manager/training services, at The Newspaper Center.

The newspaper industry spends more than $12 billion a year on wages and benefits, but it can't stop there. The training we provide our people—on the job and at high-quality, job-related seminars such as those ANPA offers—is what makes newspaper specialists winners.

GOSS HEADLINER OFFSET on edition in Greenville

"We were able to retain existing equipment and leave our plant intact and at the same time increase production capacity–all at a cost we could afford–using Headliner Offset replacement units."

William deB. Mebane, Publisher, *The Greenville News* and *Greenville Piedmont*, Greenville, S.C.

The Multimedia group's flagship daily installed a 4-unit/2-halfdeck Goss® Headliner Offset® press in line with its 8-unit/4-deck Metroliner® press. The new press went successfully on edition, on schedule, July 25, 1984.

Mebane continues: "Goss technology allowed both ease of installation and retention of the substructures and other components of the letterpresses we replaced. And there's still room for four more offset replacement units, assuring our production capacity into the 1990s."

Production Director Bill Matthews adds: "We have plenty of flexibility, too–running the Headliner Offset and Metroliner units together or as two independent six-unit presses. And considering that we had to get our paper out on the Goss Metroliner press under tight space conditions while putting in the Headliner Offset press, the turnkey installation went smoothly. It was a good partnership–Goss responsiveness and a great effort by our own team."

The Goss Headliner Offset press–designed-in flexibility for solutions to a wide range of newspaper production requirements worldwide.

Contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. (312) 656-8600.

OWNS 92 U.S., 39 CANADIAN DAILIES

Thomson Newspapers: Quiet Giant Among North American Publishers

BY MARGARET GENOVESE
presstime staff writer

Thomson Newspapers Ltd. of Toronto owns more daily newspapers in the United States and Canada than any other company. Yet it may be the least widely known. Even one of its top executives calls the firm "notoriously shy."

"We really feel the action is at our newspapers, and the newspapers should be the institution that's identified, whether it's in Richmond, Ky., or Oxnard, Calif.," says Brian W. Slaight, Thomson Newspapers' executive vice-president. "And since we believe very, very strongly in local autonomy, the ownership becomes almost incidental."

In addition, says Slaight, the company reflects its managers, who are "personally low-profile people."

This is true even at the very top. Advertising Age magazine once said of Chairman and President Kenneth R. Thomson, son of company founder Roy H. Thomson: "The only time he speaks in public is at shareholders meetings."

> *Roy Thomson sent a dime to 100 papers and proceeded to learn publishing.*

Indeed, if there is a place where the company has a high profile, it is the Canadian stock market. A company whose shares are traded on the Montreal and Toronto exchanges, Thomson Newspapers has the best profit margins of any publicly owned newspaper company in the United States or Canada. Although a Canadian stock analyst calls Thomson "a shining example" for other communications companies, its small-city newspapers have been described as lackluster editorially by a Canadian government commission, a charge Slaight refutes.

Thomson now has 92 U.S. dailies. Gannett Co. is second with 85 dailies (exclusive of the five it will acquire when its purchase of the Evening News Association of Detroit is consummated).

Thomson also owns 39 Canadian dailies (out of a national total of 111). In that country, Southam Inc. is a distant second, with 15.

Besides the daily newspapers, Thomson owns six U.S. and 13 Canadian weeklies. Altogether, the company employs nearly 10,000 people.

The dailies range in size from The Globe and Mail of Toronto, the 316,763-circulation, satellite-delivered national newspaper, to the Jackson County Floridan, circulation 4,639. However, the majority—69—of the 131 Thomson dailies are in the 10,000-to-25,000-circulation range.

"We are interested in further acquisitions of newspapers, primarily in the smaller to medium-sized communities," says Slaight.

The search is focused in the United States, where Thomson began acquiring papers in the 1950s after practically exhausting Canadian expansion opportunities. The company has averaged four acquisitions of U.S. daily newspapers a year since 1980, and thus far in 1985 it has bought six.

Unlike in Canada, where tax law denies deductions to businesses that advertise in publications with less than 75-percent Canadian ownership, there is no tax penalty associated with foreign ownership of U.S. newspapers.

In 1984, Thomson Newspapers' U.S. properties accounted for 80 percent of its total assets of $966.8 million, and 51 percent of its operating revenue of $811.8 million.

Obviously sensitive to the foreign-ownership issue, Slaight points out that the managers of Thomson's U.S. newspapers are U.S. citizens, as are all top operational managers in the Des Plaines, Ill., headquarters of the U.S. subsidiary, Thomson Newspapers Inc., and in the five U.S. divisional offices. "We feel that's an extremely important aspect of our success in the United States," says Slaight.

Today
Showdown: the rivalry continues

The majority of the group's dailies are in the 10,000-to-25,000-circulation range.

Another reason for Thomson Newspapers' success, according to analysts, is its almost total lack of diversification, which they say allows the company to devote all of its energies to newspapering and makes it less vulnerable to cyclical economic swings.

Thomson's only non-newspaper property is Augusta Newsprint Co. of Augusta, Ga., which it owns in partnership with Abitibi-Price Inc.

Slaight allows that while the mill is "a form of diversification," it is "very allied to our principal interest." In addition, he notes, Thomson merely is an investor and is not involved in the mill's management.

"Other than that, we are not into billboards or ice cream factories or whatever," says Slaight. Nor does he see any change in that policy in the foreseeable future. "I don't see any reason for it," he says. "I think the newspaper industry is going to continue to grow and prosper, and we want to be part of that growth and development."

Thomson Newspapers grew to its present size in a little more than 50 years. It began in 1934 with Roy Thomson's purchase of a weekly newspaper in Timmins, Ontario, for $6,000—with $200 down. At the time, Thomson owned three radio stations, one of which was located above The Timmins Press office. A struggling appliance salesman, Thomson had started the stations on a shoestring when he was stuck with a load of radios he could not sell because radio reception in that part of the country was so bad.

From that modest beginning developed what has been called the "Thomson empire," only a part of which is Thomson Newspapers. In 1964, 12 years before his death, Roy Thomson was knighted Lord Thomson of Fleet, a title his son now holds.

The Thomson family still controls Thomson Newspapers, owning 61 percent of the company's stock.

Thomson Newspapers Ltd. is entirely separate from other Thomson family interests, including International Thomson Organisation Ltd., a diversified public company. Among other things, International Thomson owns newspapers and consumer magazines in the United Kingdom; business, legal and financial publications, electronic publishing services and travel agencies throughout the world; Britannia Airways; and North Sea oil fields.

Neitzel, publisher of the Easton daily (right), confers with Managing Editor Bruce B. Frassinelli.

Dimes to dollars. According to one of his biographers, after purchasing The Timmins Press, Roy Thomson withdrew 100 dimes from the bank, looked up the names of U.S. communities about the same size as Timmins, and sent one dime to the newspaper in each town asking the publisher to mail him a copy of the paper. Then he reportedly spread the papers out on the floor and taught himself about the newspaper business.

The investment of those dimes has paid off. Although it is not the biggest communications company in the United States and Canada in terms of revenues, assets and profits, Thomson Newspapers Ltd. has the best profit margin, bar none.

It is at least twice as profitable as the next most profitable public Canadian communications company, says C. Sue Scully, vice president and media stock analyst of McLeod Young Weir Ltd. of Toronto.

Thomson Newspapers Ltd.'s 1984 and five-year-average operating profit margins also exceed those of publicly traded U.S. newspaper companies tracked by Morton Research of the U.S. brokerage firm Lynch, Jones & Ryan. In 1984, for example, Thomson had an operating profit margin of 33.2 percent, while the average in the United States was 20 percent, according to the Morton report. Thomson's five-year average was 30.6 percent, compared with 18.8 percent in the United States overall.

Quarterly earnings per share of Thomson stock have declined on only two occasions in the past 10 years, both times in 1982 when the newspaper industry was reeling from a recession and both times by only small percentages, according to Michel G. Perreault, vice president and communications stock analyst with Alfred Bunting Co. Ltd. of Montreal.

According to Perreault, three things contribute to Thomson's earnings growth: its ability to make its papers profitable through advertising and circulation rate increases, its acquisition program, and its "streamlining" of operations at its new properties.

Perreault calls Thomson "one of the finest companies that has its shares listed on the exchange in Canada. It's a growth stock. It's a well-run company."

Asked about the company's profitability, Slaight replies: "We've been at it for 50 years, and I guess you would have to be pretty stupid to have become associated with as many good newspapers and good newspaper people as we have and not learn some things. We didn't write the book; we've been learners all our life."

The 51-year-old Slaight, operational chief of the company, literally grew up in the Thomson organization. Son of the publisher and part-owner of the Moose Jaw (Saskatchewan) Times-Herald, Slaight was a high school student working part-time at the paper when it was acquired by Thomson in 1949. While studying journalism at what is now Ryerson Polytechnical Institute in Toronto, he worked for Thomson during the summers in different locations. After journalism school, he joined the company full time.

St. Clair McCabe, formerly president of the parent company, is president of the U.S. subsidiary and works primarily in acquisitions. Operational control of the U.S. newspapers is exercised by Frank C. Miles, senior vice president and general manager.

Thomson's divisional offices—there are four in Canada in addition to the five in the United States—provide consultants to Thomson papers in such areas as editorial, circulation, advertising and production, explains Slaight. The group maintains national news bureaus in Ottawa and Washington; several regional bureaus in Canada; a state-capital bureau in Ohio, where it has 14 dailies (the most Thomson owns in a single state); and it is considering a capital bureau for Pennsylvania, where it has 11 dailies.

Good or bad? Not all Thomson watchers are as laudatory as the market analysts. One of the harshest critics of Thomson Newspapers was the Royal Commission on Newspapers, created to investigate the Canadian newspaper business after Thomson's closing of the Ottawa Journal and Southam Inc.'s simultaneous closing of the Winnipeg Tribune on Aug. 27, 1980.

"Its small-town monopoly papers are, almost without exception, a lacklustre aggregation of cash-boxes," the government commission said about the Canadian links in the Thomson chain. Slaight calls the criticism "unfounded" and "very unfair."

"I think you have to remember the source of the criticism and take that into account," he says. "Certainly, that is not the feeling of our readers, and I don't think it is at all (an) accurate reflection of what our newspapers are doing. I think we produce excellent small-city newspapers."

Criticism of Thomson newspapers generally excludes The Globe and Mail. "Thomson appears so far to have treated the Globe somewhat in the way the Thomson group treated The Times of London when it owned that paper—as a separate case apart from the chain," says Peter Desbarats, a member of the Royal Commission staff and now dean of the School of Journalism at the University of Western Ontario.

What happens to a newspaper after it is acquired by Thomson is a source of differing opinions.

In a 1983 article in The Quill, the journal of the Society of Professional Journalists, Sigma Delta Chi, Bruce B. VanDusen, former editor of The Kokomo (Ind.) Tribune, wrote bitterly about the Thomson organization's treatment of that newspaper. "Constantly working with a skeleton staff, constantly urged to boost the story and picture counts, denied the research needed for training, never encouraged to care about design, Thomson news executives need little imagination and no independence," he said.

A different view is expressed by Hal B. Neitzel, publisher of The Express in Easton, Pa., a 46,795-circulation daily acquired by Thomson in 1984. "The relationship has been very pleasant for our operation," he says. "We found their people to be helpful, to be understanding. We have made this transition from family ownership to group ownership very gracefully."

What is most "striking and refreshing" to him, says Neitzel, is that the company has honored "100 percent" its promise of editorial autonomy.

The Daily Gazette, in Xenia, Ohio, has lost none of its editorial quality under Thomson control, contends Randy Blackaby, managing editor. The 11,296-circulation daily won a Pulitzer Prize in 1975, three years before its purchase by Thomson. Blackaby was a member of the news team that produced the prize-winning coverage of the devastation wrought on the town by a tornado.

Under Thomson, the newspaper has a "constant newshole" of between 52 and 56 columns a day. "That is quite a plus," says Blackaby, noting that the newspaper would have had some "pretty lightweight" editions during the recent recession if the size of the newshole was dependent on advertising volume, as it had been under the previous owners.

Nowhere was the transition to Thomson ownership more traumatic than in Lethbridge, Alberta, where "The Committee for Quality Journalism" was established to protest the acquisition of The Lethbridge Herald. Managing Editor John Farrington, a former Thomson central office executive in Toronto, was the target of epithets painted on the newspaper building.

"A newspaper that operates not with an eye to profits and not with an eye to making a dollar here, there and everywhere, is not going to last very long," says Farrington.

"I think if people would talk to people who now work for Thomson Newspapers, there would be a better understanding of what Thomson Newspapers is all about. I think if it were not for Thomson Newspapers in Canada, there would be many communities—probably as many as 20 or even 30—that would not be serviced by a daily newspaper." ☐

"Which Circulation Management System offered us the Total Solution to our Circulation and TMC needs?" "PAPERTRAK, of course."

Warner 'MDS' Color
600 BOTELLO ROAD GOLETA CALIFORNIA 93117
complete color separation system
BESELER
45MX

This unique NEW color masking technique takes less than 1 minute to expose and develop. NO developer, NO fixer, NO wash, and therefore NO drying time is necessary to make a mask.

How can the Warner color system benefit you? "MINUTE MASK"

The "MINUTE MASK" system is a perfect back-up for a scanner, it's faster, and produces higher quality than many scanners.

This NEW "MINUTE MASK" technique can update your present Berkey, Carlson, Duck, Cosmo, Chemco EZ Color, Durst, Digicolor, Kodak, DuPont, Gevaert and other conventional systems to save 10 to 15 minutes of time and $15 to $20 per set, while improving quality. Most of the above conventional systems can be updated for less than $5,000.00 including a "MINUTE MASK" film processor and training in this new technique.

If you are buying a new color separation system, we have the highest quality, lowest cost, fastest and most complete color separation system available.

When you add up all the extras needed for other systems, you may have to pay over $50,000.00, and still get an old, slow, costly, poor quality, conventional masking system, or used conventional screen scanner.

Call (805) 967-1296 and let us tell you about "MINUTE MASK."

COLOR IN SMALL DAILIES

Trend has focused on big dailies, but papers with lesser circulation have achieved a great deal, too

BY PAUL KRUGLINSKI
presstime technical writer

A new colorful phenomenon now regularly occurs each autumn about the same time as the leaves begin their color show. It's the annual rash of articles published about USA Today, whose anniversary is in mid-September.

Almost every article touches on how Gannett Co.'s national daily is changing newspapers from a black-and-white to Technicolor medium. But while USA Today attracts headlines and accolades, some small-circulation newspapers quietly continue to print high-quality color with scant notice outside newspaper production circles.

Some of the many smaller dailies that have gained a reputation within the newspaper business for excellence at four-color reproduction are the Fairbanks (Alaska) Daily News-Miner, The Sun Chronicle in Attleboro, Mass., The Free Lance-Star in Fredericksburg, Va., the Independence (Kan.) Daily Reporter, Citizen Tribune of Morristown, Tenn., The Brawley (Calif.) News, the Daily News-Record of Harrisonburg, Va., and the Olean (N.Y.) Times Herald.

Most of these and several others were enlivening their readers' and advertisers' lives with color long before the first issue of USA Today occupied a vending machine three years ago.

According to these newspapers, whose circulations range from 4,000 to 40,000, there is no magic involved in producing quality color consistently. Generally, the main ingredient in their color programs is strong management commitment, which translates into the proper equipment and a properly trained staff to get the job done.

"Management has to want quality color reproduction and spend the money for it," says Duane M. Snedden, assistant publisher of the Fairbanks paper. That commitment then "trickles down to the staff."

"You can't have a high regard for costs," observes Attleboro Publisher Paul A. Rixon, who adds that "the long-term returns equal the expenditures."

But money does have a bearing on color programs at small dailies. They do not usually have the wherewithal available to larger newspapers. Consequently, their programs frequently lack the sophistication found at larger newspapers.

"A smaller newspaper is not able to have a (separate) quality-control person," observes Josiah P. Rowe III, co-publisher and general manager of the Fredericksburg daily. "To my way of thinking, it takes some understanding (on the part of management) of what's involved, and I have that."

In some instances, the dailies added staff such as photographers and graphics people, but more often the existing staff took on expanded responsibilities.

Typically, the graphics editor, chief photographer or camera operator became an ad hoc quality-control manager, running interference between the departments. Some of the smaller papers, like their big-city cousins, also have formed color committees that monitor reproduction.

Press capacity at dailies of this size can limit process color capabilities, but in a strange twist, small capacity sometimes can open up the paper to additional color potential.

Unlike larger presses equipped with color halfdecks, the single-width offset presses used by smaller dailies must employ black-printing units for color work. If advertising increases in the course of planning a day's press run, process color is eliminated to recapture printing units. On the other hand, Rowe notes, burgeoning advertising has forced him to split press runs, thus opening up all sections to more process color pictures.

"Sometimes things happen here in town that we want to cover in color," says Independence Publisher Herbert A. Meyer III, "and we've split the press run (of the Daily Reporter) to print the color."

Because of press restrictions, smaller dailies tend to use more time-insensitive pictures. If a picture gets "bumped" one day, executives say, they can run it another.

"Editorial color definitely gets bumped for press capacity," observes Charles L. Gray, president and general manager of the Daily News-Miner. "So process color really is sort of an expendable item."

Equipment used. Although there is a similarity in the management techniques applied at the quality-color papers, the equipment and production methods used to produce color run the gamut.

Gray says good color has been a News-Miner staple for years.

]

Some of these dailies have acquired high-tech color scanners to do color separations; others are achieving quality reproduction with direct-screen systems or sending the pictures out to separation houses.

Falling prices for scanners have been particularly attractive to the smaller papers with their more limited cash flow. The Free Lance-Star in Fredericksburg purchased a new scanner for under $100,000, and Rowe notes that even lower prices for used scanners now make them affordable to large numbers of small newspaper operations.

Most of the eight dailies interviewed by presstime say they run 15-20 pieces of editorial color art per week.

Their newsprint and ink bills tend to be proportionally higher than those for larger papers. Printing color tends to result in greater newsprint waste, because registration problems are common—particularly at the start of a press run. And spoilage of, for example, 300 copies of a 10,000-circulation paper results in a far-higher waste percentage than for a paper with 100,000 circulation.

Color inks are more expensive than black ink, and because the ratio of color pages to black pages is generally higher at smaller papers, their ink bills are proportionately greater. Several of the papers interviewed say their outlays for color ink equal or exceed those for black ink.

In other areas, though, the smaller dailies have much in common with their larger counterparts.

Nearly all the papers say that if they must choose between a good black-and-white photo and a mediocre color shot, they opt for the black-and-white.

"The color picture has to stand on its own," says Rowe. "We won't run a picture larger than it ought to be just because it's color."

However, press scheduling has forced some of the dailies to print color pictures that provoked second-guessing.

"There's something about four-color process that if you're a little bit off, (the photo) looks four times as bad," says Meyer of Independence.

In some instances, the dailies gained a perspective on their black-and-white printing through the institution of preventive maintenance programs. Settings are checked and units are cleaned on a regular basis. Also, many dailies periodically run test photos to check whether press settings are correct.

"You don't realize how difficult it is to run (good) black-and-white until you've run color," Rowe notes. "One byproduct of running color is your black-and-white paper looks better."

In nearly all cases, running process color meant more work and a period of time to work out the bugs.

"The hard part of process color is not making the (photographic) separations," adds Rowe. "It's all the other things that go into color, such as laying out pages, stripping film, making plates and setting up the press. You don't realize how hard it is to do until you get into it. And it's not easy for a small newspaper."

Positive public reaction. Universally, running color has improved the newspapers' images in their communities. Some report specific benefits.

"It's always been a good public relations program," notes Gray, whose Fairbanks paper has been running process color since the early 1950s. "Even people who don't appreciate our editorial stance like the way the paper looks."

Because all the papers have been running color for a long time, the executives say, their communities take the look of the papers for granted. But occasionally an appreciative letter will arrive.

Unlike many of the color programs at other dailies, The Free Lance-Star's has attracted advertising. "The best indication of advertiser reaction is that we are running more process color ads," Rowe says.

For The Sun Chronicle, which competes with 10 other papers in its section of Massachusetts, the color program has helped increase circulation. Since the paper started printing offset in 1974, Rixon says, its circulation has grown 70 percent, with much of that coming since the inception of the color program.

"We feel process color gives us an edge on our competition," he says. "It's enhanced our product and image in the community. It's really paid off, and we don't regret the investment."

Comments R. Jack Fishman, publisher of the Citizen-Tribune in Morristown: "We live in a color world today. Color obviously adds to a newspaper both from an editorial and advertising standpoint. We're doing more color now than we have in the last 20 years, and there's no question that it's helped our circulation."

Most of the dailies say that USA Today has had a positive effect on their color programs, and none begrudge the national paper for the attention or credit it has been receiving.

"For years we've been running the U.S. and Alaskan flags in color on our front page," says Gray. "We're not as gaudy as USA Today, but we're happy with the way our paper looks." ☐

How Parade® your community relations.

Since its inception, Parade Magazine has offered distributing newspapers many exciting promotional programs designed to build community involvement and readership. Here are brief descriptions of just four of these programs, all of which provide you with opportunities for circulation growth and goodwill.

How a policeman can make your newspaper more arresting to readers.

Parade's Policeman of the Year Program, in conjunction with the International Association of Chiefs of Police, recognizes the outstanding law enforcement official in the United States. The program also salutes many officers in other communities with Honorable Mentions, so editorial opportunities abound for Parade's distributing newspapers to credit their local heros.

How high school athletes can help you score with your community.

Parade's All-America Programs annually recognize America's finest high school scholastic athletes who participate in football, soccer, and boys' and girls' basketball. An article in your newspaper concerning a local athlete not only creates goodwill and visibility in your community, it also creates increased readership.

PARADE More readers

© 1985 Parade Publications, Inc. All rights reserved

helps improve And your circulation.

How a newscarrier can deliver better circulation.

Parade's Young Columbus Program, launched in 1956, annually honors outstanding young newspaper carriers and students. Using scholarship, citizenship, new starts, and overall job performance as criteria, newspapers choose winners who are then rewarded with trips to Europe. With that kind of incentive, newscarriers delivering Parade's distributing newspapers have generated over 1,000,000 subscription starts in the last five years.

How two photographers can snap up more readers for you.

Parade proudly circulates two extraordinary photography exhibits to communities with newspapers distributing Parade. The exhibits con-[illegible]f the works of Arthur Rothstein and Eddie [illegible]ams, two of America's most prominent photographers. Newspapers that have co-sponsored these exhibits with Parade agree that the community goodwill derived is invaluable.

For further information concerning these programs and others offered by Parade Magazine, call Sandy Andrews at (212) 573-1005.

Arbitration Process Is a

BY CLARK NEWSOM
presstime labor writer

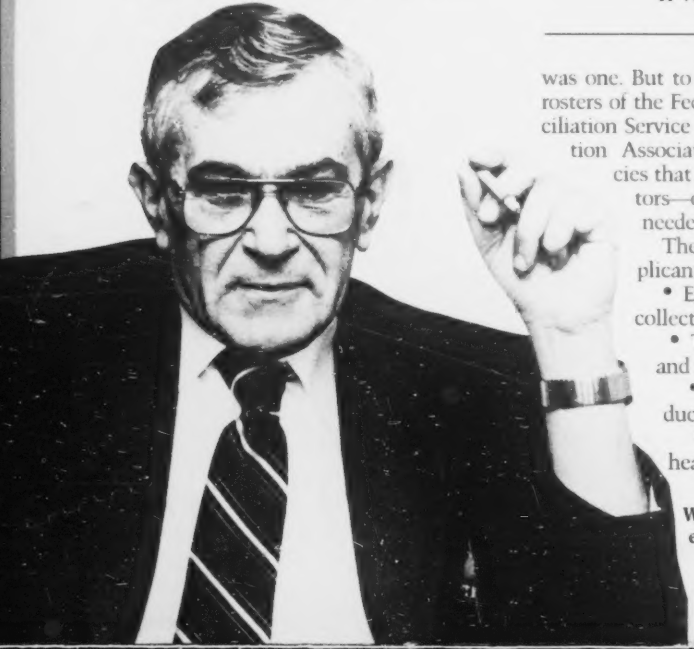
The settlement of disputes by referring them to an impartial third party—an arbitrator—for a binding decision predates English common law, and the practice is still widely used in newspaper labor/management matters today.

"Generally speaking, unions and management over a long period of time have accepted the idea that binding arbitration is the best method of resolving disputes concerning contract interpretation," notes Charles N. Mock, senior vice president/personnel for the Providence Journal and Bulletin.

The first reports on newspaper labor agreements that provided for the arbitration of disputes were made at the 1895 ANPA Convention. Then, as now, the agreements prohibited strikes and lockouts over arbitrable disputes.

The purpose of arbitration, notes Martin Teplinsky, a Toronto labor arbitrator and lawyer, "is the speedy, efficient and inexpensive resolution of grievances by persons who are selected by the parties, responsive to the process and are experts on the issue."

There are about 1,300 arbitration agreements between newspapers and unions in the United States and Canada, and each year about 100 grievances are resolved through the arbitration process.



Witney is one of many educator-arbitrators.

Differences over contract interpretation are involved in about 70 percent of the newspaper disputes, and about 30 percent concern the propriety of disciplinary actions, including discharge, taken by the publisher. Arbitrators also are called on occasionally to set the wage rates in new contracts.

"The continuous stability and acceptance of arbitration in the newspaper business as a problem-solving procedure is a credit to management and labor," says ANPA Vice President/Human Resources Roy W. Anderson. "Despite the win-lose relationship of the ultimate decision, both sides are winners in the orderly and peaceful settlement of a contract misunderstanding or grievance. Of even greater benefit than the resolution of the problem is the fact that work continues and relations generally remain harmonious."

Each year, about 80 arbitrators hear the newspaper disputes. Anyone can call themselves an arbitrator—King Solomon was one. But to qualify for listing on the rosters of the Federal Mediation and Conciliation Service or the American Arbitration Association—the primary agencies that assist in selecting arbitrators—certain qualifications are needed.

A "disturbing" development "is the tendency on the part of some arbitrators to act as a mediator."

The FMCS requires that applicants have:

- Extensive experience in collective bargaining
- The ability to write clear and concise awards
- The capability to conduct an orderly hearing
- A history of having heard at least five cases.

The AAA basically requires applicants to provide 15 letters of reference, including five each from representatives of management and unions. It does not require prior arbitration experience.

Both organizations require that the applicant not be an advocate for either organized labor or management.

AAA reports that of the 3,500 labor arbitrators on its roster, 45 percent are lawyers and 35 percent are educators. Only about 23 percent work as arbitrators on a full-time basis.

While the number of newspaper arbitrations has remained static in recent years, change has been felt in other ways over the past two decades. And most observers agree that the bulk of those changes have been for the better.

For one thing, "the level of representation on both sides has certainly improved," says New York City arbitrator Jesse Simons, who was personnel and industrial relations manager for the New York Post between 1954 and 1961.

At the same time, "the arbitrators who get selected are more professional than they used to be," observes Donn M. Purdy, director of industrial relations for Thomson Newspapers Ltd. in Toronto.

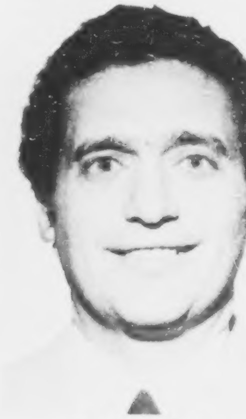
Lawrence A. Wallace, vice president/industrial relations for The Washington Post, notes that arbitrators now pay closer attention to the various labor laws, especially the landmark Taft-Hartley Act.

A "disturbing" development in recent years, he says, "is the tendency on the part of some arbitrators to act as a mediator" and attempt to negotiate a settlement of a dispute rather than rule in favor of one side, the other side or partially for both sides. "Some arbitrators openly suggest there may be a basis for a settlement," Wallace says.

Eva Robins of New York City, who has handled about 4,500 cases and who has been designated as arbitrator 15 times at newspapers, complains that the "new generation" of management and labor representatives presenting cases to arbitrators tends to treat it as a court process, which is not what arbitration is all about. (Robins, a lawyer, is believed to be the first woman to decide a newspaper case, back in 1973. Today, eight women are active in arbitrating newspaper disputes.)

Time-Honored One

Eva Robins



Martin Teplinsky

Teplinsky of Toronto agrees with Robins' observation. "We don't need people playing like lawyers," he says.

Problems cited. Common complaints by both management and labor are that the next open date for the most experienced arbitrators is months away, and that several months go by after the hearing before an award is issued.

"Terrible delays" are common in both the United States and Canada, notes C.J.H. (Chris) Davies, director of industrial relations for The Toronto Star.

For example, Robins says her next open date is "sometime in February."

Teplinsky says his next open date is in March. "But if [the case] is urgent, I could fit it in sooner. Like a doctor does."

"I suppose we create the problem ourselves," says Wallace of The Washington Post. "We hate to take a new person."

In the District of Columbia, Wallace notes, the going fee for an arbitrator is $400 a day plus expenses. An uncomplicated case involving one day of hearings may take three and a half days of the arbitrator's time, while a more complicated case may take eight or nine days.

Arbitrators charge not only for the hearing, but also for study time and the time to write opinions. In some cases, a court reporter's fee is involved. If an outside lawyer presents the case, there is additional cost. And occasionally there is the expense of bringing in an expert witness.

The Federal Mediation and Conciliation Service reports that in 1984, the fees and expenses charged by arbitrators averaged $1,371.88 per case. In all newspaper arbitrations, the company and union split the cost.

Teplinsky also has heard the complaints—"too slow, too long, too costly." The cause of the complaints, he says, is that many of his colleagues are "insufficiently productive." He notes that in contrast, "90 percent of my arbitration hearings are concluded in one day. I crack the whip. We skip lunch. I try to get the parties to agree to an oral award" instead of a written one.

Arbitrators "should schedule three or four cases a day," Teplinsky says. "I schedule some cases at 4 p.m."

"One of the big problems in arbitration," he says, "is that nobody participating pays. It's the company and union that pay." The management and union representatives themselves hold the key to controlling costs and must make demands on the arbitrator, Teplinsky maintains.

> *With all its problems, arbitration has worked for decades in the newspaper business.*

While the splitting of costs is common to all newspaper arbitrations, other parts of the process differ according to geography and under whose auspices the arbitration is being conducted.

For example, The Toronto Star's Davies observes that in the United States, "there is a greater propensity to use written arguments. The submission of briefs is rarely used in Canada."

Arbitrator Fred Witney, professor of economics at Indiana University, notes that the FMCS encourages arbitrators on its roster to render awards not later than 60 days from the date of the closing of the record. AAA rules require that the award be rendered not later than 30 days from the close of the hearings, unless otherwise agreed by the parties. If an award cannot be made within the required time, the arbitrator must seek an extension of time from the parties.

Responding to Teplinsky, Witney notes that "not many" arbitrators would give their decision at the conclusion of the hearing unless it was required under the contract. The parties involved nearly always want written opinions, he says, and "in the majority of cases, the parties want to file post-hearing briefs."

Arbitrator Barbara Zausner Tener of Bordentown, N.J., says the deficiencies she sees in cases before her generally stem from the failure of all participants to discuss the issue thoroughly. "If they would listen to each other, they could solve the problem themselves," she says.

With all its problems, arbitration has worked for decades in the newspaper business, notes John B. Hammett, senior vice president of the San Jose (Calif.) Mercury News. "The process should be encouraged," he says.

How they're selected. Labor agreements in the newspaper business usually provide for the selection of an arbitrator through either the American Arbitration Association or the Federal Mediation and Conciliation Service. The two sources are about equally designated in the agreements. The AAA charges an administrative fee of $100 for each party. No administrative or filing fee is charged by the FMCS.

The AAA is a not-for-profit organization with headquarters in New York City. The FMCS in Washington, D.C., is an independent government agency created by the Taft-Hartley Act in 1947.

The AAA's appointment process is more formal than that of the FMCS. For example, each AAA case is assigned a tribunal administrator to handle details such as arranging hearing dates. Under the FMCS procedure, it is the arbitrator's responsibility to contact the parties for hearing dates.

To begin an arbitration, either the company or union writes the AAA or FMCS, whichever one is designated in the labor agreement, enclosing a copy of the contract or quoting its arbitration clause, stating the grievance and provisions of the contract involved, and requesting that a panel of arbitrators be submitted to the parties.

The AAA will submit a list of 12 to 15 names, including brief biographies of the arbitrators.

The FMCS submits seven names unless the applicable labor agreement provides for a different number or unless the parties themselves request a different number.

If the parties cannot agree on an arbitrator, usually a coin is flipped and the winner strikes the first name from the list, with the parties striking alternately until one is left.

Both services will submit another list of arbitrators if requested by the parties. "We rarely send more than two lists," says Frank T. Zotto, AAA's associate director for case administration.

In some cases, newspapers and their unions have negotiated other procedures. For example, The Washington Post's contract with its composing room workers, represented by the International Typographical Union, provides for a panel of five named arbitrators from which one is chosen for each case.

The contract between the San Jose Mercury News and The Newspaper Guild names 11 arbitrators for the parties' selection. If there is a disagreement over which arbitrator will serve in a particular dispute, the arbitrator is selected by the elimination process.

Other agreements in the San Francisco Bay area provide for a panel of seven named arbitrators. In some instances, the arbitrators are called in order, and the one with the first open date is selected.

In recent years, the Guild has been involved in more arbitrations than any other newspaper union. In 1983, 45 of the 101 arbitrations reported by ANPA were initiated by the Guild, and in 1984, the Guild was a party in 40 of the 94 decisions.

Labor specialists say the large number of Guild arbitrations arises from the union's diverse membership. San Jose's Hammett notes, for example, that the Guild at his newspaper represents employees in numerous departments—editorial, advertising, business, circulation and maintenance—rather than a single unit of craft employees where an issue is usually settled after one interpretation of a contract provision.

"The Newspaper Guild has many diverse views within its bargaining units," adds ANPA Manager/Labor Relations Charles Cole. And Guild officials "take a more aggressive interpretation of their contracts than those in other unions," he says.

"Employers tend to press us more on false interpretations of the contract," says Richard J. Ramsey, executive director of the Guild's contract committee.

But while the entire arbitration process deals with disagreements, there is one fundamental point of agreement among labor, management and the arbitrators involved in newspaper disputes: The procedure works. As New York City arbitrator Jesse Simons says, "What would they do if they didn't have it?" ☐

The X-Rite B318 Sets You Free!

DENSITY
X-Rite B318
Battery-Powered
Color Reflection
Densitometer

Free to operate anywhere. Free from worries about accuracy & reliability.

The X-Rite B318 is no ordinary densitometer. It's our new battery-powered color reflection densitometer with all the traditional quality and performance features of our standard densitometers. Plus the convenience of being totally portable.

Powered by four rechargeable Ni-Cad batteries, the X-Rite B318 is ready to perform with superb accuracy wherever . . . and whenever it's needed. Yet this compact unit is only 7 inches long by 3 inches wide.

Using long-life batteries, the B318 allows approximately 1000 measurements per charge, and the batteries are designed to last for over 500 charges.

What's more, the B318 gives you a lot of extras that don't cost extra. Like the "low battery indicator" to let you know when it's time to recharge the unit. Then there's the battery charger/eliminator. By connecting it to an AC power source, you gain the added convenience of using the densitometer while the batteries recharge or operating the instrument without the batteries.

And perhaps the best news of all is the B318's low list price—only $1295.

For more information about our complete line of graphic arts densitometers, please contact us or your nearest X-Rite Dealer today!

Panama's La Prensa Struggles Against Political Tumult

BY MARCIA RUTH
presstime staff writer

Where do you get the courage to continue publishing a daily newspaper in a country with 17 years of dictatorship, a country from which you were once forcibly deported and exiled for three years for opposing government policies, a country where two years after your paper was established, Panamanian defense forces invaded the plant and poured acid on computerized equipment?

"I don't think we're any more courageous than anybody else," says I. Roberto Eisenmann Jr., the leading force behind the establishment of La Prensa, then the only independent daily in Panama. "You sort of break a barrier where no matter what you say and do, your risk is still 100 (percent)."

But now, five years after the presses first rolled Aug. 4, 1980, Eisenmann fears for his paper's survival.

"This is not a game," he said in an October interview in Cambridge, Mass., where he is on a Neiman Fellowship at Harvard University. "This is in the middle of crisis time. And I think it can go either way."

Fears for La Prensa were recently accentuated by a private warning to one of the paper's directors by U.S. Ambassador to Panama Everett Ellis Briggs that La Prensa is in danger.

And in response to a perceived threat to his life, one of La Prensa's leading political columnists, Guillermo Sanchez Borbon, went into hiding for a period of about two weeks.

The crisis over La Prensa is tied to the current political situation in Panama.

In late September, Gen. Manuel Antonio Noriega forced the resignation of Panamanian President Nicolas Ardito-Barletta, former vice president for Latin American and Caribbean region at the World Bank. This ouster followed a public outcry over the brutal murder of an outspoken Noriega critic, amidst widespread rumors that Panamanian military forces were responsible for the killing and that Barletta had called for an independent investigation.

The victim of the slaying was Hugh Spadafora, a former government insider and a somewhat flamboyant international revolutionary figure who had publicly tied Noriega to Panama's drug traffic.

What further alarmed many Panamanians was the degree of brutality with which Spadafora was murdered: He was found beheaded, his body mutilated, just over the border in Costa Rica.

"These terrorist activities are first-timers for Panama," says Eisenmann, who describes the country as historically South American while geographically in Central America. "Beheadings in Central America are not real news, but in Panama it had never been done," he says.

In this crisis, as he has in the past, Eisenmann says he counts heavily on the support of the press around the world.

"The reason we (La Prensa) are still alive is because of this international exposure of our plight," he says, "because the military dictators in our area of the world worry more about their international image than their local (image)."

Coverage and editorials have "really made a difference" in the past, he says, and this time, "we didn't wait for the thing to be closed to start screaming."

In early October, editorials in several U.S. papers, including The New York Times, The Washington Post, The Boston Globe and The Miami Herald, voiced alarm over La Prensa's possible fate, and some free-press groups have lodged protests with Panamanian government officials about it. In an Oct. 3 cable, the American Society of Newspaper Editors warned the Panamanian government against any efforts to "close or otherwise attempt to intimidate" the Panama City paper.

In a responding telegram in late October, Panama's new president, Eric Arturo Delvalle, told ASNE that "In Panama an absolute freedom of press exists, and that those rumors you've heard are totally unfounded. . . ."

I. Roberto Eisenmann Jr.

Mustering support. International support has been a lifeline for La Prensa from the beginning.

A businessman with no previous experience in the newspaper business, Eisenmann decided to launch the daily paper in 1979 when he returned to Panama after his exile was lifted. He turned first to the Inter American Press Association, from which he received both technical knowhow and moral support.

And others contributed to the fledgling paper: Most notably, Armando Gonzalez, now manager of the management engineering department of The Miami Herald, who played a major role in designing the La Prensa plant; and San Juan, Puerto Rico, publisher Carlos Castanedas, whose El Nuevo Dia art director, Jose Luis Villegas, established the paper's basic design.

La Prensa is "the best thing that happened to Panama in many years," says George Beebe, who as IAPA president in 1980 pushed the button that started the presses rolling. "The other papers are not only government operated and controlled but pretty poor," says Beebe, formerly associate publisher of The Miami Herald and currently vice chairman for projects of the World Press Freedom Committee. "There wasn't a good one in the lot, so this paper came along."

Three other Panamanian dailies are owned by the government, and another is controlled by two men who have positions in the military regime.

Critical to La Prensa's success was Eisenmann's decision to opt for multiple ownership. Originally close to 600 people and now more than 700 own the paper, with no individual or group having more than a $5,000 share. Multiple ownership, he says, made it possible to:

- Raise the $1 million needed to start a paper that was "95-percent sure not to publish" during the military regime
- Ensure editorial independence and plurality of views
- Reduce the risk of government reprisal—a dictator "couldn't finger one person or one group to eliminate the project. He'd have to go after a lot of people."
- Increase the sense of commitment and personal contributions of Panamanians—"there is no Big Daddy that's going to put a hand in his pocket to pay the payroll if the money isn't there."

In this regard, participation has been remarkable, says Eisenmann. For example, "We'd need 20 typists because we were behind (in typesetting), and we'd have 20 women volunteer." In addition, after nearly a week of government occupation in 1982, in which about $100,000 worth of equipment was destroyed, "we'd have people walking in donating money to get us back on the streets."

La Prensa, which means "the press" in Spanish, was "for the democratic community 'the light,' so there was a lot of cooperative work," he adds.

Eisenmann says the six-days-a-week broadsheet paper has a circulation of more than 30,000.

In the course of its five years, the paper has carried many stories causing embarrassment to the government, including an exposé showing misuse of $100 million in social security funds and the funneling of $6 million in cash deposits through the bank account of Noriega's brother.

Emphasizing its position as an "independent," not an "opposition" paper, La Prensa has no editorial page, but it fills the equivalent of an op-ed page with columns contributed by a wide range of outsiders and editorials from other newspapers.

The paper's editorial board includes people with a variety of professional and political views. When pressed by interest groups or political parties to take a particular position, La Prensa sometimes has to remind people that "we're a newspaper," says Eisenmann. "It's their job to make the news. . . . We report it." □

Upholding Democracy with a Free Press—from Scratch

"Well, we're coming back home," Roberto Eisenmann thought as the plane left Miami carrying him, his wife and four children back to Panama after more than three years of forced exile.

He thought of the freedom he had enjoyed in the United States and the risks that could await him in Panama, and asked himself: "But what do I do to further the cause of democracy?"

As he remembers it now, seated for brunch in a Cambridge, Mass., hotel just off the Harvard University campus, "My mind sort of scanned the whole panorama. And number one on anybody's list is a free press. I mean, you just can't have any democratic opening of any sort if you don't have a free press.

"I had never seen the inside of a newspaper (plant) before," he laughs, "So it was just a very romantic, crazy idea."

But after the emotion of that day subsided, in which many such planes with many more families converged from different places of exile, he stuck to his idea.

"Anything can be learned," he told James B. Canel, then executive director of the Inter American Press Association, when he went back to Miami to retrieve the rest of his family's belongings. "I think my next project has to be the creation of an independent paper in Panama."

A third-generation Panamanian whose family originally came from the European region of Alsace, Eisenmann says he spearheaded the drive for an independent paper out of his "humanistic outlook" and "love for the homeland." His ambition, he says, is "to see my country institutionalized democratically."

Once the project was under way, it was not as difficult as he had imagined to raise his goal of $1 million. "A few people said, 'Here's $1,000 but don't ever tell anybody I gave it to you,'" he says. "But most were willing to risk it."

Staffing was another matter. Faced with government licensing of journalists—which required either five years with a Panamanian paper or a journalism degree from a Panamanian university—he hit on a solution: He would hire people with "very high prestige" in other professions or recent journalism graduates with no experience. The government would have difficulty questioning the credentials of the former group, and the latter would not have been influenced by practices of the other, government owned or controlled, newspapers, he reasoned.

Then, he says, La Prensa informed the government: "We are not going to comply with the law. What are you going to do about it?"

But the solution to one problem raised another. The night before the presses first rolled, Eisenmann remembers an employee saying, "This can't be. Nobody in this building knows how to put out a newspaper." He laughs at the audacity to start up a major daily, now the largest in Panama, with such a crew: "We didn't know anything about newspapering; these people with very high prestige didn't know anything about newspapering, and the kids didn't know."

According to Eisenmann, all through the process of purchasing land, ordering machinery and preparing the staff, "we would suddenly get somebody who would say, 'I have a friend of a friend of a friend of the dictator, and I know he's not going to let you open.' But instead of sitting there and saying, 'Now what do we do?,' We just said, 'Well, we don't listen to this' ".

But in private moments, the Eisenmanns do not forget the dangers of publishing a newspaper in such adverse circumstances. "I know that what we are doing is right," says his wife, Maruja, "and I pray a lot." —*Marcia Ruth*

Whether they're an executive or a secretary, a book editor or a TV cameraman, someone in a newsroom or someone in the mailroom.

Whatever they do at Hearst, we want each and every one of our 13,000 people to be creative people. To not just "do" their job, but to come up with creative ways to do it better than anyone else.

Helen Gurley Brown's creative idea for Cosmopolitan identified a whole new group of women and provided them with the first magazine they can truly call their own.

Enrique Borrego's creative idea solved the problem of delivering his papers on time even after a huge blizzard. What Enrique did was prepare in advance, by starting an hour earlier and enlisting the help of a partner...his father!

Creative ideas have helped us triple our size in the past ten years and have made us one of the largest and, we think, one of the best communications companies in the world.

A company people want to work for.

A company people want to grow with.

The Hearst Corporation

Good creative ideas
that make good business sense.™

CREATIVITY IN NEWSPAPER ADVERTISING

TRADITIONALLY, THE MOST IMAGINATIVE ADS WERE THE PROVINCE OF TV AND MAGAZINES. NOW THE RACE IS ON TO MEET SPECIAL DEMANDS OF NEWSPAPERS.

BY MARCIA RUTH
presstime staff writer

reativity is hard enough to define. And in advertising, even the usual definitions—"fresh," "original," "new," "alive"—slip away before a special requirement: As any ad director will tell you, "It's not creative if it doesn't sell."

Judged by these twin criteria of innovation and effectiveness, there is a consensus that in the 1980s a wave of "creativity" is sweeping through advertising in general, and newspapers are finally joining that trend.

Ad creativity will receive "a great deal of attention" in the newspaper industry's Future of Advertising Committee recently established by the Newspaper Advertising Bureau, says Leo Bogart, NAB executive vice president and general manager.

That emphasis should help stoke the rising interest in ad creativity by newspapers, which previously tended to take a back seat to television's sound and motion and magazines' color and high-gloss impact.

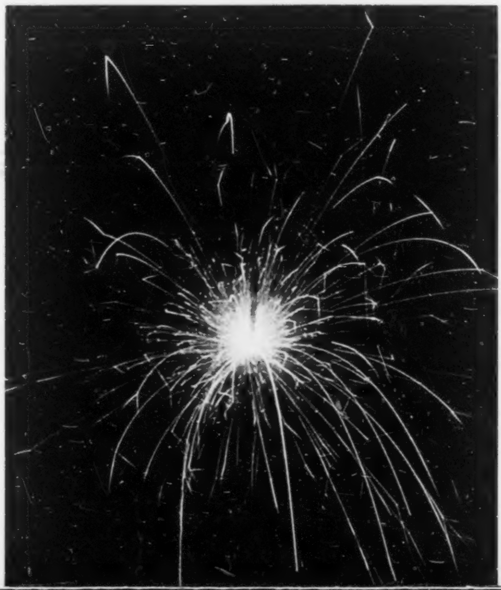
Pressed by the need to meet daily deadlines for high-speed presses, newspaper staffs churn out thousands of routine ads. Other ads, often less impressive, are inserted by advertisers convinced the medium serves only to move long lists of products off the shelves.

"Creative" approaches to brand recognition often go elsewhere, particularly with national accounts where newspapers' share has dropped over the past few years. More often than not, those newspaper ads that triumph in national "creative" competitions turn out to be relatively small appendages to campaigns centered in other media.

It is in newspapers' best interest to broaden this creative effort, for throughout the business community there is an understanding that ad creativity pays at the bottom line. "It's not creative in order to have fun. . . . It's a hard-headed business look," says Burton J. Manning, chairman and chief executive officer of J. Walter Thompson USA. "There's a great resurgence of creativity when clients say they want advertising that will really break through, really be noticed, really be seen," he says. "What clients today overall are saying is, 'What you guys call creativity seems to me to get more sales, so let me have more of it.'"

Yet newspapers in general have been reluctant to take on creativity as an issue directly. "It is difficult to address because once the space is sold, it no longer belongs to the newspaper, it belongs to the advertiser," says John A. Wolf, president of the International Newspaper Advertising and Marketing Executives.

"What the newspaper has to do is make creative use of newspapers a possibility," including such things



as quality reproduction of black-and-white, quality reproduction of color, and positioning," says Wolf, senior vice president of the Dallas Times Herald. "So when the advertiser sits down and plans out how to use white space they own because they bought it, they know the newspapers are technologically able to handle that through to its final conclusion and can appreciate what the creative person wants to convey."

Similarly, Bogart of NAB sees three areas newspapers should address to attract more creative advertising:

- Make the medium more attractive to agencies and advertisers by focusing on "how to motivate them, how to excite them, how to instruct them, how to get them involved with communicating in print"

ATHENA AWARDS

Illustrator Robert Heindel (leaning over table) and Charles N. Blakemore of Blakemore & Killough judge entries last year for Athena (below, right). Winners appear in NAB publication, Creative Newspaper, which in 1984 bore Heindel painting (below).

CREATIVE
NEWSPAPER 9
ΑΘΗΝΑ

- Be more flexible in positioning advertisements in the paper, "which gets into the willingness of newspapers to adapt themselves to unusual requirements and requests"
- Make creative people more cognizant of newspapers' color capabilities.

Increasing ad creativity became a priority of NAB when it established the annual ATHENA (Award to Honor Excellence in Newspaper Advertising) competition 10 years ago.

Bureau officials are convinced that the more creative the ad, the harder it works. Says Henry R. (Hank) Simons, who as NAB vice president and creative director has organized the contest each year: "We have done research that shows that ads of the same size and for the same kind of product can show double the recall of others, and the only explanation for that is in the creative content: One headline was more compelling, more startling than the other; something in the layout was easier to read and stay with; something in the illustration had more pulling power."

As this awareness becomes more widespread, newspapers are moving more aggressively, pushing agencies and clients, as well as themselves, to upgrade aesthetics as a means to increase effectiveness.

The "Big Idea." If one pattern could typify the new wave of outstanding newspaper ads, it is the juxtaposition of a compelling graphic with an unconventional headline—often connected by wit, humor or irony—that stops the reader cold. Once hooked, a straightforward text delivers the basic information.

If one agency could be considered the "hot creative shop" for print in the 1980s, it is Fallon McElligott Rice, which burst on the scene in Minneapolis in 1981 with a full-page ad for "A new advertising agency for companies that would rather outsmart the competition than outspend them."

And if one ad could illustrate the new creative thrust, it is one of three ATHENA winners the agency produced in 1984: Dominating the space for Minnesota Federal Savings & Loan is an 18th century print of a colonial man in the stocks, ignominiously exposed to the taunts of a jeering crowd. The headline reads: "What Exactly Does 'Penalty for Early Withdrawal' Mean?" The body copy answers: "Simply stated, penalty for early withdrawal means that we can't pay you as much interest as WE promised if you don't leave your money with us as long as YOU promised."

By the end of the first campaign to position Minnesota Federal as "plain talk bankers" willing to level with average consumers (also portrayed on television, radio and posters), installment loan volume and loan applications had both increased more than 200 percent.

Not only is this ad typical of current creative techniques, it also reflects a trend to take on subjects not traditionally associated with ad creativity.

"There is an inherent interest in what Sears has to sell . . . but nobody opens the newspaper to find out what the Bank of Virginia has to tell me today," says James R. (Mike) Hughes, executive vice president and creative director of The Martin Agency in Richmond, Va., one of a small group of relatively new firms outside Manhattan which established its early reputation in print. "So we have to find out: What does the Bank of Virginia have to say that is interesting? And then we have to find an interesting way to tell it."

This strategy—the use of one big idea around which to organize a campaign—is relatively rare in newspaper ads even today, although it became a staple of agency advertising a generation ago.

At the turn of the century, most ads still followed the pattern set by posters. It was called "keeping your name before the public." But with the growth of mass media, the proliferation of brands and a burgeoning consumer population that could not be reached by individual salesmen, "salesmanship" entered the ads themselves—extolling values of products and identifying needs for consumers.

By the 1950s, there were several major schools of thought on how to do this best, all of which, to some degree, continue today:

- An ad executive who perceived a public that does not absorb complexity, Rosser Reeves, tried finding the "unique selling proposition" for each product, then hammering it home. "Wonder Bread builds strong bodies 12 ways" and "Rolaids absorb 47 times its weight in stomach acid" are typical slogans of this "master of hard sell."

- A former researcher who believed the public had a desire to learn, David Ogilvy, founder of Ogilvy & Mather, developed rules for effective ads. Preferring photographs to graphics, long body copy and a specified number of words in headlines, he launched finely crafted ads for products like Hathaway shirts, Schweppes tonic and Rolls Royce motor cars.

Often this "targeting" of advertising is based on psychographics—the grouping of people by values and lifestyles as well as age, sex and income.

- As founder of the Leo Burnett agency and what became known as "The Chicago School," Leo Burnett brought a more folksy, down-to-earth quality to advertising. Believing in the "inherent drama" of each product, his ads broke taboos on close-ups of products such as raw meat. And when there were no "inherent" qualities, he created figures to embody mythical ones—from the Marlboro Man to the Jolly Green Giant.

But it was William Bernbach who set the dominant tone for the "Golden Age" of advertising in the 1960s.

"Creativity," defined by Bernbach as a unique approach to every product, became the hallmark of the Doyle Dane Bernbach agency, which grew more than tenfold during the decade.

Stressing the synergy between words and images, Bernbach's ideas revolutionized agency structure, bringing together "creative teams" of artists and copywriters, many of whom subsequently moved to controlling positions in ad agencies.

The use of wit and humor, outspoken honesty and direct confrontation of the values of the consumer became the hallmark of such well-known ad campaigns as the Volkswagen Beetle (Think small) and Avis Rent-a-Car (We're number two, but we try harder).

When the economy slowed in the 1970s, agencies, like businesses, pulled back from innovation. As a result, advertising "tended to become very derivative, over-tested, safe and boring," says Thomas McElligott, creative director of Fallon McElligott Rice in Minneapolis.

"What happened was the advertising agencies and the clients during the late '60s and early '70s began to have what turned out to be an inordinate respect and appreciation of business school graduates," says Robert H. Levenson, DDB copywriter throughout most of the Volkswagen campaign and now vice chairman and chief creative officer of Saatchi & Saatchi Compton.

The application of the business-school case method to advertising cannot work when creativity is ignored, says Levenson. The idea that "all you have to do is figure out in retrospect why this brand is successful and three other brands are not, follow the example of the successful one and abandon the unsuccessful ones," won't work if you ignore "freshness, originality, sticking out—all those things that come from the creative mind," he says.

When more creative solutions returned to Madison Avenue in the 1980s, The Big Idea emerged again, but directed less to extolling the virtues of a particular product than to meeting the needs of a particular audience. Fast foods, soft drinks, automobiles and cigarettes, for example, began being marketed more by how they fit into different lifestyles than by dwelling on specific details of the products.

Often this "targeting" is based not on customary demographics but on psychographics—the grouping of people by values and lifestyles as well as age, sex and income.

Array of Contests Reflects Growing Interest in Creative Ads

A variety of contests sponsored by newspaper associations recognize superior advertising:

- ATHENA (Awards to Honor Excellent Newspaper Advertising), the Newspaper Advertising Bureau's primary awards. Entries in 14 categories are judged by prominent leaders in ad creativity. Deadline for 1986 awards will be an as-yet unspecified date next spring. Presentation of 1985 awards will be Nov. 21 at The Four Seasons restaurant in New York City. Contact: Hank Simons, vice president/creative director, NAB, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 704-4570.
- NoRMA, sponsored jointly by NAB and the National Retail Merchants Association. Deadline is Nov. 4 for awards to be presented Jan. 14, 1986, during the annual NRMA convention in New York City. Contact: NoRMA Awards, NRMA Sales Promotion Division, 100 West 31st Street, New York, N.Y. 10001; (212) 244-8780.
- DANDY (Dealers' Automotive Newspaper Display Advertising), sponsored jointly by NAB and the National Automobile Dealers Association. It honors campaigns and individual ads by car dealers and dealer associations. Deadline is Nov. 27 for awards to be presented Feb. 1 during the NADA convention in New Orleans. Contact: NAB Detroit regional office, 280 N. Woodward Ave., Suite 206, Birmingham, Mich. 48011; (313) 642-9200.
- Tearsheet Exhibits, sponsored by International Newspaper Advertising and Marketing Executives. Deadline is Dec. 27 for awards in 25 categories to be exhibited at the INAME Sales Conference Jan. 26-29, 1986, in Las Vegas. Contact: Reggie Hall, assistant general manager, INAME Exhibits Committee, P.O. Box 17210, Dulles Airport, Washington, D.C. 20041; (703) 648-1177.
- Best in Print awards sponsored jointly by the International Newspaper Promotion Association and Editor & Publisher magazine. Deadline is Feb. 4, 1986, for awards to be presented during INPA's annual conference May 18-21 in Fort Lauderdale, Fla. Contact: Michael Kane, special projects manager, INPA, 11600 Sunrise Valley Drive, Reston, Va. 22091; (703) 620-9560.

In addition to those from national newspaper associations, there is a wide variety of newspaper advertising awards presented annually by private organizations and national, state and local associations.

McElligott strives to break away from "safe and boring" ads.

In most cases today, ad campaigns are derived at the corporate and agency level only after such extensive research using a wide variety of tests, studies and interviews.

Broadcast v. print. While the newspaper industry as a whole is coming to grips with ways to increase both the use and perception of newspapers as a creative medium, it is smacking head-on against a perception by many in the advertising community that newspapers simply aren't suitable for creative ad campaigns.

At many agencies the concept prevails that, as the creative director of a major agency puts it, "television is just so much more dynamic, gripping, emotional, memorable."

"When people talk about advertising today, they're talking about television. It's very rare they talk about print anymore," says Roy Grace, chairman and executive creative director of Doyle Dane Bernbach. "I can't remember the last time I heard people say, 'Have you seen this great print ad?' It's always, 'Have you seen this great commercial?'"

Following this premise, there is a tendency for advertisers, particularly with national accounts, to save their memorable ads for television, while relying on print to convey follow-up information—what Lee Clow, president and creative director of Chiat/Day, calls the "one-two punch" of "emotional" commercials followed by "rational" print ads. Nowhere was this strategy clearer than in Chiat/Day's "1984" Super Bowl TV commercial for Macintosh computer, followed by a 20-page magazine insert explaining the computer's operation and subsequent newspaper ads tackling the mundane details of where the product is sold.

Clever copy and good art are united for dramatic results.

In addition to altering this agency mindset about the role of newspaper advertising, newspapers and all media, face the challenge of trying to overcome the general barrage of conflicting messages in the marketplace and be heard above the increasing din.

Advertising has grown to an $87-billion industry in this country, and according to a 1984 survey of advertising leaders by NAB, the number of advertising messages in all media will double before the end of the century.

"Everybody's so jaded about advertising. You don't have a captive audience," observes Edward E. Littleford, senior vice president and deputy executive creative director of Foote, Cone & Belding.

The situation is particularly acute for television. A 1965 study and 1976 follow-up conducted by the American Association of Advertising Agencies found that two-thirds of adults thought advertising "insulting to their intelligence," a trend borne out by subsequent studies by individual agencies. "The impression is that television is the touchstone where the irritation begins," says Rena Bartos, J. Walter Thompson's senior vice president and director of communications development, who spearheaded the research for the 4As.

Another problem for television is the decline in its advertising effectiveness because of "zapping" of commercials. A 1984 study by the 4As, American Advertising Federation and Association of National Advertisers predicted that by the year 2000 at least 50 percent of U.S. homes will have video cassette recorders, and a majority will own remote controls that facilitate zapping.

Against this conflicting background—with agencies continuing to emphasize creative TV commercials despite concerns about public acceptance of commercials in the future—a quiet revolution is under way in print (newspaper and magazine) advertising. It has been largely instigated by smaller agencies developing low-budget campaigns for local clients.

With regard to newspapers, these agencies are building on what historically have been areas of strength for dailies—their timeliness, their ability to convey a lot of information in one place, their enhancement of ad credibility by placement in the "news environment," as well as a growing sophistication of the public at large.

"Print has the time to pose a more thoughtful and ultimately more persuasive argument for trying a product or service," says McElligott of Minneapolis. "Because it has more time, you can have more integrity in the sell. At a time when the consumer is really skeptical about everything from government to advertising, you have the opportunity not just to tell what you have time to tell, but what you really ought to tell."

And "creativity" costs far less in print. "You can do outstanding, unforgettable television with a lot of money. You can do outstanding, unforgettable newspaper with a lot of brains," says Richmond ad executive Hughes.

While some newspapers are spreading the word to agencies of the creative possibilities in newspapers, others are attempting to influence retailers who design their own ads to make them more creative.

"There are a tremendous number of retailers who do not understand the value of creativity, and their ads remain somewhat of a jungle as a result," says Thomas J. Holbein, executive vice president of Belden Associates of Dallas, one of the largest newspaper research firms.

"As price increases, it becomes more and more incumbent on newspapers to improve the selling effectiveness of ads they run," says Mark R. Arnold, senior vice president of marketing for The Honolulu Advertiser and Honolulu Star-Bulletin. "But it's a two-way-street. Newspapers and retailers have got to work together . . . and I think you're going to see more of it."

Some other observers are predicting more cooperation between advertising and editorial staffs in improvement of ad design. "It's going to come about because more and more editors are realizing that readers do look at ads," says Mario R. Garcia, associate director of The Poynter Institute for Media Studies in St. Petersburg and a leading newspaper designer. "Those fine lines (between editorial and advertising) exist for an editor, but they do not exist for the reader (for whom) advertising and editorial content blend on the page."

Newspapers' efforts. While national advertisers and many large local and regional advertisers produce their own ads or hire agencies to do them, the bulk of a newspaper's ads are turned out day-after-day, week-after-week by the in-house department of the newspaper itself.

"We're faced with a high volume," says Jack Shanahan, advertising art director for the Los Angeles Times. "Our bread and butter, the major share of our effort, is directed to those people who don't have agencies and haven't the wherewithal to put it together."

Virtually all middle- to large-size dailies have artists doing most of the layouts sold by the advertising staff. In general, only the largest have copywriters whose sole responsibility is producing ad copy.

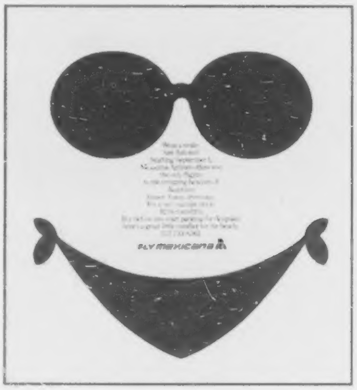
Many of the larger papers have what are called "creative service departments" that turn out material for both advertising and promotion.

Many of the larger papers have what are often called "creative service departments," in which artists and copywriters, as well as photographers and color experts, turn out material for both advertising and promotion. Almost never are editorial and advertising graphics produced by the same staff.

At papers of less than 50,000 circulation, "it will be very rare when you have a creative department as such, but every paper I know that has (creatives) knows these people pay their way and a lot more," says Edmund C. Arnold, professor emeritus at the Virginia Commonwealth University School of Mass Communications.

For papers of all sizes, there is a recognition that good creative services make newspapers more competitive with other media. And that is why "creatives," once viewed as a frill, are increasing in number throughout the business.

"Our advertisers are becoming more and more sophisticated," says David Alley, retail advertising manager of The Clarion-Ledger (morning, circulation, 51,174) and Jackson (Miss.) Daily News (evening, 29,590). "We can't assume we're going to get the business anymore, because there are too many other media out there trying to get a piece of the advertising dollar. There are just too many options for the advertiser, so the person who can make the strongest case will get the business, and part of that is putting together something that makes sense and works."



The Jackson papers have a creative staff of two, "but we could use four," says Alley.

Another mid-size newspaper with a creative staff is the Abilene (Texas) Reporter-News (all-day, 51,793). "Where we can be the greatest use to our customers" is "creative use of small space, so we give the Mom and Pop advertisers something for the money they spend," says Retail Advertising Manager Thad D. Byars. "We're going up and up and up (in rates) every year. We need the opportunity to say, 'Here's why we're going up, we can offer you more.' They (small advertisers) need all the value they can get. They need all the value we can give them."

"It's not (just) a question of whether it's cost effective," says Robert C. Momson, vice-president/marketing of the St. Paul (Minn.) Pioneer Press. "If we're going to keep the small retailers in business, we have to help them be more professional. . . . We have to give them this kind of help so they can compete in an environment where these resources are available to the giants." Momson, INAME president-elect, characterizes his paper's 10-person creative services department as a "mini-agency."

Whatever their title, advertising artists and copywriters spend most of their time turning out formats basically agreed on beforehand by the paper's sales representatives and their clients.

At the Los Angeles Times, Shanahan estimates that about 65 percent of the ads prepared by his staff of 40 artists and three copywriters are fairly routine, while a select group of about 10 to 15 percent of the ads take up a third or more of creative time.

"We function in every which way, but it's whatever the sales force requires of us as a support group," says Times Copy Chief Al Miyadi. "We're not putting together a pretty ad, we're putting together a functioning ad."

Often this partnership involves combating the impulse of advertisers to "throw in the kitchen sink," forcing them to streamline ads for impact.

In general, "the weakest part is the headline. All they (advertisers) talk about is 'sale' or give it a label like 'shrubs,'" says Laura Meier, creative services manager for The Courier-Journal and The Louisville Times. "What we try to do is put more information about benefits to the consumer, so when you're reading a headline, it speaks directly to you."

For example, Meier, who supervises a staff of seven artists, two copywriters and a photographer, recently convinced a tree

Among noteworthy creative newspaper ads are (clockwise from right) the cover of a Neiman-Marcus preprinted insert, US West's bison and Piedmont Airlines eye-catching double-truck. Mexicana Airlines' ad (preceding page) entices beach lovers.

nursery owner to abandon a simplistic price/product headline for a question-and-answer format that positioned his store as a year-round place to obtain advice rather than simply a seasonal source of plants.

Convincing advertisers of the need to select a "dominant illustration" is another job of staff creatives, says Meier. Still another is getting them to understand the value of "white space" to set off their copy and illustrations, says professor Arnold.

Sometimes the perceived needs of the advertiser clash with the aesthetic sensibilities of the creative staff, and in those instances newspapers often bow to their clients' wishes.

"We like to make our paper as clean as possible . . . but if they're a 'down and dirty' discount chain, that is really not going to sell their products," says Nancy B. Coleman, division manager of display advertising, marketing and creative services for The San Diego Union and The Tribune. "If they want a sophisticated look, we'll provide it. If they don't, we won't."

At other times, creatives are called upon for "crisis management," says Steven J. Lundblade, retail advertising mangager of The Pueblo (Colo.) Chieftain (morning, 51,007). That's what develops, he notes, when someone turns in an unacceptable layout at 2 p.m., "and you 've got to be in production by 4."

In very rare instances, when there is no agreement on design, papers may refuse ads. "We have an aesthetic standard, says Irv Kornblau, marketing research manager of USA Today. "Sometimes an ad comes in and you say, 'There is nothing illegal about it. It's not offensive.' But there is something about the ad that says, 'This is not the kind of visual material we want to have in our newspaper.'"

Innovative endeavors. Along with the trend toward hiring more creative talent, newspapers are attempting to use these professionals more imaginatively. This is particularly true with the increased emphasis on "spec" (speculative) ads—copy prepared in advance of a sales call.

In the past few months, Harte-Hanks' Byars has transformed his four ad creatives from their previous supporting role—producing ads for salesmen after space is sold—into a kind of "spec department," with the objective of furnishing salesmen with speculative ads for every call.

"We've got to get back to selling something that's tangible and not an abstract idea," says Byars. "If you don't have a spec ad, it's an abstract idea."

At the St. Petersburg Times and Evening Independent, ads are sometimes revised even after they have run. "We look through the paper every day, looking for crummy ads, ineffective advertising," says Andrew Kohut Jr., manager of the advertising, marketing and creative department. Those judged below par (usually those not designed by the papers' creative staff of 25) are redesigned, in color. The revised ad is then mounted alongside the printed one and sent to sales people handling the account.

Pre-sales preparation also has emerged as a potent weapon in winning back free-standing inserts from direct mail.

The Dallas Times Herald has established "a separate sales force that does nothing but work with major regional (shopping) malls," says Senior Vice President Wolf. Providing a "turnkey" operation that includes everything from selecting merchandise to be featured to handling photography and layout, "we provided an enormous service to centers that have wanted to be in newspapers but couldn't really put it all together on their own."

On a smaller scale, the owners of a Georgia mall report special sections designed by the one-person creative staff of The Athens Banner-Herald (evening, 12,609) and The Athens Daily News (morning 9,813) yield three times the results of their own free standing inserts, particularly when distributed through the papers' approximately 72,000 total-market-coverage program. "Every time they (mall owners) get new management, I have to convince them all over again," says General Manager A. Mark Smith, whose Athens papers often win awards for creative ads.

Other small- and medium-size papers report similar experiences. The "biggest area where we see the payoff (for spec work) is in themed editions and special sections where you send the sales people out early and see a lot of accounts that aren't regular customers," says Pueblo's Lundeford.

Not content with local clients, some larger papers are using creative services as a lever to pry loose some of the elusive national dollars agencies are funneling into other media, primarily television.

Over the past year, advertising executives from the St. Petersburg dailies took spec ads to creatives in more than 50 ad agencies around the country. While the payoffs are not in yet, General Advertising Manager Walter R. Stecher considers the visits successful in sensitizing agency creatives to innovative use of newspapers. He emphasized there is "another way to use newspapers other than quarter page block ads"—ways such as gatefolds (foldouts), double-truck streamer ads and photo techniques to localize national graphics—for example, an ad for a product superimposed on the skyline of a particular city.

Many agency creatives, particularly in New York where major newspapers print almost entirely in black-and-white, "didn't realize newspapers could produce color," Stecher says.

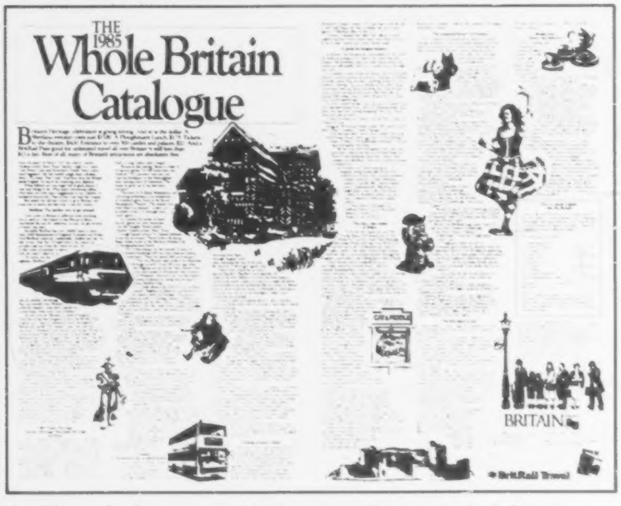
At one major agency he chooses not to name, one creative even told him, "I've never seen a newspaper person before." Typically, newspapers make presentations to media planners or account executives, concentrating on rates and circulation data rather than creative potential.

"The real key is that advertising agencies for the most part don't like to work with the print medium. They like the glamour of broadcast," says Page Haines, promotion manager of the Houston Chronicle. In the past, "we'd go in and show how to use newspapers and agencies not wanting to work with print would submarine our whole presentation."

To combat this, the Chronicle has just formed a two-person team to prepare "agency quality" work for presentation to agency creatives, augmenting marketing data normally presented to account executives or media buyers. Often, says Haines, staff creatives can show agency creatives "how they can use newspapers to complement their broadcast program."

"A lot of times it's the creative that sells it anyway. It's an emotional decision," she says. "Now we've got a creative approach that ties it all together."

These steps being taken by a few newspapers are in line with conclusions that emerged from a recent API seminar on "New Strategies for Newspaper Advertising Growth." They were that "black-and-white is considered a low-impact print medium by many advertisers," and that "the new young creative talent coming through agencies is attuned more to the sound and visual medium of television and doesn't really know how to use print imaginatively," says API Director Frank Quine.



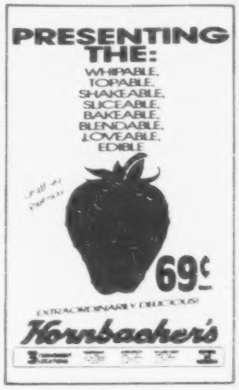
Double-truck ads can attractively accommodate a great deal of copy.

"Some seminar members felt that newspapers need to sit down with agencies and accounts at the creative level—not just the upper management level—and show them all the advertising resources that newspapers offer, including much-improved color capability," says Quine.

To enhance their relations with advertisers, some newspapers have sponsored yearly contests to reward creative efforts. One of the best-known is the eight-year-old Gute awards in Louisville, named for Johann Gutenberg, the inventor of moveable type.

Last year, the Houston Chronicle initiated ACE (Advertising Creative Excellence) awards with a flamboyant airport ceremony complete with stunt flying, lady astronauts and free plane rides.

Other papers sponsor workshops for local advertisers and agencies or potential clients, offering instruction in basic ad design as well as compliance with the newspaper's requirements. In 1984, the San Diego papers attracted more than 600 people to its biennial workshop.



This Fargo, N.D., ad used strawberry-scented ink and boosted sales tenfold.

Bringing the rewards for creative work closer to home, the Louisville papers last year inaugurated quarterly awards for their staff's own spec ads. Judged on how often they make it in print as well as on copy and graphic design, the program "is really working," says Leslie A. Alpers, manager of marketing and creative services.

One of 1985's most dramatic examples of "creative" effort initiated by a mid-size paper won one of 10 top awards at INAME's semiannual contest in July—an ad for strawberries done with strawberry-scented ink by The Forum in Fargo, N. D. (all-day, 56,962).

Instead of the usual 2,800 quarts of strawberries sold after a routine ad, 28,000 quarts were sold.

Posing the question of whether the staff members who cooked up the pink perfume "might have created a monster," Forum Editor Joe Dill wrote in a Sunday column: "It blows the mind to consider what we could do with the North Dakota State University Bison."

Improvement needed. In addition to such individual newspaper efforts, there are areas where some advertising and newspaper executives believe the newspaper industry as a whole could encourage more creativity. These include: widespread availability and consistency of color reproduction, more attention by editors to ad design and placement, and the use of computer graphics as a creative tool.

Studies consistently show that color enhances the effectiveness of newspaper advertising, and that color has the potential to increase advertising sales.

Yet past differences in quality from paper to paper have caused cautious and selective use of ROP color by agencies and advertisers, and many outside the newspaper business seem unaware of recent improvements and moves toward standardizing quality of color reproduction. (See story, p. 48.)

In a 1985 NAB survey of 400 agency officials and their clients, it was found that about two-thirds of their print advertising was in color, and respondents praised color as being far more effective than black-and-white ads in capturing attention, conveying prestige and creating impact.

Despite the fact that 87 percent of U.S. daily newspapers offer ROP color, half of the ad executives responding to NAB thought only 50 percent or less of the nation's dailies had ROP color capability. And while 80 percent-plus said more than half of magazines print good color, only 4 percent said more than half of newspapers did.

A significant step toward both establishment and enforcement of high-quality color came with the formation this year of Gannett's Four-Color Newspaper Network. The 156 participating papers—38 of which are owned by Gannett—must comply with strict quality control in order to participate in the one-order, one-bill service.

Another recent survey, this one by INAME of nearly 100 advertisers, found that almost 80 percent of those responding were planning to use ROP color more frequently, but that lack of color quality was their primary concern.

"The next step is to make our members aware of what customers want," says William F. Share, vice president of marketing at The Milwaukee Journal. "Then every publisher has got to decide what to do."

With regard to design, as sophisticated demographics laid the foundation for more special sections and targeted delivery, "creative placement" has become a key element in ad design. This is a step beyond putting an ad in a certain *section*; it means responding to more "creative" approaches to placement of advertising on the *page*.

"We are seeing a lot of interest in what is called the 'magazine environment,'" says Priscilla A. Waring, vice president of Gallup & Robinson, who presented her advice on improving newspaper ad creativity at Advertising Age magazine's Creativity Workshop in August. "Advertisers are trying to position themselves to take advantage of target audiences."

But old attitudes die hard.

Rankled by the refusal of several newspapers to consider a client's suggestion of three ads stepped diagonally across a page "because we never did it before," Jack P. Cohen, vice president and director of print/outdoor media buying for Doyle Dane Bernbach, comments: "When I hear that, I see stars." Even worse, he says, is another frequent answer: "If I did it for you we'd have to do it for others."

"What's wrong with that?" he asks.

In one effort associated with creative placement, NAB has launched a program to lure targeted advertising to ROP, primarily national accounts planning to run in one place consistently. For example, in June, Merrill Lynch began running ads on the bottom third of the New York Stock Exchange pages of 22 major dailies on "financial Tuesday"—the first day stock prices are posted after the weekend. This strategy is similar to that of the Marlboro ads now running on sports pages in 59 papers on "sports Monday"—the day after most important games are played.

The Merrill Lynch campaign was made possible only after the bureau engaged in considerable arm-twisting at newspapers, says Mac G. Morris, NAB vice president and national sales manager.

Annoyed at widespread reluctance to take a fresh look at established page formats, Morris says editors and publishers "have got to start looking at what the customer needs instead of what they need."

Gary Chapman, The Courier-Journal and The Louisville Times

Meier of The Courier-Journal and Louisville Times encourages use of a "dominant illustration."

"A lot of editors don't listen to ad directors. They tell them to 'go fly a kite,'" says Morris, who maintains "the editorial and the business departments are going to work together in the future."

Some news executives agree there should be more cooperation between advertising and editorial in design.

"It's a turf issue," says Richard A. Curtis, a former president of the Society of Newspaper Design. "News designers work for the newsroom, and any hint they are somehow interested in advertising taints them," says Curtis, managing editor/graphics and photography for USA Today, where such barriers were not established when the paper began three years ago.

Particularly at smaller papers, editors "are going to be told what spaces they have," says Louis Silverstein, retired former assistant managing editor of The New York Times and corporate art director of The New York Times Co. "They pour the editorial matter around the ads like ice tea around the ice cubes," he says.

"I think there is an awareness that (more cooperation) would be a good thing to do, but it's always down the road somewhere," says Robert B. Covey, art director of The Seattle Times. "It's a matter of making the commitment."

The third area where many see a need for improvement in newspapers' approach to the aesthetics of advertising—computer graphics—involves adding a new dimension to what has been primarily a production tool.

More than half of the nation's dailies now use some form of computer technology to generate ads, says Arthur M. Boudreau, ANPA manager of technical training. Few, however, have advanced beyond production uses," he adds.

"There's clearly going to be a significant impact (on creativity), but so far it hasn't been much," says Thomas G. Hagan, president of Camex Inc., one of the largest manufacturers of computer graphics equipment for newspapers. "As they (ad systems) get more and more refined, they get more appropriate for designers to use."

One newspaper group that successfully experimented with creative use of computers is the Journal Newspapers in suburban Washington, D.C. "Our people are far more creative than they've ever been," says Production Manager Kathy Hanley. The reason, she says, is that with cut-and-paste layout, "you didn't try things" because of the cost and time involved. Now, "if you want to try a reverse, you hit the button and see if you like it. If you don't, you can do it over in seconds."

Whether or not these further improvements— more color, more flexibility in placement, more computer design—are made, creativity will continue to be the "Holy Grail of advertising," says Tony Lunt, vice president/communications for the Association of National Advertisers.

As his members define creativity, he says, it is "something that creates sales and profits, which is not necessarily beautiful pictures and glowing words, but something that works." ☐

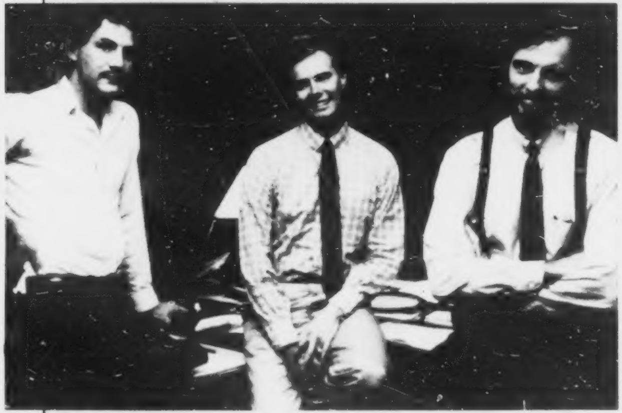
'A Bold Attempt at Something New'

The illusion is so real. A tropical forest in midtown Manhattan? No, it's Foote, Cone & Belding.

Behind the foliage at the entrance to that advertising agency are desks. And people. And work being done.

An art director whispers, "Sometimes there's not enough privacy. But when you're alone in here, it's really incredible. It's really wild. It's a bold attempt at something new."

Not every ad agency would convert a "creative" wing of a Park Avenue tower into a virtual metaphor of natural growth. Keith L. Reinhard, chairman and chief executive officer of Needham Harper Worldwide, says he never thought of forests, "but I have thought of sandboxes."



Lloyd Swickle

Coming up with ideas at Foote, Cone & Belding are (from left) Art Director Bob Funk, Olson and Littleford.

"There is something to be said for pace and enthusiasm in your work," he says, pointing to Needham's slogan: "We create the world's best advertising and have a glorious time doing it."

The excitement, the intensity, the playfulness, the raw energy of creative departments is legendary. Yet for all the surface antics, the work is deadly serious. And participants know it.

"Essentially, we are people who are hired by clients to come up with an idea which will show them off to the world," says Foote, Cone & Belding copywriter Kim Olson. Edward J. Littleford, FCB's deputy executive creative director, adds: "There is nothing indulgent about that message."

On the wall outside the creative forest are the three down-to-earth questions their agency asks of every ad: Is it unexpected? Is it relevant? Is it successfully executed?

In 1984, corporate America paid $87 billion for advertising, of which more than $36 billion was billed by ad agencies. More than 80 percent of the billings are from New York City agencies—most of them packed into one square mile of mid-town Manhattan.

Although newspaper "creatives" generally earn as much as reporters and less than ad salesmen, within agencies "creatives" form the elite. Not only is "creative" an agency's highest paid department, but salaries there rose twice as fast as those in other departments in 1984, according to Adweek magazine's annual survey.

Just who are these "creatives"? And what is this "creative process"?

Basically, creatives come in two forms: art directors and copywriters.

Because of the technical nature of their work, most art directors have some formal training, often as commercial artists who develop free-lance portfolios that ultimately lead to their being hired by agencies. Copywriters, as one creative director puts it, "come from God-knows-where."

Achieving the perfect harmony of verbal and visual communication, the work of "creatives" is highly collaborative. So is their position within the agency, where they must work with researchers, media buyers and account executives to determine and meet the needs of the client.

Although the union of artists and writers is often described as a "marriage," creatives and account executives work together "like the two sides of the brain," says Eric J. Zanot, associate professor of journalism at the University of Maryland.

"If creatives were left alone in an advertising agency, they would produce advertising that is exciting, inventive, aesthetically pleasing—but probably would not sell the product," he says. "If account people were left alone in an advertising agency, they would produce advertising that is directed at the right target audience, follows the right strategy—but be so dull nobody would buy the product."

Within this collaboration, "the key to the creative process is strategy," says John M. Keil, executive creative director at Dancer Fitzgerald Sample, another New York-based agency. Typically, a campaign begins with a "strategy statement," often only a few lines, which says basically: "Here is what the audience is, and this is what we want them to do."

From this point, "you must determine what you must make that prospect understand or feel or believe in order to accomplish your objective," says FCB Board Chairman John P. O'Toole. "[It's] simple but difficult to isolate that one piece of information—be it logical or emotional or both—that you have to get that person to accept and respond to."

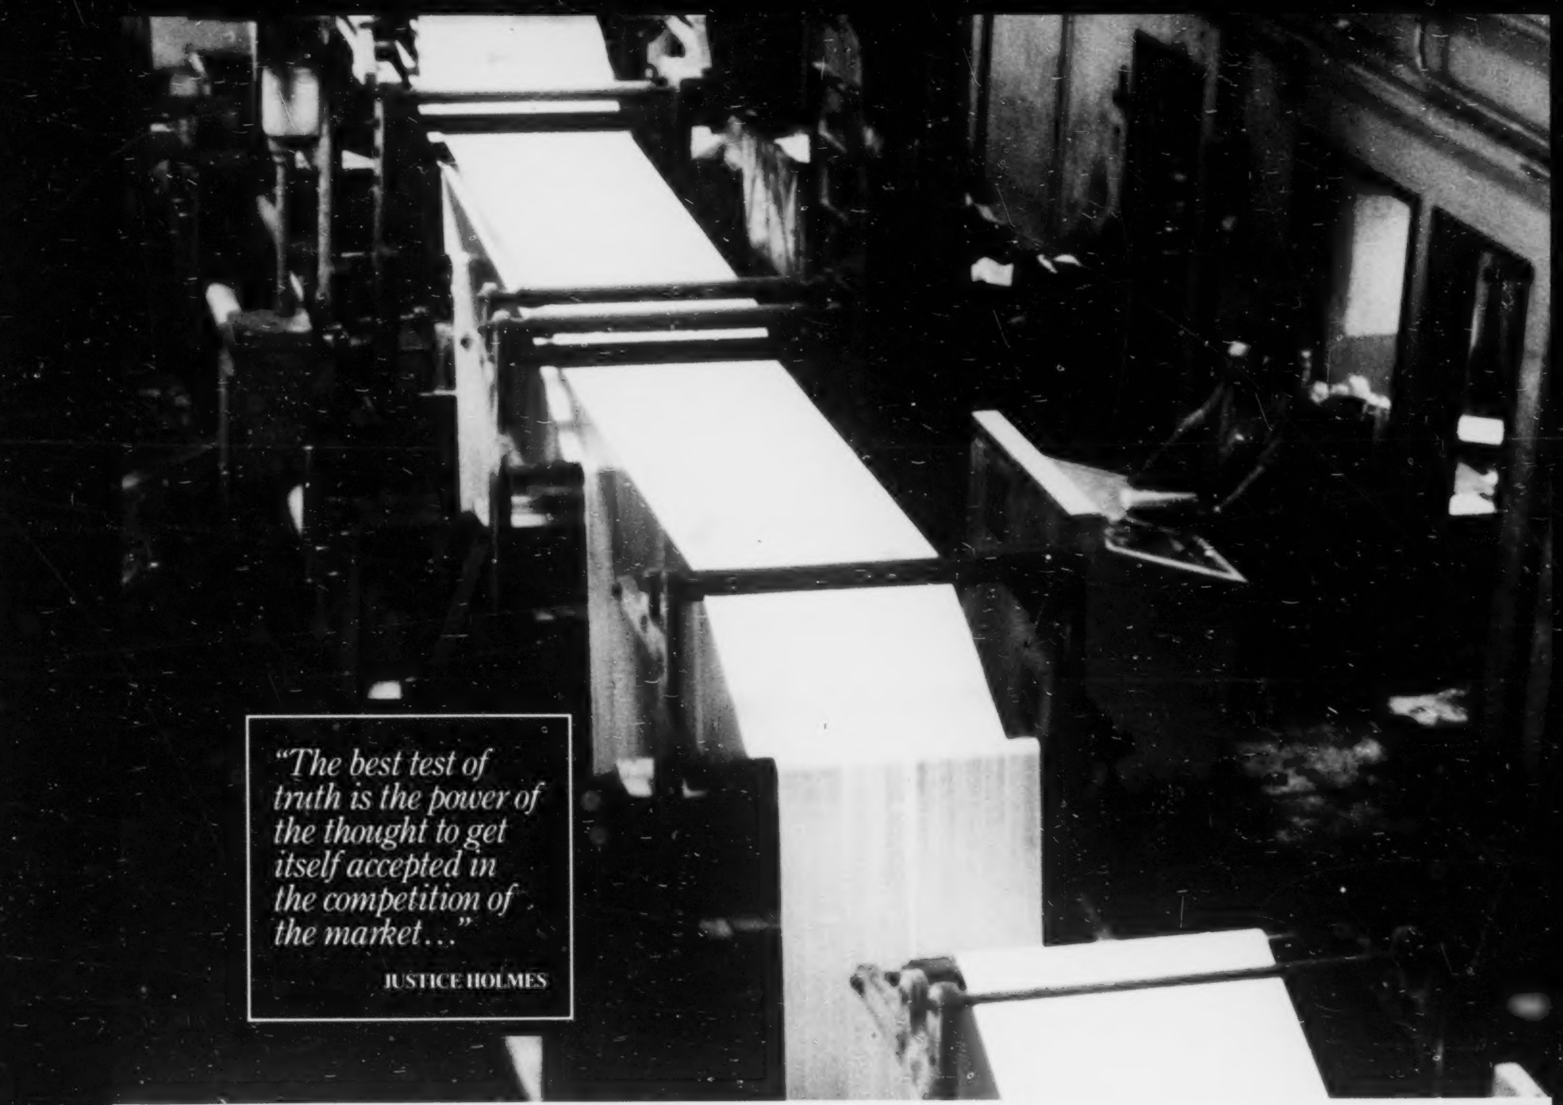
Although account people often produce the strategy, creatives are the people who find these ideas and develop symbolic presentations for a targeted audience.

Their "creative process," which some describe as "both orderly and disorderly," is "more predictable and controllable than people think it is," says FCB Creative Director Jackie End, who like many creatives has worked for a number of agencies—Young & Rubicam, Doyle Dane Bernbach, and Wells, Rich, Greene.

"There are two kinds of information," she says: "There is the information that you have from your studies, all down on paper—who buys this and how much money they make—and that's really good and valuable."

"Then I have other information that may appear to be intuitive, but it's not. It's just not quantitative. It's more specific and more human and probably more emotional. . . . And that's really the basis of creativity in our business—that ability to put yourself in somebody else's place and understand what they are looking for," she says. "If I'm trying to sell to you, I have to *become* you."

—Marcia Ruth



"The best test of truth is the power of the thought to get itself accepted in the competition of the market..."

JUSTICE HOLMES

SPECIAL NEEDS INSURANCE PER PUBLISHERS' REQUESTS

To test the power of a thought in print requires strong backing in constitutional law and an insurance company with the experience and resources to protect the publisher. The Mutual Insurance Company Limited, Hamilton, Bermuda, was formed by newspaper men and women to serve the newspaper industry. This group of insurance companies continues to explore new means to assist the newspaper business in the United States and Canada by offering special policies per publishers' requests.

The Fourth Estate is functioning in a sensitive environment which requires increased protection from litigation to exercise the freedom of the press. The Mutual Insurance Company Limited, Hamilton, Bermuda, offers a range of insurance services for the newspaper industry including strike, libel, and First Amendment insurance, seminars on the prevention of libel suits, as well as special policies requested by publishers to meet unique requirements. At present, The Mutual Insurance Company Limited insures more than 800 dailies across the U.S. and Canada.

Active as protectors of the press since 1939, The Mutual Insurance Company Limited has more combined experience in insuring the newspaper industry than any other insurance group. To meet present and future needs, Mutual urges publishers to address suggestions and inquiries to the address provided.

PROVIDING PROTECTION FOR THE PRESS

COMMUNITY SERVICE

Newspapers broaden projects in the public spirit

BY MARGARET GENOVESE
presstime staff writer

As the Chicago and North Western Railway Co. train traveled through the Iowa countryside in late September, it was met by crowds of supporters and high-school marching bands. No, it was not a political campaign train making whistle stops. It was The Des Moines Register's "FarmAid Express."

Not only did it take 500 Iowa farmers, farm-related business people and politicians to the FarmAid benefit concert at the University of Illinois, it also delivered the symbolic message to Register readers that the newspaper cares about the same things they care about—in this case, the plight of financially strapped American farmers.

The train trip was engineered by Register Editor James P. Gannon. "I think any time a newspaper can do something . . . that identifies itself with the interests and needs of its area and its people, it is a good thing to do," he says. "We don't need to stand aloof where we can show some caring and some leadership."

Newspapers have long been regarded as public-spirited institutions in many communities [presstime, March 1982, p. 49], but as the Des Moines example suggests, a number of them are reaching out in new directions with their community service programs.

A sampling of only about a dozen newspapers around the country shows the wide range of new programs and the high level of importance newspapers are giving their corporate-citizenship responsibility.

The Kansas City Star Co., for example, has significantly expanded its community service program in the last several years. "We have always been involved in the community," says Jeffrey S. Hall, vice president/marketing. "But, I think it is fair to say there were a lot of people who felt like we could do more."

In 1982, The Kansas City Star began its biggest community service project ever, "Project Warmth," in cooperation with Carrier Cares Inc., an organization of independent newspaper carriers. Cosponsored by a local TV station, the project seeks food, clothing, blankets and money for the needy in the Kansas City area.

For two weekends each year, Star carriers are stationed at drop sites to receive contributions. More than 59 tons of food, clothing and blankets were given to the cause, heavily promoted in the Star, in the first three years. The campaign also has received more than $1.3 million in cash donations, the majority of them returned in special envelopes inserted into a Sunday edition of The Star.

(The Star is by no means the only newspaper to put its distribution ability to work for the benefit of charity. Recently, The Tacoma [Wash.] News Tribune and The Commercial Appeal of Memphis inserted specially marked grocery bags into their editions to help local food banks in food collection drives.)

Other major community service projects recently launched by the Star Co. include "Project Literacy," in which readers are asked to contribute to a program to combat adult illiteracy [presstime Sept. 1985, p. 28]; "Excellence in Teaching," recognizing superior teachers; The Kansas City Star's "Scholar-Athlete Awards," honoring high-school seniors; and "Pride in Print," in which the newspaper company invites local advertising agencies and design studios to design ads reflecting the attributes of Kansas City, and then runs one of the ads each week on a full page of The Kansas City Star and of The Kansas City Times.

The increased involvement has benefited the newspaper company as well as the community, says Hall. "I think the employees feel better about the company because of our participation, and I also believe that the community, more and more each year, recognizes the fact that

Gannon (center, in sweatshirt) surveys crowd greeting FarmAid Express in Marshalltown, Iowa.

we are very actively involved in the betterment of Kansas City."

Reading the headlines. Newspapers looking for new community service ideas often find them in their own headlines. After the Dallas suburb of Plano, Texas, experienced a rash of teen suicides, the Dallas Times Herald conducted a "town forum" on the issue of adolescent suicide.

Cosponsored with Trailways Corp., the forum drew participants that included actor Peter Fonda, who talked about his mother's suicide and its effect on him; authorities in the field of suicidology; the lieutenant governor of New York, founder of the National Commission on Youth Suicide Prevention; and the mother of a teenager who had committed suicide. Will Jarrett, editor of the Times Herald, discussed the newspaper's coverage of teen suicide.

The newspaper plans to hold another forum this year, on teenage drug and alcohol abuse, says Barbara A. (Bobbie) Wallace, community relations manager.

Similarly, reports of a crisis in American education prompted The Providence Journal to add six new education-related community service projects last year, according to John E. Hazard, special projects coordinator. Rather than solicit readers' contributions, the newspaper financed all the projects itself, he says.

The newspaper's "Encouragement Fund" invites funding proposals from schools around the state for projects costing $100 or less. So far, the newspaper has given out about $10,000 in grants, enabling schools to do such things as buy computer programs and hire consultants.

Among the Journal's other new initiatives are an awards program honoring the senior in each high school in the state who has shown the most effort to excel academically, a "Question of the Month" quiz in which schools can win reference books, and a high school journalism competition.

The newspaper also has "adopted" an inner-city high school in Providence. It donated equipment, provided a scholarship, offered staff members to teach journalism, printed graduation programs and assisted the school in other ways.

The Journal became an example for other businesses, and today, 19 of the city's 28 public schools have been adopted, according to Hazard. "We've been a leader," he says, "and that's kind of nice."

Public education is not the only aspect of government getting a boost in newspapers' new community service campaigns. The Hartford Courant last year invited city departments to compile a "wish list" of projects they could not complete because of limited public funds. The newspaper published the 1,000-item list in a double-truck ad and asked readers to grant the wishes.

Do
Something

Hartford Courant campaign netted $50,000.

The "Do Something" campaign, similar to one conducted several years ago by The Baltimore Sun, netted $50,000 in goods and services. According to Sylvia H. Levy, public affairs manager, the campaign will be repeated in 1986, the city's 350th birthday.

The campaign also earned a first place award for the Courant in the "public relations/community service" classification of the International Newspaper Promotion Association Promotion Awards Competition.

In addition to the annual contest, cosponsored with Editor & Publisher magazine, INPA publishes a directory of newspaper community service projects. An updated version should be available next spring.

> *"I think there is less of the thinking that 'We've always done it this way,' or 'We've always done this event.' I think we are starting to . . . say, 'Is it doing what it should do for the community and the newspaper?'"*

Health kick and other trends. INPA President Scott C. Schurz says in the last decade he has seen newspapers move toward more health and safety related community service projects. The publisher of the Herald-Telephone in Bloomington, Ind., notes that his newspaper, for example, has sponsored an annual Spring Running Festival since 1976.

Certainly one of the biggest newspaper-sponsored athletic events is The Milwaukee Journal's "Al's Run," the third largest running race in the United States. In its first seven years, it raised more than $677,000 for the intensive care unit of Milwaukee Children's Hospital.

The run is only one of several major community events sponsored by The Journal Co. in recent years. In 1982, it began its "Rainbow Summer" program of free, outdoor concerts. The lunch-time concerts are held every workday during June, July and August at Milwaukee's Performing Arts Center.

The newspaper had sponsored other musical events in the past but nothing of that magnitude. "I think the trend is for newspapers to do fewer, more major projects and really have an impact," says Mary Riedel, promotion manager.

The Miami Herald is working to tailor more of its community service programs to distinct community segments, says Sam Verdeja, vice president, community relations. An example is the Calle Ocho festival. Begun eight years ago with the cosponsorship of the Kiwanis Club of Little Havana, the festival has attracted other local business sponsors and annually draws more than a million people. Verdeja calls it "probably the largest Hispanic event in the country.

Newspapers also are making a greater effort to evaluate their community service programs, says Mary Harris Weingart, assistant director of community and corporate services for The Arizona Republic and The Phoenix Gazette. "I think there is less of the thinking that 'We've always done it this way,' or 'We've always done this event," says Weingart. "I think we are starting to look at the event and say, 'Is it doing what it should do for the community and the newspaper?'"

The newspapers' community and corporate services staff now judges each project against a set of "public service criteria." It also has compiled all of the newspapers' community service projects into a booklet. Its title speaks for all newspapers and their community service efforts: "We're not just newspapers. We're neighbors." ☐

Newspapers Can Benefit From Product Loyalty

BY BURL OSBORNE

It is difficult to get very far into a discussion of reader retention without having a discussion about brand loyalty, or some euphemism more acceptable to purists that means the same thing.

The extent to which brand loyalty exists has much to do with the long-term prosperity, sometimes even the survival, of almost any product, whether it be soap or a newspaper.

Brand loyalty has figured in the success of mass-market products like Ivory soap or Kellogg's Corn Flakes, and upscale products such as Mercedes Benz automobiles and Rolex watches.

Coca-Cola placed its success in jeopardy by misreading or ignoring the lessons of its own brand loyalty and fooling around with a formula that wasn't broke and may not have needed fixing. However, because Coca-Cola responded quickly to outraged loyal customers, the company wound up with even more shelf space than it started with.

AT&T wasn't so lucky. Ma Bell lost its entire business because it allowed its customers to perceive the company as arrogant and unresponsive to their needs. Ma Bell, sitting on a monopoly, didn't nurture brand loyalty and managed to lose its franchise despite having the best telephone system in the entire world.

I would suggest that the newspaper business has the same opportunity as Ivory soap to develop brand loyalty, and the same opportunity as Ma Bell to lose the franchise.

Brand loyalty is equally vital for any newspaper, and there are at least three elements to achieving it.

The first of these is quality.

Quality alone will not develop reader loyalty, but it is the first requisite. Without quality, there can be no foundation for loyalty.

The quality of a newspaper, in the context of this discussion on reader retention, can be measured by two yardsticks—content and relevance.

Content of high quality embraces the characteristics of thoroughness, accuracy, fairness and balance. Quality content also has to do with coverage areas in which a newspaper excels. Just how good is it, in absolute terms, in comparison with its competition?

Quality of content also means the quality of reproduction. If newspaper reproduction, both color and black and white, doesn't compete with the quality of reproduction that readers see elsewhere, including in USA Today, it will be difficult to persuade them of our overall high quality.

The other ingredient, relevance, is more difficult to measure. Essentiality may be a better way of describing what I mean. A newspaper of high quality, if it wishes to develop loyal readers, needs to publish news and information that not only is important or interesting or "good for them." Readers must find every day in the newspapers something they will understand to be essential to them. They must not merely enjoy or like to have the paper; they have to *need* it to get through the day. Relevance means that readers must have a possessive feeling about the newspaper. They must think of it as "my" newspaper, even on those occasions when it is necessary to bring them news they don't want, or don't enjoy, but need.

Consistency. The second major building block for brand loyalty is consistency. We have to give readers expectations of what we will do for them, and then meet or exceed those expectations every day.

Burl Osborne

> *Quality alone will not develop reader loyalty, but it is the first requisite.*

The level and thoroughness of coverage must be consistent. If we cover the world one day, and provide nothing outside the county the next, our readers will be confused and wander off. If we give readers the scores part of the time, we'd better be prepared to give them the scores all of the time. Decisions about levels of coverage need to be long-term. Putting something in one week and slipping it out the next won't fool the readers who cared, and if you are inconsistent they won't trust you again.

Consistency also has to do with the tone of the newspaper. A front page with only hard news headlines one day and only soft magazine features the next will just make readers wonder if we know who we are. One kind of logic on the editorial page one day and something opposite the next won't keep readers; it will cause them to dismiss us as irrelevant.

The tone that we transmit is very difficult to assess because it is the synthesis of a reader's impressions of many aspects of the newspaper, ranging from news and opinion, to the impact of the advertising, to circulation service—all over an extended period of time. If the newspaper's tone of voice is inconsistent, readers will notice and loyalty will waver.

Consistency means timeliness. Readers have to be able to anticipate not only the content and tone of voice of the newspaper; they have to know that it will be there when we promised it would be, every day.

That means there must be a production schedule that will permit the news department to get enough of the news in and also get the paper off the press in time to

---

Osborne, president/editor of The Dallas Morning News, delivered these remarks at a recent meeting of the Readership Task Force, which is part of the Newspaper Advertising Bureau's Future of Advertising Committee.

get it delivered.

With more people going to work earlier in the morning, and with more television outlets providing more news later at night, the printing window will need to shrink from where it is.

This is leading to requirements for additional capital expenditures for additional press capacity, and equipment to speed the inserting process, in order to prevent the erosion of loyalty that comes with newspapers that either contain too little news or arrive too late to be relevant.

A consistent newspaper will have important features and elements in the same place every day, where readers can find them. The paper will be easy to read and easy to use. Classified won't be split into a dozen pieces to avoid going up four pages on a collect run. The obits will have a home. Comics won't move all over the paper.

A Litmus Test for Brand Loyalty

1. Has your newspaper's kick ratio—ratio of complaints to circulation—gone down in the past year?

2. Has your rate of "churn"—turnover among subscribers—gone down in the past year?

3. Do most of your customers call your newspaper "the paper" or "my paper?"

4. Is there at least one article or feature in your newspaper every day that readers *have* to have?

5. Do you have last night's scores in the paper, every day?

6. Do you know where the obits are in your paper today? Is that where they were yesterday?

7. Have you gotten out on time every day for the past two months?

8. Can a newcomer read your newspaper for a month and understand what your city is all about?

9. Has your newspaper published anything in the past week that specifically contributed to bringing ethnic minorities into the mainstream?

10. Are the people who complain about your newspaper at the country club almost *always* wrong? Really?

If all the answers were yes, take a bow. If some of them were no, it might be worth taking a look for some ways to build brand loyalty.

Research, service, packaging. The third major factor in developing brand loyalty is differentiation—the process of carving out a newspaper's special territory in the market and then protecting it from encroachment by others.

The foundation for differentiation is research. A newspaper needs to know who it is, who and what its competition is, who and what its market is, and most of all, who its customers are.

A newspaper needs to identify those franchise areas in which it holds or might achieve a competitive advantage that could be used to build loyalty.

Someone needs to figure out what the newspaper does better than any competitor, whether in obvious areas such as sports or business, or in others such as mix of features or columnists or quality of writing and editing. If there are no areas of potential superiority, then brand loyalty isn't immediately important. The first concern should be survival.

A major potential tool for differentiation is service. This is not just a concern of the circulation department. It is a concern of everyone in the newspaper. In our own case, we require a daily meeting of senior representatives of the circulation, advertising, production, news and promotion departments just to ensure that everyone knows what everyone else is doing, and that problems don't fester. This group discusses service every day.

Maintaining excellent service means the composing room must close on time, and the newspaper has to get out on time. It does no good to publish the best content in the world if it arrives too late to be read.

Service also means that newspapers must be ready with a constructive, problem-solving response to complaints.

We need to be confident that complaints about delivery, or billing, or news content, or advertising policies, or editorial views will be handled in a way that strengthens, rather than weakens, the bond with our readers. Most complainers call us because they have some hope of redress for their problem. That suggests at least a potential relationship with the newspaper, or they never would call at all. Taking the time to resolve a complaint fairly can convert a potential defector into a loyal reader.

A newspaper that develops brand loyalty, like soap or corn flakes, will differentiate itself by excellent packaging.

That means it will not be edited for reporters or other editors or contest juries, but for readers. Its design and layout will meet the needs of readers, not the designer. That means attractive color and graphics and artwork will be used whenever they help readers understand the subject more quickly or more easily.

Packaging means the newspaper will be sectioned to suit readers, not production druthers; that obits will be where they belong and classified will be in one piece;

OUR ABILITY TO HANDLE A DATA BASE OF 2,000,000 HOMES IS OPENING SOME EYES.

It's a surprise to some people in the newspaper industry that we offer a CIS system that handles over 2,000,000 subscriber homes.

We started Creative Data Systems seven years ago with a carefully planned development strategy. Each step was researched thoroughly, tested repeatedly, and proven. By starting small and working our way to a position as an industry leader, we've learned our lessons well.

The IBM System/38 has grown too, with capacities now equalling many main frame computers. That's why we can give you an integrated TMC data base system that works. One that handles 5,000 starts and stops per day, and billings for over 100,000 pre-pays. Our display advertising software handles over 30,000 advertisers.

Our powerful systems are designed to meet the needs of larger newspapers. If you want to talk with someone who understands the problems of larger papers and knows what you're looking for, give us a call.

An IBM Value-Added Remarke

that indexing and summaries will be adequate; and that color will be used wisely even if, God forbid, it requires more work by all the departments involved.

Promotion, commitment. However good the research, however good the service, however strong the packaging, differentiation cannot succeed without good promotion.

We make our living in advertising. When the economy turns down, we tell advertisers that they need to advertise even more. Yet, the first thing *we* cut in a downturn is—you guessed it—our own promotional advertising.

We are supposed to be in the communications business, but we have trouble getting word from news to circulation to promotion—and to our readers and prospective readers—about the great things we are doing.

We ought to approach our newspaper the way brand managers in other fields approach their product: Give it its own marketing program and stick with it.

Brand loyalty is not built from one quarter to the next. If the commitment isn't for the long term, it isn't likely to succeed. Adding space to sports for three weeks and then taking it away won't pass the reader test for product improvement. Getting out on time one week and finishing late the next won't build anything but problems. Anyone who thinks one 13-week flight of television commercials is enough promotion for the year has missed the point.

Substantial dollars invested over time in reader retention are required to produce satisfactory profit retention into the distant future.

Trading off retention investment to achieve over-promised profits in the next quarter is just as risky as meeting the target by selling a press. The only difference is that you can watch the press being hauled away. Readers leave one at a time, quietly.

Now let's consider the good news.

We have a lot of offer: the raw information that readers need to get through the day, certainly the bad news but the good as well, some entertainment and an occasional chuckle, and the insight and understanding that permit them to fulfill their potential and meet their responsibilities as citizens in a democratic society.

We understand that. We know how important newspapers, our newspapers, are to citizens and to our society. We need to communicate that to readers. If we can, and if we deliver what we promise, I think it quite possible that readers will give us brand loyalty in return. ☐

Mike Hughes

Creativity in print is his specialty

BY MARCIA RUTH
presstime staff writer

Humorously portraying its own position in advertising, The Martin Agency in Richmond, Va., displays a familiar New Yorker cover in its lobby: Poster-size, midtown Manhattan is shown as the center of the world.

Richmond is not on the map.

Yet in "The Fan," a renovated section of the old Confederate capital surrounding an equestrian statue of Robert E. Lee, Martin's thrives as one of a growing number of ad agencies swimming successfully against two major tides—the location of more than 80 percent of large agency billings in New York City and the focus of major agencies on television.

At the heart of Martin's effort is its executive vice president and creative director, James R. (Mike) Hughes, a former newspaper reporter who has what he calls a "reverence" for print. His agency reflects that, with more than a third of its business in print, including nearly 20 percent in newspapers—twice the national agency average for newspaper billings.

"There are some messages with some emotions that work better, that seem to translate better into one medium or another," he says, "but I'm convinced that if the newspaper is in the hands of the audience you want to reach, you can tell that audience just about anything and get them to buy it."

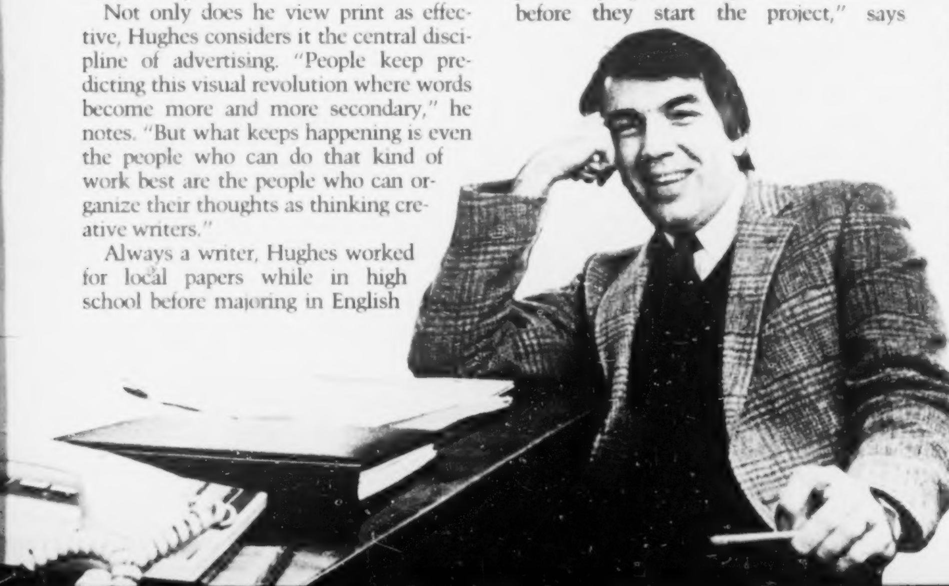
Not only does he view print as effective, Hughes considers it the central discipline of advertising. "People keep predicting this visual revolution where words become more and more secondary," he notes. "But what keeps happening is even the people who can do that kind of work best are the people who can organize their thoughts as thinking creative writers."

Always a writer, Hughes worked for local papers while in high school before majoring in English at Washington and Lee University in Lexington, Va. Then he became a reporter and copy editor at The Richmond News Leader. Turning down an offer to be assistant city editor at the News Leader and shifting his original intention to become a magazine feature writer, he followed his father's footsteps into advertising in 1971.

Hired by the Martin agency in 1978, Hughes has become known for combining an easy going personality with hard-driving talent. "You don't get a person that smart and that kind that often," says copywriter John Mahoney. "He completely lacks arrogance and intellectual pretense—and he could really have that. Most people in his position, they're in love with themselves."

The winner of more than 50 national and international creative awards, this 37-year-old newswriter-turned-copywriter is "too good to be true," says Martin Group Vice President W. Thomas Robinson. "What a guy like Hughes brings to (advertising) is the sensitivity that there are business objectives without lowering his (artistic) standards," Robinson says. "On the other hand, he is very tuned into the fact that the people who create it are artists, and a piece of their soul goes into their story boards."

Careful research is a hallmark of The Martin Agency founded in 1965. "We expect our people to be up to their ears in it before they start the project," says Hughes. So is respect for the creative work produced. "It's a hard thing for an industry to tell outsiders, but the plain truth is the best people will not work in your business if they have to worry about the research coming later," he says. "They want the research up front. They want to know what they're doing before they start."



This balance earns Hughes and his agency high praise from Thomas McElligott, creative director of Fallon McElligott Rice in Minneapolis. "There are a lot of products of bright research people and smart marketing people saying exactly the right things to the right market," he says. "The problem is it's often said without flair and freshness. On the other hand, there are agencies turning out fresh work that is not based on marketing research, and sometimes it works and sometimes it doesn't. The Martin Agency has both sides of the equation."

In pursuing his craft, "passion"—a word not often used in the business world—comes easily for Hughes. "I believe *passionately* in what I do," he says. "I am passionate and obnoxious about my belief that the guy reading the newspaper or watching TV is a thinking human being who appreciates the fact that you design what you present to him well."

"Fun" also enters his serious approaches to clients. "There are just too many success stories" to leave humor out of advertising, he says, standing in a room full of ads enticing readers with a smile.

"Blondes Prefer Gentlemen" was part of a campaign that increased sales for Virginia Gentleman bourbon while sales of bourbon in general went down.

In other hands, "only a few modes of transportation have proven themselves under the world's harshest conditions" could be a humorless introduction for railroad engines produced by Electro-Motive, a division of General Motors Corp. But Martin's campaign works through humor as well as information: In one double-truck ad, this headline runs under photographs of the GM product along with a camel, a burro and an elephant.

As with many ad campaigns, it is hard to trace specific impact on sales. "You don't read an ad for locomotives and order four over the phone," says Hughes. But one of this series was rated the second most read ad in an issue of The Wall Street Journal.

Taking life with the same sense of adventure with which he tackles advertising, Hughes is currently off to explore India for a month with his wife Ginny, an ad executive-turned-social worker, and their eight-year old son. ☐

Covering the U.S.A.

Visiting British journalist finds an ocean of difference in reporting on government here and at home. He says American officials are much more open.

BY LIONEL BARBER

After three months working as a British journalist in Washington, I have good news to report: Penetrating the federal bureaucracy is surprisingly easy.

Compared to my experience in London, where my inquiries often meet with evasion and obstruction, Washington bureaucrats were helpful, usually straightforward and above all open.

They have to be. So vigorous is the competition for the attention of journalists—among lobbyists, congressmen and other government officials—it is easy for an outsider to be overwhelmed. And while this torrent of views and information carries with it certain dangers, the American reporter attempting to discover what is going on inside the bureaucracy enjoys a position that, in my view, is privileged.

My first foray into the Washington bureaucracy came shortly after arriving at The Washington Post when one of my editors handed me a pile of photocopied documents, including several internal memoranda drawn up by officials of the Agency for International Development.

Until that day, I had never heard of AID, the federal agency that dispenses some $7.8-billion of foreign aid a year, mainly to Third World countries. But the briefing papers supplied by the Post's original source were so comprehensive that, within two hours, I was able to piece together a fundamental policy shift by the agency's top official, Peter McPherson.

The issue at stake was emotive and, by all accounts, sensitive: whether AID should fund "natural family-planning groups"—who are opposed to all forms of artificial contraception such as condoms, pills and spermicides—to propagate their preferred version of the "rhythm method" abroad, without reference to other forms of birth control.

The memoranda obtained by the Post documented meetings between McPherson and the natural family-planning groups, as well as correspondence between President Reagan's assistant for public liaison, Faith Ryan Whittlesey, and one of the leaders of the natural family-planning lobbyists, Mercedes Arzu Wilson.

Lionel Barber

My assignment was twofold: first, to explain why McPherson had agreed to break with a long-established AID tradition that all family-planning groups receiving federal money should offer couples a choice on birth-control methods; second, to establish whether rumors that the White House and Vice President George Bush had put pressure on McPherson were true.

Tracking the reasons behind McPherson's new policy favoring natural family-planning groups was relatively easy. The AID memoranda charted, in excruciating detail, McPherson's twists and turns as Wilson and other "pro-life," anti-abortion lobbyists pressed him to open up the agency's coffers.

The White House connection was to prove more difficult. But not impossible. After several phone calls to the natural family-planning lobbyists and elsewhere, I established that Wilson, accompanied by Rep. Henry J. Hyde (R.-Ill.), had met with Bush. This was subsequently confirmed by the Vice President's chief spokeswoman, Shirley Green, who also gave invaluable, on-the-record comments on Bush's views. One final, frank conversation with McPherson, and the story was wrapped up.

> In Britain, the weapons available to breach the bureaucracy are frustratingly few in number.

This initial encounter with the bureaucracy shows how accessible officials are—and how willing they are to talk, provided the journalist is equipped with the right information. No doubt, I enjoyed an advantage in the AID story because my original material was so detailed. But over the next three months, I rarely found myself short of a quote or a document.

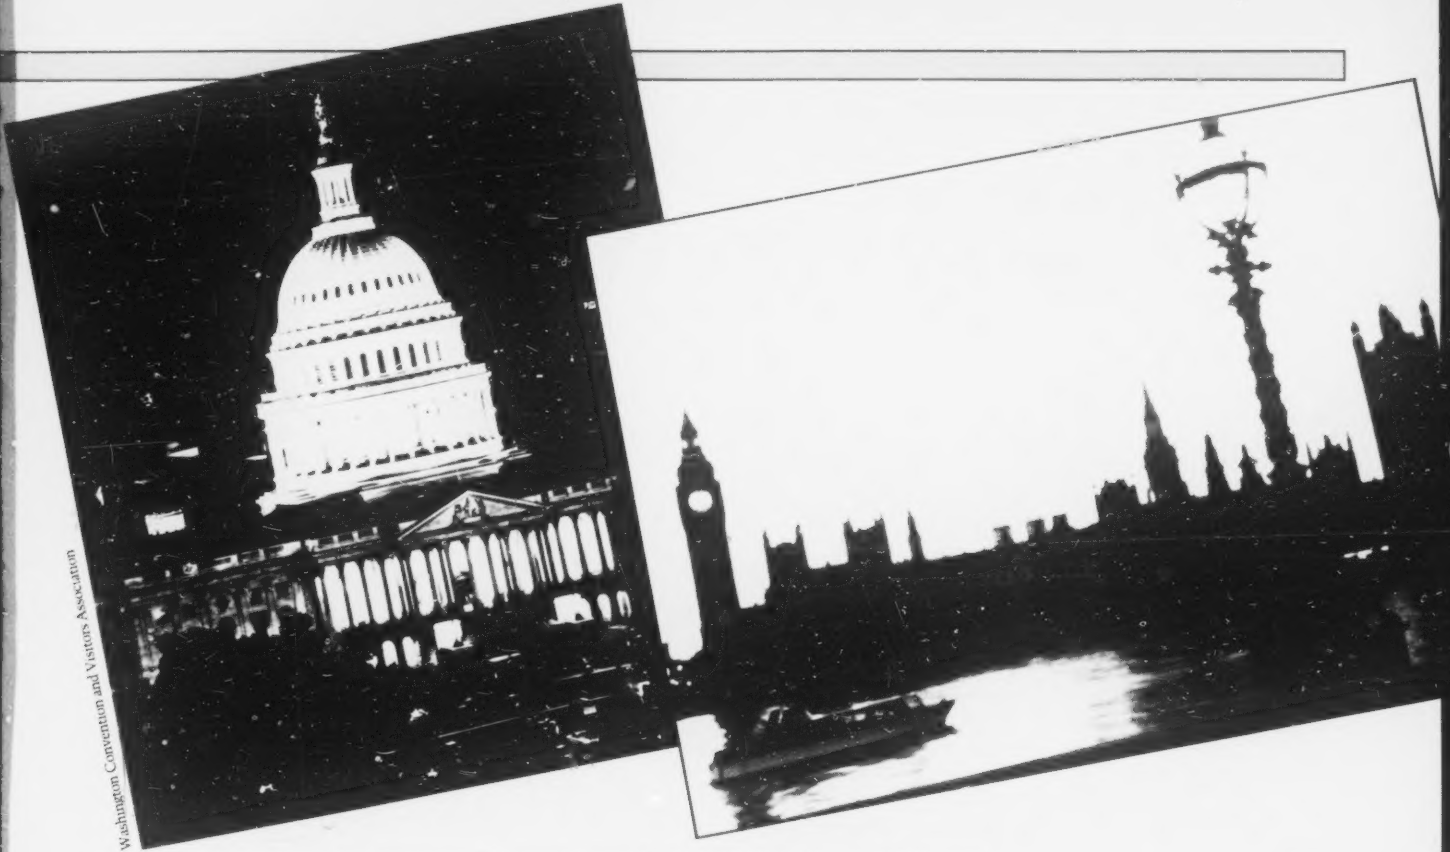
The dispersal of news in Washington reflects the amount of information that interested parties can commandeer from the federal government, an important difference from Britain where there is no Freedom of Information Act and no genuine tradition of using the press as a medium for informed political debate.

Closed channels. In Britain, the weapons available to breach the bureaucracy are frustratingly few in number. Those who "leak" information to the press risk at best their jobs, at worst prosecution under the Official Secrets Act, in force since 1911.

Another channel for government information—Parliament—is far less effective than Congress as an executive watchdog. This stems not only from important constitutional differences between the two countries, but also from availability of resources. A whole army of aides, staffers and researchers support Congress, while some members of Parliament can afford only a single secretary-cum-typist.

In my experience, the British journalist

Barber, a reporter on leave from The Financial Times of London, spent the summer at The Washington Post as Lawrence Stern Fellow. An adaptation of this article appeared in the Post.



Washington Convention and Visitors Association

For reporters, there are more than appearance differences between the Capitol (left) and Houses of Parliament.

is often better informed about pending policy moves in the government than the British MP, an absurd state of affairs that does the public a disservice and stifles debate—which is exactly what the politicians and supporting bureaucracy want.

As a journalist who used to cover Whitehall, the umbrella term for the British civil service, I had my most bruising encounters with the bureaucracy on issues of policy-making. Ask a British bureaucrat about a government policy in the making, and the shutters come down.

The problem for the reporter is compounded by the anonymity in which British policy-making is conducted. There is no equivalent of the Congressional Directory, which lists names and telephone numbers of senior administration officials. A quiet chat with, for example, a senior British Foreign Office official in charge of Far East Affairs is all but impossible. Most journalists would not know the diplomat's name, let alone his private line.

British officials like to remain impersonal, preserving the fiction that they are merely the servants of their politically elected masters and have next to no impact on policy. By hiding behind this screen of anonymity, they are able to reduce contact between journalists and the government to central press offices, thereby immediately diluting the information flow.

In Washington, by contrast, the relationship between officials and journalists is far more informal. One striking example is at the State Department, where journalists are allowed to eat side-by-side with officials in the department's canteen. But it goes far deeper.

One senior reporter at the Post who has covered a major U.S. department for several years described his reaction when an important contact switched jobs. Instead of kissing a good source goodbye, the reporter rang the new official and sought a meeting. "I explained to him what I expected of him, and what he could expect of me," said the reporter. "The idea was to build a relationship."

The more equal treatment meted out to the journalist in the United States imposes certain responsibilities, particularly when the American official speaks privately against the government line. "No fingerprints attached," was a phrase I learned to employ here when officials elected to speak freely about certain sensitive policy issues.

In Washington, the journalist is sucked into the political process and often becomes, willy-nilly, an active player.

There is a second, more subtle point. In Washington, the journalist is sucked into the political process often at such an early stage that he or she becomes, willy-nilly, an active player.

Lobbyists are well aware of this. By handing over government documents and providing top-class briefings for journalists, they hope to win them over to their cause.

The same applies to congressional sources who, while often impeccably informed, are also incorrigibly partisan.

On an emotive issue like federal aid for groups who oppose abortion and any form of contraception, this bias was particularly pronounced. Faced with a deluge of information from one side (those opposing AID's decision to fund natural family-planning groups because they claimed it infringed freedom of choice), and a defensive, anti-media posture by several natural family-planning groups, it is all too easy for the journalist to fall in with one group.

That is a risk in the information free-for-all in Washington. As an excuse for the secrecy, evasion and lack of access in London, it simply will not wash. ☐

Administration officials confer with publishers on press cards, labor policy

Presidential spokesman Larry M. Speakes has expressed a willingness to work with ANPA to try to resolve the Association's concern over procedures for White House accreditation of foreign journalists.

ANPA and the International Press Institute have complained to the White House about a requirement that foreign correspondents get a letter of introduction from their governments as a prerequisite to securing White House press credentials. The organizations say the policy amounts to licensing of foreign journalists by their own governments [presstime, March 1985, p. 49].

Answering questions at the ANPA Government Affairs Committee's semiannual meeting in Washington, D.C., Speakes, principal deputy press secretary, said he had discussed the accrediting matter with the White House legal staff. Although he indicated there still were legal and security questions to be answered, he told the audience of newspaper executives: "We'll work it out."

Following the meeting, Committee Chairman George W. Wilson, publisher of the Concord (N.H.) Monitor, said he was "encouraged to realize that Larry Speakes understands the issue" of foreign-journalist accreditation.

Wilson said he was also "glad that Don Regan had a chance to hear our concern"—a reference to White House Chief of Staff Donald T. Regan, who was on the same program and discussed national and international issues.

In a follow-up letter to Speakes, Wilson asked for a meeting with White House press, legal and security officers. "As you know, everyone wants to secure the safety of the President," he wrote. "But, we are confident that ways can be found to do so while not violating the principles for which the U.S. speaks so eloquently in international forums."

Since then, the White House legal office has been in touch with ANPA, and discussions on the matter were taking place in late October, according to Martin Casey, ANPA manager/government and international affairs.

Brock (center) chats with Chairman Wilson (right) and committee member Charles S. Rowe of The Free Lance-Star, Fredericksburg, Va.

Other speakers at the Government Affairs Committee meeting included Postmaster General Paul N. Carlin (see story, p. 45) and U.S. Labor Secretary William E. Brock.

Brock, addressing a joint luncheon that also included the Association's Human Resources Committee, said the Reagan administration does not support a House bill that would require companies employing 50 or more workers to give 90 days' notice of plant closings or mass layoffs.

The bill (HR 1616) was reported to the full House July 23 by the Education and Labor Committee. It had not gone to the floor for a vote by press time.

Regan (left), Speakes listen to questions.

HR 1616 would require that notice be given to employees, unions (if any) and the Federal Mediation and Conciliation Service before a plant closing or before the layoff of at least 50 employees during a 30-day span.

In other developments during the Sept. 26-27 ANPA committee meeting:

- Members of the committee's First Amendment/Freedom of Information Working Group met with Senate Judiciary Committee Chairman Strom Thurmond (R-S.C.) to explain their opposition to S 150, a bill pending in his committee to amend the Freedom of Information Act.
- ANPA staff explained the state legislative issue-tracking system being developed by the Association using word-processing equipment. It contains constantly updated developments in the areas of VDT regulation, state taxes, and advertising for alcoholic beverages, lotteries and legal notices. Information on other issues will be added.

At this time, use of the database is limited to ANPA staff. The Association hopes eventually to provide direct computer access via telephone lines for members of the Government Affairs Committee and others.

Two FCC members denounce cross-ownership restrictions

Is momentum gathering for a change in federal regulations that ban cross-ownership of a newspaper and broadcast station in the same market?

At the Federal Communications Commission, which administers the rules, two of the present four commissioners have indicated they believe the rules have not always performed as intended. The ban on cross-ownership is intended to promote diversity in sources of information within one market.

Commissioner James H. Quello and FCC Chairman Mark S. Fowler have linked the deaths of several metropolitan dailies to cross-ownership rules.

Quello said recently that if "someone wanted to propose a [different] rule and back it up with persuasive arguments, it's possible this commission would consider it."

However, U.S. Rep. Timothy E. Wirth (D-Colo.), chairman of the House Telecommunications Subcommittee, made it clear in a recent letter to Fowler that he favors retention of the rules and is concerned about the FCC's recent approach toward temporary waivers.

Quello, asked if present cross-ownership rules have encouraged diversity, said there are "some cases in the past where it hasn't." As examples, he cited the Boston Herald-Traveler, The Washington Star and The Bulletin of Philadelphia—all newspapers once owned together with television stations and all newspapers that are no longer published.

Quello said no one has compiled a record linking the deaths of the newspapers with their separation from TV revenues. However, he maintained the newspapers' deaths were the "end result" in every case.

Fowler made similar connections earlier in a speech Sept. 24 to the International Radio and Television Society.

"For years, indeed, until this very day, the FCC has taken a dim view of allowing a newspaper to own a broadcast outlet in the same market," Fowler said. "No matter what the circumstances, no matter what the consequences, the FCC had an answer to such cross-ownership situations. And the answer was, 'No.'

"Well, tell 'No' to the people of Boston, for whom the daily paper, the Boston Herald-Traveler, is no more, a casualty of this policy. And tell 'No' to the folks in Washington when we said that Albritton Communications couldn't own a TV station and run a newspaper. After a slow and expensive illness, The Washington Star twinkles no more."

In his Oct. 3 letter to Fowler, Wirth said the cross-ownership rules are "absolutely necessary to foster the robust marketplace of ideas envisioned by the First Amendment. For a local broadcaster to own a local newspaper or cable system would fundamentally undermine these very basic policy goals."

Wirth said he was concerned about the "casual attitude that seems to be developing within the industry, and at the commission," with respect to requests for temporary waivers of the cross-ownership rules.

"I recognize that there may be certain circumstances where the transfer of a broadcast license might require a temporary waiver of a very limited duration in order to avoid a severe business dislocation that could adversely affect the availability of information sources in a local market," Wirth said.

"However, the mere claim, without more, of a 'distress sale' resulting from voluntarily entering into the acquisition of a media property should never be a sufficient basis for the commission to grant a temporary waiver of even a few months."

Pending before the FCC is a request for a temporary waiver from K. Rupert Murdoch to permit him to own newspaper and broadcast stations in Chicago and New York City for two years. On Oct. 4, the commission granted the request of the Tribune Co. of Chicago for a temporary waiver to allow it to retain for 18 months newspaper, television and cable properties in the Los Angeles area [presstime, Sept. 1985, p. 61]. □

Correction

In the September issue of presstime (p. 35), Edward Toliopoulous was misidentified as purchasing agent for Ryco Graphic Manufacturing Inc. He is purchasing agent for Rycoline Products Inc., sales representative for Ryco Graphic Manufacturing. Presstime regrets the error. □

Appeals court upholds federal standard on hearing conservation

Newspapers should review their hearing conservation programs to make sure they are in full compliance with federal standards, advises Richard W. Neergaard, ANPA manager/environmental services.

Neergaard made the recomendation following the Sept. 23 ruling of the 4th U.S. Circuit Court of Appeals upholding the Occupational Safety and Health Administration's hearing-conservation amendment to its noise exposure standard. That amendment requires employers to monitor their employees' noise exposure and institute a hearing conservation program if exposure exceeds an eight-hour, time-weighted average of 85 decibels.

In November 1984, a three-judge panel of the appeals court declared the amendment invalid, saying OSHA had exceeded its authority because the amendment requires employers to assume responsibility for hearing losses that may not be related to the workplace [presstime, Dec. 1984, p. 34].

In its recent decision, the full appeals court reversed that ruling. It said OSHA acted within its authority in promulgating the amendment and found "simply no merit" to the argument that the amendment seeks to regulate non-occupational hearing loss.

OSHA had suspended enforcement of the amendment after the panel's ruling, but the agency reinstated it when the full appeals court accepted the case.

To help newspapers to review their programs, ANPA has developed a "Hearing Conservation Program Checklist." It contains information on the federal requirements for noise exposure monitoring, employee audiometric testing, hearing protection, training and record-keeping.

Although there is no provision in the amendment for annual noise-exposure monitoring, Neergaard said newspapers that have had "significant changes" in production that might affect noise levels or duration of exposure—such as increasing circulation by a substantial amount or adding press units—should have new exposure monitoring done.

Newspapers that have questions about the requirements or that want copies of the checklist should contact Ellen F. Walaski, ANPA industrial hygienist, at The Newspaper Center, Reston, Va. □

'Hazard communication' standard to take effect

Beginning Nov. 25, chemical manufacturers must be in compliance with the federal Occupational Safety and Health Administration's "hazard communication" standard.

This means newspaper employees may begin seeing—if they haven't already—materials coming into the newspaper plant bearing new hazard warning labels.

According to ANPA environmental experts, examples may be inks, solvents and photographic chemicals. Warnings, they say, could include: "Flammable—Avoid Heat"; "Use Goggles"; "Avoid Skin Contact—Use Gloves." And inks made with untreated oils would have to carry a cancer-warning label [presstime, Oct. 1985, p. 40].

As users of these materials, newspapers have until May 25, 1986, to comply with the standard. This will require them to implement hazard communication programs, including compiling "material safety data sheets" on the products and training employees in the products' use.

In October, ANPA mailed copies of a Hazard Communication Standard Compliance Package, or "Hazpak," to member newspapers to help them develop their programs [presstime, Sept. 1985, p. 35].

As they plan their hazard communication programs, newspapers should be aware that more than production personnel may be affected, advised Richard W. Neergaard, ANPA manager/environmental services.

For instance, he said, some copying machine chemicals may be covered under the standard. Therefore, if a newsroom employee is in charge of pouring the chemicals into the machine, that employee will have to be included in the hazard communication program. Other non-production employees that may be covered include those in the art and maintenance departments, he said.

Neergaard noted that products purchased at retail for newspaper operations also may contain warnings. Retail establishments may not have material safety data sheets available on the products, in which case newspapers will have to request them from the manufacturer, he said.

COURTS

Oklahoma liquor ad ban clears federal court

A federal judge has ruled that Oklahoma's ban on the advertising of alcoholic beverages does not violate the First Amendment.

The Oklahoma Press Association and the Oklahoma Broadcasters Association challenged the ban in a suit against Richard A. Crisp, director of the state's former Alcoholic Beverage Control Board.

In granting Crisp's motion for partial summary judgment, U.S. District Judge Lee R. West said he based his ruling on a 1983 decision by the 10th U.S. Circuit Court of Appeals that the prohibition was a valid restriction on commercial speech.

A hearing will be held Nov. 18 before West on the organizations' claim that the ban violates the 14th Amendment.

In a related matter, Oklahoma Attorney General Michael C. Turpen said a printing plant in the state may print and bind a national publication that contains liquor advertising without violating the state's ban on alcoholic beverage advertising.

The opinion was requested on behalf of Dow Jones & Co., which plans to build a satellite printing plant for The Wall Street Journal in Oklahoma City [presstime, Aug. 1985, p. 37]. Dow Jones has asked an Oklahoma court to rule on the matter.

Supreme Court accepts access, ad cases

In the first month of its new term, the U.S. Supreme Court agreed to hear two cases of interest to the press and refused a third.

Accepted for review were:

- *Press-Enterprise Co. v. the Superior Court of Riverside County, Calif.*, which raises the question of whether there is a constitutional right of access to records from certain pretrial criminal proceedings [presstime, Oct. 1985, p. 42]
- *Posadas de Puerto Rico Associates v. Tourism Co. of Puerto Rico*, which questions the constitutionality of a Puerto Rican law prohibiting advertising by gambling casinos.

Turned down was *Chicago Tribune v. Department of Revenue of the State of Illinois*, which questioned whether an Illinois use tax violates the First Amendment.

COURT BRIEFS

- Press groups asked the full U.S. Court of Appeals, District of Columbia Circuit, to rehear a case in which a three-judge panel ruled there is no First Amendment right of **public access to court records in civil cases** prior to a trial's completion and issuance of a final judgment.

The Reporters Committee for Freedom of the Press and four reporters had appealed a U.S. District Court order sealing documents furnished by Mobil Oil Corp. in the libel suit brought by former Mobil Oil President William P. Tavoulareas against The Washington Post.

- A federal jury in Baltimore Oct. 17 found former naval intelligence analyst Samuel L. Morison **guilty of espionage and theft** for selling classified satellite photographs to a British military magazine [presstime, April 1985, p. 21].

- Executive Editor William A. Hilliard was **sentenced to jail for contempt of court** Oct. 7 after The Oregonian of Portland refused to comply with subpoenas for unpublished photographs.

Multnomah County District Judge Robert L. Kirkman subsequently stayed the sentence and $300 fine pending the newspaper's appeal to the Oregon Court of Appeals. It will be the first appellate decision in Oregon interpreting the state's shield law, according to Stephen S. Walters, attorney for the newspaper.

- A four-judge panel of the Appellate Division of the New York State Supreme Court Oct. 9 permanently lifted a court order barring a reporter from the New York Daily News from writing additional stories based on secret grand jury records that were mistakenly placed in a public file.

Acting Supreme Court Justice Luigi R. Marano had issued the **gag order** after reporter Daniel Hays wrote a story based on the grand jury documents even though Marano warned him not to.

LEGISLATION

Newspaper industry offers cautionary words on ad, tax bills

ANPA submitted comments to three congressional panels in October expressing concern over bills that would:

- Require rotating health warning messages in advertising for smokeless tobacco products
- Require aspirin advertising to contain a warning about a possible link between aspirin and Reye's Syndrome, a childhood disease
- Impose a type of "value-added tax" on manufacturers to support clean-up of toxic waste dumps.

A bill requiring health warnings in the tobacco ads was approved Oct. 23 by the House Subcommittee on Health and the Environment. A similar bill was expected to be considered in late October by the Senate Committee on Labor and Human Resources. ANPA, which has commented to Congress before on the matter, warned that the bills raise "severe First Amendment problems" [**presstime**, Sept. 1985, p. 36].

The House bill would require three specific warning messages to appear, on a rotating basis, in a circle-and-arrow format on packages and ads for the product. The measure now goes to the full Energy and Commerce Committee.

Although the subcommittee retained the advertising provisions of the tobacco bill, it rejected a bill that would have required aspirin advertising to carry a message warning of Reye's syndrome. Instead, it approved a bill requiring warning labels only on aspirin-containing products themselves.

ANPA and the Magazine Publishers Association had expressed concern about the original bill last March [**presstime**, May 1985, p. 42] and repeated it in letters to subcommittee members just prior to their consideration of the legislation.

In the other legislative activity drawing ANPA's concern, the House Ways and Means Committee Oct. 23 approved a bill to fund the so-called Superfund toxic waste cleanup effort. ANPA said it is against the value-added tax included in the bill.

The tax, also part of the Senate-passed version, would be imposed on the value of manufactured, tangible personal property minus the cost of materials used in the products.

IAPA issues mixed reports

Good news and bad news emerged from the 41st General Assembly of the Inter American Press Association in Cartagena, Colombia, Oct. 14-17.

"There are few encouraging signs that the dicatorships are relaxing press restrictions. However, there are now fewer such dictatorships," concluded a report issued by the association at the close of its meeting, which was attended by more than 300 delegates.

Considered an example of improvement was the leveling of a criminal charge against a former Brazilian government official accusing him of murdering a journalist during the recently deposed military regime.

"In the past and even yet, some Latin Americans say, assassinations of reporters or editors would have gone all but unnoticed and quickly forgotten by other than friends and families of the victims," IAPA reported. "Now, in more and more countries, justice is being done, even when government officials are accused of a crime."

Despite such political improvements, the report noted that "the most widespread threats against the independent media appear to be economic in nature."

Cited among these economic threats were: "intolerable" import duties on newsprint and other items [**presstime**, Aug. 1985, p. 12] and the selective purchase of advertising by governments. This is particularly relevant in countries with little private enterprise, where in some cases governments control more than three-quarters of the economy.

"We all know that what we stand for is that the power of the state should not be used to influence the press," said Edward Seaton, chairman of IAPA's Executive Committee. "But what we haven't come up with is a formula governments ought to adopt."

Seaton, who is publisher and editor in chief of The Manhattan (Kan.) Mercury, said, "U.S. publishers and editors are just beginning to understand how important this (economic censorship) is in Latin America."

Red Cross starts journalists' hotline

The International Committee of the Red Cross has opened a hotline to assist journalists whose lives are thought to be in danger.

The concept, originally proposed at a meeting of journalists from 16 international and regional media associations, became a reality Oct. 21 [**presstime**, June 1985, p. 58]

In a departure from previous Red Cross procedure, in which the organization responded only to family requests to locate missing or visit imprisoned people, the organization will accept inquiries from national, international and regional organizations and employers of journalists missing or believed to be in danger.

The Switzerland-based Red Cross will attempt to locate such journalists, visit them, and facilitate contact with their families and news organizations. Traditionally, the Red Cross petitions for the release of imprisoned people only for medical reasons.

Requests for Red Cross assistance on the hotline should include the journalist's date and place of birth, and religious preference, as well as infomation about the circumstances surrounding the disappearance or detention and about other groups that have been contacted.

The "hotline" can be reached three ways:

- Telephone—41-22-346001
- Telex—CICR 22269
- Mail—ICRC, Press Division Hotline, 17 Avenue de la Paix, CH-1202 Geneva, Switzerland.

Body of Phoenix reporter not yet recovered

The body of a U.S. reporter killed in Afghanistan Sept. 19 has not been recovered. According to Richard Robertson, city editor of The Arizona Republic, retrieval is hampered by heavy fighting in the area.

Charles Thornton, a medical writer for the Phoenix daily newspaper, was on assignment to write about medical volunteers in Afghanistan when the truck in which he and about a dozen others were traveling was hit, apparently by Soviet forces.

Peter Schlueter, a photographer accompanying Thornton, has returned to work at the Republic.

Free paper rebuffed on 2nd-class

ANPA Postal Committee Chairman Sandra C. Hardy of Calkins Newspapers discusses mail issues at committee meeting Oct. 8-9 in Washington, D.C., with Gregg K. Jones (right) of Greeneville (Tenn.) Sun and Walter E. Duka, assistant postmaster general for international postal affairs.

A constitutional challenge to rules prohibiting free newspapers from using second-class, in-county rates has been thwarted by the 6th U.S. Circuit Court of Appeals.

The court, without ruling on the merits, sent the case back to U.S. District Court with orders to dismiss.

The Enterprise, a free weekly in Winchester, Tenn., had filed suit against the U.S. Postal Service rules in question. The newspaper said the only difference between it and most other weeklies is circulation pricing [**presstime**, Sept. 1985, p. 6]. Free papers distributed by mail are required to use third-class service, which generally is more expensive than in-county, second-class rates.

A federal district judge had ruled in favor of The Enterprise. He ordered USPS to repay the newspaper $77,356 in "excess postage."

But in siding with the Postal Service, the 6th Circuit ruled the District Court did not have jurisdiction. Rather, the court said, the matter should have been raised first in the "agency" or regulatory arena, where rate cases and classification questions are addressed. Appeals from that process, involving the USPS Board of Governors and the Postal Rate Commission, are supposed to go to a Court of Appeals, it said—not the District Court.

The appeals court said that in passing the 1970 Postal Reorganization Act, Congress intended "constitutional questions such as those asserted here should be raised initially at the agency level followed by review of the agency's classification decision in the courts of appeals."

Ron Bailey, publisher of The Enterprise, disagrees. Constitutional questions, he said, should be resolved by the courts, not through the regulatory process. In late October his newspaper was considering several options in response to the decision.

One possible action for The Enterprise is filing a complaint with the rate commission. The commission already is hearing one of three other pending cases in which free newspapers have protested their being ineligible for in-county, second-class rates. The other two cases are pending in the courts.

The case before the rate commission was filed by Tri-Parish Journal Inc., parent company of the free River Parishes Sun of LaPlace, La. The Journal first filed suit in U.S. District Court, but the court sent the case to the commission. The court retained jurisdiction, however, and said it will address the issues if the rate commission does not resolve them soon.

A new round of briefs was filed in the case in mid-October. ANPA restated its position that the paid-subscriber rule is the best way to keep government out of the business of deciding what is a legitimate newspaper.

ANPA argued that if free publications were given the rights to use in-county rates, which are subsidized by Congress, the rate commission "would be engaging in *de facto* postal appropriations. . . . By admitting to the in-county rate a mailer the Postal Service has not contemplated including in its budget figures, but will have to include retroactively in a reconciled appropriation, the commission will upset the existing appropriation and rate structure."

Also, ANPA criticized a Tri-Parish Journal proposal that postal authorities assign a panel of journalism "experts" to assist in determining whether a particular publication should be permitted to use in-county rates. Such a group would be made up of journalism professors, editors and publishers, the Louisiana company suggested. ANPA said such a scheme "presumably would require evaluative judgments of the news and information in a publication."

And for once ANPA and the direct-mail firm Advo-System Inc. wound up on the same side of a postal issue, although for different reasons.

Advo said the free papers should not be allowed to use in-county rates, but it cited the same arguments it uses in opposing newspapers' use of in-county rates for their total-market-coverage publications.

The second-class TMC issue is the subject of a separate complaint Advo has filed at the rate commission.

"Either practice, if permitted, would seriously and irrevocably undermine the integrity of the second-class mail privilege, to the detriment of those legitimate publications that need and deserve the benefits," the direct-mail firm said.

—C. David Rambo

3 nominated for USPS governor

President Reagan has nominated three people to serve on the 11-person U.S. Postal Service Board of Governors. Confirmation is expected before Congress recesses either late this month or in December.

The nominees are:

- Robert Setrakian of Washington, D.C., a businessman who until recently served on the Federal Maritime Commission, for a term expiring in December 1993
- Barry D. Schreiber of Miami, a lawyer and member of the Dade County Board of Commissioners, for a term expiring in December 1992
- James H.T. McConnell of Wilmington, Del., a lawyer, businessman and banker, for a term expiring in December 1989. □

Rate hike postponed; funding still unsettled

Uncertainty over "preferred" postal rates affecting second-class mail delivery of many newspapers continued in October. At least three major developments came into play.

First, the U.S. Postal Service delayed an increase in rates for in-county newspapers and for those with fewer than 5,000 copies mailed outside the county in which they are published. Current rates are expected to remain at least until Nov. 17.

Second, Congress adopted a "continuing resolution" providing stopgap funding until a final figure is determined.

Third, House and Senate conferees planned to meet in late October to decide the fiscal 1986 spending limit on "revenue forgone"—the federal subsidy for mail such as in-county newspapers and that of non-profit organizations. Of the total revenue forgone allocation, newspapers receive less than 10 percent. The conferees' decision could determine how much rates would increase this year.

And in another postal matter prompting publishers' concerns, several amendments have been attached to funding legislation that could severely limit use of in-county rates.

David F. Harris, secretary to the USPS Board of Governors, said the reason the second-class rates did not go up Oct. 1 was that Congress allocated more money than expected in a stopgap funding measure for continued postal operations until the 1986 budget figure is finalized.

The governors in September had expected Congress to allocate $749 million in a "continuing resolution." That would have necessitated an immediate increase in rates from step 14 to step 16 on a 16-step scale that Congress established in 1970 [**presstime**, Oct. 1985, p. 44].

But in the end, Congress provided $785 million. Harris said the difference between that and what the governors had anticipated was enough to maintain step-14 rates until Nov. 17, "unless Congress does something" in the interim to change that course.

One thing Congress was expected to do was postpone implementation of any new rates—including the one that would kick in after Nov. 17—until Jan. 1. But that was undetermined at press time.

The next step in the process is for members of the House and Senate appropriations committees to agree on a spending limit for revenue forgone this year. The Senate has recommended $785 million, which would boost rates to the full step-16 level. The House has recommended about $922 million, which would cause only a one-step increase.

Meetings between House and Senate conferees were scheduled for late October.

For many newspapers, the prospect of higher rates is just one of several current worries over congressional action on the postal front. Some publishers are particularly concerned about amendments to funding bills that have been proposed. Among them are proposals:

- To limit use of in-county rates to those publications that circulate primarily in the county, or that have a total circulation of less than 10,000. The measure is designed to stop what some legislators believe are abuses of in-county mail rates by national magazines, including Playboy and Penthouse.
- To limit the use of in-county rates to the first 20,000 copies of any issue. This could cause big rate increases—possibly up to 100 percent—for newspapers that deliver large numbers of their copies through the mail. An example is The Journal Newspapers, a group of suburban dailies in the Washington, D.C., area.
- To limit use of in-county "sampling" provisions and raise rates for some total-market-coverage programs that use second-class mail. The proposal would base the number of allowable "sample" copies on the weight of in-county subscriber mail rather than on the weight of *all* subscriber mail, as regulations now permit. ☐

Carlin insists there is no 'imminent rate filing'

Postmaster General Paul N. Carlin said the U.S. Postal Service is succeeding in efforts to reduce operating deficits, and he denounced rumors of "an imminent rate filing."

Carlin's remarks came Sept. 27 at a breakfast meeting with the ANPA Government Affairs Committee, where another USPS official, Don F. Allen, director of the Office of Rates, criticized newspapers' use of second-class mail for total-market-coverage publications.

Carlin said USPS intends to "stretch out the current rate cycle just as long as possible" despite a budget deficit of about $500 million for the fiscal year that ended Sept. 27. He would not specify a time when a new case may be filed.

The postmaster general said a recent pattern of Postal Service financial losses is coming to an end. In fact, USPS operated with a $7.2-million surplus in a recent four-week accounting period, he reported.

The Postal Service has set "a very realistic goal of breaking even financially in fiscal 1986," Carlin said. "We have a fighting chance of meeting that objective."

Another factor that may "ease the pressure on rates" is a nearly $1-billion loan the Postal Service is taking out for long-term financing of capital improvements such as new buildings. USPS previously used operating revenues to finance such projects. "That billion dollars will not be used to bail out our 1985 operating deficits," Carlin added.

A week and a half after Carlin's comments to the Government Affairs Committee, W. Terry Maguire, ANPA vice president/general counsel, noted at a meeting of the Association's Postal Committee that if USPS had collected separate third-class postage for detached labels—used heavily by Advo-System Inc. in its bulk mailing programs—the revenue would have amounted to about $1 billion. Maguire also noted that the USPS loan will add $1 billion to the national debt.

In his appearance before the ANPA group, Carlin took a diplomatic tack and turned the more controversial questions over to Allen, who was a bit more blunt.

First, Maguire asked why USPS originally sided with newspapers on the second-class TMC issue "and then caved in to Advo" after the direct-mail firm filed a complaint at the rate commission. Allen replied that USPS was "not responding to third-class mailers" and that the TMC products in question do not "really appear to be second issues" of a newspaper as allowed under second-class rules. He said the publications appear designed for "another purpose."

Second-class rates, particularly subsidized in-county rates, "quite clearly were not intended for this advertising thrust into the market," he said. Such sentiment has spilled over into Congress. (See story, this page.)

Later, Allen responded to ANPA opposition to the "free ride" given detached labels, saying they promote efficiency and lower cost for the Postal Service. ☐

ANPA seeks 'conditions' in Computer III

As the Federal Communications Commission conducts a major policy review of rules affecting telephone companies, ANPA is preparing its argument on behalf of the newspaper business that "dominant" carriers must be subject to "certain conditions" to ensure competition.

It is all part of the intensifying debate over regulatory and judicial restraints on AT&T and the seven Bell regional companies.

The Bell regionals, with support from some government entities, are increasingly applying pressure to loosen some restraints the companies have lived with since the breakup of the U.S. telephone monopoly nearly two years ago [presstime, Oct. 1985, p. 47].

The FCC policy review, labeled Computer III, has been characterized by former FCC Chairman Richard E. Wiley, who represents ANPA in communications matters, as "a major upheaval in the structure of the telecommunications industry."

In its notice of rule-making, the commission has proposed two major changes.

First, the FCC would no longer require that the regionals and AT&T offer unregulated computer services and products through separate subsidiaries. This change would open new possibilities for vertical integration.

Second, the agency is proposing new criteria for deciding when services should be regulated. Essentially, the key elements would be whether a competitor has monopoly characteristics and a service is competitive.

As ANPA's position on Computer III was being discussed in late October, two core issues were being considered. One was the role of separate subsidiaries, which now provide a required means for regionals to offer certain new services. The second issue revolved around concerns about the potential for Bell transmission facilities and other resources, such as telephone subscriber lists, to provide unfair, competitive advantages.

The FCC extended the deadline for comments to Nov. 13.

While the Computer III review is getting under way at the FCC, business also is flourishing in another telecommunications arena—the court of Judge Harold H. Greene, who presided over the Bell monopoly's breakup and subsequent decisions about waivers from terms of the consent decree. Requests for line-of-business waivers go first to the Justice Department and then to Greene.

Bell regional companies are applying pressure to loosen regulatory and judicial restraints.

In comments filed with the department Oct. 7, ANPA questioned the plan of one regional, Bell Atlantic, to enter the direct-marketing business through a subsidiary. Noting that the Bell Atlantic plan describes a broad range of direct marketing activities, ANPA said, "The conduct of these activities could include prohibited information services."

Bell Atlantic's request also was opposed by Lee Enterprises Inc. of Davenport, Iowa, a media company that publishes 18 daily newspapers.

Lee and Bell Atlantic may be scrambling for telemarketing (telephone sales) business. Lee's recently formed Call-It Co. will provide information and telemarketing services, but Bell Atlantic's definition of direct marketing includes telemarketing also.

"Potential customers often are chary of signing up if the monopoly supplier of local transmission services appears ready to enter the field with unknown pricing options," Lee said in comments filed Oct. 8.

However, Bell Atlantic maintained in its waiver request that under its plan, "there is no possibility" the company could "use its monopoly power to impede competition in the direct-marketing industry." Bell also maintained the industry is highly competitive and can be entered easily.

Another waiver request that has attracted newspapers' attention comes from Southwestern Bell Corp., a Bell regional that wants to enter the advertising business through a subsidiary.

Broadly defining the business, Southwestern Bell in its Sept. 30 request listed activities that included "furnishing services for direct-mail advertising and compiling and selling mailing lists," as well as placing ads in media that include newspapers.

ANPA, in an Oct. 21 filing, said the plan "can be construed to include the provision of information services over monopoly telephone facilities."

—Barbara J. Friedman

TELECOMMUNICATIONS NOTES

- Viewdata Corp. and Scripps Howard plan to offer Pittsburgh residents a national videotex service paired with **electronically transmitted local news.**

Viewdata, owned by Knight-Ridder Newspapers Inc., operates the videotex service Viewtron. Scripps Howard owns The Pittsburgh Press. The joint venture is Viewdata's first partnership with a local newspaper to get under way. It is also Scripps Howard's debut in videotex.

The partnership expects to provide a package of Viewtron and local news on a trial basis early this month and to be fully operational in December.

A successful partnership in Pittsburgh would make Denver and Memphis, where Scripps Howard also owns dailies, likely sites for other joint ventures, the companies indicated.

- Courier Communications Corp., a subsidiary of the Courier-Journal and Louisville Times Co. is **combining public access videotex with coupons.**

The coupons come from printers attached to some terminals installed at welcome centers, state parks and other sites in Kentucky. The service, which is aimed at highway travelers, carries advertising.

- **Cowles Media Co.** launched a public-access videotex venture Oct. 7 with the installation of 15 terminals at high-foot-traffic locations in Minneapolis.

The service has signed 65 advertisers, including the Cowles' flagship newspaper, the Minneapolis Star and Tribune.

- The Washington Post Co. has agreed to **buy 53 cable systems** from Capital Cities Communications Inc. for $350 million. The systems have 350,000 subscribers in 15 Midwestern, Western and Southern states.

The systems are among the assets Capital Cities and ABC are selling in anticipation of the companies' $3.5-billion merger [presstime, April 1985, p. 11].

Hell introduces new "Pressfax" laser facsimile system!

High resolution "Pressfax" lends benefits to newspapers!

Pressfax P 100 Scanner

Superior quality...high resolution...speed...and reliability. These are the proven benefits of the new Pressfax flat-bed laser facsimile system from Hell Graphic Systems.

Pressfax gives you the capability to directly and rapidly transmit complete text and image pages for newspapers, magazines, and catalogs to any remote site for printing. With this advanced, easy-to-operate system working for you, you're assured of high-resolution black and white and four-color reproductions of transmitted images. In fact, Pressfax is the only system capable of scanning up to 175-line, high-quality color separations, and recording exact facsimiles in accurate register at a remote location.

Best of all, Pressfax can grow with your changing requirements. Your investment is always working for you...year after year. To find out more, contact your Hell branch office.

Guide will help advertisers obtain quality reproduction

ANPA and Newspaper Advertising Bureau staffs are putting the finishing touches on the "Advertisers Guide to Quality Newspaper Reproduction," prepared by the Standards Subcommittee of the ANPA Technical Committee.

To be available early next year, the guide is a consolidated, revised and updated version of what has come to be known as "Reports 10 & 11"—ANPA's guidelines for the preparation of black-and-white and color materials for newspaper reproduction.

The new guide is considered an important step in the endeavor to attract more national advertising to newspapers and to improve the quality of advertising reproduction as a whole, according to newspaper executives.

The project is a joint effort between the American Association of Advertising Agencies and the newspaper industry. The Technical Committee approved the revisions to the guidelines at its September meeting, then sent them to NAB for design, layout and publication preparation.

"The book gives advertisers the basic requirements for achieving optimum quality in the reproduction of their ads in newspapers," said Charles R. Blevins, vice president/production for Gannett Co.

For black-and-white ads, the guide covers the proper materials to use, photographic techniques, halftone preparation, special effects, layout and typography.

A major change is the inclusion of Standard Advertising Units for sizing.

For color advertising, the guide discusses changes brought about by advances in color separation technology and ink chemistry. It offers suggestions on color photography and ways advertisers can maximize the impact of their color ads.

Regarding production, the guidelines cover typography, overprints, vignettes, reverses, dropouts, register marks, corrections, quality control, color proofs and sequence.

A key section of the guide lists standards developed to provide advertisers with exact specifications for materials to be submitted to newspapers. The standards address the requirements for both the offset and letterpress processes.

According to the newspaper executives involved, the new guide should encourage consistency in the materials advertisers provide newspapers, in communications between individual newspapers and advertisers, and in newspapers' reproduction quality. ☐

Newspapers' preprints, ROP ads rate highly

A new, seven-market study bolsters newspapers' argument that advertising circulars are more effective when delivered as newspaper inserts than when delivered any other way.

The study also compared the effectiveness of ROP and newspaper inserts.

The research was conducted by Urban & Associates Inc. of Sharon, Mass., for The Times Mirror Co. of Los Angeles.

The first part of the study, comparing newspaper versus other means of delivering advertising circulars, concludes that "newspapers have a strong competitive advantange over direct mail and hand-delivery as the means by which advertisers can maximize the selling effectiveness of their circulars."

Among the key findings backing up that conclusion are that newspaper inserts are read by more adults—and read more frequently—than circulars delivered in any other way; that newspaper inserts are used more intensively than other inserts; and that adults prefer circulars inserted in the newspaper 2-to-1 over any other distribution system.

The study also noted that "only newspaper inserts appear to be used as a source of information for store-selection as well as product perusal."

In comparing ROP and newspaper inserts, the study found that "ROP appears to do a better job among the segment of shoppers who admit to being influenced by advertising."

It also concluded that "ROP and inserts are not substitutes for each other." Christine Urban, president of Urban & Associates, said "it would seem that consumers use circulars for product information and ROP when they want to make store decisions, perhaps closer in time to their actual shopping trip."

The two-phase study consisted of telephone interviews of 2,107 adults in seven markets, and 5,251 interviews with shoppers in those markets. ☐

Analyst Morton sees relatively lackluster fourth quarter

Gains in advertising revenue at many newspapers are proving modest in the third quarter. And fourth-quarter prospects are dimming.

The reasons are many, but high on the list are shifts in the advertising mix and a strong fourth quarter in 1984 that will make comparisons with this year tough.

This was the gist of comments on advertising offered by newspaper analyst John Morton at the annual meeting of the International Newspaper Financial Executives in Dallas Oct. 20-23. About 500 people attended the meeting.

Morton, of the Washington, D.C., brokerage firm Lynch Jones & Ryan, said the numbers used in his analysis were gathered mainly from "the major publicly owned newspaper companies." But they included "results from certain private companies whose data we have access to on a confidential basis through consulting."

Linage grew in the third quarter, but "most companies were disappointed with what happened in July and August . . . and early results from September show little, if any, improvement," he said.

Prospects for the fourth quarter, Morton added, "are not as bright as they once appeared to be."

Advertising revenue in the fourth quarter will be measured against 1984's strong performance, when there were six more shopping days between Thanksgiving and Christmas. Morton said he is not willing to predict "a blockbuster Christmas" given "current evidence."

Changes in the advertising mix have also contributed to slower advertising revenue growth, Morton indicated. "Newspapers typically are selling more linage and getting less revenue from it per line," he said. The major reason is "the burgeoning growth of preprints," for which, Morton added later, rates have been flat or even dropped.

Another drag on revenue growth comes from some newspapers' aggressive discounting of run-of-paper advertising. Morton called the programs "an important step" in holding ROP advertising over the long run, but he said the move "really doesn't improve the linage-revenue equation" and "may make it worse."

Morton also discussed classified advertising. While still "one of the fastest-growing categories," he said, it has not shown "the extraordinary gains" of 1984. ☐

Home videotex services are developing slowly, but business uses gain wide acceptance

BY CRAIG C. STANDEN

Last month I shared with you some of Charles Kinsolving's projections on the probable shape of the media business in 1995. Charlie is the Newspaper Advertising Bureau's vice president for marketing/new technology, and one of his jobs is to keep an eye on how new technologies might affect the future of our business.

This month I'd like to cover the outlook for home computers and telecommunications technology—and especially the marriage of these two technologies to create an electronic publishing industry that currently consists of electronic database services and videotex.

This is an area of particular importance to newspapers and newspaper people because daily newspapers collectively represent the largest database in the United States and because some of our profit centers—especially classified advertising—may be very vulnerable to this kind of electronic competition.

Certainly, the potential for large-scale electronic publishing is impressive. Today 14 percent of American homes have a personal computer. By 1995, that figure will be 34 percent. Most of these computers will be owned by families with relatively high personal incomes and high disposable incomes—the most desirable customers for any business. That represents a sizable potential market in itself.

In addition, there will almost certainly be continuing growth in demand for information databases in the business market for all kinds of industry. A survey of U.S. and Canadian businesses showed that nearly half of middle and top managers use computers on the job.

Companies that have learned to serve this market for business information, such as Mead Corp. with its Lexis and Nexis services, have found it highly profitable. And most of us in the newspaper business are aware of the way electronic database publishing of business information has transformed Reuters into a booming information company.

Many observers believe that as personal computer penetration grows in the home market, videotex will become the electronic information and transactional medium serving the home market.

So far, however, videotex and its allied technologies have received a lukewarm reception from consumers. The three commercial services serving the home market—Viewtron in South Florida (and gradually elsewhere), Gateway in Orange County, Calif., and Keyfax in Chicago—had less than 5,000 subscribers, well below original projections, the last time numbers were reported.

> *Many observers believe that as personal computer penetration grows in the home market, videotex will become the electronic information and transactional medium serving the home market.*

At the same time, the non-graphics information services, such as Dow Jones News Retrieval, The Source, and CompuServe, are meeting with wide acceptance in the business world, with approximately half a million subscribers already. So in terms of business services, videotex seems to have a bright future.

But for consumers, these services are apparently too high-priced at present, involving as they do special equipment, telephone charges and a monthly subscription fee. The systems also have proved to be fairly difficult for consumers to use, and much of the information they supply is needed only occasionally by the average consumer and is frequently available through other, more traditional sources.

Of course, continuing improvements in technology will solve some of these problems, but Charlie believes the key to videotex's success lies in the development of services and applications that are so necessary, useful and convenient for the consumer that he or she will gladly pay for them. As examples, he cites home banking, shopping, and message sending and receiving.

Videotex will be helped by the large number of banks using automatic teller machines, which are rapidly acquainting the average consumer with the ease and convenience of computerized transactions. We're also seeing a rapid increase in public-access videotex, with terminals providing information on travel, entertainment and shopping springing up in shopping malls, hotels and airports all over the country. Again, they should help videotex's future by familiarizing millions with the idea of interactive communication via computers and video terminals.

Overall, videotex as a medium for information retrieval looks like a good idea for business users and an unpromising one for consumers, while such uses as shopping, banking, bill-paying and perhaps other transactional uses as-yet unforeseen hold the eventual possibility of developing into a viable business.

Some crystal-ball gazers expect that by 1995 videotex will be used in anywhere from 20 to 50 million U.S. homes and may generate as much as $13 billion yearly in revenues. Don't bet on it, says Charlie, who estimates that videotex will be used in 18 million U.S. homes.

Another outgrowth of the electronic publishing boom is teletext, a technology that allows subscribers to display text information on their home TV screens by using a special decoder. Teletext is limited because there is no interactivity. Its development in the United States has been hampered by the lack of an agreed-upon technical standard.

Consumers probably will not pay for the teletext decoder and a monthly access fee. Therefore, teletext will survive only if it is advertiser-supported and if the decoders are built into TV sets. Charlie believes that teletext cannot be successful if positioned as an information-retrieval service, but that it has potential as a medium for directory-type information such as movie listings and restaurant guides.

Charlie and his department will be keeping an eye on all these potential threats to our advertising and informational revenues, and I'll report his findings to you from time to time. ☐

Standen, president of the Newspaper Advertising Bureau, is a regular contributor to presstime.

Laser diodes, infrared paper changing immagesetters

Two recent and related product introductions may augur the development of a new generation of high-resolution imagesetters—the devices that set both text and graphics.

Ultre Corp., a subsidiary of Xenotron Inc., introduced a photographic recording device with a resolution of 2,400 dots per inch that uses low-cost, laser diodes made of gallium arsenide as the film-exposing light source.

Also, Eastman Kodak Co. announced the availability of a new infrared-sensitive paper for imagesetters that is exposed by laser diodes.

According to newspaper experts, the announcements mean that newspapers will be able to upgrade their imagesetting technology to a simpler, more reliable and probably less expensive process.

"Low-cost, laser diodes should usher in a whole new era for computerized and digitally driven equipment in the graphic arts industry," predicted Thomas W. Frutiger, a director with Kodak's Graphics Imaging Systems Division. "Because they are so low-cost and compact, laser diodes will be used in many of the new typesetters, scanners, plotters and other equipment introduced in the future."

The advantages laser diodes offer mean the imagesetter that Ultre is marketing to other vendors and two models Xenotron is selling to newspapers are lighter and simpler in design than conventional imagesetters. And they are all less expensive.

According to Melville, N.Y.-based Ultre, its 72-pica-wide unit—without the necessary software to drive it—will cost about $15,000 each, significantly less than existing units.

Diodes are the size of a fingernail and cost about $50.

The least expensive of Xenotron's two imagesetters, a 72-pica model, costs $54,100 with all the necessary software. Its top-of-the-line, 94-pica device—with an 80-megabyte disk drive, preview monitor, Xerox XP24 laser printer and 300 fonts—sells for $125,975.

Kodak's new infrared phototypesetting paper, the company said, will cost about the same as standard paper and can be processed through conventional-film and rapid-access processors. The paper and film can be handled in a light-tight environment using a Kodak 7 (green) safelight. However, the company indicated that conventional phototypesetting paper processors using infrared sensors will have to be modified to accommodate the new paper and film.

Reportedly, the Kodak infrared paper has twice the resolution of conventional phototypesetting papers.

Besides Kodak, Japanese film maker Fuji has developed an infrared-sensitive paper that can be used in the imagesetter, according to several sources.

Comparison of lasers in use at newspapers

Lasers	Cost	Useful life (hours)	Film capability
Argon	$5,000-15,000	10,000	Wide variety
Helium-neon	$400-900	10,000	Red sensitive
Gallium arsenide	$30-50	20,000-100,000+	Infrared sensitive

Newspaper executives have welcomed the news about these developments. Still, some wondered why it took so long to join the technologies of laser diodes and infrared paper, both of which have been around for quite a while.

According to Walter Hansen, vice president and general manager of Ultre, there are three reasons:

- Established vendors tend to be conservative in the introduction of new products. "The major suppliers of graphic arts equipment do not develop things quickly."
- Vendors tend to be suspicious of developing technologies. "Laser diodes have been an evolving technology. They've become a lot more reliable in the last year." Some vendors claim the newest generation of laser diodes have useful lives in excess of 200,000 hours, or beyond the technological life of the imagesetter.
- The film suppliers had to be sure there would be a market and product for a new film. "We worked very closely with Kodak on the development of this product."

Lasers are now common components of typesetters, imagesetters, color scanners, and facsimile reading and recording devices used by newspapers. Most of those currently used are argon or helium-neon gas lasers.

Argon lasers cost $5,000 to $15,000, which includes the costs of ancillary support equipment, while helium-neon lasers cost $400 to $900. Both have a useful life of about 10,000 hours. (See chart.)

Laser diodes are being used increasingly in a variety of devices such as laser printers and facsimile receivers. In contrast to the bulky gas (argon and helium-neon) lasers, laser diodes are solid-state devices made of gallium arsenide, a semiconductor like silicon. The diodes are the size of a fingernail and cost about $50 each, with their manufacturers predicting the price will decline to $6 each within a year.

Vendors have leaned toward using gas lasers because of their ability to expose conventional, existing emulsions. However, gas lasers are relatively expensive, complex and dependent on external modulation devices that control the laser beam and need to be recalibrated periodically. The recalibration of lasers and relatively frequent replacement of lasers and ancillary devices have been sources of aggravation for newspapers.

Kodak's Frutiger also notes that argon lasers "are not very efficient or long-lived." In addition, they require cooling equipment.

"It's not just the cost of the gas laser that is involved," said Frutiger, "it's also the cost of the power supply, the light source and the modulator. Laser diodes don't require an expensive, trouble-prone external modulator. Instead, they can be modulated directly, simply by varying the current supplied to them."

Some sources also said the development of laser diodes will make helium-neon lasers obsolete in graphic arts applications.

The consensus among prepress experts is that the Kodak-Xenotron announcements will pressure other vendors of imagesetters to develop similar products, and the Ultre output recorder is but the first of a parade of new generation imagesetters.

"Almost every future imagesetter is going to be a raster output device," predicted Tony DiPentima, president of Raster Graphics Inc., a Mount Kisco, N.Y. graphic arts vendor that will be marketing its own version of the Ultre imagesetter. "That's where everything is going."

The infrared-film and laser-diode technology is "going to put a lot of pressure on the existing CRT typesetter vendors," he said. "The simplicity of the device will mean lower cost, and that's going to put a lot of pressure on everybody."

—Paul Kruglinski

Book outlines press-drive standard

The newly revised American National Standard Institute's "Safety Specifications for Printing Press Drive Controls" is available in booklet form from the National Printing Equipment and Supply Association.

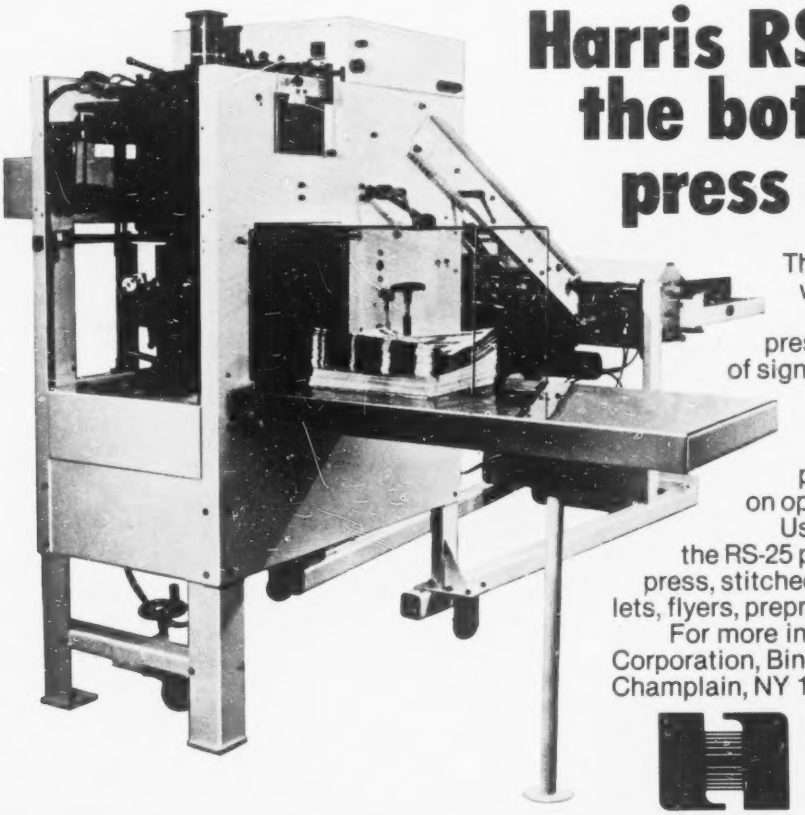
The voluntary standard provides a unified description of press-control buttons and how they function, and it incorporates technological advances made in the last few years in press controls.

However, the new standard, which took effect July 3, does not make obsolete the standard that was previously in effect, according to William D. Rinehart, ANPA vice president/technical.

Rinehart recommends that newspapers make the new standard or applicable parts of it a provision of press purchase contracts. The standard ensures that press control systems are uniform throughout the newspaper business.

ANPA was one of the contributors to the standard, which was promulgated by the American National Standards Institute Inc. [presstime, Sept. 1984, p. 59].

The book is available at a sliding-scale rate, beginning at $8 each for 1-10 copies, from the printing association's Member Services Department, 6849 Old Dominion Drive, Suite 200, McLean, Va. 22101. ☐



Harris RS-25 breaks the bottleneck at press delivery.

The RS-25 works directly inline with most standard press deliveries to produce counted, compressed, and compensated stacks of signatures, 4 to 96 pages, at rates up to 70,000 cycles per hour.

It significantly reduces manning requirements and improves stack quality so follow-on operations are more efficient.

Used inline with slitter/trimmers, the RS-25 produces stacks of glued-on-press, stitched-on-press, or unbound booklets, flyers, preprints, and other material.

For more information, write Harris Graphics Corporation, Bindery Systems Division, Champlain, NY 12919.

HARRIS GRAPHICS

TECHNOLOGY NOTES

- General Printing Ink and Flint Ink Corp. announced **higher prices for black letterpress and offset news ink** made with treated mineral oils and delivered in bulk [presstime, Oct. 1985, p. 40]. GPI's and Flint's black letterpress inks now cost 36 cents per pound, up 10 cents from the cost of ink made with untreated mineral oils. The new black offset inks are 47 cents per pound, up 8 cents.

  Flint said the price for its low-rub black letterpress news ink is 52 cents, while the low-rub offset ink costs 63 cents.

- The **Newspaper Hardware Users Group**, or NEWHUG—a group of newspaper managers concerned with the installation, operation and maintenance of electronic, electrical and mechanical systems—has formally organized. Members recently established bylaws and elected officials.

  For information about joining NEWHUG, contact Thomas J. Gengo, Houston Chronicle, P.O. Box 4260, Houston, Texas 77210; (713) 220-7980.

- Atex Inc., a supplier of front-end systems, has **signed a letter of intent** with AT&T to purchase computers, software and networking products for its Total Publishing Environment system.

  The Bedford, Mass., company said the products will form the basis of the so-called "page production node" of its proposed pagination system.

- Ferag Inc. announced it will **expand its plant** in Bristol, Pa. The supplier of newspaper distribution systems said the addition will be 34,000 square feet in size.

- ECRM, a supplier of graphic scanners that also has headquarters in Bedford, Mass., has signed an **original-equipment-manufacturer agreement** with Autologic Inc. of Newbury Park, Calif., a supplier of prepress systems. Autologic will market ECRM's PelBox Raster Image Recorder, a high-resolution output scanner.

Flexo continues to make gains at newspapers

The board of directors of Knight-Ridder Newspapers Inc. has approved the expansion of flexographic press programs at The Miami Herald and the Long Beach (Calif.) Press-Telegram. Knight-Ridder declined to reveal the amount of money committed to the expansion.

Ralph S. Roth

Currently, the Herald is running two M.A.N.-Roland flexo units with a color halfdeck; the Press-Telegram is running two Motter flexo units with a color halfdeck.

The expansion will add two units and a halfdeck to each of three letterpress lines at Miami and to the remaining letterpress line at Long Beach, said Ralph S. Roth, the company's vice president/production. The pages printed flexographically will effectively become front- and back-page "jackets" for the rest of the sections, which will be printed letterpress.

"We're through with the evaluation periods" to determine the practicality of printing newspapers flexographically, he said. "Now we're evaluating our investments."

Roth said the next logical step would be to add the same configuration of flexographic units to the last four letterpress lines at Miami, then start converting whole letterpress presses to flexography. However, he said this step will be taken only after existing problems with water-based inks and photopolymer plastic plates are solved.

Knight-Ridder is negotiating with both M.A.N.-Roland USA Inc. and Motter Printing Press Co. for the equipment. The installations could be completed by next summer, Roth said.

Also on the flexography front, The Washington Post, which was to have begun using its eight-unit Goss flexographic press to produce daily editions in September, has delayed taking that step because of problems in securing necessary platemaking equipment. The Post continues to use the press to print certain sections in advance [presstime, Aug. 1985, p. 52]. ☐

Publication delayed for color ink book

Publication of ANPA's new color ink book has been delayed.

Because of the federal "hazard communication" standard that takes effect Nov. 25, "All basic ink manufacturing ingredients are undergoing close scrutiny by the basic material producers as well as ink companies," said William D. Rinehart, vice president/technical of the Association.

"At this time, no one is certain which color pigments will be acceptable in the near future. Consequently, the Association will delay the printing of the new color ink book [presstime, Oct. 1985, p. 28] until at least the first quarter of 1986, to be certain the inks specified meet new federal requirements."

Because the current AdPro® and AD-LITHO™ inks do not contain heavy metal compounds, Rinehart said, no changes are expected in the three basic process colors. But spot color blending could be modified, he said. ☐

Color-separation scanners compared

Newspapers interested in purchasing color scanners may want to check the *1985 Color-Separation Scanner Comparison Charts.*

The 22-page booklet compares the various color scanners produced by the seven major vendors in the field.

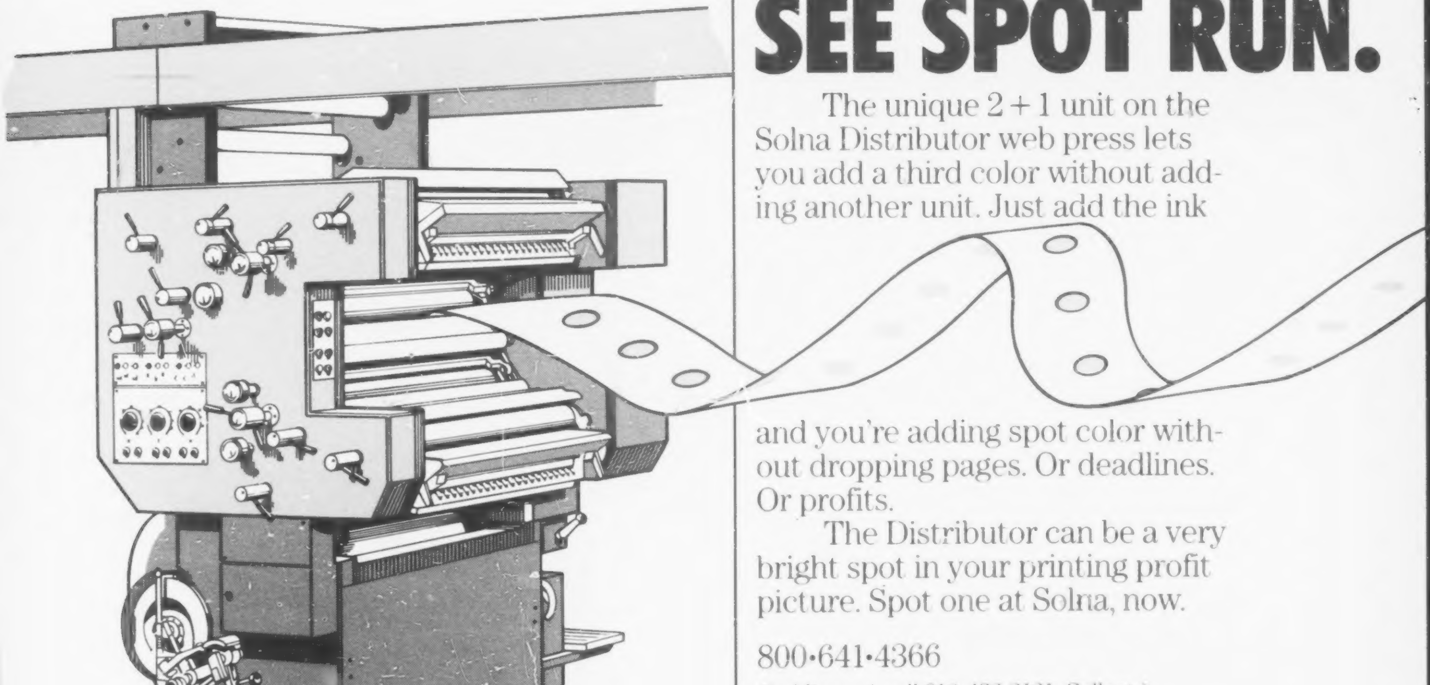
Among the 23 areas of comparison are prices, scan and magnification ranges, light sources, color correction capabilities, special effects, films used and resolution of separations.

The booklet also includes explanations of scanner technology and a glossary of terms.

The $25 booklet is available from Durbin Associates, 3711 Southwood Drive, Easton, Pa. 18042. ☐

TECHNOLOGY CALENDAR

- The Poynter Institute for Media Studies will hold a **conference on color in newspapers** Nov. 6-9 in St. Petersburg.
- The Society of Photographic Scientists and Engineers will hold a **symposium on prepress technology** Nov. 19-21 at the Marriott Crystal Gateway Hotel, Arlington, Va.
- A symposium for the **Digital Equipment Computer Users Society** will be Dec. 9-13 at the Disneyland Hotel, Anaheim, Calif.
- **Graph Expo '86 West** will be March 1-4 at the Los Angeles Convention Center.
- The sixth annual **Seybold Seminars** on electronic publishing systems will be March 9-14 at the Beverly Hilton Hotel, Los Angeles.
- The **Newspaper Hardware Users Group** will meet March 27-28 in Houston.
- The 58th Annual **ANPA Operations Management Conference & Exposition** will be June 21-25 at the Georgia World Congress Center, Atlanta.



SEE SPOT RUN.

The unique 2 + 1 unit on the Solna Distributor web press lets you add a third color without adding another unit. Just add the ink and you're adding spot color without dropping pages. Or deadlines. Or profits.

ACEJMC clarifies rate for mix of required J-courses

The journalism school accrediting agency has adopted a clarification of its controversial "75-25 rule" but rejected a proposal to automatically penalize schools that do not meet the standard.

At its semiannual meeting in Chicago Oct. 20, the Accrediting Council on Education in Journalism and Mass Communications also backed away from a plan floated at its last meeting to reduce sharply the voting representation of newspaper organizations [presstime, June 1985, p. 69].

Historically, the so-called 75-25 rule has referred to the balance ACEJMC believes undergraduate journalism students should maintain between liberal arts courses and professional journalism courses, respectively.

In its current literature, the council explains that "approximately 25 percent of a student's education should be in the journalism and mass communications unit and approximately 75 percent in general academic courses with an emphasis on the liberal arts and sciences."

The new clarification gets away from that 75-25 language and from the notion of the rule as a restriction on journalism coursework. Instead, it prescribes the minimum number of credits a student should have in non-journalism courses and specifies the kinds of courses these should be.

The language that was adopted was drafted by a committee chaired by John M. Lavine, publisher and editor of the Lavine Newspaper Group in Chippewa Falls, Wis., who represents the Inland Daily Press Association on the council. It says students must take a minimum of 90 semester hours in courses outside journalism or mass communication. With most schools requiring at least 120 semester hours for graduation, this achieves the desired 75 percent.

Within those 90 semester hours, students must successfully complete 65 in the liberal arts and sciences. The remaining 25 may be taken anywhere in the institution, so long as they are not journalism or mass communication courses.

In order for a school to be considered in compliance with the standard, the council said 95 percent of the students in the two graduating classes preceding an accrediting visit must meet the semester-hour criteria. However, it rejected a proposal that schools not in compliance be denied accreditation or put on probation. Penalties for violators will be decided on a case-by-case basis.

The move to reject the specific sanctions was led by Vernon A. Keel, who represents the Association of Schools of Journalism and Mass Communication. Keel, director of the School of Communication at the University of North Dakota, said the ASJMC executive committee was concerned that a school could be denied accreditation because it did not conform to the curriculum standard, regardless of whether it met ACEJMC's other 11 standards.

The council's refusal to adopt automatic penalties drew criticism from Claude Sitton, the American Society of Newspaper Editors' representative on the body. "This is an extremely disappointing development," said Sitton, editorial director and vice president of the News and Observer Publishing Co. of Raleigh, N.C. "It does not speak well for the future of the council, and it tells editors that if they are to assure themselves of the qualifications of prospective employees, they must examine the college transcript of every applicant and examine it very, very carefully."

ANPA's representative on the council also said the penalty provisions should have been adopted. "Whether (failure of

U. of Maryland wants to be 'model' school

The University of Maryland plans to establish its College of Journalism as a "model professional school" by 1990.

"We want to do something that I don't think is done very well anywhere right now," said Dean Reese Cleghorn at an Oct. 14 press conference. "And that is to really be serious about teaching the practices of journalism, with people on the faculty that have a lot of experience to do that, and at the same time do serious research."

The tendency of schools around the country, he said, is to do one or the other.

To implement the plan, the college's annual budget of $1 million will be increased by 50 percent. In addition, university officials approved a "selective admissions" program for the college to reduce enrollment about 50 percent. It currently has about 1,200 majors.

"I think that any university which tells you, 'You may cut your numbers of students in half at the same time we will add to your resources by half,' is serious," Cleghorn said.

At the press briefing, the school also revealed findings from a study directed by Associate Professor of Journalism Maurine H. Beasley, exploring the ramifications of the growing numbers of women in journalism. It noted that in 1977 the percentage of female journalism students nationally surpassed that of male students, and that it has increased steadily since then, reaching 59.2 percent in 1984-85 [presstime, Feb. 1985, p. 37].

The study concluded that female journalism students need to "acquire better basic writing skills, find suitable role models, learn how to persuade employers so they will not settle for less than men, and make plans for successfully combining family life with careers." ☐

Cleghorn (left) reviews plan with Washington Post columnist William Raspberry of the college's board of visitors.

the penalties] relaxes enforcement of the 75-percent rule remains to be seen in the actual performance of the ACEJMC visiting committees and in the final accrediting votes of the council," said James H. Ottaway Jr., chairman and president of Ottaway Newspapers Inc., Campbell Hall, N.Y.

However, ACEJMC President Joseph W. Shoquist said he agreed with the majority of the council that the penalty provisions made the standard "too rigid."

"We're not an enforcement agency," said Shoquist, managing editor-special projects of The Milwaukee Journal. "We are trying to measure the quality of journalism education, and strict numerical measurements are not necessarily the best way to do it."

He noted that ACEJMC "has historically resisted rigid measurements of quality. It's always taken the position that there are many factors involved in a fine journalism education, and they should all be considered in relationship to each other and in relationship to the mission of the school."

> "We're not an enforcement agency. We are trying to measure the quality of journalism education."

With regard to the possible restructuring of ACEJMC, a council committee scrapped its previous controversial proposal to reduce voting membership from newspaper organizations, largely because of the vocal opposition its plan sparked [presstime, Sept. 1985, p. 40].

The committee has been trying to come up with a way to restructure the council in light of what some say is the newspaper industry's overrepresentation.

Its original plan called for limiting the council's 10 representatives from print media to four votes. Under the new plan, all 10 would continue as voting representatives and the council would seek additional members from national organizations representing segments of the communications industry other than newspapers.

No formal vote on the new plan was taken. It is expected to be discussed again at the council's April meeting in San Francisco. *—Margaret Genovese*

New studies explore credibility, secret taping of calls, how photos help readership

BY GUIDO H. STEMPEL III

Philip Meyer pointed out in a presstime article in June [p. 26] that the ASNE credibility study contains some encouraging news about newspapers' credibility. Comparing figures from the current study with those from similar studies several years back, he found indications that public confidence in the press is on the upswing.

There's more of the same kind of good news in an article by Ralph S. Izard, professor of journalism at the E.W. Scripps School of Journalism at Ohio University, in the Summer 1985 issue of Journalism Quarterly.

In a nationwide telephone survey of 629 people, he asked about honesty and ethical standards of Americans in various fields. Clergy got the most "high" rankings on honesty and ethical standards, followed by physicians, police and journalists in that order. Then came business executives, advertising executives and members of Congress.

However, only 6.5 percent of the respondents said journalists were "low" in honesty and ethical standards. By comparison, 11.2 percent rated physicians low, 11.9 percent rated police low and 34.6 percent rated members of Congress low. Only clergy had a smaller percentage of low ratings.

Izard also found that 82.4 percent of the respondents felt journalists on the whole are ethical, 75 percent felt journalism is a profession which ranks high in public respect and 66.8 percent felt information provided by news media is, on the whole, accurate.

• • •

The legality of surreptitious recording of telephone calls by reporters is not altogether clear. The attitude of editors about this practice, however, is very clear.

A survey by S. Elizabeth Bird, journalism faculty member at the University of Iowa, found overwhelming opposition to use of hidden recording devices. The telephone survey covered managing editors or assistant editors of 150 randomly selected newspapers of more than 25,000 circulation. Eighty-three percent of the respondents disapproved of surreptitious recording; the great majority of those opposed cited ethical reasons.

On the other hand, most of those who approved use of hidden recorders did so on the grounds that it would help ensure accuracy.

Eighty-seven percent of the respondents said they had never authorized use of hidden recording devices, but a majority said they would consider it under some circumstances. Most apparently had in mind situations in which the intent was to uncover illegal activity.

It is interesting to note that the opposition among editors in this survey is stronger than that of the general public in the ASNE credibility study. In that study, 62 percent of the respondents disapproved of the use of hidden recording devices.

This study also appears in the Summer Journalism Quarterly, as does an article on legal liability in surreptitious recording.

• • •

A study by two journalism faculty members at Texas Christian University found that use of a related picture helped readership of the story it went with. However, the study by Rita Wolf and Gerald L. Grotta found that a portrait helped readership more than an animated action photo.

Their experimental study, reported in the Winter 1985 issue of the Newspaper Research Journal, used a front page that included four stories and a picture. There were several versions of the front page. The stories were the same, but the pictures varied. One version had a portrait of a dancer that went with a story about her. Another had an animated picture that went with the story.

The story was read thoroughly by 82 percent of those who saw the page with the portrait but by only 50 percent of those who saw the page with the animated picture.

Both pictures were the same size. The major difference seemed to be that the dancer's face was much larger in the portrait. That apparently made the portrait more eye-catching.

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

New study shows differences in views of journalists, public

Six months ago the American Society of Newspaper Editors released the results of a study that showed "three-fourths of all adults have some problem with the credibility of the media, and they question newspapers just as much as they question television."

In late October, the Associated Press Managing Editors Association provided the flip side of the equation: Nearly 60 percent of U.S. newspaper journalists say newspapers have a "credibility problem," and 85 percent place a "high priority" on improving it.

In parallel studies conducted by the same firm—MORI Research Inc. of Minneapolis—ASNE and APME highlight key similarities and differences among newspaper journalists and the public in their attitudes toward newspapers [presstime, May 1985, p. 56].

In general, the journalists trust newspapers more than the public, with 45 percent of journalists and only 32 percent of the public giving newspapers high marks for credibility.

But journalists tend to be more critical of themselves and their papers, with only 49 percent of them rating the "quality of reporting" at their newspapers good while 59 percent of the public rate it good.

Journalists also think their newspapers do a better job of following high journalistic standards than they do of fulfilling the "watchdog" role of the press.

Both journalists and the public agree that newspapers are concerned about their communities. Both also say papers emphasize bad news too much, and reporters frequently overdramatize the news.

However, they disagree on the value of investigative reporting, with 81 percent of the journalists and only 56 percent of the public rating it "very important." Moreover, 79 percent of journalists see investigative reporting as worthwhile regardless of the outcome, while 61 percent of the public say it is "worthwhile only when it leads to some actions being taken to correct the problem."

And they have personal differences. In some ways, "journalists are a different breed than the public they try to inform and serve," says the APME study, with "gaps that may cause misunderstandings" in key areas, including journalists' preference for the role of "detached observer," their "transience" instead of having strong community ties, and differences in demographics and ideology.

Preference for news sources differed markedly also, with 97 percent of the newspaper journalists and only 36 percent of the public preferring newspapers as the source for local news. Television is preferred by 50 percent of the public.

For national and international news, 61 percent of the journalists prefer newspapers, compared with only 18 percent of the public. For this news, the public prefers television by a wide margin—72 percent, or 4 to 1 over newspapers.

In conducting the APME survey, MORI Research developed a procedure for random sampling that was aimed at reflecting the papers read by respondents to the earlier ASNE survey.

A total of 1,929 journalists were sent questionnaires and 1,333 (69 percent) responded. Just over a third were news editors and just under a third were news reporters, with the rest almost equally divided among feature reporters, feature editors, and photographers or graphic artists. ☐

Media take a hard look at terrorism coverage

News media coverage of terrorism incidents is a hot topic in media circles, as evidenced by the number of media organizations discussing the issue in recent weeks.

The Washington, D.C., chapter of the Society of Professional Journalists, Sigma Delta Chi, sponsored a panel discussion Oct. 17 on coverage of terrorism and the issue of voluntary press coverage guidelines.

The Radio-Television News Directors Association held a workshop on terrorism and the news media Oct. 18 in New York City.

The ANPA/American Bar Association Task Force was expected to discuss the issue at its Oct. 24-25 meeting in Baltimore. The discussion was requested by ABA President William W. Falsgraf [presstime, Aug. 1985, p. 37].

In a related development, at its Sept. 24 meeting, the Press, Bar and Public Affairs Committee of the American Society of Newspaper Editors said it is willing to discuss the ramifications of press coverage of terrorist activities with the ANPA/ABA Task Force and another ABA-related group, the National Conference of Lawyers and Representatives of the Media. But the ASNE committee said it is "unequivocally opposed to establishing guidelines."

The ANPA Convention Arrangements Committee is discussing the possibility of including a session on terrorism on the program of the ANPA Convention in San Francisco April 21-23. ☐

NASA launches 'journalist in space' program

The National Aeronautics and Space Administration unveiled a "journalist in space" project Oct. 24.

The announcement that a journalist will be part of a future space shuttle mission came on the heels of a project meeting a week earlier at The Newspaper Center in Reston, Va., sponsored by the Association of Schools of Journalism and Mass Communication to discuss the selection process. The meeting was attended by 14 other journalism-related organizations, including ANPA.

ASJMC President Robert L. Hoskins, dean of Arkansas State University's College of Communications, said his association will contract with NASA in screening candidates for a space shuttle flight, which is expected to be scheduled in the fall of 1986 or spring of 1987 [presstime, Sept. 1985, p. 42].

Hoskins has appointed Albert T. Scroggins, dean emeritus of the University of South Carolina College of Journalism, as project director.

Journalists who wish to be candidates for the space shuttle mission will apply to the project office in Columbia, S.C., Hoskins said.

He said a national panel will select five journalists from 40 semifinalists for NASA's consideration. NASA will then evaluate those individuals and select the first journalist in space and a backup. ☐

Largest API seminar schedule includes budgeting, libraries

A record 36 seminars have been scheduled by the American Press Institute in 1986, including two new offerings.

The two new seminars are:

- **The Newspaper Budgeting Process,** May 4-7—for all department managers, especially those about to be introduced to a newspaper company's budgeting process.
- **Technology and the Newspaper Library,** Sept. 14-17—for newspaper librarians, and for those responsible for planning and developing an electronic news library system.

Two seminars introduced this year will be repeated in 1986: Newsroom Administration and News-Editorial Management for Non-News Executives. The latter is a cross-training program to provide a working knowledge of newsroom operations for those in advertising, circulation, marketing or general management.

Other seminars scheduled for API's 40th year of operation [presstime, Sept. 1984, p. 57] are:

- **City Editors** (for newspapers over-75,000 circulation), Jan. 5-15
- **Developing Management Skills,** Jan. 12-17
- **Publishers and Chief Executives** (for newspapers under-75,000 circulation), Jan. 19-24
- **Circulation Managers,** Jan. 19-29
- **Newspaper Design,** Feb. 2-7
- **Advanced Reporting,** Feb. 2-7
- **Editing the Weekly Newspaper,** Feb. 9-14
- **Executive Editors and Managing Editors** (for newspapers under-75,000 circulation), Feb. 16-26
- **Sunday and Weekend Editors,** March 2-7
- **Community Weekly Advertising Executives,** March 9-14
- **Management and Costs** (for newspapers over-75,000 circulation), March 16-26
- **Advertising Executives** (for newspapers over-75,000 circulation), March 23-28
- **Newspaper Production and New Technology,** April 6-11
- **News Editors and Copy Desk Chiefs,** April 13-23
- **Suburban Weekly Advertising Executives,** April 20-25
- **Sports Editors,** April 27-May 7
- **Managing Computer Systems,** May 11-16
- **Management and Costs** (for newspapers under-75,000 circulation), June 1-11
- **Newsroom Administration,** June 8-13
- **Effective Writing and Editing,** June 15-20
- **Business and Economic News Coverage,** June 22-27
- **Management of the Weekly Newspaper,** June 22-27*
- **Promoting the Daily Newspaper,** Sept. 14-19
- **Advertising Executives** (for newspapers under-75,000 circulation), Sept. 21-Oct. 1
- **Journalism Educators,** Oct. 5-10
- **Circulation Managers,** Oct. 12-22
- **Classified Advertising Managers,** Oct. 26-Nov. 1
- **Feature and Lifestyle Editors,** Oct. 26-Nov. 5
- **City Editors** (for newspapers under-75,000 circulation), Nov. 9-19
- **Picture Editors and Graphics Editors,** Nov. 30-Dec. 5
- **Executive Editors and Managing Editors** (for newspapers over-75,000 circulation), Nov. 30-Dec. 10
- **Developing Management Skills,** Dec. 7-12*
- **Marketing the Daily Newspaper,** Dec. 14-19
- **News-Editorial Management for Non-News Executives,** Dec. 14-19.

Thirty-two of the seminars will be for daily newspapers and four for weeklies. In addition, weeklies may nominate participants for the two Developing Management Skills seminars.

Except for the two seminars denoted by an asterisk, the sessions will be conducted at API headquarters in Reston, Va., next door to The Newspaper Center. Management of the Weekly Newspaper will be at Stanford University, and the second Developing Management Skills seminar will be at Kellogg West Conference Center in Pomona, Calif.

Tuition will be $715 for a nine-day seminar, $625 for a six-day seminar, $575 for a five-day seminar and $350 for a three-day seminar. Room and meal charges are billed to the newspaper after the seminar at API's special contract rate with a Reston hotel.

To participate in an API Seminar, an applicant must be nominated by a newspaper's principal executive. Additional information and forms can be obtained from API Director Frank Quine, 11690 Sunrise Valley Drive, Reston, Va. 22091.

Press freedom traced to English common law

Leonard W. Levy's *Emergence of a Free Press* is a "revised and enlarged edition" of his *Legacy of Suppression*, published in 1960.

Levy, a Pulitzer Prize-winning historian and a professor at Claremont (Calif.) Graduate School, continues to argue that it was not "the intent of the American Revolution or the Framers of the First Amendment to abolish the common law of seditious libel."

Further, while the evolution of libertarianism may have led to wide public acceptance that "Congress shall make no law . . . abridging the freedom of speech, or of the press," Levy contends that these words, while "boldly stated," are—in a historical context—"narrowly understood."

He says that these freedoms have roots in English common law, which means that they were treated as a "parliamentary right" rather than a "civil right."

However, the author concludes: "What they (the framers) said is far more important than what they meant. It is enough that they gave constitutional recognition to the principle of freedom of speech and press in unqualified and undefined terms."

The 384-page, hard-cover book is available for $29.95 from Oxford University Press, 200 Madison Ave., New York, N.Y. 10016.

A publication designed to aid writers, editors

"Clarity, style and accuracy" are the key elements of good writing. As for good editing, it "is like population control, without the controversy,"

Elwood M. (Woody) Wardlow, associate director of the American Press Institute in Reston, Va., assembled these and other suggestions for good journalism in *Effective Writing and Editing: A Guidebook for Newspapers*.

To facilitate the writing process, Wardlow offers advice on the following: Gathering, analyzing and organizing material, vocabulary, spelling, rewriting, using reference sources, readability and more. The one-time managing editor/administration of the Buffalo Evening News also offers tips for editors.

The soft-cover, 60-page publication is available for $2. Copies may be ordered from the American Press Institute, 11690 Sunrise Valley Drive, Reston, Va. 22091.

More dailies test for drug use

More newspapers are giving pre-employment physical examinations that include a drug-screening test. At the same time, questions are being raised at newspapers about screening for the virus that causes acquired immune deficiency syndrome—AIDS.

Within the past 12 months, at least five dailies in three communities have begun testing prospective new hires—as part of a general physical examination—for indications of drug use. They include: The Daily Herald of Arlington Heights, Ill., the Fort Lauderdale (Fla.) News and Sun-Sentinel, and the Baltimore Sunpapers (only for drivers and those working with machinery).

Also, the Los Angeles Times will begin screening job applicants for drugs this month.

As recently as mid-1984, human resources experts were able to name only one newspaper, The New York Times, that was analyzing urine samples for drugs as part of its regular physical exam for new employees [presstime, June 1984, p. 8]. Another newspaper operation, The San Diego Union and The Tribune, began such testing in 1983 but did not make it public until this year.

At The Daily Herald, which began its drug-testing program two months ago, Human Resources Manager Judith A. Szabados reports that other companies in the Chicago suburb of Arlington Heights are screening out about 10 percent of job applicants because of drug use.

The Daily Herald's employment application form states that there will be a drug-screening test and that failure to pass it could result in disqualification for a job. The examinations, done by Humana-Med First, provide next-day results, says Szabados.

In addition to the newspapers that have begun drug testing, Knight-Ridder Newspapers Inc. has started screening for drugs during pre-employment physicals for positions at its corporate headquarters in Miami, reports Douglas C. Harris, vice president/personnel.

While "we're looking at it,' there is as yet no company policy applying to the newspapers in the group, Harris says.

An expert in the field was recently invited to brief a newspaper audience on how "Employers are Getting Tough About the Use of Drugs and Alcohol in the Workplace."

Allen W. Teagle, an attorney with the San Francisco law firm Littler, Mendelson, Fastiff & Tichy, told the Industrial Relations Bureau Management Conference in San Diego Oct. 2 that employers should "make sure people who are going to be tested know what they're going to be tested for and what the employer is going to do with the results." Teagle also said he would not take action on the basis of one unfavorable test result. "My view is that you ought to retest them."

The increase in pre-employment testing for signs of drug use is taking place in an industry that has not extensively used physical examinations for prospective employees. A late-1981 personnel information survey of ANPA members found that only 21.5 percent of the 543 respondents did so.

Blood-pressure testing is being joined by drug testing in some newspapers' physical exams.

Despite the recent rise in drug testing for people applying for newspaper jobs, personnel relations specialists in the industry say they know of no paper that is routinely testing previously hired employees for drugs.

Nor is any newspaper believed to be testing for the AIDS virus.

Dr. Howard R. Brown, medical director of The New York Times, notes that tests for AIDS are still in the developmental stage, with false positives and negatives. "There is no indication that an employee with AIDS constitutes a health risk in the workplace," he adds.

Dr. Wayne O. Buck, medical director of the Los Angeles Times, agrees. There is "no scientific evidence at present that a person can catch AIDS by working alongside a person who has it," he says.

Says John B. Jaske, Gannett Co.'s vice president/labor relations and assistant general counsel: "Because medical opinion is that [AIDS] is not communicable in the workplace, there is no reason to test for it.

"The only rationale that could be advanced at this point for testing would be that if medical opinion changes as we learn more about the disease. Then we would have a need to know who has it so we could take appropriate action."

But even now, some newspaper personnel directors are wondering how they would handle a situation where employees refuse to work with a fellow employee who contracts the disease.

Buck says that would be "a personal aversion not based on scientific facts."

The federal Centers for Disease Control in Atlanta is "in the process" of forming a task force of medical authorities, representatives of employers and labor unions, and other interested groups to prepare a set of guidelines for employers on how to deal with the disease in the workplace, according to Betty B. Hooper, a public affairs specialist at CDC.

There is "no evidence of any casual transmission" of AIDS, Hooper adds.

"If employers can test for drugs, they probably can test for AIDS in the absence of some statute that would prohibit it," says L. Michael Zinser, a partner in the law firm of King, Ballow & Little in Nashville. "Of course, drugs are illegal and having AIDS isn't."

There is at least one state statute that prohibits testing of job applicants and employees for the virus. Wisconsin has passed such a law. It also bans insurance companies from using the test in making policy coverage decisions.

In addition, California has a confidentiality law that imposes fines of up to $10,000 and/or imprisonment for up to one year for willful disclosure of the results of the AIDS test. Also, results cannot be used to determine suitability for employment or eligibility for insurance.

And a Los Angeles ordinance prohibits employment discrimination on the basis of AIDS.

The Centers for Disease Control reports that as of Oct. 14, AIDS had struck 14,125 Americans and that 7,157 of the victims had died—an increase of 291 cases and 102 deaths over the previous week.

Labor specialists begin analysis of Philadelphia settlement

Labor specialists say it's too early to assess the significance for the newspaper industry of the hefty wage and benefits settlement of the recent 46-day strike against Philadelphia's daily papers. "It's a complex package to analyze," said one.

Agreeing to the package were Philadelphia Newspapers Inc., publisher of The Philadelphia Inquirer and Philadelphia Daily News, and the nine unions that struck Sept. 7 [presstime, Oct. 1985, p. 50]. The dailies resumed publication Oct. 23, one day after the last of the unions ratified the contracts.

The new four-year agreements provide an average of 6 percent a year in wage and benefit increases to the 4,112 union-represented employees. The $150 package amounts to $45 per week per employee retroactive to last Sept. 1, $30 effective Dec. 1, 1986, $30 on Nov. 1, 1987, another $30 Nov. 1, 1988 and $15 on Feb. 15, 1989. However, each union has some discretion in allocating the wage package among its members.

"We think it's a good contract for PNI and a good contract for the unions," said Ted R. Rilea, vice president/labor relations.

Newspaper wage settlements with mechanical and driver unions, not including benefits, have been averaging about 4.5 percent this year, according to the research staff of ANPA's Human Resources Department.

"If other unions follow the Philadelphia lead," said Paul J. Lizundia, secretary/manager of the Pacific Northwest Newspaper Association in Portland, Ore., "it would be a tough bargaining year.

"I do not feel it would be in the best interests of either unions or the companies to do so, however, because it appears the union gains do not outweigh the lost wages and lost business to the company. It would appear that the Philadelphia strike experience really proves that cooperation between companies and unions is far better than confrontation."

"The Philadelphia strike and settlement is reminiscent of the large city negotiations of the '60s," observed ANPA Vice President/Human Resources Roy W. Anderson. "The challenge for management and labor is to restore PNI's previous market position and grow at a rate to absorb the costs of the settlement by creating a greater public acceptance."

PNI, which is owned by Knight-Ridder Newspapers Inc., said it lost $50 million in advertising and circulation revenues during the walkout. William W. Broom, PNI's vice president/public affairs, acknowledged that readers may have been lost during the lengthy strike, but he said the company is making an all-out effort to "win them back with the quality of the product."

In the bargaining process, the company on Oct. 15 offered its $150, four-year package while the Philadelphia Council of Newspaper Unions was asking for $145 over three years.

On Oct. 18, delivery truck drivers represented by the Teamsters voted 175-163 to reject the company's offer, despite the fact that five other unions had already approved it.

However, in another ratification vote four days later, the drivers approved the same contract, 248 to 132. The agreement was then ratified by employees represented by the other three unions that had not previously approved it—The Newspaper Guild, the International Typographical Union and an independent mailers' union.

Before the strike began, each union agreed that none would return to work unless all accepted their contracts.

At one time, Pennsylvania Gov. Richard L. Thornburgh entered the strike picture, writing a letter to Knight-Ridder Chairman and Chief Executive Officer Alvah H. Chapman Jr. and the presidents of the international unions. The strike posed a threat to the economic well-being of the state's largest metropolitan area, said the governor, who urged the leaders to "personally review" the situation.

Chapman responded with a letter stating that "all of us in Knight-Ridder are concerned about a timely end to what we feel is a very unnecessary and unfortunate strike."

(The governor's intervention recalled a move by former Michigan Gov. George Romney, who at one point during a 1967-68 strike against the Detroit dailies threatened special legislation to force compulsory arbitration of the dispute. Romney subsequently left the negotiations in the hands of state and federal mediators.)

The 46-day cessation of publication in Philadelphia was the longest on the U.S. mainland since a 54-day suspension of the St. Louis Post-Dispatch in 1978-79.

Union's bid to represent home delivery personnel rejected by NLRB

The National Labor Relations Board's regional director in Boston has dismissed a representation petition filed by a union seeking to represent employees of the home-distribution subsidiary of The Boston Globe.

The Boston Globe Employees Association, an independent union, sought to represent certain workers, including assistant managers and assistant-managers-in-training known as "road persons," at Community Newsdealers Inc., a wholly owned subsidiary of the Globe Newspaper Co.

However, Regional Director Robert S. Fuchs found that the assistant managers and road persons were ineligible to be included in the bargaining unit because they are—as contended by the company—supervisors. Fuchs based his ruling on their supervision of both delivery drivers and youth carriers, who were held to be employees rather than independent contractors.

For a union to obtain a representation petition, it must present signatures from at least 30 percent of the employees in the proposed bargaining unit. Based on his finding of the supervisory status of the assistant managers and road persons, Fuchs ruled that the union had failed to show sufficient interest to warrant further proceedings in either the unit proposed by the union or in a larger unit he found to be appropriate.

There were about 215 employees in the unit sought by the union and approximately 790 individuals in a unit suggested by the company.

The union did not appeal the decision.

(Community Newsdealers Inc. and Boston Globe Employees Association, Case No. 1-RC-18479) ☐

Correction

The October issue of presstime (p. 51) mistakenly reported that newsroom employees of The Boston Globe voted to affiliate with The Newspaper Guild. The newsroom involved was that of The Boston Herald. All non-exempt, white-collar functions at the Globe are represented by The Boston Globe Employees Association. Presstime regrets the error.

Arbiter upholds 3-day suspension of reporter for signing agreement with news source

The Youngstown (Ohio) Vindicator "displayed patience" and "restraint" in giving a reporter a three-day suspension for signing a confidentiality agreement with a news source without his supervisor's knowledge, an arbitrator said.

Arbitrator Robert J. Asman rejected the contention of Local 11 of The Newspaper Guild that the disciplinary action was without "just cause."

The suspension was imposed after it was discovered that the reporter two years earlier had signed the agreement with Hunt Energy Co. of nearby Salem, Ohio, in return for his exclusive right to the news that an out-of-state company soon would purchase a portion of Hunt.

The Nov. 6, 1981, agreement, signed by the grievant over the Vindicator's name and by a Hunt official, stated that information released "shall be held in the strictest confidence until approval for publication is given by Hunt," and that "Hunt retains the right to review any information before its public release." The agreement added that the Vindicator "will be held liable for any early release of material both visual and printed which can or will be detrimental to certain business transactions now being conducted by Hunt involving the SEC and/or other parties involved."

The reporter, who had started at the paper in 1971 as a summer intern, subsequently wrote a story about the acquisition. He informed an assistant managing editor that he had a front page story in the works and had agreed to hold it until the event took place. He did not, however, disclose that he had signed a written agreement.

The story appeared on page 1 after the acquisition agreements were executed. Arbitrator Asman noted that the transaction took place in an industrial area "struggling with poor economic conditions in which any impending revitalization movement would be considered good news to the community."

Two years later, another reporter working on a Hunt follow-up story discovered the confidentiality agreement in the Hunt file and showed it to the city editor. The document spurred reactions in the newsroom described as "shocked" and "mind-boggling," the arbiter noted. The grievant was then suspended for three days.

The union argued that the grievant thought the agreement did not differ essentially from numerous similar agreements exchanged orally.

But the Vindicator contended that an "unwritten rule" prohibited the type of agreement signed by the grievant because it exposed the company to liability and sacrificed the newspaper's right to the final say about what it prints.

Asman said the argument "most persuasive" in support of the discipline imposed was the confidentially agreement itself. "Each specification of the agreement is loaded with implications and it seems to me that the company could not escape liability for its breach if any of those conditions had been broken. The language that a newspaper would dread most, I am sure, is the expression 'approved for publication.' Any oral understanding carrying such an implication would be prohibited out of hand."

The reporter's "lapse of good judgment" in signing the agreement left him and the company "vulnerable to any number of unsavory episodes," the arbiter said.

NLRB election

Houston Chronicle, ITU: In a rerun of a 1984 decertification election, composing room employees voted 86-46 against further representation by Typographical Union No. 87. The second election was conducted Sept. 26 after the NLRB set aside the first election in which employees had voted 75-71 to retain the union as their bargaining representative [presstime, Aug. 1985, p. 49].

(NLRB Case No. 23-RD-556)

Additional arbitration awards

New York Post, Guild: Milton Friedman ruled that the company violated the labor agreement by subcontracting computer work previously performed by bargaining-unit employees.

New York Times, GCIU: Richard Adelman converted to four-month disciplinary suspensions the discharges of two pressmen for allegedly stealing coupons.

Philadelphia Inquirer and Daily News, Guild: James C. Duff ruled that the company did not violate the labor agreement by retaining the services of a 24-hour answering service in Nebraska to take calls from new subscribers.

San Jose (Calif.) Mercury News, GCIU: Gerald R. McKay found the company did not violate the labor agreement when it changed to a staggered lunch-period system for pressroom employees; however, he found the company did violate the agreement by eliminating a five-minute wash-up period.

San Jose Mercury News, Guild: Patrick J. Boner ruled that photographers who attended a voluntary staff meeting at a downtown hotel were not "working" and therefore not entitled to overtime pay, but that some of them were entitled to "call-back" pay.

San Jose Mercury News, Guild: Gerald R. McKay sustained the discharge of a janitor for "sneaking off" for several hours during his work shift.

Sheboygan (Wis.) Press, Guild: Joseph B. Kerkman found that a circulation clerk who was unable to return to work after expiration of her sick leave was entitled to $880.60 in "dismissal" pay.

Toronto Star, Guild: Kenneth P. Swan ruled that the permanent layoff of a garage department body mechanic did not violate the labor agreement.

Vancouver (British Columbia) Province and Sun, IBEW: Stephen Kelleher found that the company violated the electricians' labor agreement by contracting with a firm to install lighting fixtures; at the same time, he dismissed the union's grievances pertaining to maintenance work on video display terminals and computers.

Washington Post, ITU: Laurence E. Seibel found that a mailroom helper had "constructively resigned" by accepting a $90,000 settlement of a workers' compensation claim, and that the company's subsequent refusal to rehire him did not violate the labor agreement.

Human-resources experts ponder employee relations in year 2000

The year 2000 is no more distant now than 1985 was in 1970, when the federal Environmental Protection Agency began operations, the Occupational Safety and Health Act was approved by Congress, and an ANPA Task Force on Broadcast and CATV Ownership was appointed.

Now a 12-member team of newspaper human-resources specialists is considering employee relations issues in 2000. The group comprises a task force of ANPA's Human Resources Committee's personnel subcommittee.

While there are forces and trends that will affect all employers, the task force is concentrating on what the personnel environment in all newspaper departments will be like in the future.

James D. Boswell, vice president/employee and public relations of the Los Angeles Times, said an initial report of the task force's efforts will be made in January at the annual ANPA Labor and Personnel Relations Conference in San Diego.

Boswell said the task force will share its initial findings with other newspaper human-resources specialists to get the broadest possible outlook.

To focus collective thinking, the task force invited to its first meeting Joseph F. Coates, president of J.F. Coates Inc., a Washington, D.C., research organization specializing in the study of the future.

At the Sept. 24-25 brainstorming session in Washington, D.C., Coates discussed the future implications of women and immigrants in the work force, dual-income families and child care, changing social values, and "telematics"—the technology of telecommunications, computers and associated devices.

"Technology is wiping out middle management," Coates said, as computers eliminate the need for people to analyze information. Acquisitions and mergers also affect the workplace, because "you don't need two of everything," he said.

Court upholds arbitration award for Chicago Tribune

The Chicago Tribune did not violate its labor agreement with the pressmen's union by posting jobs that could be claimed on the basis of company seniority rather than by shift seniority, the 7th U.S. Circuit Court of Appeals ruled.

The decision upheld an arbitration award in favor of the newspaper [presstime, Aug. 1983, p. 28].

Web Printing Pressmen's Union No. 7 appealed the arbitrator's decision to the 7th Circuit after it had been affirmed by a U.S. District Court.

The appellate court found the newspaper's 1982 move to a new production facility and its need for a more flexible work crew were sufficient reasons to change from the unwritten past practice of shift-wide seniority to the new company-wide seniority system.

The court noted that the Tribune's new offset presses required retraining of pressmen, and that the change in the seniority system gave the company flexibility to put together effective work crews.

Even though the old seniority system was an established practice, it "did not automatically become enshrined as part and parcel" of the labor agreement, the court said.

The pressmen's union is one of three unions that struck the Tribune July 18 in a dispute over new contract terms.

(Chicago Web Printing Pressmen's Union No. 7 v. Chicago Newspaper Publishers Association, USCA7 No. 84-2720)

Recent contract settlements

Chicago Sun-Times, GCIU: Three-year agreement covering pressroom employees; retroactive to April 3, 1985.

Dallas Morning News, ITU: Three-year agreement covering composing room employees; retroactive to May 1, 1984.

Memphis Commercial Appeal, ITU: Two-year agreements covering composing room and mailroom employees; retroactive to March 9, 1985, and Jan. 1, 1985, respectively.

(Details in November 1985 ANPA Labor & Personnel Relations Letter.)

Unit limited to newsroom employees found inappropriate

Local 3 of The Newspaper Guild withdrew a petition to represent editorial employees of 23 suburban weeklies in the Minneapolis/St. Paul area after the NLRB's regional director in Minneapolis found the appropriate bargaining unit included all non-mechanical employees.

Regional Director Ronald M. Sharp upheld the contention of Minnesota Suburban Newspaper Co. that a unit limited to news department employees was inappropriate.

Sharp noted that the board has "traditionally" found units of all non-mechanical employees to be "optimal" in the newspaper industry. The rationale behind the board's policy, he said, is that all departments of a newspaper must engage in a unified and coordinated effort to produce the paper. Thus, he noted, all non-mechanical employees share "a community of interest."

The board has found single major departments of non-mechanical employees appropriate only in cases where there are "distinct departmental lines," which he said were "non-existent" in the company's operation.

(Minnesota Suburban Newspaper Co. Inc. and The Newspaper Guild of The Twin Cities, Case No. 18-RC-13733)

Newspaper upheld in pension computation

The U.S. Supreme Court in October let stand a decision upholding The Wilkes-Barre Times Leader in its computation of pension benefits for six former employees who retired while they were on strike against the newspaper.

The Times Leader continued publication after four unions struck in 1978 over the terms of new labor agreements. Four of the plaintiffs retired in 1979 and two in 1980. They sued the newspaper company after their pensions were reduced by including the strike period (when they were not being paid) in the calculation of their average annual compensation for the five-year period before retirement.

A lower court ruled that the trustees of the pension plan did not act "arbitrarily or capriciously" and had not violated any provisions of the federal Employee Retirement Income Security Act [presstime, March 1984, p. 45].

(Edwards v. Wilkes-Barre Publishing Co. Pension Trust, 85-16)

UTU, U.S. railroads have tentative pact

A tentative labor agreement has been reached between the United Transportation Union and U.S. railroads. The agreement is subject to UTU ratification.

Details were withheld pending ratification.

The UTU and railroads had reached tentative agreement last June, but it was not ratified by the union, and President Reagan subsequently appointed an emergency board to avert a strike [presstime, Oct. 1985, p. 58].

If the agreement is not approved this time, the union will be free to strike. ☐

Justice urges denial of rail merger

The Antitrust Division of the U.S. Justice Department has urged that the Interstate Commerce Commission disapprove the proposed merger of the Santa Fe and Southern Pacific railroads.

Approval would "contravene the mandate of the Staggers Act to rely upon and therefore to preserve rail competition," the Justice Department said.

The Staggers Act, enacted in 1980, is the so-called rail-deregulation act. It is credited with restoring financial health to the nation's railroads. ☐

Norfolk Southern issues warning on Conrail

Norfolk Southern Corp. has restated its threat to rescind its bid for purchase of Conrail, complaining that Congress has delayed consideration of the purchase long enough.

"Time for talking about Conrail is over," Robert B. Claytor, Norfolk Southern chairman and chief executive officer, said in late October.

Norfolk Southern's offer officially expires at the end of this year [presstime, Aug. 1985, p. 58]. ☐

Shipping hampered

The St. Lawrence Seaway has been blocked because of the collapse in mid-October of a 150-foot section of concrete wall along one of the seaway's 54-year-old locks.

Mattson suggests two-tier price structure for newsprint

The concept of a two-tier price structure for newsprint—recognizing a dichotomy in paper quality and charging more for the better grade—may be an idea whose time has come, according to the president and chief operating officer of The New York Times Co.

Speaking to a seminar attended by newspaper and newsprint executives, Walter E. Mattson said the changing nature of the newspaper business is having its effects on the relationship between newspapers and their newsprint suppliers.

Newspapers have recognized that they need to turn out high-quality products to meet advertisers' expectations, he said, and printing on better quality newsprint is part of the drive for higher quality.

"It's a big deal because out there in the world of communications there is fierce and increasing competition for the time of consumers and for the dollars of advertisers," Mattson said. "Newspapers have been struggling to hold their ground on both fronts. As a matter of self-perservation, the outcome of that struggle must be of great concern to newsprint producers."

Advertising and newsprint are "two sides of the same coin," he noted. "Advertisers are no longer satisfied with the same newspaper that looked like the one they used in yesteryears. They want a newspaper that looks like a magazine. They want a page that is a splendid setting for their expensive advertising."

USA Today has taught advertisers to expect consistent reproduction on high-quality newsprint, Mattson told participants in the Oct. 10-11 Newsprint Seminar sponsored by ANPA and the Technical Section of the Canadian Pulp and Paper Association. They have responded, he added, by buying more advertising in the national daily published by Gannett Co.

Mattson also pointed out that the newspaper industry has been collectively seeking to attract more national advertising by establishing Standard Advertising Units and standardized research, rate cards and invoices.

"As this work has gone forward," he continued, "there has developed an increased recognition that quality of newspaper printing must be improved, and that cannot be accomplished without paying careful attention to the quality of newsprint."

Mattson identified money as the main problem in improving newsprint quality: Mill owners needed to be assured of a better return on investment to justify the cost of advanced paper-making technology.

But at some point, he said, the laws of economics will take hold of the newsprint suppliers, forcing some to improve their operations and others to go out of business.

"The inevitable result of the supply and demand curve will increase the value of quality newsprint to newspapers, and two-tier pricing will develop," Mattson said. "The progressive mills will be financially rewarded for their foresight [in investing in new processes]. As a result, the mills that had not previously invested in quality will be forced to do so. Those that are too old to change will shut down."

And when higher quality newsprint is available, the Times Co. president predicted, many newspapers will be forced by their advertisers to use it.

Mattson's remarks were made at a luncheon during the Chicago seminar, which drew a record 375 attendees. ☐

NEWSPRINT NOTES

- Donohue Inc. is considering a proposal to **add a $160-million newsprint machine** at its Clermont, Quebec, mill, pending assurance of financial assistance from the federal and Quebec governments.

- Pierre Peladeau, the president of Quebecor Inc. said he is negotiating with Canadian partners to **build a $280-million newsprint mill** with an annual capacity of 180,000 metric tons.

- A marketing research firm will study the long-range implications to the U.S. and Canadian paper industries resulting from the recent **penetration of the U.S. market by foreign producers.**

The study will be conducted by Walker Wiener Associates of Briarcliff Manor, N.Y., in association with Jaakko Poyry Oy, a forest products consulting firm in Helsinki, Finland.

The study, scheduled for completion by next April, will assess the market outlook for newsprint and other paper products through 1990.

Newspapers continue to set strong pace in consumption

Newsprint consumption by all U.S. users was 0.2 percent higher in September than in September 1984. Their consumption increase for the first nine months of the year was 0.9 percent above that for the same period of 1984.

Meanwhile, consumption by U.S. daily newspapers increased by 4.2 percent in September, and by the same percentage for the first nine months combined.

Newsprint inventories of newspapers in ANPA's statistical sample were estimated at 46 days' supply at the end of September, compared with 45 days at the end of September 1984. Mill stocks were 29.8-percent above the year-earlier level.

Shipments from Canadian mills for the first nine months were down 0.7 percent from the same period of 1984. Canadian shipments to the United States increased 0.5 percent, but there were decreases of 2.4 percent in shipments within Canada and of 5.3 percent in those to overseas customers.

Domestic shipments from U.S. mills declined 3.4 percent for the first three quarters of the year.

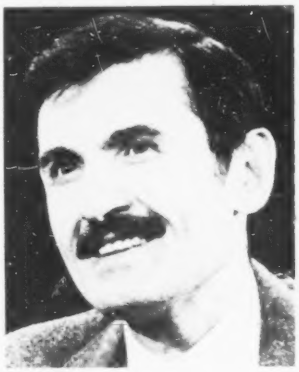
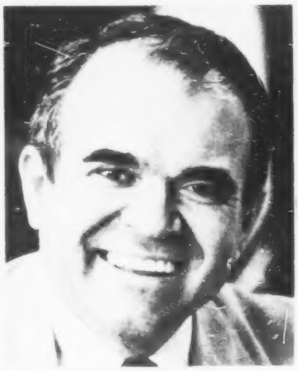
Speeches



Jerry Levin

Fred W. Friendly



Paul N. Carlin

Laurence B. Lain

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Re-establishing a Healthy Relationship Between Newspapers and Readers

Michael J. Davies, editor, publisher and chief executive officer, The Hartford Courant. Georgia Press Association annual editorial seminar, Atlanta, Aug. 15.

The Zenger Case: Then and Now

Floyd Abrams, attorney, Cahill, Gordon & Reindel, New York City. Commemoration of the anniversary of the John Peter Zenger trial, National Archives, Washington, D.C., Sept. 18.

The Hostages, the U.S. Government and the Press

Jerry Levin, correspondent and formerly held hostage in Lebanon, currently on leave from Cable News Network. Testimony before the House Foreign Affairs Committee's Subcommittee on Europe and the Middle East, Washington, D.C., July 30.

International Terrorism and Journalism

Fred W. Friendly, Edward R. Murrow professor emeritus, Columbia University Graduate School of Journalism. Remarks made in receiving the Citation of Merit from the Association of Schools of Journalism and Mass Communication, Memphis, Aug. 4.

The U.S. Postal Service: Recent Developments and Future Plans

U.S. Postmaster General Paul N. Carlin. ANPA Government Affairs Committee meeting, Washington, D.C., Sept. 27.

From the Association for Education in Journalism and Mass Communication annual convention, Memphis, Aug. 3-6:

The Editor and Publisher As Public Official: The Ultimate Conflict of Interest

Don Sneed, assistant professor, Communications Department, Texas A&M University, College Station

The Case Against Mass Media Codes of Ethics

J. Jay Black, professor, Department of Communication, Utah State University, Logan; and Ralph D. Barney, professor, Department of Communications and College of Fine Arts, Brigham Young University, Provo, Utah

An Analysis of Writing Coach Programs on American Daily Newspapers

Raymond E. Laakaniemi, associate professor, School of Journalism, Bowling Green (Ohio) State University

The Readership Problem: Steps Toward a Comprehensive Model

Laurence B. Lain, assistant professor, Department of Communication, University of Dayton (Ohio)

Conflict and Consensus in Zoned and Suburban Newspapers

Paul Salsini, instructor, College of Journalism, Marquette University, Milwaukee

Electronic Publishing Approaches to Undergraduate and Graduate Curriculum: Videotex, Teletext and Databases

Jerome Aumente, director, Journalism Resources Institute, Rutgers University, New Brunswick, N.J.

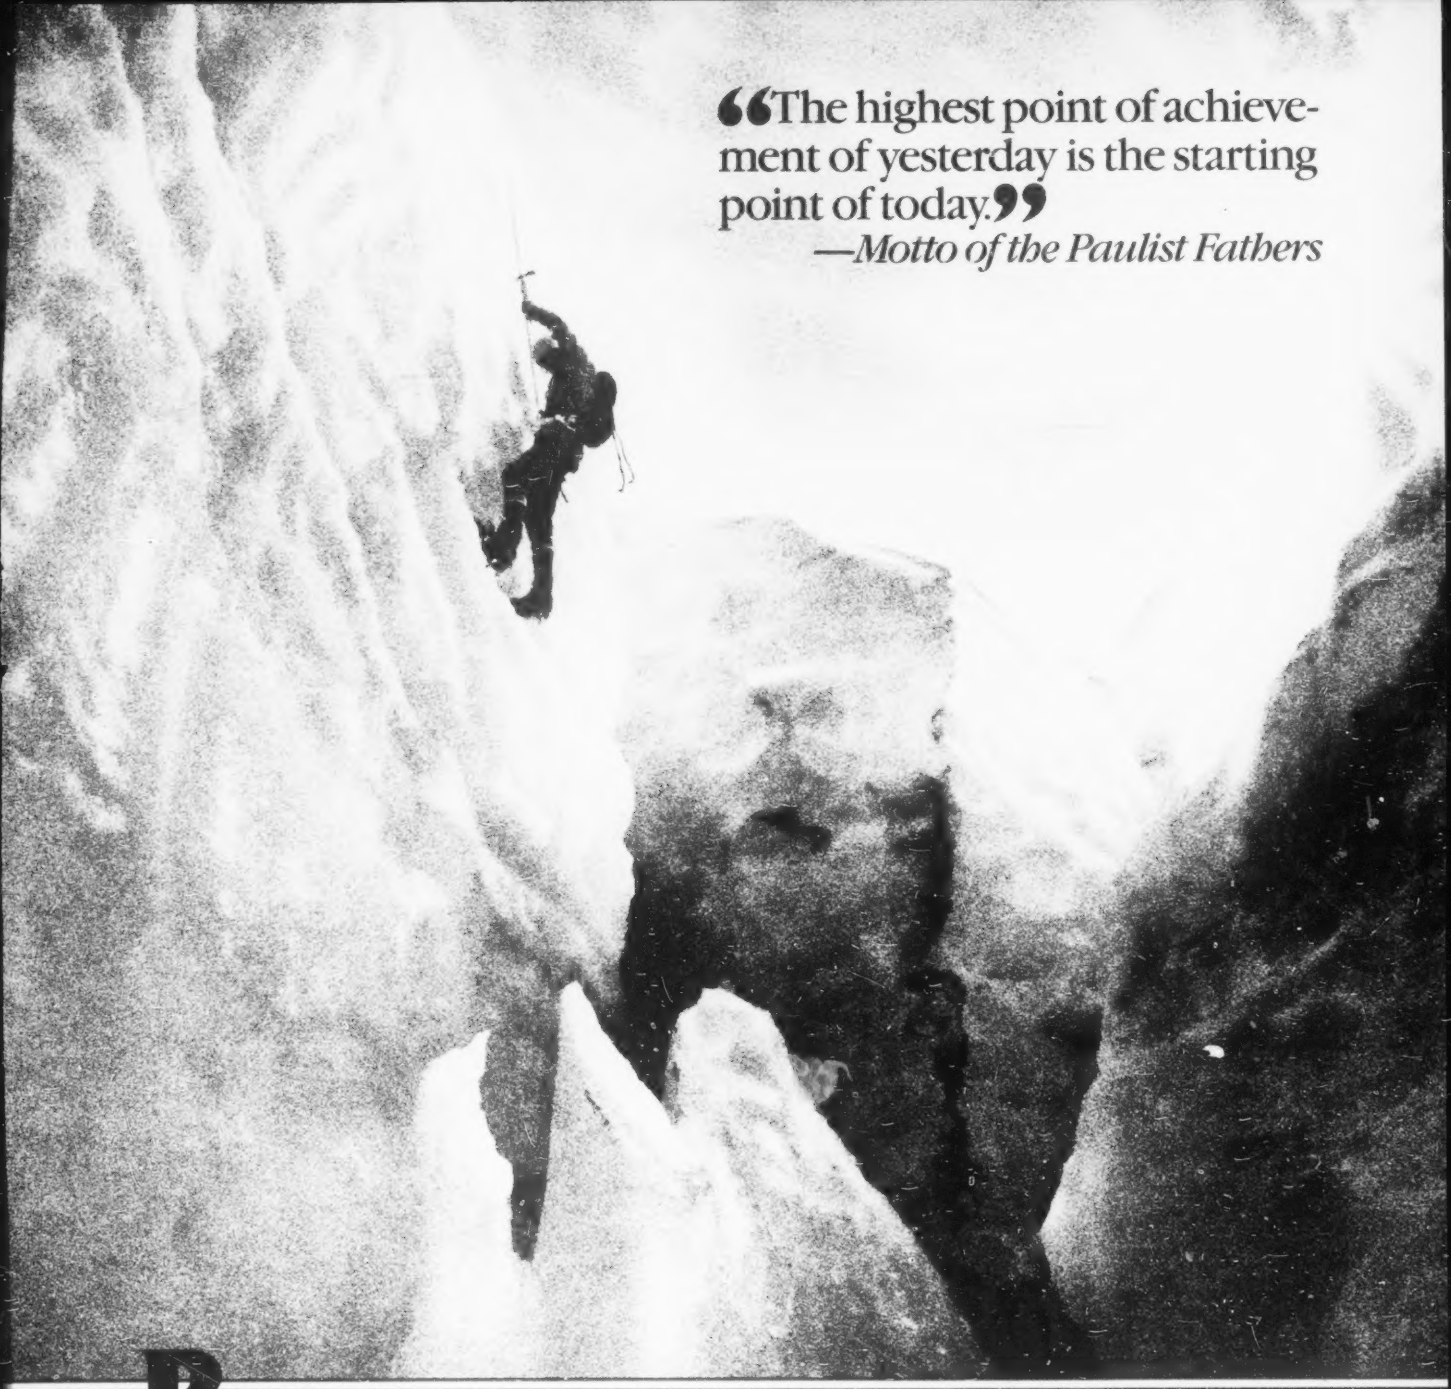
From the International Newspaper Promotion Association Europe Division annual conference, Klagenfurt, Austria, Sept. 8-10:

Marketing the Market Segments

Page Haines, promotion manager, Houston Chronicle

Newspapers Must Stop Ignoring Young Readers

Peter Dear, head of newspaper sales, The Newspaper Society, London.



“The highest point of achievement of yesterday is the starting point of today.”
—Motto of the Paulist Fathers

Bold and dramatic stories . . . cheering crowds and big headlines. Newspapers cover these well. But there are quieter stories, pervasive and more persistent. These offer a different challenge. They're even harder to report.

The Press-Enterprise is itself such a story. It's the story of a newspaper determined to grow faster than the county it serves—even though that county is the fastest growing in Southern California.

Over the last 10 years, Riverside County's population has increased by 53 percent. The pace has not slackened; 1985 is bringing more of the same.

The Press-Enterprise is enjoying the fastest growth in its 107-year history. In the six-month period ending September 30, our circulation was 9.2% greater than in the same period in 1984.

Where does this growth rate place us among the nation's fastest growing papers of over 100,000 circulation? That's not our concern. Our challenge is Riverside County and its growth. Exceeding that growth is our mountain to climb.

Sources: *Population percentage figure: California State Department of Finance. Circulation percentage figure: ABC Publishers Statement for 6 months ending September 30, 1985. As filed with the Audit Bureau of Circulations, subject to audit.*

RIVERSIDE COUNTY'S NEWSPAPER

Newspapers caught in N.J. law on South African divestment

Opposition to the apartheid policy of the government of South Africa is generating a rising tide of public sentiment against companies doing business in that country. In at least one state that tide is sweeping with it newspaper companies whose only "business" in South Africa is gathering and disseminating news.

A new state law prohibiting New Jersey from investing in "any company doing business in or with the Republic of South Africa" apparently will mean the state's public pension funds will have to divest millions of dollars of newspaper stocks.

According to the state's Division of Investment, The New York Times Co. and The Times Mirror Co. are among 46 companies whose stock must be sold by the pension funds in the next three years. As of Aug. 27, the day on which Gov. Thomas H. Kean signed the law, the funds owned 90,000 shares of New York Times stock, which had a book value at that time of $4.138 million, and 60,000 shares of Times Mirror, valued at $3.168 million.

"It is probably the most frustrating single example of a shotgun approach that I can think of," said Leonard R. Harris, director of corporate relations for The New York Times Co. "We have a bureau chief there, and he rents space. Now that is considered, quote, doing business, end quote."

The New York Times also has subscribers in South Africa and makes its news service available there, Harris said, adding that this also could be considered carrying on business in South Africa. "But in all cases, the primary thing is the dissemination of news," he emphasized.

Likewise, a Times Mirror spokeswoman explained that the Los Angeles Times has a correspondent and a secretary based in Johannesburg. She quoted Otis Chandler, Times Mirror chairman and editor-in-chief, as explaining at a stockholders' meeting May 22 that this constituted the company's "total corporate involvement in South Africa."

The spokeswoman said it also is possible a magazine published by Times Mirror might be sold on newsstands in South Africa. "But we didn't put it there," she said. As with most publishing companies, distribution of Times Mirror publications around the world is handled by independent companies.

Officials of both media companies said that in the past, after the nature of the involvement has been explained, investors have indicated that was acceptable to them. Harris said The New York Times will try to "explain to the government of New Jersey that they have framed a bad 'hit list.'"

However, William P. Mooney, deputy director of New Jersey's Division of Investment, said the wording of the new law leaves his office no room for flexibility. "We have no choice," he said. "They are doing business there, and that is what the legislation precludes."

According to Mooney, the division's list of 46 companies whose stock it must sell was compiled using information from the Investor Responsibility Research Center. That Washington, D.C., organization publishes a directory, updated quarterly, of corporations with direct investments in South Africa. An appendix to the directory lists U.S. news organizations that have a correspondent or correspondents based in South Africa.

Mooney said the division has asked New Jersey's attorney general whether IRRC should be used as the source of its disinvestment list. As of late October, it had not received a reply, he said.

A senior analyst at IRRC said she was unaware of any other subscriber to the IRRC directory using the information on news organizations in that way. "As a general rule, my impression has been that subscribers are not penalizing news organizations for having correspondents in South Africa," said Meg Voorhees.

Twelve other states have adopted policies restricting investment in stocks of U.S. companies in South Africa, Voorhees said. They are: California, Colorado, Connecticut, Iowa, Kansas, Maryland, Massachusetts, Michigan, Minnesota, Nebraska, North Dakota and Rhode Island. She did not know their relevance to news organizations.

At least one government entity, the District of Columbia, has exempted news organizations from its investment ban. Regulations effective Sept. 6 state that "companies whose activities are limited solely to gathering or reporting news in or from" South Africa are not considered to be doing business there.

—Margaret Genovese

Ranks of a.m. papers continue to swell

Two U.S. daily newspapers converted from p.m. to a.m. publication in recent months, continuing the long-running shift toward morning papers.

The ranks of evening newspapers are also being thinned by the loss of The Charlotte (N.C.) News, which ceases publication Nov. 1, according to its owner, Knight-Ridder Newspapers Inc. The News, whose circulation had dropped to about 34,700, was sister to The Charlotte Observer, a morning paper with circulation of 187,180.

The Observer will continue publishing solely in the mornings, but its coverage will be expanded, a Knight-Ridder official said.

Also, the all-day Johnson City (Tenn.) Press-Chronicle (circulation 3,216 mornings and 25,251 evenings) dropped its p.m. edition Sept. 30 to become a mornings-only newspaper called The Johnson City Press.

In Binghamton, N.Y., a consolidation produced a mornings-only newspaper Sept. 30. The Sun-Bulletin (morning, 27,536) merged with The Evening Press (57,166) to become The Press & Sun-Bulletin.

Another consolidation produced an all-day newspaper. In Biloxi and Gulfport, Miss., The Sun (morning, 12,497) and The Daily Herald (evening, 38,285) merged Oct. 1 to become The Sun Herald.

The newspapers that converted from p.m. to a.m. since presstime's last roundup of publishing-cycle changes (presstime, May 1985, p. 84) were:

- The Stockton (Calif.) Record (52,083), May 13
- The Selma (Ala.) Times-Journal (9,488), April 1.

In Canada, The Globe and Mail of Toronto ceased publication of its afternoon city edition Oct. 25.

The edition, which was published for about 18 months, was an experiment for the a.m. newspaper. ☐

Some papers question readership findings

Grumblings over the validity of recently released syndicated research have subsided while disgruntled newspapers in a few markets continue to sift through raw data compiled by the 1985 Simmons-Scarborough's Newspaper Ratings Study.

"We're still doing some analysis," said Perry Williams, research manager of The Dallas Morning News. "There are a number of things that concern us."

What bothered the Morning News was the difference shown between its circulation figures and the syndicated measurement of readership.

With Morning News circulation up 9 percent daily and 12 percent on Sunday, Williams questioned Simmons-Scarborough readership figures showing an 8 percent drop daily and 9 percent loss on Sunday. "It doesn't seem to fit that our circulation has gone so well but our readership would go down," said Williams. "I guess our concern is our lead is not what we think it ought to be, based on our circulation."

As occurred in the other cities where one daily questioned the data, another one supported it.

"We feel that the study accurately reflects the market," said Jo Miller Vernon, research director of the Dallas Times Herald. The syndicated study showed "almost the identical results in a six-county area" studied several months later by proprietary research, said Vernon, "so we haven't had any reasons to question the [Simmons-Scarborough] results."

Since the release of the report in mid-July [presstime, Aug. 1985, p. 42], papers in 10 of the 123 markets in which 170 papers were studied have raised questions about the data—most notably in Houston, Tampa-St. Petersburg, Hartford and Washington, D.C., as well as in Dallas. Over the past few months, representatives of these papers have visited the New York offices of Simmons-Scarborough Syndicated Research Associates to obtain tapes of raw data from which the conclusions were derived. Two brought portable computers to re-keyboard the information.

According to Gerald T. Silvers, chairman of the Syndicated Research Task Force of the Newspaper Research Council and International Newspaper Advertising and Marketing Executives, "extensive preliminary re-examination of data in these markets uncovered no systematic or recurring error."

Silvers, research director of The Cincinnati Enquirer, wrote in the October issue of INAME News that "chance and related factors that affect all survey results" can have an impact on individual newspapers "with no apparent reason."

Meanwhile, research directors of some newspapers raised general issues that the study should address next time around.

"This particular study might have been designed to project Washington as a market but not the Journal's audience within the market," said Michael Veitch, vice president sales and marketing of The Journal Newspapers, which circulate daily in the suburbs surrounding Washington, D.C.

The Journal Newspapers, according to Veitch, "are not distributed equally" throughout their circulation area, but have "a very vertical appeal" to "upper income, single-family homeowners" in well-defined neighborhoods. Such an audience, said Veitch, would not emerge strongly with the random-selection telphone survey better adapted to more densely populated urban circulation patterns.

"Ours is not a reach vehicle. It's a rifle shot," he said.

Hugh Downey, marketing director of the Fort Worth Star-Telegram, raised the question of whether Simmons-Scarborough's sampling criteria undercounts the readership of papers with more upscale demographics. A complete analysis by the Star-Telegram will not be ready for a few weeks, but Downey said, "I would suspect that it [this pattern] is systematic and therefore would be nationwide."

Changes in methodology are "really a question for the papers to answer," said Simmons-Scarborough's president, John Polich. The study followed guidelines drawn up by the Newspaper Research Council and Advertising Research Foundation. ☐

Task force holds minority job fair; Ghiglione nominated to head steering committee

About 75 minority students and 16 recruiters from nine news organizations attended the first job fair sponsored by the industry-wide task force to increase minority employment in non-editorial jobs with newspapers.

ANPA Foundation Director Judith D. Hines called it a "first step and a pilot attempt that taught us what works and what might not."

The Oct. 4 event was held in Atlanta in conjunction with the Oct. 3-5 fair for editorial jobs, sponsored by the American Society of Newspaper Editors. The ASNE event attracted more than 70 students and about 25 editors from 16 newspapers.

Figures were not available on how many job offers were actually made at either fair.

The non-editorial job fair was one of a series of steps being taken to increase the number of minorities employed in advertising, circulation, promotion and business departments of newspapers [presstime, Sept. 1985, p. 59]. Two more are planned next year.

In addition, ANPA Foundation will establish a staff position for coordination of minority programs, beginning in 1986.

More than $70,000 annually for five years has already been pledged by ANPA Foundation Trustees to fund minority-opportunity programs through 1990. An additional $10,000 a year has been pledged by Gannett Foundation.

Meeting in Chicago Oct. 17, the group coordinating such efforts set specific objectives. They include: developing minority programs within associations and sharing information to avoid duplication; developing and promoting training and education programs, including more scholarships; and creating a nationwide minorities campaign while encouraging newspapers to generate local initiatives.

The Steering Committee of the Task Force on Minorities in the Newspaper Business (formerly the Conference on Minority Issues Steering Committee) nominated a new chairman, Loren Ghiglione, publisher of The Bristol (Conn.) Press and chairman of ASNE's Minorities Committee.

The group also nominated two vice chairmen: Charles T. Brumbach, president and chief executive officer of the Chicago Tribune, and Mervin Aubespin, associate editor/development for The Courier-Journal and The Louisville Times and former president of the National Association of Black Journalists.

The full task force will vote on the nominations at a Jan. 31 meeting at The Newspaper Center in Reston, Va. ☐

New player in ownership sweepstakes: Tacoma News Tribune goes up for sale

While one privately owned media company on the West Coast was put on the block in October, another one remained—apparently—not for sale.

Stockholders of The Tribune Publishing Co., which publishes The Tacoma (Wash.) News Tribune, decided Oct. 4 to sell the company. Besides the News Tribune (evening, circulation 106,499), the company's other properties include a tri-weekly, a cable system, a radio station and a business park.

The company is being sold for "estate-planning purposes," according to Elbert H. Baker, chairman of the board and publisher of the News. Besides Baker, the principal owners are his sisters, Mary Baker Russell and Elizabeth Baker Kelley.

Baker said Oct. 22 that no offer had been accepted. The sale is being handled by a New York broker.

In the other West Coast ownership situation, Harry H. Hoiles reportedly was planning to make a third but different bid to acquire Freedom Newspapers Inc., whose other stockholders rejected his first two overtures.

Peter R. Kent, an investment banker advising Hoiles, described the third bid as containing several wide-ranging options that would put Hoiles in control of Freedom—or leave him outside its operations entirely.

D. Robert Segal, president of the Santa Ana, Calif.-based newspaper and broadcasting company, has said the board passed a resolution at the time of the first offer indicating nearly all the other owners "were not interested in selling their stock at any price" [presstime, Oct. 1985, p. 60].

Hoiles' second offer for the stock, which is held by other heirs and the estate of Freedom's founder, R.C. Hoiles, was $2 higher than the initial bid of $96 a share in cash. That second offer, rejected in October, was made by a company controlled by Harry Hoiles and members of his family who together own one-third of Freedom's outstanding shares.

Now Hoiles intends to offer "a significantly different" third price for the stock, said Kent.

Under another option, Kent said, Hoiles will try to sell his family's stock to other Freedom shareholders for the price he is offering. Hoiles also will propose swapping his family's stock for newspapers and cash, he said.

In addition, Kent said, Hoiles might consider selling his shares outside the company. One reason someone might buy a minority interest in Freedom, he said, is that the company is "very profitable."

The tale is very different at the St. Louis Globe-Democrat, which filed for protection from creditors Sept. 26 under Chapter 11 of the federal bankruptcy code.

Since then, The Newspaper Guild has asked the bankruptcy court to remove Jeffrey M. Gluck as publisher. A hearing on that request is scheduled for Nov. 6.

For the newspaper, the Chapter 11 filing provides "time to pay everyone on a stretched-out basis," said Katharine A. Smith, the newspaper's director of public relations.

The creditors include 14 present and former employees, who went to court to force the newspaper into involuntary bankruptcy as a means of recovering $13,000 in back pay [presstime, Sept. 1985, p. 59].

The involuntary bankruptcy petition—scheduled for a hearing Sept. 27—became moot after the Sept. 26 filing, Smith said.

Smith said the court ordered the paper to pay the $13,000 by Oct. 9, but the Globe-Democrat missed the deadline. In the meantime, investors still hold a 45-day option to buy the paper.

As Globe-Democrat personnel spent more time in court, Multimedia Inc. of Greenville, S.C., saw the close of a legal and financial process that ended in its court-approved recapitalization Oct 1. The recapitalization resulted in the issuance of 11 million shares of common stock in the newspaper and broadcasting company.

NAHJ moves to D.C.

The National Association of Hispanic Journalists has moved its headquarters from the University of Southern California School of Journalism in Los Angeles to the National Press Building in Washington, D.C. The move took place in mid-September.

NAHJ previously shared space and staff with the California Chicano News Media Association.

Press associations: changes in command

The **International Newspaper Financial Executives**, at its annual convention Oct. 20-23 in Dallas, elected the following new officers:

- *President*—Joseph D. Cantrell, Sentinel Communications Co., Orlando, Fla.
- *First Vice President*—H. Graham Woodlief, Richmond (Va.) Newspapers Inc.
- *Second Vice President*—Barry Peckham, The Dallas Morning News
- *Secretary*—David F. Licko, Reno Newspapers Inc.
- *Treasurer*—Charles K. Barrett, News and Sun-Sentinel, Fort Lauderdale

The **Society of Newspaper Design,** at its workshop Oct. 17-19 in Chicago, elected the following new officers:

- *President*—H. Philip Nesbitt Jr., formerly with the Singapore Monitor
- *First Vice President*—Margaret Balough, Austin (Texas) American-Statesman
- *Second Vice President*—Anton Majeri, Chicago Tribune
- *Secretary*—Robert B. Covey, The Seattle Times

The **American Association of Sunday and Feature Editors,** at its annual convention Sept. 18-20 in San Francisco, elected the following new officers:

- *President*—Jack R. Rickman, Houston Chronicle
- *First Vice President*—Phyllis Singer, Newsday, Long Island, N.Y.
- *Second Vice President*—Rosalie Muller Wright, San Francisco Chronicle
- *Secretary*—Gilbert L. Watson III, The Baltimore Sun
- *Treasurer*—Clifford Ridley, The Detroit News

The **Southern Newspaper Publishers Association,** at its annual convention Sept. 15-18 in Colorado Springs, elected the following new officers:

- *President*—Tom J. Hardin, Alexandria (La.) Daily Town Talk
- *President-elect*—Cecil B. Highland Jr., Clarksburg (W.Va.) Exponent and Telegram
- *Treasurer*—Creed C. Black, Lexington (Ky.) Herald-Leader

Agence France-Presse expands its American presence

Agence France-Presse celebrated its 150th anniversary in late October against a backdrop of expanding service in the United States.

Although AFP has 12,000 subscribers in 160 countries, in late October it provided its news wire service to no North American newspapers directly. But according to AFP U.S. Director Claude Moisy, that likely will change.

Moisy explained that before Oct. 1, AFP transmission facilities did not operate under the ANPA wire-service codes. Its system was not compatible with those of Associated Press and United Press International and, hence, with those of U.S. and Canadian newspapers. AFP news material primarily was distributed by the Los Angeles Times-Washington Post News Service, but then only when a story was important enough for LAT-WP editors to have it typed off the AFP hard copy.

Now, however, AFP is able to transmit using the ANPA codes. And Moisy said the service will be sold to North American dailies through a distribution arrangement with LAT-WP.

Another indication of AFP's growing North American presence is its international newspicture service, launched the beginning of this year. In late October, two U.S. newspapers were subscribers—The New York Times and Miami Herald—and some others were using the service either on a trial or single-photo basis, Moisy said.

Another mark of AFP progress is development of a small electronic darkroom. Unveiled at the ANPA Operations Management Conference & Exposition last June in New Orleans, it will be available for sale on the American market in January, Moisy said.

AFP, an independent company run by a board of French newspaper publishers, was founded in 1835 by Charles-Louis Havas. It is one of the oldest, if not the oldest, news wire services. One of Havas' first assistants was Julius Reuter, who moved to London a few years later to start his own service that also still thrives.

AFP employs more than 2,000 people in news-gathering activities and has an annual budget of about $90 million.

In the United States, it has bureaus in Washington, D.C., and New York City and employs 42 journalists and photographers, nine technicians and 10 other support personnel. ☐

AP's 4.6% increase lowest in 15 years

The Associated Press Board of Directors set a 4.6-percent general assessment increase to take effect Jan. 4, 1986.

AP said the percentage increase was its smallest in 15 years. The 1985 increase was 4.7 percent [presstime, Oct. 1984, p. 62].

Frank Batten, AP board chairman and chairman of Landmark Communications Inc. of Norfolk, Va., said the wire service's budget for next year includes continued expansion of its satellite news distribution network and other facilities for the 1,300 newspaper members and 5,700 broadcast members of the news cooperative.

The budget also will allow start-up of a new, computerized system for tabulating and reporting election returns at the state level. Batten said the system will reduce AP's costs for covering state elections.

AP said the assessment increase will be combined with the phasing in of a second step of a new circulation-based assessment formula for newspapers. The new formula became effective last year.

Under the new system, individual AP members' rates could go up a maximum of 5 percent a year—in addition to the general assessment increase—until the appropriate circulation-based rates are reached. ☐

Recent acquisitions

Thomson Newspapers Inc. of Des Plaines, Ill., acquired The Richmond (Ky.) Register, daily circulation 9,280.

Independent Newspapers Ltd. of Wellington, New Zealand, acquired The Pawtuxet Valley Daily Times, West Warwick, R.I., circulation 9,377.

W. Dean Singleton and Richard B. Scudder acquired two New Jersey dailies: The North Jersey Advance, Roxbury, circulation 11,695, and The Herald News, Passaic, circulation 58,723.

Federated Media of Elkhart, Ind., acquired the Banner-Graphic of Greencastle, Ind., daily circulation 6,007. ☐

UPI, creditors examine purchase proposals

The owners, management and a committee of creditors of United Press International in late October were poring over details of more than two dozen purchase offers.

A final purchase plan will be presented for approval to U.S. Bankruptcy Judge George F. Bason, who is overseeing UPI's Chapter 11 bankruptcy petition [presstime, Oct. 1985, p. 61].

UPI reporter Gregory Gordon, in a story that moved on the wire in mid-October, quoted unidentified sources as saying that 25 entities had made firm expressions of interest to buy the company, and that some other parties still are preparing bids.

Gordon also quoted the sources as saying the would-be investors include:

- Bell Group Ltd., one of Australia's largest corporate conglomerates, which submitted a proposal in which creditors would receive 100 cents on the dollar
- A group led by Houston developer Joe Russo, which made a similar proposal
- Telecommunications Inc., a Denver firm that the UPI story called "the largest multi-systems operator in the cable television industry"
- Telecom Plus International Inc. of Boca Raton, Fla., a supplier of business telecommunications equipment
- A group including Indianapolis industrialist Beurt SerVaas
- Mexican newspaper publisher Mario Vasquez Rana
- The Straits Times of Singapore, an English-language newspaper published by L.J. Hollaway
- Pedro Ramon Lopez and his wife, Teresa Saldiz, who own a Miami bank and Puerto Rico television stations. They reportedly offered $28 million for UPI, about half of which would be paid in cash.

The Pritzker family of Chicago, owners of the Hyatt hotel chain and Braniff Airlines, "also may be interested" in buying the company, the UPI story said.

Gordon reported that the proposals differed significantly in dollar amount and structure. Some emphasized payments to creditors and others limited commitments to creditors "while pledging substantial amounts in working capital."

Among other developments at UPI, President Raymond Wechsler resigned in early October. He planned to become a special advisor to the creditors' committee, which represents the various firms to which UPI owes money. ☐

over-set

David A. Smithberg, production coordinator of Midwest Assemblers of Omaha, an inserting subsidiary of the Omaha World-Herald, sits in a 13,000-square-foot sea of special sections devoted to the newspaper's centennial. The 112-page section was distributed as part of the Aug. 18 Sunday World-Herald.

You never know who's listening

Newspaper executives should experience what their customers experience. At the Long Beach (Calif.) Press-Telegram, they do.

"How many readers do we turn off just by the way we answer the telephone?" wondered Senior Vice President and General Manager Vance Caesar.

To find out, Caesar and other executives from the advertising, marketing and circulation departments get together periodically for an hour or so and call various departments at the paper with comments and questions customers are apt to make. To the newsroom they might say: "I didn't like that editorial," or to the transportation department: "Can I rent one of your trucks?" The newspaper has a policy of answering calls by name within three rings.

At the end of the hour, the called employees are rated in terms of how friendly, helpful and informed they were, who was the best salesperson and who was most "customer sensitive." Certificates are awarded to employees who performed well.

Since the program started about six months ago, Caesar reports, "there has been a big improvement in the overall sensitivity of employees to customers' needs."

Policies on use of seat belts are a crashing success

t a time when several state newspaper organizations are showing concern about mandatory seat belt laws for newspaper delivery vehicles [presstime, March 1985, p. 38], at least one newspaper group and a daily have taken an opposite tack by requiring all employees riding or driving in company-owned vehicles to wear seat belts.

Topeka, Kan.-based Stauffer Communications Inc. adopted a seat-belt policy the first of this year. It applies to employees at all of the company's 21 daily newspapers and other corporate divisions, according to Kenneth C. Bronson, vice president, affiliated dailies division.

Also in Kansas, The Wichita Eagle-Beacon adopted its policy Sept. 1, 1984.

"Our interest started with our health-cost containment efforts," says James P. Spangler, director of employee relations.

"We're pleased with our employees' acceptance of the policy. A number of them have told us it's become a habit at work and in their personal cars."

Both companies report they have seen benefits of the policy. Each recently has had an employee involved in an accident in which seat belts were credited with preventing serious injury.

It comes with an owner's manual

Several Knight-Ridder newspapers are making a special effort to draw closer to their subscribers by passing out a "reader's guide" to all new home-delivery customers.

The Detroit Free Press's guide, for example, explains such matters as the use of bylines, how the paper is edited, its policy on corrections, how photographs are selected, newsroom ethics, the editorial page, columnists and advertising policies. The guide also illustrates how the newspaper covers local, state, national and world news, and it introduces the subscriber to features and special sections.

Knight-Ridder Vice President/Circulation Donald A. Nizen calls it "an owner's manual," which grew out of a task force's efforts to find ways of "stopping the stops." Nizen says that most of the group's 28 dailies have such a promotional publication. The idea is to "help new subscribers understand our papers," he says.

Newspaper numbers

13—number of inches in the width of a newspaper page under the Standard Advertising Unit system in the United States and the Canadian Newspaper Units system.

443,000—number of people employed by U.S. newspapers.

1,385—number of U.S. daily newspapers using the offset printing process at the end of 1984 (versus 275 that have letterpress presses and 28 that have both kinds).

535—number of U.S. dollars that it takes to buy one metric ton of newsprint.

7.4—number of miles of newsprint on a single roll 42 inches in diameter.

Student editor has a fight over military ads

The editor of the daily student newspaper at Wayne State University in Detroit, who had been fired for refusing to rescind a ban on military recruitment ads, dropped the ban to get her job back.

Patricia Maceroni instituted the ad ban as a protest against U.S. policies in Central America. A nine-member Student Newspaper Publications Board dismissed her as editor Oct. 3, citing insubordination.

A federal judge subsequently voided the termination on the grounds that the board violated the state's open-meetings law. On Oct. 25, Maceroni told the board she would abandon the ad policy.

"This is the first time in a long, long time that I can recall any controversy over military advertising," notes Mark W. Rose, executive vice president of CASS Communications Inc., a national advertising representative firm for about 1,300 college newspapers, including Wayne State's. Rose estimates that the military services run more than $2.5 million in national and local advertising annually in college papers.

The season of the anniversary

There must have been an overwhelming urge to organize on behalf of newspaper managers a century ago because the two national newspaper associations and one of the most well-known regional ones currently are celebrating centennial milestones within a year.

The National Newspaper Association led the pack by observing its 100th birthday at NNA's 1985 Centennial Convention and Trade Show Sept. 17-21 in Minneapolis.

Inland Daily Press Association also celebrated its 100th Oct. 20-22 at its Centennial Convention and Gala in Chicago.

ANPA will hold its 100th Annual Convention April 21-23, 1986, in San Francisco. The Association's 100th anniversary will follow in 1987.

This Sunday paper may be late, but it's for a good reason

n Sunday Dec. 7, 1941—"a day that will live in infamy"—The Westerly (R.I.) Sun believes it scooped every other newspaper in the United States.

As possibly the country's only Sunday afternoon newspaper, the Sun was able to hit the streets with news of the Japanese attack on Pearl Harbor within 40 minutes of the 2:23 p.m. EST announcement.

Today, the Sun (circulation 11,527) continues to publish Sunday afternoons.

The genesis of its unusual publishing schedule lies in the religious practices of Seventh Day Baptists that dictated that church members observe the Sabbath on Saturday but allowed them to conduct business on Sunday.

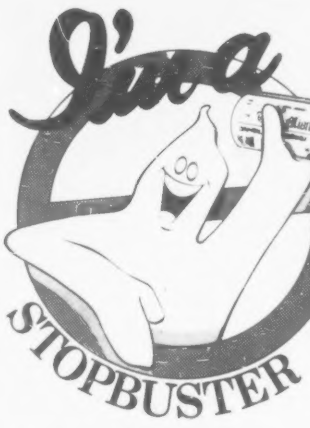
George H. Utter, who steered the paper through its switch from a weekly to a daily in 1893, was a Seventh Day Baptist as was his father, the Rev. George B. Utter, a founder of the paper.

So when the Sun became a daily, the sixth day of afternoon publication became Sunday, not Saturday.

George H. Utter II, current co-publisher, says the idea from the beginning "was to do everything on Sunday that would have normally been done on Saturday."

He hears only an occasional objection to working on Sunday morning. For "every 50 people" he interviews for jobs, "once in a while" he meets someone unwilling to work the necessary Sunday hours, Utter says. "I say that's part of the deal."

And advertisers have long accepted the Sunday afternoon paper. Utter says Sunday is second only to Wednesday as the biggest draw for advertising linage.



A new logo symbolizess a program at The Miami Herald and The Miami News to maintain home-delivery circulation by curbing "stops."

Clean reading

In St. Petersburg, they steam more than clams. Steamed newsracks have been a hot item at the circulation department of the St. Peterburg Times and Evening Independent.

The newracks were damaged by saltwater tides driven into St. Petersburg when Hurricane Elena lingered off the Florida coast Labor Day weekend. Something had to be done quickly to clean and lubricate the racks, or they would have a life span even shorter than the five years that Circulation Director David T. Fluker says is about average in the area's salty air.

If nothing had been done after Elena, the racks would have "rusted through in six months," he says.

"We've never steamed them before," Fluker says, but "We felt this was the best way to get all the sand, dirt and salt residue off." In two days, a rack could be steamed, taken apart, lubricated and reassembled.

"Our Pulitzer Prize photos deserved the best color inks"

Says Mell Kilpatrick (left), Production Manager with Bob Johnson (center), Pressroom Superintendent, and Rich Blanco, Assistant Pressroom Superintendent The Orange County Register, winner of the 1985 Pulitzer Prize for News Photography.

"We published 187 color photos of the 1984 Olympic Games which won the 1985 Pulitzer Prize for News Photography. Those photos deserved the best reproduction which was made possible by our commitment to color excellence. And that includes our color inks from U.S. Printing Ink. We began running U.S. Printing Inks when we changed over to color in 1980. Since then we have been very pleased with their uniformly excellent performance."

We are happy that Mell Kilpatrick and his production team are pleased with U.S. inks. And we're proud of the way our inks demonstrate their quality on the pages of The Orange County Register. There you'll see strong, clean colors, fresh-looking halftones, smooth laydown of solids with minimum ruboff, linting and picking. Scuff resistance is excellent, too.

Don't your color photos deserve the best inks?

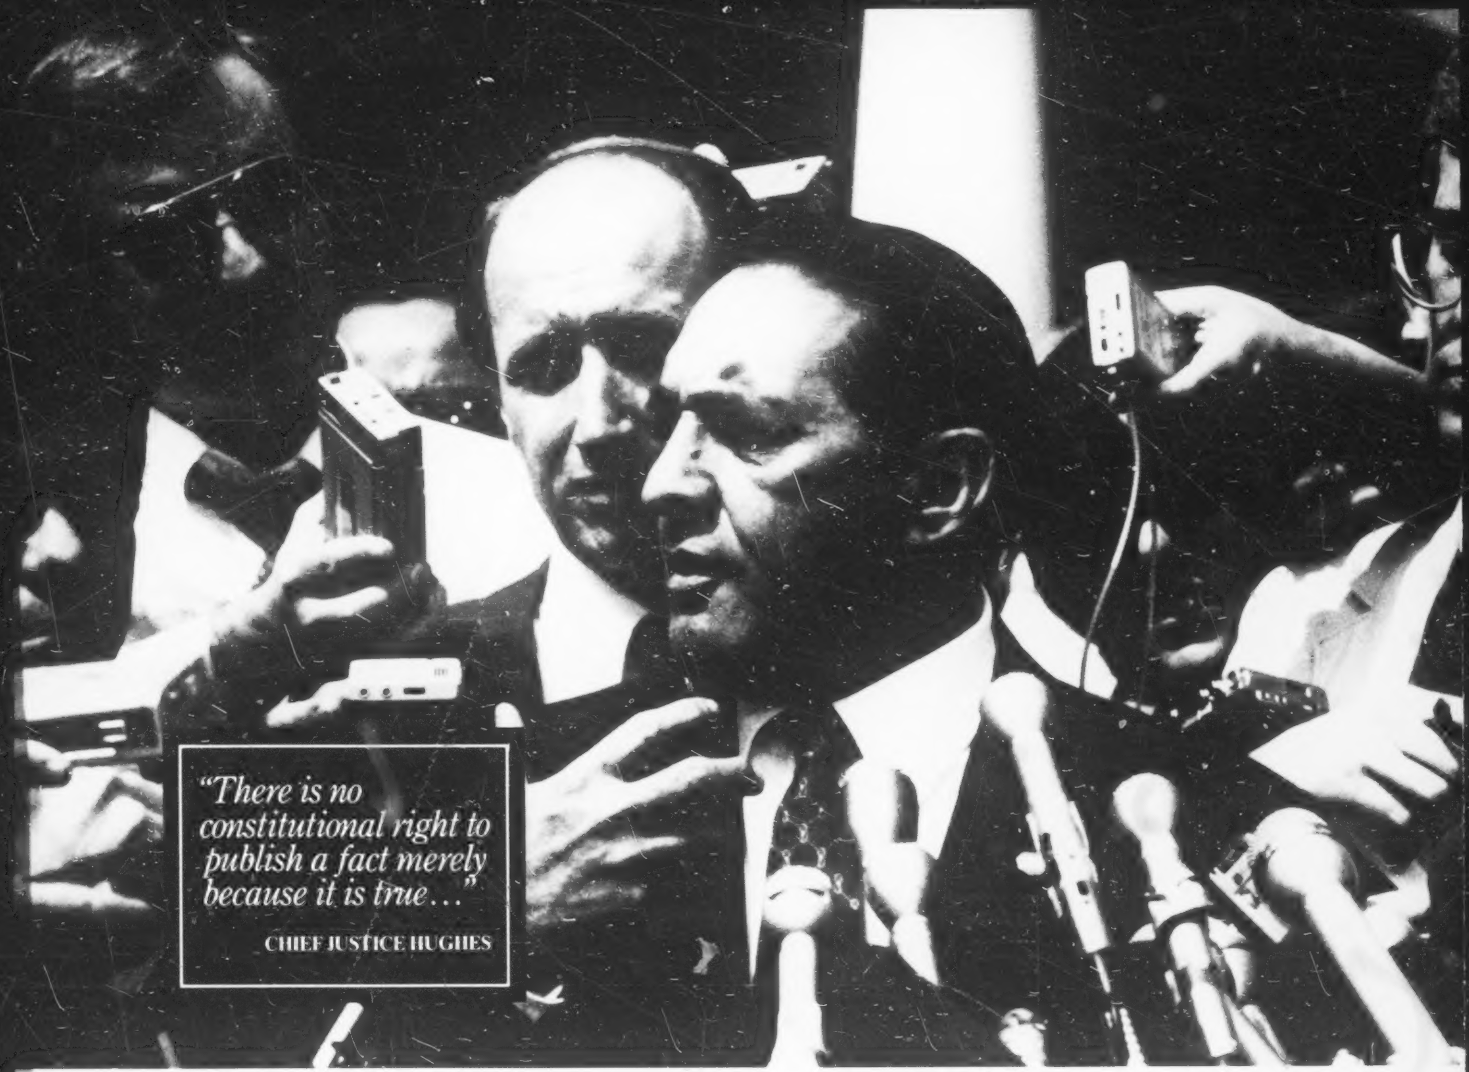
Deciding When To Go Daily Or Back To Weekly

The Rise of Specialized Reporting [illegible] Newspapers



"There is no constitutional right to publish a fact merely because it is true…"

CHIEF JUSTICE HUGHES

HOW TO PREVENT LIBEL AND INVASION OF PRIVACY SUITS

Publishers have been made painfully aware of the economic implications of the lawsuit. The last two decades have presented new challenges to publishers, editors, reporters and photographers in keeping abreast of the rapid changes in constitutional law. In response to these new challenges, Mutual Insurance Company Limited, Hamilton, Bermuda, offers a seminar on methods to prevent libel and privacy suits.

New interpretations of what constitutes libel have arisen in the past few years. Busy publishers and working journalists often are not privy to decisions which could have serious consequences for their newspaper… until it's too late. That's why The Mutual Insurance Company Limited, Hamilton, Bermuda, offers more than insurance protection. It provides a measure of prevention with this informative seminar.

Mutual offers a daylong seminar, entitled "How to Prevent Libel and Privacy Suits", to insured members. Created to meet the special needs of newspaper publishers and working journalists, the course offers legal expertise and an explanation of current court decisions. It addresses libel, public and private people, actual malice, negligence, embarrassing truths, lies, distortions, and other appropriate issues. Offered to insured members, the seminar offers instruction on applied law and documentation techniques to prevent lawsuits while getting the story out!

For further information contact Barbara Dill, (305) 576-8651.

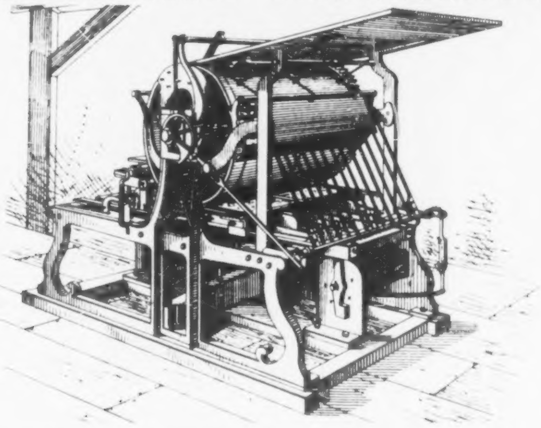
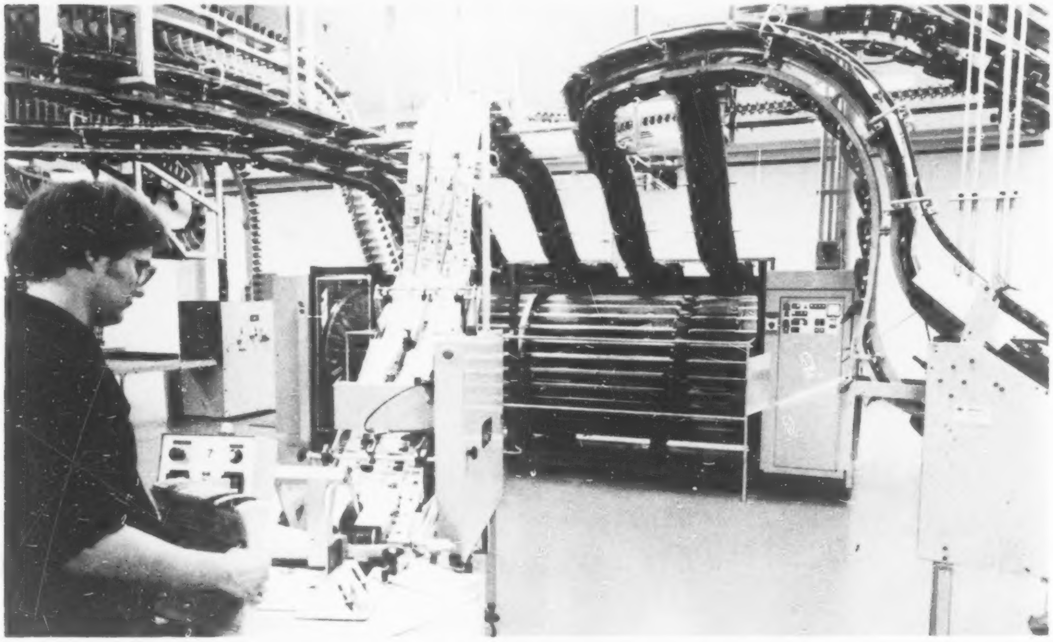
Comes the Revolution!



Single impression cylinder press, circa 1845, with a flat form bed was a revolutionary innovation a century + ago.

Over 100 years ago, "cylinder" presses were indeed revolutionary. Today's revolution is downstream from the press, where publishers are installing automated processing systems to improve profits, and be ready for the competition, wherever it appears. And, automated processing is where FERAG excels. FERAG automated inserting, conveying and processing systems are utilized by publishers all over the globe.

When you're ready to revolutionize your facilities, we're ready to help... FERAG, Inc., Keystone Industrial Park, Bristol, PA 19007... (215) 788-0892



FERAG ROTOSERT™ Automatic Inserting Systems assemble multiple inserts into main jackets on-line at press speeds, or off-line from skids or pre-palletized cassettes. (St. Paul Pioneer Press and Dispatch.)

CHAIRMAN'S CORNER

Audit Bureau of Circulations and newspaper publishers have related responsibilities

I was asked this fall to make some comments to the annual meeting of the Audit Bureau of Circulations about the revitalized cooperative relationship of the ABC and our newspaper business.

I noted the great work of Ed Estlow's liaison committee between the two entities. And I offered a few suggestions to ABC about ways it can continue and enhance its understanding of and service to both newspapers and advertisers.

Then I suggested that we newspaper folks tend to our own house, too, saying:

"We have no right to make demands of ABC for greater accuracy in auditing, or to ask advertisers and their agencies to give more careful consideration to the unique but sometimes unappreciated strengths of our newspapers, if we do not meet our own responsibilities.

"I see those responsibilities as, first, making certain our newspapers submit to ABC accurate, honest information—information that the publisher knows, to the best of his or her abilities, to be accurate and honest.

"Second, we publishers must fulfill our responsibilities to see to it that our circulation data is ethically promoted.

Richard J. V. Johnson

"As a matter of fact, to whatever degree any publisher abuses the triangular foundation of the ABC by failing to meet his or her responsibilities—to that degree, that publisher is destroying our best and last hope of bringing a better perspective to our business.

"As never before in our times at least, the world is hungry—we could say desperate—for truth wherever it may be found. We should constantly remind ourselves—as publishers, as advertisers and marketing people, as creators of advertising—that more than any other single group we have the opportunity and the obligation to set a new tone among our people.

"We can do that only by developing the capacity to view our tasks in a larger framework.

"And, the four sides of that framework are honesty, accuracy, ethics and responsibility."

Dick Johnson

Last year, 34,300 people moved to Riverside County and brought their pocketbooks with them.

They're young. They've bought homes and are raising families. They've come from Orange and Los Angeles Counties. They're now living and shopping in Riverside County.

They've made their new home-county the fastest growing in Southern California. In the past ten years its population has increased by 53% and its retail sales by 356%. The county's newspaper, The Press-Enterprise, is enjoying the fastest growth in its 107-year history. In the six-month period ending September 30, its circulation was up 9.2%.

The Press Enterprise is determined to grow even faster than its record-breaking county. So, it's out after all 34,300 of the pocketbook-carrying newcomers—and those who are following them.

Specialized Reporting

Newspapers respond to varied information needs by assigning good reporters to hone in on business, science, religion and other fields.

BY MARCIA RUTH
presstime staff writer

AP

AP correspondent Howard Benedict gets briefing from Lt. Gen. James Abrahamson, director of the Strategic Defense Initiative, better known as the "Star Wars" program.

With the growth of specialized reporting, are general-assignment reporters headed for the endangered-species list just like general practitioners in medicine, with "specialists" taking their places?

Nobody is predicting such a drastic change in journalism, but clearly, specialization is on the rise.

Recognizing the increased sophistication of their readers, newspapers have responded by providing increasingly sophisticated coverage, particularly in the areas of business and science. Sometimes presented in separate sections, such subjects are covered more and more often by specially trained reporters.

In recognition of the trend, the Pulitzer Prize board a year ago set up a new category for "reporting on specialized subjects such as sports, business, science, education and religion" [presstime, Jan. 1985, p. 52].

Eugene Roberts, senior vice president and executive editor of The Philadelphia Inquirer, sees the movement toward more specialized reporting as helping newspapers' efforts to gain more credibility with the public. "Nothing would make us more credible than having people do jobs for which they are well-trained, he says."

The increasing specialization has been accomplished in large measure by giving experienced journalists specialized training, rather than trying to make journalists out of doctors, scientists and lawyers. There are, however, a few notable exceptions to this trend, such as Lawrence K. Altman, a physician who has covered medicine for The New York Times since 1969 [presstime, Dec. 1982, p. 24].

Although he says he "wouldn't rule out anything," the Inquirer's Roberts says, "I lean to taking proven journalists and training them in specialized fields, as opposed to taking people in specialized fields and trying to turn them into journalists."

A similar view is offered by Michael W. Millican, business news editor of the Associated Press. "It is much easier to teach someone economics than it is to teach them journalism," says Millican, noting that AP set a 1985 goal to increase its business staff by 25 percent.

Still, some editors are seeking a balance between journalists and other professionals. "I think the best mix includes MBAs and engineers who can also write, along with good general assignment reporters who are just curious about things," says

Scott Bosley, managing editor of the Detroit Free Press. "You have to have one and be interested enough to try to develop the other. Editors have got to pursue [the combination], but you may not be able to hire it."

One exception to the general pattern is religion writers. Lewis Moore, president of the Religion Newswriters Association, says he gets calls from editors looking for writers with religion degrees. "I would estimate probably a fourth of your best religion editors have graduate degrees in theology or religion and/or ordination," says Moore, religion editor at the Houston Chronicle.

Keeping specialist writers on the staff and providing a promotion ladder for them are major concerns of editors. "We have to start not only grooming them and training them but making it possible for becoming a business reporter to be a goal with the same incentives and rewards as editors and managers," says Bosley of the Free Press. "We need to not run people out of reporting just when they begin to get good at it."

Training opportunities. In addition to just plain learning on the job, most journalists' specialized training occurs in mid-career.

Some newspapers sponsor journalists for year-long programs such as the Vannevar Bush Fellowships for "public understanding of technology and science" at the Massachusetts Institute of Technology, or intensive workshops such as the three-day Wharton Seminars for business writers at the University of Pennsylvania. (Presstime's annual listing of fellowships will appear in the January 1986 issue.)

Other dailies work with local institutions to design long-range training programs for their own reporters and editors—such as The Dallas Morning News with Southern Methodist University and the Detroit Free Press with Wayne State University—or set up periodic seminars with specialists such as James Gentry, director of the business journalism program at the University of Missouri.

In addition, some journalism schools are altering their programs to encourage specialization at the undergraduate or graduate level.

"What we are working on involves a marriage of the journalism curriculum with other fields," says Reese Cleghorn, dean of the College of Journalism at the University of Maryland. "The landscape is littered with failed experiments" in which professionals write about their own professions, he says. "I emphatically believe the best way to do it is to rely upon someone who is primarily a journalist who then specializes in a particular field."

Professional associations are also increasingly active in offering mid-career journalists opportunities to specialize.

For example, the Council for the Advancement of Science Writers, a privately funded group affiliated with the National Association of Science Writers, sponsors three-day conferences near key medical and scientific centers. The council also sponsors long- and short-term, writer-in-residence programs to familiarize journalists with ongoing projects and public information offices of major scientific and medical institutions.

Another example is the Education Writers Association, which holds seminars and workshops for reporters on the education beat [presstime, Sept. 1985, p. 20].

Besides all of the formal offerings, many reporters are striking out on their own, quietly filling the gaps they feel exist in their understanding of particular beats without taking leave from their jobs.

William P. Virgin Jr., business editor of the Charleston (W. Va.) Daily Mail, recently obtained a second bachelor's degree—this time in business—from West Virginia State College, six years after graduating from Ohio State University with a journalism major.

"If I knew then what I know now, I would have had more specific courses in economics or science," he says of his undergraduate years. "If it had been available, I would have tried to create a minor or stay on long enough to accumulate additional hours in a specialty."

Without specialized instruction, "What you turn out to be is a generalist, and as sophisticated as some areas are becoming, I don't think that's good enough," Virgin says.

Business pervasive. According to the latest general survey on editorial content by the Newspaper Advertising Bureau, newspapers in 1982 devoted more space to "economics" than any other topic except sports—both 12.7 percent. Another NAB study reports that in 1983, more than 70 percent of newspapers with circulations over 50,000 have separate sections on business or finance.

"I lean to taking proven journalists and training them in specialized fields" they will cover.

Eugene Roberts

A 1985 study by the Associated Press Managing Editors shows economics as the subject of 13 percent of newspapers' front-page stories, more than are devoted to any other topic except government, which rates nearly half. The same study showed health/science and education each had 5 percent of front-page stories in the 33 papers surveyed one Wednesday in February.

Missouri professor Gentry estimates that even papers with less than 25,000 circulation probably have a person on the business beat, and above 50,000, "you're probably talking three."

The surge in business coverage can be traced to the Arab oil embargoes of the 1970s, says AP's Millican, who is president of the Society of American Business and Economic Writers. "Partly as a result of what happened with petroleum, we went through a period of inflation and economic turmoil," he says, "and what was going on in the world of business and economics was seen to touch peoples' lives more directly than had been recognized previously."

With this growth, says Millican business departments have had to grapple with "something that has bedeviled specialized journalism: Is your audience a person who is involved in whatever you are writing about, or is your person standing on the outside? Is your audience an insider or the general public?"

Some papers offer virtually something for everyone. At The Dallas Morning News, where the business staff increased from seven people in 1980 to 21 in 1985, each day the business section is devoted to a different treatment of the subject: Sunday and Tuesday, expanded coverage, with features and special interest stories; Monday, international; Wednesday, energy; Thursday, economics; Friday, commercial and residential; and Saturday, technology.

While its staff was growing rapidly, the newspaper emphasized formal, mid-career training. And with little attrition over the years, the News now has what Business Editor Cheryl Hall calls a "mature staff" that can select personnel carefully.

"We have kind of a mixture deciding on an area it wants covered, "then finding the best person to cover it," she says.

For example, the latest addition to the staff, to cover workplace issues, has a master's degree in labor economics from Cornell University along with an undergraduate major in journalism.

Despite the growing presence of business reporters on newspaper staffs, many observers agree with the University of Missouri's Gentry that such reporters' "glaring weakness continues to be finance." He adds, "A lot of them don't understand the basics of economics either."

Demand for good people exceeds supply, Gentry believes, and that is why "competition for good business reporters is very intense."

Most readers "depend on the paper to tell them if something important happens" in science.

Jerry E. Bishop

Perspective key. The opposite prevails for science writers, who find a buyer's instead of a seller's market for their work.

For although specialized science reporting has burgeoned in recent years, the number of newspapers devoting individual sections to the topic is well behind the number that already publish business sections. Therefore, the number of science writers' positions on newspapers is considerably smaller.

Nevertheless, a healthy trend toward science reporting is evident. Since 1978 when The New York Times initiated the first science section in any U.S. newspaper, about 20 newspapers have followed suit. Where coverage is offered, it is heavily weighted to health and medicine rather than to the natural sciences and technology.

According to NAB, about two-thirds of Sunday and weekend newspapers with circulations over 100,000 in 1983 had standing features on health and medicine, while only a quarter had them for science and technology. For smaller papers, the percentage drops considerably—to 56 for health/medicine features and 15 percent for science/technology features for dailies from 50,000 to 100,000; and to 48 and 8 percent, respectively, for those with 25,000 to 50,000 circulation.

In science writing, even more than in other specialties, the dichotomy between the "insider" and "outsider" audiences becomes a serious challenge for good reporting.

"If you're starting out with the word 'Pain,' " as David Perlman, science editor of the San Francisco Chronicle did in a recent series on the subject, "you're going to interest . . . everybody. There's no question about it," he says.

"But when you talk about the 'ultraviolet sky,' you're dealing with cosmological questions, astrophysical questions. You have to assume very few of your readers are going to have the slightest interest. Then the trick is to get them intrigued in the wonders and the mysteries of the universe, (by) whatever sense of poetry or wonder or excitement you can tickle up in the reader, so he's going to be willing to listen to an explanation."

The Wall Street Journal's veteran science writer, Jerry E. Bishop, observes that the subject is "not like sports. People buy the newspaper to find out what the scores are." Most newspaper readers "do not have an intrinsic interest in science," he notes, yet "they depend on the paper to tell them if something important happens."

Because of their technical nature, science and medicine are considered the specialized reporting areas most prone to misinformation, with possibly dangerous consequences for the public.

"If I choose to distort . . . my editors would not catch it," says Jon Franklin, two-time Pulitzer Prize winner at The Baltimore Sun. "Knowing nothing, all they have to go on is biases," he says, noting, "That's how we get 'hysterical' reporting" on such issues as cancer, Agent Orange and Three Mile Island.

Science journalism, says Franklin, who also teaches writing at the University of Maryland, is at the stage of "yellow journalism," where most newspapers were at the turn of the century. Others have dubbed it "gee whiz" journalism, where inexperienced reporters and editors often focus on dramatic "breakthroughs" instead of underlying issues.

Assessment of risk is the key issue, say experienced science writers.

"You need to understand something about the technology before you can understand something about the applications of it that present a possible risk to society," says Barbara J. Culliton, news editor of Science, the journal of the American Association for the Advancement of Science.

A science reporter also must understand "those applications that are no more risky than anything else—except for the fact that people have hyped them so they sound risky," adds Culliton, who is president of the Council for the Advancement of Science Writing.

In a 1984 study based on interviews with science writers, Jay Winston, assistant dean at Harvard University's School of Public Health, concluded that competent coverage of science and health were threatened by both "the dominant distorting influence of the competitive force in journalism" and "analagous competitive force within science (where) researchers are using the media in an effort to attach their names to discoveries."

A recent case in point is the controversy over a purported "cure" for AIDS (Acquired Immune Deficiency Syndrome) announced by some French researchers, which was publicly debunked by most American experts.

One effort to ease this situation—of largely inexperienced reporters and editors dealing with complex scientific subjects—is the Media Resource Service established by the Scientists' Institute for Public Information in 1980 to field calls from the media, many on deadline.

The New York City-based center, supported largely by newspaper-related organizations, has about 20,000 scientists on file who are willing to serve as sources. In the past two years, journalists from more than 800 media outlets, including more than 350 newspapers, called the free service at the toll-free number: (800) 223-1730; or for calls from New York state: (212) 661-9110.

About 80 percent of the callers were repeat business, says MRS Director Fred Jerome. So far, most questions have been about toxic wastes and health.

"It's most valuable for people who are not science writers," Jerome says. "One of the hard things for us to do is to get through to editors and general assignment reporters who are not covering science that there are stories they're doing that may have a science component."

Additional advice for editors is to urge reporters to do more independent research.

"Some of the smaller newspapers ought to pay more attention to what's going on in their backyard, and they really ought to keep track of what's going on in universities. There are a lot of things going on people are interested in, and they can't just depend on the wires to tell them," says The Wall Street Journal's Bishop.

A 1984 study on newspaper science sections, conducted by the Scientists' Institute for Public Information, showed that although papers with large science staffs—such as The New York Times, The Boston Globe and The Detroit News—generated the vast majority of their own stories, most newspapers used pieces from the supplemental news services or the wires.

"What we have is a public that is scared to death of science, scientists that don't know how to communicate, and the science writer is in the middle of this," observes Franklin of the University of Maryland.

Religion underplayed. Like other specialists, religion writers agree their branch of journalism has come a long way.

"The quality and quantity of religion coverage has expanded tremendously in the last 10 years, says the Houston Chronicle's Moore, who says he has watched the Religion Newswriters Association grow from "a tiny embryonic club to a very professional society" with about 200 members.

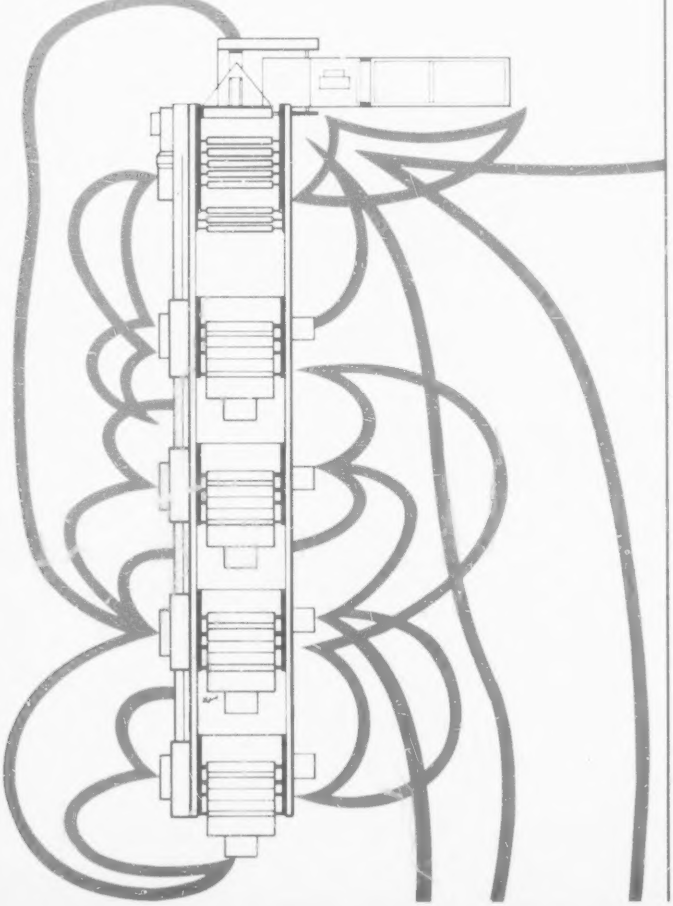
Most dramatic is the shift from coverage of religion as primarily church social events to serious consideration of the impact of religious values and practices on secular life [presstime, Oct. 1985, p. 8].

But many religion writers still voice the concern that increased sophistication is not enough. The drive for more space is their next objective.

"No matter how the polls prove otherwise, you find it very difficult for religion to be treated seriously and get stories into the paper," says Marjorie Hyer, religion writer for The Washington Post. Although she counts her editors as exceptions, Hyer says many others lack an understanding of the importance of religion in most people's lives because "people they [editors] know are not interested in religion."

To demonstrate what he considers a case of reversed priorities, the sole designated religion writer at the Associated Press, George W. Cornell, conducted a survey in 1980 in which he compared total attendance at sports events with attendance at churches and synagogues. Over the year, he found 13 times as many attended worship services (4.7 billion) as sports events (356 million).

Currently, AP has 70 reporters specifically assigned to sports but only one to religion. Business writers total 23, with five assigned to science and three to space reporting. An additional 15 or so do not hold the title of "science" writer, but are considered qualified by the AP to write on science and technology when stories occur in their regions. □



ONE PRESS
DOESN'T GIVE YOU
THE RUN-AROUND BLUES.

Unless you have a Solna Distributor, you're getting the run-around. Unlike other newspaper web presses, The Distributor is designed for easy operation from only one side. In fact, most everything is controlled from one panel right by the folder.

Take a good look at the quality, easy operation and profitability of an orange Solna Distributor. It will cure your run-around blues. Fast.

HONORIFICS ON THE WANE

Ms.Ms.Ms.Ms.Ms.Ms.Ms.Ms.Ms.Ms.Ms.Ms.Ms.

Courtesy title usage has trailed off at most newspapers

BY MARNA B. P. COURSON

Reflecting a recent change, most editors nationwide apparently believe the term "Ms." is a "Ms.-nomer" and are cutting it out of the newspaper copy that crosses their desks.

The trend was detected in the sixth annual English usage survey of Indiana University's School of Journalism, says Richard L. Tobin, an adjunct journalism professor there.

Just three years ago, Tobin says, "Ms." was acceptable to 57.3 percent of the U.S. newspaper and magazine copy chiefs surveyed.

But the latest survey shows 71.6 percent of the editors would not use the term. The study, conducted in January and reflecting a 65-percent response rate from about 150 newspaper editors and 50 magazine copy chiefs, shows the "Ms." editorial opposition knows no geographic boundaries.

Tobin says many respondents further indicate that all courtesy titles have been dropped from news copy except when they are deemed necessary for clarity. This is "a continuing and advancing trend," he adds. "Honorifics are on their way out."

An informal presstime survey of a dozen papers supports Tobin's findings.

"We pretty much dispense with courtesy titles in all news copy," says Arthur Helms, executive editor for Transcript Newspapers of Dedham, Mass., which owns two dailies and three weeklies.

Ernie Williamson, managing editor of The Houston Post, says his paper does not "use them unless specifically requested or occasionally to avoid confusion."

The Post stopped using women's courtesy titles about a decade ago, during the tenure of then-publisher Oveta Culp Hobby, Williamson notes.

The Daily Oklahoman of Oklahoma City in June abandoned all courtesy titles, says Mary Goddard, writing and editing coach. The newspaper wanted "to settle on something uniform and to fit the modern outlook," she says. Also, there was a dislike of the term "Ms."

The term "Ms." first surfaced in secretarial handbooks in the 1940s to provide women a title analogous to "Mr." for men.

One continuing backer of the feminist title is the Hiawatha (Kan.) Daily World (evening, circulation 3,488). Publisher David J. Cazalet Jr. says " 'Ms.' is the general rule of thumb unless it is requested otherwise."

Meanwhile, many newspapers continue using traditional "Miss" and "Mrs." honorifics, describing a woman's marital status, although they use no courtesy titles for men.

Women's courtesy titles "generally still appear" in The Bradenton (Fla.) Herald, but News Editor Neil Besoughloff predicts "they probably eventually will be on the way out" for the 37,539-circulation morning daily.

One notable holdout for traditional courtesy titles—including "Mr." for men on second and subsequent references—is The New York Times. "Virtually everyone breathing and alive is given an honorific," says Evan Jenkins, a news editor.

The Associated Press and United Press International have parted company on the use of honorifics, with UPI dispensing with them entirely. The AP uses them on second reference to a woman if that is her preference. But "I think ultimately courtesy titles will be gone," says AP Vice President Walter R. Mears.

The Times' Jenkins says "papers are dropping titles because it's easier, and perhaps to accord men and women equal treatment."

One style issue that persists concerns the use of "-person" in conjunction with another word, such as "spokesperson."

A few of the news organizations surveyed report they permit the use of "-person" in their copy, but most prefer more specific identifiers.

UPI has ousted all "-person" words, says Managing Editor Ron Cohen. "We're not 'neutering' anyone."

"We will recognize 'chairwoman' because it conveys information," says Stuart Samuels, city editor of The Capital in Annapolis, Md. (evening, 37,093). " 'Chairperson' or any kind of asexual thing is, to me, an abomination."

The New York Times uses standard, "masculine" titles, such as "chairman," Jenkins says. "It was just torturing the language to say 'spokesperson.' "

Indiana University's Tobin says his findings tend to support a trend away from neutered "-person" words.

"In our (last) survey, over 70 percent (responding) would outlaw 'chairperson' and return to 'chairman,' " Tobin says.

Editors appear to be "going back to the old standards," he says, reflecting a "return to more conservative usage." ☐

Courson, a former reporter for presstime *and for the Associated Press, is a free-lance writer in the San Francisco area.*

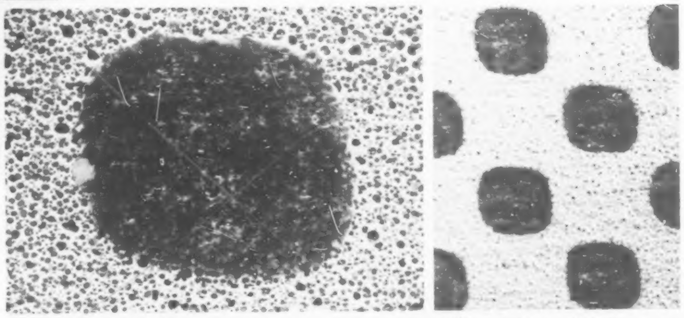
There are 250,000 reasons in this photo for using Hoechst Newsplate

They add up to superior dot reproduction. Dots with *sharp,* well defined edges, produced as a result of the plate's electrochemical grain.

Newsplate S is easy to live with. Process it in your existing processor with a developing lacquer. There's no cross-contamination of chemicals.

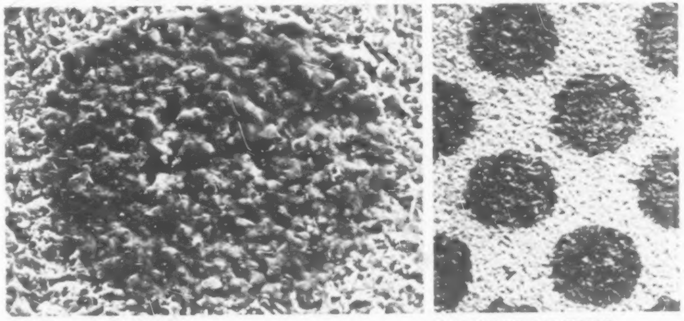
On the press, you can depend on Newsplate S for fast rollup, better ink/water balance and built-in capacity for runs up to 250M impressions. The quality of these plates gives you "room to improve" in the pressroom.

Newsplate S negative-working presensitized offset plates are manufactured in the U.S.A. by American Hoechst Corporation.



MAGNIFIED 400 TIMES **MAGNIFIED 100 TIMES**

Hoechst Newsplate S produces sharp well defined dot edges.



MAGNIFIED 400 TIMES **MAGNIFIED 100 TIMES**

Typical wipe-on plate dot edges begin to grow.

SMALL RETAILERS

NEWSPAPERS PAY SPECIAL HEED TO LOCAL CLIENTS

BY MARGARET GENOVESE
presstime staff writer

"Think small" is a slogan that is as appropriate for newspapers in the 1980s as it was for the Volkswagen Beetle in the 1960s.

Small retailers, while they may not contribute as much to a newspaper's bottom line as the big department stores, supermarkets or retail chains, are important customers, according to daily newspaper advertising executives.

The San Diego Union and The Tribune, for example, commit about 85 percent of their advertising sales staff to serving small retailers, which account for only about 25 percent of their revenues. "That, in itself, defines it as a pretty important aspect of our business," says G. F. Wilson Jr., director of advertising.

According to the U.S. Small Business Administration, in 1982 (the last year for which figures are available) there were 1,256,320 "retail enterprises" with fewer than 100 employees. They accounted for 99.2 percent of all retail enterprises.

"If a newspaper doesn't have a lot of small advertisers, it is extremely vulnerable to changes in budget from big advertisers," observes Louis E. Alexander, retail advertising manager of the San Jose (Calif.) Mercury News.

Robert G. O'Neill, vice president and director of advertising for The Times-Picayune/The States-Item in New Orleans, says that just as a department store needs small merchandise as well as big-ticket items to attract shoppers, newspapers need smaller advertisers as well as the majors to bring in the maximum number of readers.

Furthermore, he says, "the personality and the individuality of these small businesses make newspaper readership extremely interesting."

"Small advertisers are important to us because they are the backbone of the community," adds John W. Watson, advertising director of The Billings (Mont.) Gazette.

Do smaller retailers have special needs? Yes, says Alfred Eisenpreis, Newspaper Advertising Bureau vice president for retail marketing, and newspapers can help meet them.

First, newspapers can help smaller retailers plan their business in general and their advertising in particular, Eisenpreis says. One tool for doing this is the "Newspaper Advertising Planbook" that NAB publishes each year to help retailers set their sales goals and determine how much they want to invest in advertising.

But a problem with smaller retailers is that they do not consider advertising as an "investment." That is obvious when a retailer tells a newspaper, "I'll *give* you the ad," an attitude Eisenpreis calls "the United Way of advertising."

To remedy that, newspapers can help retailers understand what advertising can and cannot do for their businesses. For example, says Eisenpreis, it can create traffic in a store, but it doesn't actually sell. Only mail order advertising does that.

> *Small businesses' ads "make newspaper readership extremely interesting."*

The other major need of the small advertiser, Eisenpreis says, is help in creating and producing effective ads from their limited advertising budgets [presstime, Nov. 1985, p. 22].

Meeting the need. Newspapers are using a wide variety of selling tools to meet these needs of the small advertiser. Here's how some of them are doing it:

Special rates. "As more competition to our newspaper comes into our market, most of that competition—at least the print competition—is going to go after those small advertisers," says Watson of The Billings Gazette. "We have to constantly be watching our pricing structures for those small people."

When The Gazette increased advertising rates Sept. 1, it began emphasizing its "pick-up" rate, a discount for repeating the same ad within seven days, as a way to help smaller retailers, says Watson.

Smaller retailers also can benefit from its "stand-by" rate, which provides an advertiser a discount if the newspaper can run its ad at the newspaper's discretion.

To attract small advertisers, the San Diego newspapers have a special first-time rate and an "open credit" policy that allows retailers to start advertising before getting credit approval, according to Wilson.

Providing expertise. "We work harder for [smaller retailers] because they are more demanding and need more help," says Robert N. Schoenbacker advertising director of The Oregonian in Portland. "The major clients certainly have their own cadre of experts and do more of it in-house."

Through its "Trading Area Profiles" program, The Oregonian can help a retailer examine its trading area, confirm who its competitors are and identify its unique advantages over the competition. The TAP program divides metropolitan Portland into 38 trading areas and pinpoints within each one where people are shopping and what they are buying.

With its computerized co-op advertising program, ReCAS (Retail Co-op Advertising Service), The Oregonian also helps a retailer review its inventory for brand items and determine how much co-op money is available from manufacturers.

And the paper's nine-person staff of artists and copywriters can help a retailer produce a professional looking ad.

Although newspapers can help smaller retailers do things they do not have the staff or resources to do themselves, these small business people are not unsophisticated, Schoenbacher emphasizes. "The ones that have survived and are surviving are pretty astute."

Meeting with retailers. Along the same lines, the San Jose Mercury News has an artist in each of its two regional advertising offices, reports Alexander.

Another way that newspaper reaches out to retailers is through meetings.

"Our managers speak at night to a lot of small business groups and associations and classes at junior colleges," says Alexander.

"I spoke at a big seminar of the California Christmas Tree Growers Association," recalls Alexander. "Some of these people live way out in the mountains and hills. They were desperately interested in how to increase their revenue by advertising more effectively in the six weeks a year they sell trees."

Special positions. The small retailer can't afford the larger ads, "so a lot of times they get lost on a page," says Frank L. Beeson, marketing director for The Daily Record of Wooster, Ohio. "What we've done to try to help the smaller advertisers is to put them together under one theme."

In October, the Record ran a double-truck ad for the community's Octoberfest celebration. The local chamber of commerce paid for the top part of the ad, in which it listed Octoberfest activities, and the Record paid for space at the bottom, in which it placed appropriate artwork. Then the newspaper sold 2-by-5½-inch block ads in the spread at its average per-inch column rate—which gave smaller advertisers a discount—and threw in a free color. Unlike a "signature" ad that gives a merchant space enough only to run a logo, a 2-by-5½-inch ad is large enough for the retailer to advertise specific merchandise.

"The biggest thing that it does is give them the impact of a full page or a double truck at the cost of a 2-by-5½," says Beeson.

Because of its initial success with the idea, the newspaper plans to run one double-truck advertisement a week during the Christmas shopping season to spotlight Sunday store openings.

Daily Record's Beeson (right) discusses double-truck ad with Charles E. Manges (left), president of the Wooster Area Chamber of Commerce, and Richard H. Earl, owner of Amster Shoes, Wooster.

Deals on inserts. In addition to remaining sensitive to smaller retailers' requests for positioning in ROP, The Ogden (Utah) Standard-Examiner recently began offering such retailers two new insert vehicles: a "Print and Insert System," which allows up to six retailers to share a preprinted insert, and a coupon book.

While the P&I System, begun early this year, has been "well-received," the coupon book is probably the most popular thing the newspaper has done for its smaller advertisers, says James L. Barclay, advertising director.

For $165, a retailer can buy the front and back of the coupon. One ice cream store offered a "double scoupon"—one free double-scoop ice cream cone for each one purchased—and had 1,500 coupons returned in one month, he says.

The Standard-Examiner's P&I System, its coupon book and an attractive rate package have "kept the small advertiser out of the little shopper; it's kept them out of shared mail," says Barclay.

> *"When you serve the marketplace in this fashion, you don't open the doors" for a competitor.*

Zoning and TMC. Likewise, Howard I. Renner, advertising director for The Morning Call of Allentown, Pa., says his newspaper does not have the shopper problem that many newspapers have. He attributes it to the newspaper's eight zoned "Neighbors" editions that run every Thursday and give smaller advertisers a unique editorial environment in addition to a targeted circulation. "I think when you serve the marketplace in this fashion, you don't open the doors for someone to come in," he says.

Like other metropolitan newspapers, The Times-Picayune/The States-Item has zoned editions. But, says O'Neill "some smaller merchants also have asked for as much coverage as they can get within that zone area." The newspaper's total market coverage product, The Advertiser, responds to that request. It is delivered once a week to non-subscribers by the daily's own carrier force. "It gives the small businessman the opportunity to reach practically everyone he wants for an affordable price because he only pays for the circulation in his zone," says O'Neill.

Are smaller retailers worth the effort many newspapers make to attract and retain them? "Hell, yes," says Frank J. Savino, vice president/marketing of The Record in Hackensack, N.J. If a newspaper does not carry an ad for the store down the street or around the block, says Savino, it runs the risk of having readers say: "You're not my newspaper any more, you are something foreign." ☐

Zoned Editions, New Bureaus, More Competition Cause Growth of Editorial Staffs

BY MARION LEWENSTEIN

Despite the facts that there are fewer daily newspapers in the United States now than seven years ago, and that national circulation has remained relatively stable during this time, editorial staffing has grown by about 10,000 people nationwide since 1978.

It is true that total daily circulation climbed to a little more than 63 million in 1984, a high since World War II. Circulation figures, however, have fluctuated widely since the 1970s, rising or dipping by as much as a million from year to year. In the meantime, the number of newspapers has steadily decreased from 1,756 dailies in 1975 to 1,688 in 1984.

Yet the "annual census of newsroom employment" conducted by the American Society of Newspaper Editors shows that at U.S. daily newspapers the number of newsroom employees increased from 43,000 in 1978 to 50,400 in 1984 and to 53,800 this year. (The most recent figure is skewed somewhat by changes in job definitions listed on the census questionnaire; the changes were aimed at getting "all professional newsroom employees" counted, some of whom might have been missed in previous surveys.)

A check of some 30 newspapers across the country buttresses the industry-wide report. The Kearney (Neb.) Daily Hub, for instance, recently added four people to what had been an eight-person editorial staff. The Fort Worth Star-Telegram since 1979 increased its staff by about 100 people.

Lewenstein is professor of communication at Stanford University and a free-lance writer.

The Daily Hub (evening, circulation 11,700) was purchased by the Omaha World Herald Co. earlier this year. New management wanted to improve local coverage in its 40,000-household, six-county circulation area. The paper hired its first photographer, added one person each to the sports and general desks, and took on a reporter whose primary responsibility is covering the local college.

The Star-Telegram (all-day, 247,649), a Capital Cities Communications paper, now has about 270 editorial staffers. It competes with Dallas papers in several fast-growing counties and has multiple replates for a state edition and various city and suburban zones. The Star-Telegram's circulation has increased about 22,000 since 1980.

Gerald Zenick, associate managing editor for operations, reports that 30 percent of the 100 new staff members were assigned to zoned editions. The rest went to features, sports, business and graphics.

Reasons for expansion. In general, the key reasons for more staffers have been more intense geographic coverage; expansion of specialized coverage, especially sports and business; more and better art; and market growth. Personnel cutbacks in production areas made possible by the introduction of modern technologies are also cited as a factor in editorial-staff enlargement.

Because markets have grown fastest in Sun Belt areas, newspapers there have increased staff the most dramatically. The San Jose Mercury News (all-day, 261,668) added nearly 150 people in the last eight years. In addition to local expansion and zoned editions, the Knight-Ridder paper opened bureaus in San Francisco, the Pacific Northwest, Tokyo and Mexico.

In Florida, three Tribune Co. papers—The Orlando Sentinel and the Fort Lauderdale News and Sun-Sentinel—have been adding reporters by the dozens to new and established county and state-capital bureaus. They have created "commuting" foreign correspondents—reporters based at home but who travel frequently—expanded Washington coverage, created supplemental business and sports sections, and added to the copy desk and graphics departments.

The "annual census of newsroom employment" conducted by ASNE shows that the number of employees increased from 43,000 in 1978 to 50,400 in 1984 and to 53,800 this year.

The Sentinel (all-day, 235,490) has been adding staff at the rate of 15 to 20 people annually for the last five years. It plans another 38 new slots next year alone. Right now, editorial staff numbers 315.

The Fort Lauderdale a.m. and p.m. papers (combined circulation, 196,249) may carry zoning and remakes to the ultimate in the process of producing an average of 2,400 pages a week, says Managing Editor Earl Maucker. The papers have two separate zoned broadsheet sections six days a week, eight zoned tabloid inserts running at various times during the week, plus numerous remakes in the front, metro, business and sports sections. There also is a weekly total-market-coverage product that requires replating.

"It is impossible for me to read a complete daily output of my own papers and still find time to read the competition," Maucker says with bemusement. "I have to depend on direct supervisors to catch errors."

The news staff numbers 326, up about 35 in the last five years. Circulation has been increasing recently at an annual rate of 22 percent.

A.M. influence. Another important impetus to news-staff growth has been the conversion from p.m. to a.m. publication. Some newspapers that made the shift discovered they needed more editorial help for a morning paper. In fact, some companies that merged afternoon and morning editions into an a.m. product also found they needed additional help for the newsroom.

The Press-Enterprise (morning, 126,451) of Riverside, Calif., abandoned its afternoon paper two years ago, combining its a.m. and p.m. staff of 110. Still, to cover fully its market that grew 45 percent in 10 years, Editor and Publisher Howard H (Tim) Hays Jr. says the newspaper has hired about 25 additional people, 15 in the last year. Circulation of the independent daily has gone up nearly 10 percent in the past two years.

Eight new staffers went to new or beefed-up bureaus. They have helped increase weekend zoned news coverage and have allowed addition of a weekly zoned magazine, several zoned pages and sections, Hays says.

In other moves, the Press-Enterprise created a daily business section; started a weekend section; expanded its entertainment and home and garden coverage; started weekly health, fitness and food sections; and put six more people on the desk. The paper also has given full-time status to such beats as legal affairs, minority affairs, higher education and military news.

"Fortunately," Hays says, "this has happened during a time when business has been good and continues that way. Between that and the economics saved with a one-newspaper operation, we can pay for this growth."

He adds that the changes strengthen the paper as it becomes competitive in its own market with expanded metropolitan papers, including the Los Angeles Times and The Orange County Register.

The Arkansas Democrat of Little Rock (morning, 80,371), part of the family-owned Wehco Media group, doubled its staff when it converted from p.m. publication in 1979, according to Managing Editor John Robert Starr. Writing in a 1985 Associated Press Managing Editors Association committee report, he said circulation jumped from 50,000 to 70,000 the first year after going a.m.

Two Gannett Co. papers, The State Journal (morning, 67,449) of Lansing, Mich., and the Stockton (Calif.) Record (morning, 52,435) added more modestly to staffs when they converted from evening to morning cycles within the last few years.

Successful afternoon papers have added editorial staff, too. Knight-Ridder's Philadelphia Daily News (284,253) and Copley's Tribune of San Diego (122,732) both reported at the Oct. 28-31 APME convention in San Francisco that they have improved local coverage and added zoning and features. Since 1975, when it had 80 editorial workers, the Daily News has doubled staff, and The Tribune hired more than 30 people over the last six months, bringing its total to 190, according to the report of the APME PM Newspapers Committee.

These patterns are confirmed by researchers Judee and Michael Burgoon. They reported at the APME meeting that success in the afternoon, or successful conversion to morning, depends on meeting consumers' rising expectations. Some 30 cases they have researched show this usually means expanding staff, the Burgoons said.

Fort Worth Star-Telegram assigned 30 of 100 new staff members to work on zoned editions.

Another important impetus to news-staff growth has been the conversion from p.m. to a.m. Some newspapers that made the shift discovered they needed more editorial help for a morning paper.

Leveling off. A weak local economy has kept papers in other parts of the country from adding staff in recent years or from planning to do so in the near future.

The Times-Picayune/States-Item (all-day, 272,931) in New Orleans—part of the Newhouse Newspapers group—has remained stable with 250 news staffers despite flat circulation because of a poor economy hit hard by declining oil business.

In Lewistown, Pa., The Sentinel (evening, 13, 618), a Buckner News Alliance member, has kept its staff steady in face of 9-percent local unemployment.

When The Spokesman-Review and Spokane Chronicle (combined circulation 128,390) joined newsrooms two years ago, they redeployed people but did not add to the overall editorial staff of about 105 people. The papers, independents owned by Cowles Publishing Co., opened a Washington, D.C., bureau, expanded into Northern Idaho, beefed up coverage of higher education, and assigned more people to cover business and sports.

A seriously slowed economy will prevent the paper from hiring more staff despite pressure to add more zoning and new sections such as one for senior citizens, Managing Editor Chris Peck reports.

The Herald News (evening, 46,979) in Joliet, Ill., has faced local unemployment rates of up to 26 percent. Editorial staffing at the Copley paper dropped from 40 in 1980 to 30 several years later. Even so, that number has crept back up to 35 as Managing Editor Reynold Hertel has added to sports and general assignment.

Others have increased news-staff budgets without necessarily tying the expenditures to revenue growth. Despite stable circulation and a slowed economy, The Times-News (morning, 20,563) in Twin Falls, Idaho, has added five people since 1982, according to Managing Editor Stephen Hartgen. Management of the Howard Publications newspaper "wants to improve quality," he says.

In Kansas, the independent Dodge City Daily Globe (evening, 8,787) also has added news staff—three people—because management wanted to improve the paper, Managing Editor Lee Finch reports.

The same reasoning led The Boston Globe (morning, 509,464) to increase its news staff by about 20 people in the last three years. The paper has opened four foreign bureaus and added several "commuting" foreign correspondents, along with more desk people and special features writers.

Tom Mulvoy, deputy executive managing editor, says he expects the paper to add more people, especially when the paper goes to pagination.

Pagination requires more editors to help in layout, Jack W. Zimmerman, managing editor of The Daily Oklahoman (morning, 241,608) reported recently to APME. That Oklahoma City independent daily added four editors when it went to pagination a year ago.

Competitive needs also have dictated increased staffs for some newspapers. The Detroit News (all-day, 645,016) in one of the few knock-down, drag-out newspaper battles still being fought, has added about 20 reporters in the last two years as it fights for more statewide circulation. Many of the new reporters have gone to the state capital in Lansing. The paper is being acquired by Gannett.

Future editorial employment in the newspaper business continues to look bright, editors say, though probably not quite so rosy as the last few years. Most of those interviewed for this article project some continuing slow growth.

And even where the economy has gone sour, editors seek to let attrition rather than outright dismissals reduce staff. For example, Editor-Publisher Ted M. Natt of The Daily News (evening, 24,369) in Longview, Wash., says that in reducing his news staff from 36 to 30 people, he had to lay off only one employee. ☐

Under Oath

Reporters can prepare for the day they're called to the witness stand

BY GEORGE W. RIDGE JR.

"That was an education."—A reporter stepping down from the witness stand.

Reporters in general do not enjoy anyone dogging their footsteps. They go about their business with a personal style, and tend to bristle when their methods come under question from an outsider.

The landmark case *Gertz v. Welch* has changed this for journalists targeted in a libel suit.

Now a reporter's libel defense can be the justification of questions asked or not asked in the newsgathering process, how they were asked, and why certain aspects were included or not included in the story. This is the "fault" standard of *Gertz*.

What is fault? Put most simply: Did the reporter follow the same procedures that a fictional "reasonable and prudent" reporter would have taken under all circumstances?

Thus, even if the facts ultimately turn out to be wrong, the reporter still can prevail in the libel action if he or she can justify the methods used in reporting the story and can prove that he or she had no inkling of the falsity.

But to do so, the reporter must undergo the deposition process—pretrial questioning under oath from rival attorneys. The reporter also may have to take the witness stand, hear an expert plaintiff witness critically examine the method of gathering the story and undergo severe cross-examination.

Unfortunately, few reporters are prepared for this ordeal. They often do not make the best case to account for their reporting methods.

The best weapon available to the reporter under such conditions is to remain cool in the knowledge that you know your job much better than the lawyer does.

Points on reporting standards that lawyers often cover when questioning reporters were addressed at a recent communications law seminar sponsored by the Practising Law Institute in New York City. Although experienced journalists may find some of the underlying thoughts simplistic, they nevertheless represent legal thinking. A reporter forewarned is a reporter forearmed. Among the points:

- Is there an inference that only an adverse picture was to be presented in the article? Did the reporter ignore all or part of the information on one side of the story? Examine all the facts to see if there was a motive to slant the article.
- Did the article show prejudgment? If so, did such prejudgment prevent a full investigation of the facts? Can it be shown that there was an unfair gap between what was discovered in the investigation and what was published?
- What did the reporter do? Was there evidence of neutral reportage? (The freedom to report serious charges where the public interest is involved.) Examine the reporter's moves in compiling the story, not only from the reporter's standpoint but also by contacting all parties.

Defense attorneys say journalists can best deal with these kinds of questions by telling the truth and not letting the opposition attorney lead them into guessing. If a reporter truly does not remember, there is nothing at all wrong with answering, "I don't remember."

And, although lawyers will demand it, not every question can be satisfied by a yes or no answer. If a lawyer's badgering grows intense and your own attorney is not protecting you, do not be afraid to stand up for your rights. If truthful, give such equivocal answers as "yes and no" or "not necessarily." Then be prepared to explain such an answer.

Lawyers' tactics. Possible lines of questioning to establish "fault" under *Gertz* are numerous and complex. But lawyers engage in certain tactics that perhaps can be illustrated through a hypothetical cross-examination.

A reporter is investigating information that a local car dealer has generated more complaints with the Better Business Bureau than any other firm in the state. The information came from the former custodian of the bureau records, Miss X. Although Miss X no longer works for the BBB, the reporter—in checking her background—learns from the bureau manager that she was a valued employee and would be welcome back.

The reporter does not pursue this subject but moves on to question the manager about Miss X's allegations. When the manager discovers the real reason for the reporter's call, he becomes uncooperative and refuses to comment on the allegations. He abruptly terminates the conversation and won't accept further inquiries.

After the story is published, it turns out that there were numerous complaints against that dealership, but at least one other business had been the target of more. The dealer files a libel suit.

The plaintiff's lawyer attempts to show that the reporter's checking on Miss X's background was sub-standard:

Q. Now, isn't it true, sir, that an ex-employee who gives information must be treated with suspicion?

A. Yes.

Q. How did you check her out?

A. I called her former employer. When he said, "We would like to have her back"—well, when you learn that she is welcome back, I don't know of anything that would particularly affect her information. I did not ask why she quit because it was only important to know whether she was a valued employee, and I had to try to confirm her information.

Q. And would the question of how long she worked there be important?

Ridge is a lawyer and journalism professor at the University of Arizona, Tucson. He has testified as an expert witness on reporting standards in seven Arizona libel trials. Ridge also works summers as a copy editor for the International Herald Tribune in Paris.

PRESS
NEXT WITNESS!
AUTH

A. Unless the span of time would indicate she did not have access to the information, it would not be my standard to pursue it once I learned she was a valued employee

The time element. Another issue likely to come up in almost every libel case is time. Although juries generally can be made to understand a journalist's time constraints, the cross-examiner's sharpest attack could be along the lines of, "Why did this story have to be published today and not tomorrow?"

Ever since the 1967 Supreme Court decision in *Curtis Publishing Co. v. Butts*, attorneys have been trying to draw distinctions between "hot news" and "cold news." In *Butts*, the court ruled that the alleged selling of football team secrets by a nationally known former college coach was not "hot news."

In the car-dealer example, a reporter could face this kind of continued questioning:

Q. What in this article makes this hot news that needs to be published today, or it loses its news values?

A. This is a car dealership selling 600 new and used cars over the course of a month. That would translate to 20 a day. If you are a reader and planning to buy a car tomorrow, would you want the story held up a day? That's 20 people affected, and if the reporter has a good-faith belief through reasonable checking that there is a problem with the agency and the public is not aware of it, then he or she has an obligation to these 20 people to let them in on the secret.

The experienced attorney often will try to make light of such an answer, but the reporter should remain cool:

Q. Is it your testimony, then, that it is more important to rush a paper out than guard against libel?

A. No.

Another favorite tactic is trying to take the entire reporting and editing process out of context. In asking whether there were facts in the story that an editor would question, the cross-examining attorney would like for the jury to believe that the only thing the editor did all day was look at this one story. The reporter or an expert must make the point that this is not the case.

Q. Do you have an opinion as to whether this is an article that a reasonably prudent editor would question?

A. Well, we must step into the editor's shoes. An editor will have many, many articles go through his or her hands in the course of a day. In fact, one portion of this story did turn out later to have an error, but we must sit in the editor's chair at the time of the editing. None of the flags that usually alert editors are present in this story. If every editor approached every fact of every article as a research project in itself, the newspaper would never be published.

Beware the added question that slightly changes the entire factual context:

Q. Is it the practice of newspaper reporters that the most important items in a particular article are put first?

A. Yes.

Q. And if it is important to the article, is it also a practice that greater effort at verification are given items at the top of the story?

A. No.

Q. Is there greater responsibility on the part of a reporter or a newspaper to verify a fact concerning someone's reputation versus an innocuous account of the weather?

A. No.

Q. No? (unbelieving) Why not?

A. Well, your phrasing is difficult. I would say that in practice, every reporter knows what you are trying to say, but in actual fact and as a standard, every item has equal importance. Who can know what the consequences of misreporting the weather might be? I think it is very unprofessional judgment on an editor's part to view anything as relatively innocuous, whether it's the weather, House Bill 1023 or how an auto agency stands with the Better Business Bureau. It's a very dangerous thing for a reporter to say "this is an innocuous fact, so I have a lower duty to check on this than another fact, which is not innocuous." There are no innocuous facts in the context of news reporting.

Here is an example of one answer leading to false reasoning by the cross-examiner:

Q. To be fair and to have balance, shouldn't the reporter then put the Better Business Bureau manager's version in the article? (In this case, it was, "No comment.")

A. No.

Q. No matter what Mr. White said?

The best weapon available to the reporter under such conditions is to remain cool in the knowledge that you know your job much better than the lawyer does.

A. No. But what he said in this instance was not important to the story, and we have to confine ourselves to the facts of this reporting situation.

The reporter should remember that he or she has much more experience in the field being explored than the lawyer. Thus, the reporter often can spar successfully during cross-examination.

But watch out for truisms. Consider the following:

Q. Do you think a reasonably prudent reporter should publish untruths?

A. Known untruths?

Q. No, simply untruths.

At this point there was an objection, which was overruled.

A. I think I can answer it. The definition of actual malice is to publish something that you know is untrue. I don't think a reporter should knowingly publish an untruth.

Q. That really wasn't my question. (The original question is rephrased.)

A. I think we have a terrible problem. I have to know whether there was a knowledge of untruth. Mistakes happen in every field, even with the most prudent checking.

Often, a reporter or expert witness can clarify a journalistic myth. An example is the "two-source" rule, which burst upon the public with Watergate and often comes up in cross-examination:

Q. Doesn't the reporter need two sources to meet the normal journalistic standard of reporting?

A. If the sources are terrible, 20 sources wouldn't be enough. If the source is the custodian of the records, or the governor, or a public document, then there is no need to go out along the street and try to find someone who agrees. It is up to the reporter and editor. The two-source rule is a myth. The journalistic rule is that your source must be reliable and you must pursue additional sources until you have a good-faith belief in your information.

Another pitfall for reporters is questioning on codes of ethics.

Codes make some statements that, although they may be good advice, are not good law. Take, for example, this fine-sounding statement from the code of ethics of the Society of Professional Journalists, Sigma Delta Chi: "There is no excuse for inaccuracies."

If *Gertz* stands for one proposition, it is that inaccuracies without fault, or inaccuracies that crop up even where good reporting practices were followed, are not culpable in a court of law. Yet imagine this questioning and its effect on the jury:

Q. Do you agree with that part of the code of ethics of the Society of Professional Journalists which states: "There is no excuse for inaccuracies"?

A. The *Gertz* case screams against this fine-sounding proposition. This is returning to the old common-law, strict-liability standard—you print it, it turns out to be wrong, you lose—and ignores many libel defenses and the fault standard.

In our hypothetical case, even though the law allows a reporter to justify an inaccuracy, the code of ethics judges him guilty. The reporter is at a distinct disadvantage when trying to explain that the code should read: "There is no excuse for *negligent* innaccuracies."

More advice. Reporters also should remember that "how you testify can be as important as what you say," says Charles Kelly, a reporter for The Arizona Republic. Kelly was a witness in one of the libel cases stemming from the bombing death of reporter Don Bolles. He suggests that reporters:

1. Dispel the image of the reporter who rushes into a bar, gets a tip from a bartender, writes it on the back of a matchbook and dashes back to the newspaper with a "scoop." Watch body movements, such as scratching and twitching. Do not appear either arrogant or unconcerned in your answers, and do not let self-evident questions lead you into facetious answers.
2. Listen carefully to the questions, and think a moment before answering.
3. Do not change your attitude when you are being questioned by a friendly attorney.
4. Be honest and project the image that you are in the business of dealing in fact.

Kelly also advises the reporter to consider potential testimony even before turning a story in: "Consider your sources once again," he says. "Would they make good witnesses? Would they turn on you if the going were to get rough? It happens. Perhaps you need just one more source, just one more document."

In other words, cross-examine yourself, and you may never end up on the witness stand. □

29th
ANNUAL
COMPETITION

1986 Gavel Awards

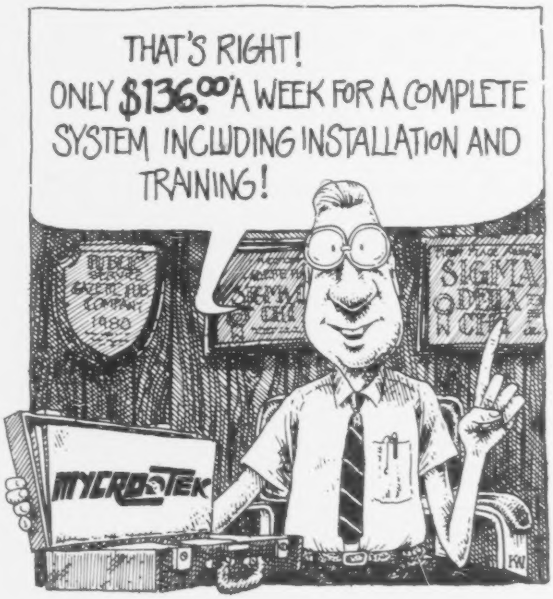
Share with us what you have done to foster greater public understanding about the law, the courts and the judicial system.

Deadline for the 29th Annual Gavel Awards program is February 1, 1986.

The competition is open to books, newspapers, newspaper magazine supplements, magazines, wire services/news syndicates, radio, television, films and theatre.

Materials published, broadcast, or produced during the period of January 1, 1985 through December 31, 1985 are eligible for consideration.

For complete information and official entry forms, please contact: Peggy Reilly O'Carroll, Gavel Awards Competition, American Bar Association, 8th Floor, 750 North Lake Shore Drive, Chicago, Illinois 60611 (312/988-6137).



THAT'S RIGHT! ONLY $136.00 A WEEK FOR A COMPLETE SYSTEM INCLUDING INSTALLATION AND TRAINING!
MYCRO-TEK
KW

Introducing The Mycro-Comp™ 550 From Mycro-Tek.

Our new Mycro-Comp 550 is a newspaper publishing system specifically designed for weeklies and small dailies — and the limited budgets they have to work with.

A Real Front-End System.

The Mycro-Comp 550 is a totally integrated system — with a PC price tag. For only $136 a week, you can have: four terminals, a network controller, typesetter interface that works with the new LaserSetter, width tables, and a spare parts kit. You also receive three days of system training and four days on on-site consultation.

A System That Grows With You.

The Mycro-Comp 550 is completely upgradeable, so your system can grow as your needs grow. Because Mycro-Tek designs, manufactures, services and supports everything we sell, you have added assurance your system will never become an orphan.

A System You Can Trust.

Perhaps the 550's biggest plus is that it's a Mycro-Tek product. For 10 years, Mycro-Tek has developed hardware and software for the newspaper industry. So you deal with one source — for everything — all the time.

If you'd like to know how we can put the Mycro-Comp 550 System to work for your publication — for only $136* a week — call us today.

RESUMES VERSUS REALITY

Checking REFERENCES

Newspaper personnel specialists employ various techniques to obtain information about prospective new employees

BY CLARK NEWSOM
and MARK INGHAM

Making employment decisions has never been an easy process. It is being complicated further by precautions that many organizations are taking to protect themselves from lawsuits over the process of reference checking.

"You can't get the references you used to be able to get," says Gerri Cordle, vice president and director of employee relations at The Orlando (Fla.) Sentinel.

Newsom is **presstime** *labor writer; Ingham is ANPA personnel relations associate.*

While precautions are not necessarily new—IBM stopped providing references in the 1960s—experts say that more companies are developing official policies that restrict the flow of information to potential employers.

The precautions may be well-advised. At least two newspapers have been sued over their handling of reference checks. William J. Dritsas, an attorney in the San Francisco office of Seyfarth, Shaw, Fairweather & Geraldson, says he is defending two California dailies against slander claims and one alleged violation of the state's labor code arising from references given regarding former employees. The code provides for monetary damages.

In many ways, reference checking may be more important than ever as today's highly competitive job market creates a tendency for job seekers to inflate some of their qualifications on resumes and in interviews.

Yet, because of the fear of litigation, many organizations will neither confirm nor deny such qualifications, especially where a subjective evaluation may be required.

"My recommendation is to give only name, rank and serial number" to requests for information about former employees, says Joanne H. Saunders, a Chicago labor attorney. Unfortunately, she adds, treating everyone the same "protects the lousy employee and discriminates against the good employee."

James P. Spangler, director of employee relations at The Wichita (Kan.) Eagle-Beacon, says his newspaper provides only job titles and dates of employment for reference inquiries.

Even though they are reluctant to give information to others, newspaper personnel specialists remain eager to obtain information on prospective new employees. Spangler emphasizes that thorough reference checking is an essential part of the selection process and one of the best indicators of the future success of prospective employees.

And another Kansas newspaper executive, William C. Barlow, corporate personnel manager for Stauffer Communications of Topeka, says, "I tell my unit managers to get as much information as possible and to give as little as possible." Stauffer's employment application includes a release authorizing the company to check references.

Barlow stresses the importance of reference checking, citing a report showing that 66 percent of all resumes are misleading in some way. "The purpose of the reference check is to identify differences

Newsday's Sanchez checks a previous employer about a prospective employee.

among candidates with similar credentials," he says.

Some newspapers, such as the San Jose (Calif.) Mercury News and The New York Times, run credit checks with local credit bureaus on new employees who will be handling money, such as circulation district managers and cashiers in the accounting department.

To verify academic degrees, the Times has prospective employees sign a form that is sent to the college or university, according to William G. O'Fallon, director of human resources.

But even a college can produce inaccurate information about someone who went to school there and is now seeking a job. Barbara Sanchez, editorial personnel manager of Long Island, N.Y.-based Newsday, says that "at least five times I've been told (by a college) that someone did not have a degree." Further checking verified that the person actually had the claimed degree.

In spite of policies against giving out too much information, many interviewers say they still can get information by calling a previous employer. "Many people are not careful in giving out information," says Sanchez. "It's unbelievable the type of information you get."

When a former employer is reluctant to supply information, personnel specialists say experienced reference checkers can get positive and negative information from offhand comments, voice inflections and hesitations. "They get pretty savvy in picking up signals," says Marilyn Lee, corporate director of human resources for The Times Mirror Co. in Los Angeles.

Lee says she advises the group's newspapers to have all requests for references referred to the newspaper's personnel department rather than be handled by supervisors.

Similarly, San Francisco lawyer Dritsas says it's "critical" that supervisors refer calls to personnel departments. "Employers get in trouble when they don't have such a policy," he says, noting that a friend of a former employee may call a supervisor and pretend to be a potential employer—just to find out what's being said about him or her.

Although he hasn't seen it happen yet, Dritsas says he wouldn't be surprised to see a case where the new employer of a worker sues the former employer for giving false information on the person hired.

Checking the network. The most popular way around the official policies to give only minimal information is informal networking. There is almost always a former employer willing to share some information off-the-record. "That's how you get your best reference," says Denis P. Albright, manager of human resources at Woodward Communications in Dubuque, Iowa, which publishes the Telegraph Herald there.

But such techniques may not always result in the hiring of the best employees. For example, "the old-boy/girl network" tends to perpetuate itself at the expense of minorities, observers note.

Newspapers may be losing some valuable diversity in their work forces by only hiring "someone who knows someone," says Madelyn P. Jennings, senior vice president/personnel and administration at Gannett Co.

The possibility of lawsuits has prompted some papers to tighten up on information they give out about job seekers.

Considering "the enormous cost of one bad hire," says H.O. (Tommy) Thomasson, vice president/human resources for Toronto-based Southam Inc., the cost of memberships in newspaper organizations such as the Newspaper Personnel Relations Association, International Circulation Managers Association, American Society of Newspaper Editors and ANPA is negligible. "One of the great values of associations is that you get to know people," he says. "Information is hard to come by unless you know the person you're talking to."

Thomasson also notes that most cities have local personnel organizations where executives from various industries meet and exchange information "on a one-on-one basis."

To illustrate the importance of reference checking, Thomasson recalls a reporter who worked in two Canadian and four U.S. cities before "a small paper in New York state" checked with a newspaper in England where the reporter claimed to have been employed and found he had never worked there. "It turns out he used aliases and was wanted for fraud," the Southam executive says. "He was arrested by immigration authorities."

Experts say that there are many ways to check references, some better than others. The best checks are done in person, but such interviews are not always possible.

Much checking is done through correspondence, which almost always is restricted to objective information because of the fear of libel suits.

W. Rip Collins, personnel and training consultant for the Industrial Relations Bureau in San Francisco, says he advises newspapers not to respond over the telephone to reference requests. "Several newspapers have as a written policy that they will not respond to a request unless it is in writing," he says.

Even so, the telephone interview is the most common form of reference checking. Employment managers who do a lot of checking have some suggestions for getting the right kinds of information by phone. Barlow of Topeka recommends that the job applicant's personal interviewer and the reference checker be the same person.

Chester A. (Chet) Hopkins of Handy Associates, an executive search firm in New York City, says he makes a list of topics to be addressed but tries to let the person giving the reference talk as much as possible. In many cases, he will try to get an additional reference by asking who else might know about the candidate.

When possible, Hopkins likes to interview former subordinates as well as superiors to get a complete picture of the individual. Also, while he discounts the value of personal character references, Hopkins says he likes to ask them about the individual's weak points.

In responses to reference checks, "what is not said is often as important as what is said," remarks Jack E. Lohnes, managing director of Spencer Stuart, an international executive search firm in New York City.

Lohnes likes to describe the specific position and situation for which he is recruiting to get the comments focused as much as possible. For example, if he is looking for someone to handle a new distribution system, he may ask for examples of past experiences with such systems. If the reference is unable to provide examples or suggests that the employee may have had more pertinent experience with another employer, Lohnes interprets this as a possible reflection of the employee's abilities.

Experts caution that these and other reference-checking techniques are not infallible. In the end, they say, it may be necessary to rely on simple good judgment.

"Elaborate checking may rule out a lot of people who may be good employees," says Gerald W. (Jerry) Wright, director of personnel and industrial relations for The Tampa Tribune. ☐

DAILY OR WEEKLY?

Publishers weigh many factors when deciding a change in publishing frequency. High on the list are health of the local economy and what the market will allow.

BY BARBARA J. FRIEDMAN
presstime staff writer

In 1985, something special happened in Hilton Head, S.C., and Mount Vernon, Ind.

On Hilton Head—an island known as a posh place to vacation or retire—The Island Packet crossed the short but high bridge between dailies and non-dailies. Riding the momentum of an expanding retail market, the triweekly Packet began publishing five days a week. With circulation of about 12,000, the paper also was pushed forward by its wide acceptance in the island's growing number of homes.

Hilton Head is "a fairly insulated community" that is "very interested in itself," says Publisher Ben T. Banks.

In Southwest Indiana, the Mount Vernon Democrat crossed the same bridge—but heading the other direction. Influenced by the loss of a major advertiser to direct mail, the 3,671-circulation Democrat—after more than 70 years of daily publication—became a semiweekly. But direct-mail competition was only the immediate cause of the Democrat's troubles.

"I don't think this community should ever have had a daily," says William A. Brooks, the newspaper's editor and general manager. "The revenue base isn't there."

Since the start of 1981, at least 51 U.S. and Canadian newspapers have traveled the bridge separating dailies and non-dailies. Of those crossing, 27 (53 percent) cut publication days to once, twice or three times a week. The other 24 (47 percent) added days to appear five or more times a week.

In the early part of the decade, retreats from daily publication often outnumbered advances by a wide margin. More recently, advances have slightly exceeded retreats.

While each crossing is different, newspaper executives repeatedly refer to the local market when explaining traffic on the bridge. Oftentimes, markets of newspapers making the trip to the daily-publication side show clear signs of actual or promised growth that can produce new revenue to cover the higher costs of publishing daily. For newspapers heading the other way, the impetus sometimes lies in a disappointing market or the search for a niche.

Dailies belong to "an expensive club," says William E. Branen, publisher of the semiweekly Burlington (Wis.) Standard Press. Membership requires paying for the stock quotes, comics, expanded news coverage and the wire service a non-daily can do without.

"Every market stands on its own two feet," says S.W. Papert, president of The Papert Cos. Inc., a national firm of advertising representatives. But "there really is only one factor. That is advertising support."

Allan Meath, executive vice president of acquisitive Park Newspapers, says "I've never bought a newspaper. I've bought a market." Such logic led Park to buy The McDowell News, formerly a triweekly in Marion, N.C., and make it a daily Oct. 1.

H. Doyle Harvill, vice president of Multimedia Newspaper Co., says the local market "determines the retail sales base," and that is the "primary indicator in any community whether it can support a daily."

Multimedia has a new daily in Mountain Home, Ark., an area that like Hilton Head, has benefited from people building second homes. New dailies are also found in towns with a robust economic base, like Leesville, La., where the economy depends heavily on timber and an expanding military base.

As suggested by what happened in Hilton Head, Marion, Mountain Home and Leesville, nearly all of the newspapers that stepped up to daily status since the start of 1981 are in the Sun Belt.

And there are more to come. John C. Ginn, president of Harte-Hanks Communications Inc.'s Southeastern Group, says that company is grooming three of its Sun Belt non-dailies to become dailies. He says they are located in areas with growing retail bases, have high penetration figures and enjoy strong acceptance among readers.

Newspapers that over the past five years reverted to non-dailies are found across the United States, including the Sun Belt, and in Canada's British Columbia and Yukon.

That side of the bridge—the non-daily side—has about 7,400 newspapers and shoppers in the United States and 717 in Canada. These numbers are more than four times the daily category—1,688 in the United States and 113 in Canada.

However, experts say that only a small percentage of the non-dailies are in markets that make them legitimate candidates to go daily. Multimedia's Harvill says he suspects most non-dailies' markets "won't support it."

The pool of non-dailies includes thousands with paid circulations, but many others are free-circulation papers that are marketed as a package with a local daily.

The types of non-dailies being operated by groups like Harte-Hanks run the gamut. The varieties include shoppers and free newspapers as well as those that charge by the copy and by subscription. Sometimes they are sold as a package and sometimes alone.

Montgomery Newspapers' John A. Rankin delivers his papers weekly now since the change from daily publication.

Roadblocks. "A great number" of newspapers, after becoming semiweeklies or triweeklies, have stopped short of becoming dailies, says Branen of the Burlington Standard Press. There are many reasons:

High on the list is competition for advertising from larger, established dailies, Branen says. Such papers have an edge with retail chains, and "most every town, no matter what the size, is dominated by chains." Advertising is bought regionally or nationally with an eye on "numbers" rather than "loyalty to a local paper." New smaller dailies are at a disadvantage, he maintains.

In contrast, non-dailies compete for advertising in another league. As "an entirely different product," non-dailies with high penetration can grab off some of a chain store's advertising through a close relationship with the manager at the local store, Branen says.

The preference of regional and national advertisers for an established daily—especially one owned by a newspaper group—is proving to be a sticky problem for a Georgia weekly that went daily July 2.

The Gainesville Tribune, after 26 years as a weekly and a recent change of ownership, chose to go head-to-head with Gannett's Gainesville daily, The Times, which is a weekday p.m. and Sunday-morning paper with a circulation of 20,965. The Tribune now publishes mornings except Sunday and Monday. Don Palmer, the Tribune's publisher, says circulation at the paper he owns with his wife has risen from about 7,000 when it was weekly to about 10,000 as a daily.

However, he adds, the Gannett paper "sitting across the street" makes it difficult to get advertising from "large chains that make decisions on a regional and national basis. That holds us down."

Another reason for non-dailies' hesitation is the double-barrel risk of higher cost and resistance from loyal readers.

Branen, a newspaper consultant as well as an owner, says cost can jump as much as 300 to 500 percent, depending on a particular newspaper's operation, its market and the number of publication days being added.

But like most rules of thumb, the one about skyrocketing costs was made to be broken. At the Island Packet in Hilton Head, Banks says operating costs rose only about 25 to 30 percent when it went daily. However, the Packet is atypical on two important counts: It is printed at another newspaper owned by the parent company, and it was already largely distributed by carriers before becoming a daily.

The biggest costs of going daily are associated with distribution, newsprint and editorial content.

William E. Branen

When a newspaper goes daily, the biggest new costs tend to be associated with distribution, newsprint and editorial content, Branen says. Pressrooms, on the other hand, usually require little additional investment. From the standpoint of press capacity at non-dailies, "I know very few of them that couldn't go daily tomorrow," Branen says.

The press may not be a problem, but readers can be. Sometimes, they do not take kindly to change.

With circulation of 13,604, the Burlington Standard Press is large enough to become a daily but does not, Branen says, because there are "too many good dailies around us" and "we'd just be duplicating services." Also, his semiweekly Press can "offer so much more local news and not bore our readers." A non-daily is free to devote all its resources to covering a community, Branen notes.

People in Mountain Home, site of Multimedia's new Arkansas daily, were reluctant to give up the community's triweekly, says Vice President Harvill. Their reaction, he says, was, "We don't need a daily."

According to Harvill, "The reader there is like in a lot of places like that," where people do not want to see a town "grow too much."

Other executives who helped guide newspapers to daily publication tell similar stories. Harte-Hanks encountered this attitude in surveys by non-dailies. The company found it puzzling and dug deeper.

The people surveyed were often reading "lazy, sleepy newspapers" filled with stories on subjects like who was on the honor roll and who made Eagle Scout, says Ginn.

"People have a limited appetite for that kind of information" and said they did not want more. The answers translated to a thumbs-down on getting it every day.

So Harte-Hanks tried an experiment at one of its triweeklies being considered for daily publication. The premise was that news with broader appeal—often hard news—would arouse readers' interest and lay the groundwork for going daily.

Reporters were retrained to do a better job of finding and writing such news. Within eight months, the paper's circulation rose from 5,500 to 10,000, despite a downturn in the local economy, and the town's interest in having a daily "dramatically increased," Ginn says.

Even when a growing market beckons, a non-daily can be better off financially—at least in the short run—by staying put.

Dailies are not necessarily more profitable, says Thomas F. Matthews, president and publisher of the triweekly Tracy (Calif.) Press. And "the size of the retail base by itself does not justify going daily.

"Sometimes it's more profitable to run a three-day-a-week paper if you can maintain your position in the market," he says.

One reason is that publishing on a less-than-daily basis, newspapers have more open press time than other newspapers for lucrative commercial printing [presstime, June 1985, p. 14].

The Press, which is about 60 miles east of San Francisco, has been seriously considering going daily. But taking that step, Matthews says, would mean giving up part of an extensive commercial printing business. And that business is "sometimes more profitable" than putting out a daily, he says.

Roger W. Coover, publisher of The Union-Recorder in Milledgeville, Ga., which became a daily in 1982, agrees. Commercial work, "if you can get it and keep it, is more profitable " than putting out a daily, he says.

On the other hand, commercial work is viewed in some quarters as a prelude to going daily because it enables pressroom crews to become acclimated to the rigors of putting out a paper five or more times a week.

Commercial printing aside, new dailies must work hard to make sure rising revenues are not swamped by rising costs.

Harte-Hanks' Ginn says it is fair to assume that dollar for dollar, a new daily, at least in its first year, will not be as profitable as a non-daily. Coover agrees.

However, some other executives say profit margins increased or held steady in the first year of daily publication.

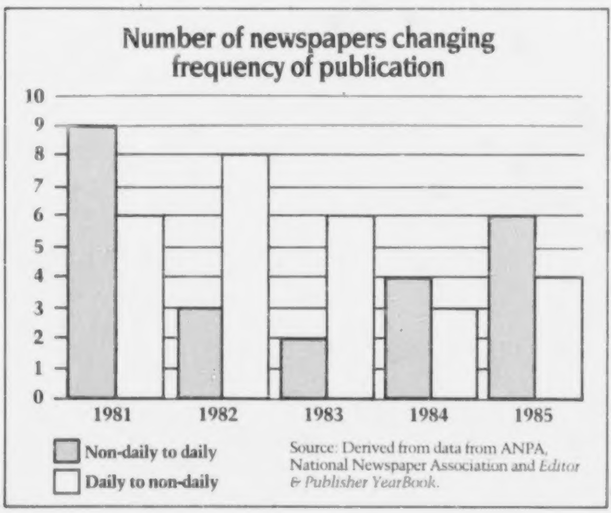
At The Baxter-Bulletin, Multimedia's eight-month-old daily, increases in revenues have so far outrun increases in costs, Harvill says. Of the decision to go daily, he says, "We wouldn't have done it if we were going to lose money."

If a potential loss in profitability weighs against a decision to become a daily, there are benefits. Matthews names three: maintaining a newspaper's position in a market, flexibility for advertisers and timeliness for readers.

Advertisers like the flexibility of extra days of publication, especially when regional or company-wide policies specify certain days for ads to run, he observes. As for timeliness, "in a small-town, people like to know what's going on as soon as it happens."

The benefits can also range from institutional pride to a paper's enhanced value as a possible acquisition. Former non-dailies that successfully make the transition to daily are much more valuable in the newspaper marketplace, says Charles A. Lyons, president of Chesapeake Publishing Co., which owns dailies and non-dailies.

The bad news, Lyons says, is that a botched attempt to



Source: Derived from data from ANPA, National Newspaper Association and *Editor & Publisher YearBook.*

Alberto Pacheco

become a daily can disrupt the well-being of a newspaper's employees and its balance sheet. "The worst thing you can do is change frequency prematurely."

The path to daily. To ease the transition to daily publication, weeklies nearly always become semiweeklies or triweeklies first. That way the final move is less difficult.

Other factors, such as total-market-coverage programs, can also help smooth the change. That's because by publishing a shopper or free-circulation paper, non-dailies have a stable circulation base to offer advertisers. Frequently, Branen notes, circulation drops when a non-daily goes daily.

But beyond these few similarities, the paths to daily publication in this decade have diverged. Some non-dailies, such as the Gainesville Tribune, plunged into markets as the second daily in town; others, such as Multimedia's Baxter-Bulletin, had an open field; and still others found a place within the circulation territory of metropolitan dailies.

A few non-dailies, such as the Contra Costa Times in Walnut Creek, Calif., were free-circulation newspapers before converting to paid dailies. (See story, p. 30.)

Despite planning and strategies designed to make the non-dailies' transition easier, the newspapers often find that dailies live in a different world with good features and bad. Daily publication means a new set of ways to trip as well as to soar for people in the advertising, editorial and especially circulation departments.

In selling classified advertising, "You open all kinds of sales opportunities when you increase your frequency," Multimedia's Harvill says. "It's tough to sell a classified four weeks in a row; it's easy four days in a row."

On the other hand, the same newspaper has a shorter shelf life. When the same paper sits in a newsrack or in a store for a few days, it stands a better chance of being sold.

For a circulation department, becoming a daily means grappling with the delicate issue of subscriber rates and the headache of setting up a carrier system. Newspapers that go daily can no longer rely, as most non-dailies do, on the mail and single-copy outlets as ways of reaching readers.

One former non-daily that had reached its far-flung subscribers by mail began delivering to waiting carriers by airplane. Mark N. Trahant, editor and publisher of the Navajo Times Today in Window Rock, Ariz., which went daily last year, says air-delivery was the only feasible way to maintain outlying subscribership in a circulation area spread across 25,000 square miles.

Mapping a carrier route was the biggest pain in becoming a daily for newspapers like the Baxter-Bulletin that previously were mailed or sold by the single copy. Setting up production schedules was, "by comparison, child's play," says Publisher Wayne E. Gay.

To map the routes, the Baxter-Bulletin circulation staff had to locate every house in what Gay describes as a "fairly rural area. . . . You can imagine traveling around these lakes and rivers," he says of the rural Arkansas area around Mountain Home. "It took a lot of man-hours."

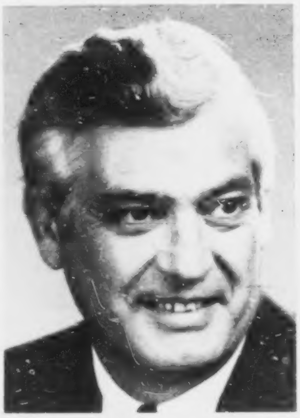
As for setting subscription rates, Gay calls the task "a tough one." Worried about losing readers but also about bringing in circulation revenue, different newspapers responded in different ways.

At the Packet in Hilton Head, customers starting this month will pay double the old rate of $18 a year for getting five instead of three newspapers a week. The Packet faces no locally produced, daily competition on the island.

At the Baxter-Bulletin, which also has a fairly open field, the new yearly rate was set at $29.84—about a 60-percent increase over the triweekly's price. Gay, who calls the new rate "cheap," says, "We want to keep our numbers up."

But the Arkansas daily wanted subscribers "to know it's nice to have a newspaper every day," Gay says. "So we let them renew at the old rate for a year, knowing that we're taking a beating."

But the worst problem for one newspaper was a snap for another. Like the markets the new dailies serve, the experiences reported were more like squares on a checkerboard than threads in ribbon.



Sometimes it's more profitable to run a non-daily paper if you can maintain market position.

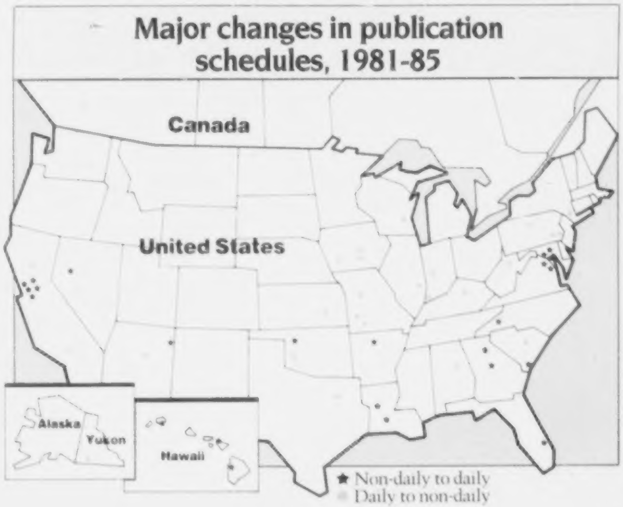
Thomas F. Matthews

Goodbye to daily publication. As with the choice of becoming a daily, the decision to go the other way often hinges on a reading of the local market. But, within that general rule, there are many factors that can persuade or force a daily to publish fewer days. The pulls can range from the search for a niche to a response to a sparse retail base. The latter had much to do with changes at the Democrat in Mount Vernon.

That Indiana paper had a habit of losing money even after it was acquired by Landmark Communications Inc. in 1980. Landmark improved salaries and benefits, offered extras like tuition reimbursement, and set the minimum number of pages per day at eight.

The daily's staff and readers benefited, but the bottom line continued to sag. Generally, the paper was losing money three out of the five days of publication, says Brooks, the general manager and editor.

Major changes in publication schedules, 1981-85



Alberto Pacheco

Mount Vernon Democrat's Brooks says weak retail advertising led to shift from daily to twice-weekly.

Tradition and the road system were on the side of two of the Democrat's competitors 15 miles of interstate highway away. Most of the area's retail stores are in Evansville, dominated by The Evansville Courier, which is independently owned, and Scripps Howard's Evansville Press. Those papers have a joint operating arrangement.

Evansville has the good fortune to be at the hub of the area's interstate system. By contrast, the roads linking Mount Vernon with other towns in the vicinity are secondary roads that Brooks describes as "the pits." So despite Mount Vernon's "great" and growing industrial base, "people shop in Evansville" and the retail advertising follows them, Brooks says.

What's more, advertising in the Democrat became noticeably skimpier when the regional headquarters of K mart decided to switch from newspaper inserts to third-class mail delivery through Advo-System Inc., Brooks says.

Max Heath, vice president and executive editor of Landmark Community Newspapers Inc., says K mart's decision cost the newspaper $40,000 to $50,000 a year. The Democrat had been printing an eight-page, color insert almost weekly for the retail chain. "We bought the newspaper on the strength of having a K mart" account, Heath says.

So last May 1, the Democrat switched to twice-a-week publication, a move that substantially cut costs but did not make the town "too happy," Brooks says. Since then, improvements in the advertising department combined with lower costs have improved the paper's profit margins. "In other words, they exist now," says Brooks. "We're not bringing it in in wheelbarrows, but at least the ink is black."

It was the lure of a niche that pulled the Camden (S.C.) Chronicle-Independent back from daily to triweekly publication in 1982.

Camden—a pretty town in the middle of horse country—is 25 miles from Columbia, home of the state capital and South Carolina's largest daily, The State. Glenn G. Tucker, the Independent's editor and co-publisher, says the Columbia paper has "heavy penetration" in his paper's territory.

Faced with a strong rival and, more importantly, with the results of a market survey, the Independent "decided finally that people here were more attuned to a non-daily, completely local paper," Tucker says. So the paper became a triweekly and made changes that included dropping its price. Since then, paid circulation has risen from a low of 5,200 when the Independent was a daily to 6,400 recently. "We've found our niche," Tucker says.

In the Philadelphia suburbs, a belief in the need and market for local news led to changes at two suburban dailies. In 1982 and 1984, respectively, Today's Post in King of Prussia and Today's Spirit in Hatsboro became non-dailies. They are among the 14 suburban newspapers owned by Montgomery Newspapers of Fort Washington, Pa.

The decision improved the newspapers' profitability and took them out of head-to-head competition with The Philadelphia Inquirer.

However, William E. Strasburg, president and publisher of Montgomery Newspapers, says the move was neither defensive nor a response to a sluggish retail market. On the contrary, he notes Today's Post has offices in one of the largest shopping centers in the United States. And the Inquirer had only 30 percent penetration in the two newspapers' circulation area at the time the two Montgomery papers converted to non-daily, he says.

Part of the rationale for giving up daily frequency stemmed from research that showed most readers in King of Prussia and Hatsboro preferred getting local news in less frequent doses, and most were getting the bulk of their national and international news from television and from the Inquirer, Strasburg says.

Taking heed, Strasburg turned Today's Spirit into a once-a-week newspaper and has seen paid circulation rise from 7,200 to 8,500, he says. That increase has probably been helped along by the 65-percent drop in the subscription rate. Today's Post went from being a paid daily of about 10,000 circulation to a 44,000-circulation, predominantly free weekly.

Since the switch in publication frequency, the profitability of both papers has shown "good improvement," says Strasburg, who declines to give figures. Costs are down—particularly for distribution, newsprint and news gathering—and more press time is available for commercial printing, he notes. The newspapers no longer purchase wire services, comics or stock quotes.

Non-dailies have more of a niche next to metropolitan dailies,

Bob Gonzalez, The Union-Recorder

Milledgeville daily has benefited from new shopping center.

Strasburg believes, because they are in a good position to satisfy the public's growing appetite for local news. "He profits most who serves best," the Montgomery Newspapers executive says. Asked if he would consider making the newspapers daily again, Strasburg replies, "No, because we've been through that route."

Tribulations and profits. Here are some snapshots of newspapers that moved to daily publication in the last five years and one that made the move earlier:

- In Louisiana, the stands of timber that feed local sawmills have kept the area growing in "our lean years," says Jim Merritt, general manager of the Leesville Leader. More recently, nearby Fort Polk has helped make Leesville "one of the few areas in Louisiana that is presently growing," he says. The town, population about 9,000, is in the ankle of the Louisiana boot, about 210 miles northwest of New Orleans.

Partly on the strength of recent growth and the arrival of a new shopping center with big advertising spenders like Sears Roebuck and Co., the newspaper decided "it was time" to become a daily, according to Merritt.

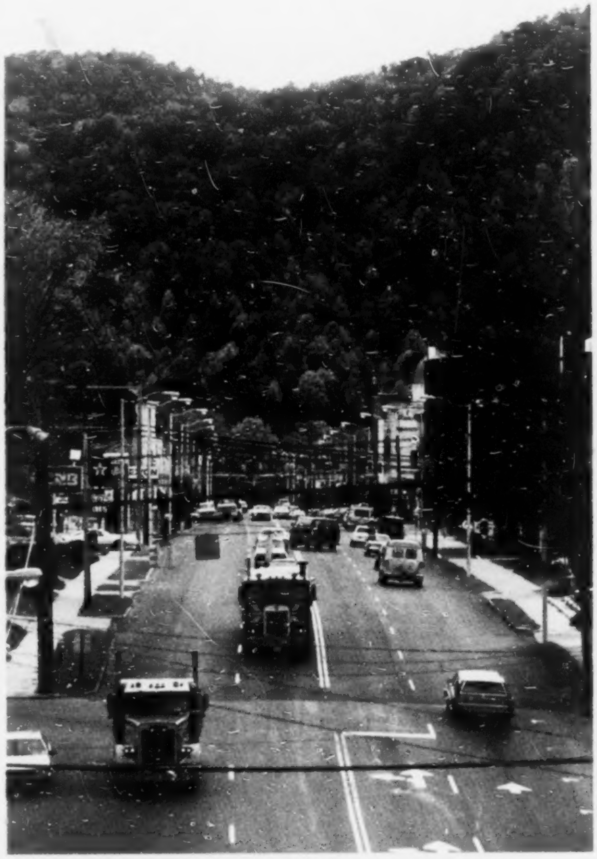
So in the spring of 1984, the Leader added Tuesday, Wednesday and Friday to the Thursdays and Sundays it had been publishing. Except for a short deviation, the paper's editorial focus has stayed geared toward "giving people what they want," Merritt says, and "that means 'local' 99 times out of 100."

In the transition to daily publication, the Leader's payroll grew from 18 to 23 people as two joined the editorial staff and three part-timers went to work in production. The additional staff and newsprint were the biggest costs of becoming a daily.

During that first year, costs and revenues rose at about the same rate. To the newspaper's surprise, it was spending as much extra as it was making, Merritt says.

Because the Shreveport Times and the Times-Picayune/States-Item of New Orleans sell in Leesville, the Leader was not able to charge as much for five-days-a-week publication as it had hoped. A survey before becoming a daily told the Leader that it would have to set circulation rates below its big-city competition.

The Leader has apparently overcome what Merritt describes as readers' doubts about the need for a daily. The newspaper's circulation has risen from 6,800 as a semiweekly to 8,100, he says. The Leader is also publishing a free-circulation newspaper.



Scott McAlpine, The McDowell News

With an eye on past and expected growth in Marion, N.C., The McDowell News became a daily Oct. 1.

In 1985, the Leader produced more pages without further increases in staff and cut costs elsewhere. The general manager says the changes have helped make the daily more profitable than the semiweekly.

Looking back, Merritt has two main thoughts about the switch to daily publication. The worst hurdle had nothing to do with money, he says. As a semiweekly, "You only live with urgency twice a week. With a daily you live with urgency every day," and that "takes it toll."

His second thought is: "You have to be a smart operator in a small town to make a five-day newspaper work for you."

- In Oklahoma, the economy around Woodward has turned sour on Leon Fetzer, who converted a semiweekly paper to the daily Woodward News last March. The area's staples of agriculture and oil are suffering, and the hoped-for increase in the town's advertising base hasn't happened, he says.

Fetzer had another problem that he solved in October by buying the rival Woodward Daily Press. With the Press' purchase and merger with Fetzer's newspaper, Woodward is again a one-daily town. Fetzer, who grew up in Woodward—a town of 15,000 about 120 miles northwest of Oklahoma City—had wondered earlier "how many newspapers the town can support."

Fetzer bought the semiweekly in February 1984. Soon thereafter, "to get our product out there to show what we had in mind," he started a free-circulation paper. In the meantime, he kept his semiweekly's 750 paying subcribers. On the day he began publishing five days a week, the free-circulation paper died and the paid newspaper assumed its name.

Fetzer says he has spent heavily on the News. "We put out a nice paper" with "process color every day," he says. Subscribers apparently agree. By Fetzer's count, paid circulation climbed recently to 8,200.

Fetzer says he decided to start the second daily in town because "we thought we could be competitive with a better product." Reviewing the just-ended, seven-month rivalry, he says simply, "We won."

When Woodward had two dailies, the News was not making a profit but was "getting close," assuming continued growth, Fetzer says. The merger, he adds, will not "make us immediately profitable."

For newspapers considering becoming the second daily in town, Fetzer has some advice: Be ready for "a long haul" and consistently put out a better product than the competiton.

- In Milledgeville, Ga., state government is an inescapable presence. The town, which is 90 miles southeast of Atlanta, has the state's largest prison and a huge mental hospital. Besides two colleges and a textile mill, the town of about 15,000 added factories making airplane parts and air conditioners to its economy in the 1970s.

The community was growing, says Coover, publisher of The Union-Recorder there, and the paper wanted to help the process by becoming a daily. The long view was "that growth would come back to us."

In the short run, the decision to turn The Union-Recorder from a semiweekly into a daily in 1982 cost its owners, Knight-Ridder Newspapers Inc.

In the first two years after the switch, The Union-Recorder "had to accept lower profits" as rising costs outran rising revenues, Coover says. But by continuing to do commercial printing, he adds, the newspaper was able to minimize the drop in profits.

As a semiweekly, the newspaper's commercial printing earned about $1 million a year or about 40 percent of the newspaper's revenues, he says. Commercial business was good enough to help keep two press shifts working five days a week. A pressroom used to that kind of schedule found the adjustment to printing a daily newspaper a snap.

In anticipation of becoming a daily, The Union-Recorder added wire services and staff prior to the actual conversion. The preparation also included building new facilities.

As a daily, the paper made a commitment to publishing at least 12 pages a day, no matter how sparse the advertising.

Although The Union-Recorder competes against other dailies, including Knight-Ridder's Macon Telegraph & News, the newspaper accepted only paid-in-advance subscriptions and raised the price 250 percent.

Shortly after the conversion, circulation dropped about 1,000 to 7,000, with most of the losses coming in single-copy sales, Coover says. Circulation revenue rose 150 percent, he adds, but the increase merely covered the jump in distribution costs.

To any newspaper contemplating becoming a daily, Coover suggests that it "sit down and really make the projections" and "look at the growth in the market. . . . Be sure to take your desire [for the status of being a daily] out of the picture."

- In Beavercreek, Ohio, Chris Mitsoff wanted to know what to expect before turning his triweekly into a daily. So in the early 1970s, he checked with several other publishers. Mitsoff says "the oldtimers" cautioned him to "count on a pretty drastic drop in circulation." He was told people do not like a familiar non-

Some free newspapers have made a double conversion

In addition to the newspaper traffic between non-daily and daily publication there is a similar, though less-traveled route from free to paid circulation. Some papers have taken both trips.

The Contra Costa Times of Walnut Creek, Calif., since 1961 has gone from triweekly to daily publication, then from free to paid circulation.

Others have done the same. For example, the West County Times of Pinole, Calif., is in the process of converting to paid circulation after increasing frequency in 1982 from triweekly to daily. Like the Contra Costa Times, it is owned by Lesher Communications Inc. and circulates in Contra Costa County, an expanding market about 30 miles east of San Francisco.

The Contra Costa Times has a history that dates to 1913. In 1965, the free-circulation paper joined the ranks of dailies by starting publication five days a week. In the spring of 1981, it was publishing seven days and counted approximately 54,000 of its 115,000 circulation as paid.

At that point, management "felt it had a strong enough product to begin conversion to a [totally] paid newspaper," says Michael Switzer, assistant circulation manager. He adds that "the marketplace here is one of the fastest growing in the state" and has been for some time.

Over an 18-month period that started in the spring of 1981, the newspaper used extensive sampling and an advertising blitz to convince people that the Times was worth paying for. In the meantime, a shopper—Times Plus—helped keep penetration high.

Recently, the Times reported weekday paid circulation of 82,151 and Sunday paid circulation of 85,951—about 28,000 higher than when the campaign began.

Some of the gains come from Walnut Creek's growing population and some from the success of the campaign to convert free circulation to paid, Switzer says.

The Contra Costa paper was not the first to make paying customers out of people who were accustomed to getting a free newspaper. One well-known California pioneer was the Tribune Co.'s Valley News in Van Nuys, which began a conversion campaign in 1975. [presstime, Oct. 1980, p. 8]. These days the newspaper is called the Los Angeles Daily News and has paid weekday circulation of 150,403.

Switzer says readers were persuaded to pay for the Contra Costa Times largely because it "was and is a good paper" and "that really made the difference. . . . It looked like a real newspaper" rather than a shopper.

Beyond that, the newspaper followed a careful campaign to turn its readers into paying customers.

First, readers began getting a flier that told them a change was coming but did not give details. Next, one week before the conversion was to start, fliers began appearing at readers' homes, telling them the newspaper would no longer be distributed free. Each day's flier—with the logo "Your Time Is Running Out"—highlighted some feature in the newspaper, like sports. The last day, on a flier saying "Your Time Has Run Out," readers were offered a 50-percent discount on a subscription.

Next, for two months, people who did not subscribe were skipped as delivery was made. Then, district by district, the newspaper began offering free samples. At any point in the 18-month period, non-subscribers were getting a free sample one week in four. The other three weeks they received the shopper.

The sampling rotation served two purposes. The Times was offered enough to whet a reader's appetite but "not so frequently" as to satisfy the need for a newspaper, Switzer says. Also, the samples enabled the newspaper to deliver on its guarantee to advertisers of a circulation of 90,000.

And as paid circulation climbs, the number of samples shrinks. By last summer, non-subscribers were getting a sample only one of seven weeks.

Interestingly, like the bridge between daily and non-daily publication, the one between paid and unpaid circulation also has two-way traffic. For example, Today's Post in King of Prussia, Pa. in 1982 went from a paid-circulation daily to a weekly that for the most part is distributed free.

'Daily' means different things

A rose is a rose is a rose. But not everyone agrees on what a "daily" newspaper is.

Different newspaper-related organizations use different definitions. They are, a newspaper published:

- At least five days a week (any five days)—ANPA, the National Newspaper Association and Standard Rate & Data Service Inc.
- At least four days a week (any four days)—*The IMS/Ayer Directory of Publications* and the *Editor & Publisher YearBook*.
- At least four days a week but not to include Sunday—Audit Bureau of Circulations.

daily to change. But Mitsoff says he believed the community needed a daily. He went ahead, and the Beavercreek Daily News was born.

The oldtimers were right. Circulation dropped from around 6,000 to 4,000 and only recently climbed back to around 5,500.

In mid-1975, when the News became a daily, the exodus from nearby Dayton was making a prosperous bedroom community of Beavercreek. No one was printing much news about the community, Mitsoff says, and "besides, I had all the bills paid up. It was a time to do it, now or never."

Beavercreek has grown from around 7,000 in 1960 to 33,000. But proximity to Dayton did more than provide residents for Beavercreek, it supplied competition from neighboring dailies for advertising dollars. And as hard times came to Ohio in the late 1970s, growth in population and housing in Beavercreek "slowed to a crawl," Mitsoff says.

"As recession came and went, we had red ink and fought like hell to get it back in the black." Commercial printing helped, providing about 20 percent of the newspaper's annual sales of about $1 million.

Despite the ups and downs of his daily, Mitsoff recently started a weekly in neighboring Mad River. Echoing the logic that makes weeklies going concerns, Mitsoff says Mad River residents do not want another community's masthead or "news mixed with their own."

Mitsoff adds the area has "hundreds of stories that aren't being told anywhere else. We sit here amazed at stories that are coming out of Mad River."

- In Arkansas, no freeways lead into Mountain Home, where Multimedia recently turned its triweekly newspaper into a daily. To reach the town in the Ozarks, competing newspapers "have to be trucked up the mountain," according to Vice President Harvill, who had a hand in planning the conversion.

The situation was made to order: Multimedia had a newspaper in what Harvill characterizes as "a growing market" without local daily competition. The town of 6,000 residents is in a county with a population of close to 40,000, he says, and it is 150 miles from Little Rock.

So in April, the Baxter-Bulletin went daily, the final step of a process that began three years earlier. In those years, the Bulletin moved from publication once to twice to three times a week. "We had definite schedules that we were working toward," says Publisher Gay. "It was pretty well-planned."

The community grew quickly during the 1970s as Midwesterners liked what they saw and bought second homes in the area. Factories making boats and pharmaceuticals also came to town and helped round out the economy.

Growth slowed in the early 1980s as high interest rates put a crimp in people's home-buying plans, but the population has continued to grow, Gay says.

After becoming a daily, the Baxter-Bulletin lost 1,000 of its 3,000 out-of-state subscriptions, but overall circulation rose. As a triweekly, the paper had circulation of about 8,000, and more than half of that was sold as single copies. Recently, the daily's circulation was about 9,000, and carriers deliver 60 percent of that, Gay says.

The Baxter-Bulletin did not add staff as it increased frequency. It is "operating with pretty much the same number we had when I came here" in 1982, says Gay.

Moving On Up? No one knows how many non-dailies will travel the path to daily publication in the near future. But it's a good bet those that plan to have already come as far as publication two or three times a week.

That pool of potential dailies, according to a recent tally, consists of 517 semiweeklies and 72 triweeklies in the United States and 29 and six, respectively, in Canada. Yet former dailies are also part of those counts.

Once a newspaper crosses the bridge to daily publication, it is tough to go back. Pride as well as cash is involved.

Burlington's Branen says he knows of two or three dailies that would be better off as non-dailies. It is "strictly the pride of the owners that keeps them from making that move," he says. Moving to daily publication is "a tremendous step," he says, and it "must be quite a letdown" to head the other way.

One of the greatest misconceptions is that "daily newspapers are the only Cadillacs in town," says Lyons of Chesapeake Publishing. He maintains there are some non-dailies that are "head and shoulders" above dailies in quality and profitability.

But pride aside, even the numbers can lead a publisher astray.

A non-daily can equal or surpass other newspapers when the measure is profit margins, he says. However, Lyons and others note that a well-run daily in a good market is in position to earn many more dollars than a non-daily, even if the non-daily's profit margin is higher.

The lure of more dollars can pull a newspaper toward daily publication. So can figures on circulation.

A publisher can review circulation, revenue and costs at a newspaper and conclude that "this ought to be a daily," Lyons says. To those people, he politely says, in effect, slow down.

Circulation might look good, but if household penetration is low, then a potential daily lacks the "growth trend" it needs, Lyons says. And numbers on penetration, while a valuable indicator, are not an absolute gauge of a newspaper's quality and readers' loyalty. These two factors have much to do with whether a non-daily can attract paying readers five or more times a week, Lyons says.

When all the above is in place, anchored by "the driving force" in the market, another ingredient is required, in Lyons' view, to make the crossing to daily publication work. That is a commitment of resources.

"Sometimes in the newspaper business, we shy away from real research and development," he says, and instead try "to stretch people here and there." To give the transition a chance, a non-daily needs to "commit the resources that are needed" and "not just stretch a system to make it happen."

Even after all the planning and work are done to assure a non-daily's easy transition, Meath of Park Newspapers says "The people may not want the damn thing."

Lyons has a similar thought. "You never eliminate the risk of something new." In the end, "You fall back on your instinct of whether this thing is going to fly." ☐

PAGE HAINES

Setting an example for effective newspaper promotion

BY MARCIA RUTH
presstime staff writer

When Page Haines tells people she comes from Fort Stockton in West Texas she says she can almost play a tape of what they are going to say: "Oh, I went through there one time."

The hub of six highways, her hometown is no metropolis on its own, but its restaurants, motels and gas stations provide needed services to travelers on their way to other destinations.

As promotion manager of the Houston Chronicle, Haines acts in a similar fashion—not always the policy maker, but more often than not an essential link at the crossroads, tying together the work of departments setting forth in different directions.

"Synergy" is a key word.

"She is able to work very closely with the news department, the advertising department and the circulation department in order to build campaigns that are synergistic in all those areas," says Richard J.V. Johnson, president of the Houston Chronicle and chairman and president of ANPA.

"We don't do short-term, quick-fix promotions," Haines says. "What we really do is not promotion but marketing communications. . . . Whatever we do ties back into our total marketing program to enhance our corporate goals."

In this respect, "Page is typical of the successful promotion director of the '80s," says Paula Markiewicz, executive director of the International Newspaper Promotion Association. "Well-educated, her approach is studied and market-oriented as opposed to bells and whistles."

"Energetic" and "thorough" are other words often used to describe Haines' style.

"And the organizational strengths she brings are outstanding," says John W. Sweeney, the Chronicle's advertising director. "She's able to keep a lot of projects going at once. "From marketing, to the arts, to the schools—you name it, we're involved in it."

Don't ask Page Haines for samples of what she does unless you are prepared to receive by return mail a 9½-pound package of such samples. Brochures, posters, letters, special newspaper sections and video tapes pour out of the package, defining her department's productions, including:

- In advertising, the symposium that attracted 700 people to hear nationally recognized experts discuss the reach and power of newspaper ads; and presentation of awards for creative ads
- Editorially, the Chronicle's program for the prevention of child sexual abuse; and a special section on the best-dressed women in Houston
- For subscription promotion, a book, *Texas: A Salute from Above,* with aerial photographs of the city
- For hometown pride, there are video tapes of Houston's sesquicentennial, starring Chronicle reporters as experts in business, politics and the social scene.

And there are programs for individuals, such as brides, with month to week to last-minute instructions on how to arrange for their weddings, artfully composed in a cream-colored packet sealed with a yellow rose.

"Whatever we do ties back into our total marketing program," says Haines, adding a favorite phrase: "We always make sure our major promotions have a lot of arms and legs to them."

A case in point: The program to combat child abuse was billed as public service but was cosponsored with one of the paper's largest advertisers, Foley's department store. It also reached into circulation by producing the largest single-copy sale in the Chronicle's history the day a Spiderman comic book especially addressing the subject was distributed with the newspaper.

To produce this flood of materials, Haines presides over one of the largest newspaper promotion staffs in the country—31 full-time and five part-time employees. About half are in what are described as the sales promotion and creative area, with seven artists and four copywriters. The other half work on projects ranging from in-house publications and displays to a program for using newspapers to improve student performance in school. Four staff members produce much of the printed material; others provide liaison with the local ad agency handling non-print promotion.

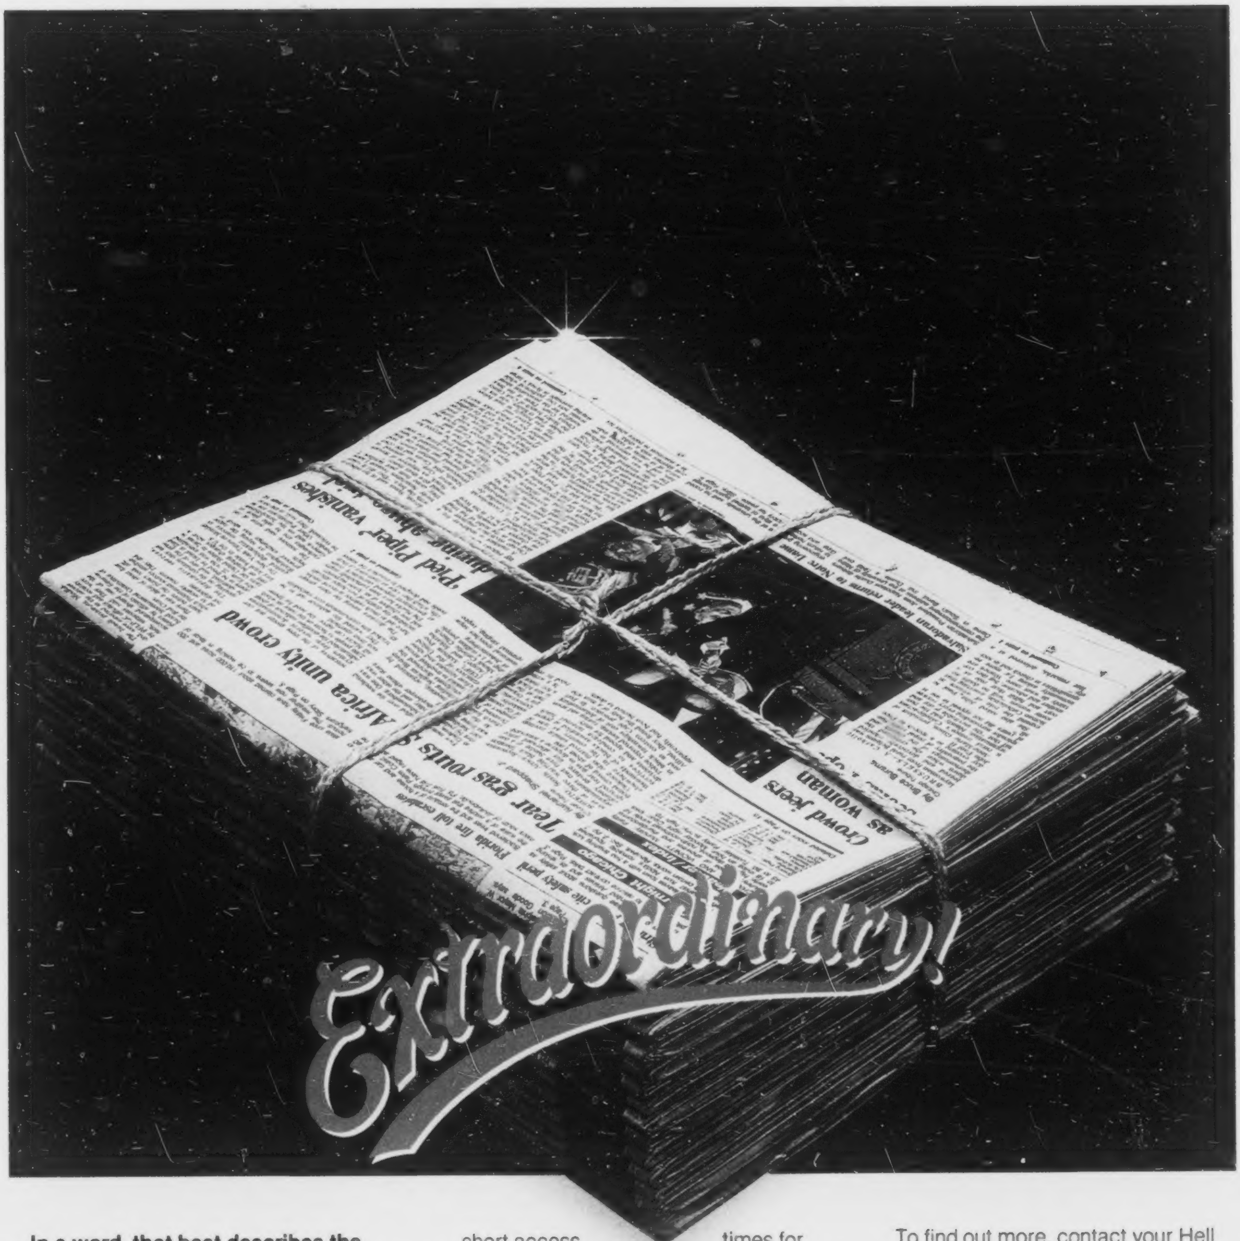
While co-workers focus on her energetic output, Haines, at 37, credits much of her success to the strength gathered from her "Mom and apple pie" upbringing. One of three children raised by a mother who was president of the PTA and "parents who are still married to each other," Haines first double-majored in English and journalism at Texas Tech University, adding enough business courses to give her "the widest possible options."

Entering newspapers first as special events manager of Houston's other daily—the Post—in 1973, she shifted to the Chronicle five years later as creative supervisor, rising to planning manager in 1981 and to promotion manager in 1983. Mid-career, she obtained an MBA from the University of Houston when she decided to shift towards marketing, which is also the field of her husband, Christopher.

Although she has never actually lived outside of Texas, Haines says her frequent travels—her favorite cities to visit are New York and San Francisco—provide fuel for creative energy.

Hesitant to criticize but nonetheless critical of conservative approaches to marketing and promoting newspapers, she observes the "paradox" that newspapers—"major centers of communication, the first to know and report trends"—are "sometimes the last to apply them to our own business."

For this newspaper promotion manager, the very essence of "being in communications" is "being receptive to new ideas." ☐



In a word, that best describes the complete line of easy-to-use prepress products from Hell Graphic Systems. Put them to work. They'll do wonders for your quality control and productivity. And improved quality and productivity mean faster payback on your initial investment.

The Chromacom electronic page makeup and retouching system allows you to do things you never thought possible. Ghosting, super-imposition, color corrections—virtually anything you can conceive. Software-controlled Chromagraph color scanners provide short access times for high quality color separations, use little material, and permit extensive correction. Combined with the Digiset LS 210 Laser Image Setter and IP 100 Image Processor, the high-resolution Pressfax laser facsimile system gives you the capability to rapidly and precisely assemble, process, and transmit high-quality newspaper pages and printed originals to any remote site for printing.

It's the first system capable of scanning four separations independently.

To find out more, contact your Hell branch office.

There are newsworthy stories to be reported about non-profit, charitable organizations

BY DAVID M. COONEY

Have you visited your local Goodwill Industries facility lately, analyzed the real impact of your local family-planning agency, or discovered where special education students go after they leave your public classrooms? Has your local community hospital been absorbed by a national for-profit chain? Are your Scout programs healthy, and who really uses the local "Y"? Where do your elderly citizens eat?

These may seem extraneous questions to an editor looking for hard community news. Not so. They are suggested inquiries into the important but often underrated not-for-profit sector. Important in size, function and for the contributions they make to community life, non-profits are frequently viewed as a place where the "Dolly Dogooders" meet to care for the needy. Reporting tends to emphasize fund-raising events, often on the feature page. Rarely does any newspaper follow up to see what actually happens to the money. In reality, non-profits are a potential source of interesting, frequently important and often good news.

Collectively, non-profits are the infrastructure by which American society voluntarily seeks to solve its problems with private resources. There are almost 900,000 non-profits including schools, churches and professional associations, as well as agencies meeting specific social and cultural needs in the local community. For example, Goodwill Industries of America Inc. provides rehabilitation and job training to more than 70,000 Americans a year, spending funds largely earned through its own enterprise within the local community and turning former tax users into taxpayers. Local, state and federal taxes paid by disabled persons employed at and placed by Goodwill total $24.7 million.

Together, these agencies employ more than 6.2 million people (about 6 percent of the work force), own one-ninth of the land, earn $160 billion and spend $130 billion a year. They enjoy the support of 84 million volunteers whose time is worth more than $64.5 billion.

David M. Cooney

Even without schools and churches, the size of the system is significant. As individual agencies, the non-profits tend to have policy set by local citizens interested in specific local needs. Because their bureaucracy is usually small compared with government, when properly led and professionally managed they can be very cost effective and extremely flexible.

American charities have existed for decades, but the nature of service delivery has changed with the times. In the past 50 years, specialized education, research and the complexity of issues to be addressed created a requirement for full-time, properly trained and adequately funded employees and organizations. While many agencies successfully continue to mix volunteers and professionals in service delivery, to a great extent lay persons have become the policy setters and resource developers.

Over the same time, many non-profits became partners or employees of government in research, program development or service delivery. As more and more dollars were allocated by government, old agencies developed new interests and new agencies sprang up to compete for dollars.

Now the trend seems to have reversed. The national news focuses on balancing the federal budget. This has already meant reduced spending on social service. Those who oppose such cuts rarely argue that federal social programs are either efficient or effective; they do argue correctly that certain social needs still exist. Accepting the thought that there will be less federal spending on these unsolved problems, the question arises as to how, or if, those needs will be met in the local community.

Some people look to state or city budgets. Others, more skeptical of government, are more apt to look to the private sector, especially the non-profit institutions.

The non-profit solution may be more appropriate than it might seem at first glance. Helping to make that evaluation through good reporting can be very useful, make interesting reading, and result in extensive community feedback. The result of these civic considerations can have a long-term impact on various important aspects of community life.

The thrust of the news is not that certain problems are being returned to the community, but in the evaluation of the capacity of the non-profit network to absorb the new client load. Many non-profits operate on the margin economically, even with government grants and fees. Their ability to function without subsidy, while at the same time absorbing an increasing client load from a growing population with ever higher expectations, is seriously in question. Some smaller organizations will inevitably fail. This will place a heavier burden on the old-line agencies like Goodwill, churches, synagogues and the "Y's." That burden will require community action taken judiciously by well-informed citizens.

The role of the local newspaper in this process truly suggests itself. Such editorial interest is not only necessary for the entire community, but it also will be highly welcome to the non-profit community. ☐

Cooney is president and chief executive officer of Goodwill Industries of America Inc. He is a retired Naval rear admiral and former Navy Department chief of information.

HOW THE BEST JOURNALISTS IN AMERICA MAKE THEIR MARK

Over the last two decades the Scripps Howard Foundation has provided some of the best journalists in America with honors, cash and something money can't buy: Recognition.

This year will be no exception. We will present national journalism awards in conservation and the environment, human interest, public service, editorial writing, and writing in the defense of the First Amendment. There's even an award for the most promising cartoonist of the year.

You're eligible if you're a man or woman working for any newspaper in the United States or any of its territories, or a cartoonist whose work is not regularly syndicated.

To enter, send for an entry blank and fact sheet from the Scripps Howard Foundation, 1100 Central Trust Tower, Cincinnati, Ohio 45202. (We hate to be sticky, but we cannot accept any work after deadline, or without properly filled out entry blanks.)

Send us the best work you've done in 1985. If it's good enough, our judges will see to it that you make your mark in 1986.

REGULATIONS

Ink companies now seeing 'red'

Just before the Nov. 25 deadline for chemical manufacturers to comply with OSHA's "hazard communication" standard, confusion arose over a pigment used in some red news inks.

The confusion is over how containers of that pigment—"Red Lake C"—will be labeled and whether inks containing the pigment will continue to be used by newspapers. Already, work is under way to develop a suitable substitute.

The pigment under scrutiny is an ingredient in AdPro® and AD-LITHO™ Bright Red #65 and Medium Red #64, popular "spot" colors.

Prompting the concern is a 1982 study by the National Toxicology Program, a federal research consortium, into a grade of the pigment used in making drugs and cosmetics. "D&C Red No. 9" caused an increased incidence of spleen cancer in male laboratory rats who were fed large amounts. However, the study did not find the pigment caused cancer in female rats—or in laboratory mice of either sex.

The labeling question is not as clear cut as it was in the case of news ink made with untreated mineral oil [presstime, Oct. 1985, p. 40].

Unlike the untreated mineral oil, the pigment does not appear in any of the reports that OSHA has said should be used as authoritative in categorizing a chemical as a carcinogen or potential carcinogen. One such source is the National Toxicology Program's Annual Report on Carcinogens.

For chemicals that do not appear in those reports, the OSHA standard requires manufacturers to evaluate them for any hazards and to ensure that products made with them are appropriately labeled.

None of the major producers of the pigment for red ink said they would put a cancer warning label on containers. Each one has elected to handle the labeling issue differently.

The most specific hazard warning label will be that of BASF Wyandotte Corp. It will indicate the presence of Red Lake C and state that in animal feeding studies the pigment "caused chronic spleen damage in mice and rats," according to Robert G. Thoma, director, public and government affairs. The label also will advise that exposure to the product "should be minimized by use of appropriate personal protective equipment and engineering controls," he said.

Sun Chemical Corp.'s label of products containing Red Lake C also will note that they contain the pigment and will recommend the use of "appropriate personal protective equipment and/or engineering controls to minimize inhalation and/or skin contact," according to a Product Safety Bulletin issued Nov. 11 to its customers and sales representatives. The label also will state: "When low levels of exposure are maintained, potential risk resulting from use of this product is considered insignificant."

On its "Material Safety Data Sheet" accompanying containers of the pigment, Sun Chemical points out that the Cosmetic, Toiletries and Fragrance Association reviewed animal feeding studies and concluded that the increased incidence of cancer in male rats occurs only after they have been fed such high doses of the pigment that their spleens have been damaged. CTFA also has done "risk assessments" that show "use by humans doesn't really pose any problems," according to a CTFA spokeswoman.

The least specific label will be that of Magruder Color Co. "As far as we are concerned, there would be nothing except a notice to use good hygiene practice," said John A. Howard, executive vice president and chief operating officer.

Howard and other executives of pigment and ink companies note that the pigment is permitted by the federal Food and Drug Administration to be used in drugs and cosmetics.

D&C Red No. 9 is one of 10 substances on the agency's "provisional" list of color additives, according to Emil Corwin, FDA information officer. In fact, D&C stands for drugs and cosmetics.

Currently, an FDA-commissioned scientific review panel is evaluating the safety of D&C Red No. 9 and five other substances on the provisional list. It will report findings June 6, 1986.

Meanwhile, major ink companies reflect the uncertainty that surrounds Red Lake C.

Spokesmen for the General Printing Ink division of Sun Chemical Corp., Flint Ink Corp. and J.M. Huber Corp. said their companies would not put special warning labels on ink containing Red Lake C but would include information about the pigment on Material Safety Data Sheets.

Another major ink company, U.S. Printing Ink, has not yet made a decision on its course of action. Herbert L. Edelman, vice president-operations, said the company has 90 days after receiving a new MSDS from a supplier to make its hazard determination.

Edelman said he believes that by early February, when the company would have to make its decision, "it will be a dead issue as far as newspapers are concerned. I don't think there will be any AD-LITHO or AdPro inks made with Red Lake C."

George Cashau, ANPA director/technical research, said inks using Red Lake C "probably" will be removed from ANPA's color ink book, which sets standards for color ink in the newspaper business. "We are looking for a suitable substitute to replace the pigment," he said.

"The ink companies are working on it, and we've got a couple [of inks] to look at, but no decision has been made," he said. ANPA has delayed the printing of its new color ink book because of confusion surrounding the new hazard communication standard [presstime, Nov. 1985, p. 53].

In the meantime, for newspapers that decide not to use red ink containing Red Lake C, ANPA has come up with "close" matches to the two colors, according to William D. Rinehart, ANPA vice president/technical. The match to Bright Red #65 may be made by combining 60 parts Process Red #62 and 40 parts Process Yellow #63. The match to Medium Red #64 may be made by combining 90 parts Process Red #62 and 10 parts Process Yellow #63. ☐

Amending 'must-carry'

The Federal Communications Commission Nov. 14 opened a rulemaking proceeding aimed at amending its "must-carry" rules, which require cable-TV systems to carry all local TV stations.

The rules were overturned by a federal appeals court last July. The U.S. Supreme Court has been asked to review that decision [presstime, Oct. 1985, p. 43].

Health and Safety Symposium focuses on hazard standard

Discussion of the U.S. government's "hazard communication" standard dominated ANPA's fifth annual Newspaper Health and Safety Symposium.

Concern over the standard was one reason attendance at the meeting was double that of last year, said program chairman Howard R. Brown, medical director of The New York Times. The Oct. 31-Nov. 1 symposium in New Orleans drew 124.

Developed by the Occupational Safety and Health Administration, the hazard communication standard is intended to provide workers with information about the hazardous chemicals with which they come in contact in the workplace.

Various speakers stressed the importance of newspapers' having a good program to comply with the standard.

"The legal threats alone are enough to compel the first-class attention of all management," said Joe D. Smith Jr., president of the Alexandria (La.) Daily Town Talk, who led off a panel discussion on the responsibilities of various newspaper personnel in implementing a hazard communication program.

Newspaper Printing Corp., which publishes The Tennessean and the Nashville Banner, began implementing its program by developing a list of all chemical products used by the company, said William D. McGahan, operations director.

To control the introduction of new products, the company directed that hazardous chemicals be ordered only through the purchasing department and received only by shipping and receiving department employees. "No free samples of any material considered to be hazardous are permitted to be accepted by any unauthorized person," he reported.

Employee training is a major aspect of compliance with the standard. Carol G. Voorhees, director/employee relations of Call-Chronicle Newspapers Inc. in Allentown, Pa., said her company planned to have the first phase of its training completed by Nov. 25, the date on which chemical manufacturers must have assessed the hazard posed by their products, labeled them appropriately and issued "Material Safety Data Sheets."

In phase one of the training, all employees covered by the program will be made aware of the standard and their rights, she said.

Phase two will involve a "run-through" telling employees of the proper work practices associated with each chemical. This is targeted for March and April, she said. Under the standard, newspapers must complete employee training by May 25.

California has had a state hazard communication law for the past three years, said Michael G. Manfro, manager/safety and environmental affairs for the Los Angeles Times.

He advised that safety data sheets be reviewed for "completeness and obvious errors" and cautioned that the forms are not standardized. The Times has developed a "user sheet" that takes technical information and puts it into layman's language, he said.

Bruce H. Berry, a lawyer with the New York City firm of Bermant & Blau, said that OSHA, in enforcing the standard, will initially be looking at "good faith" efforts at compliance but later will be checking much closer.

John A. Zangerle, of the Cleveland law firm of Baker and Hostetler, outlined actions newspapers can take to avoid problems. "We have to take all employee safety and health concerns seriously," he said. "If an employee complains about a safety or health issue, the worst that we can do is to ignore it or simply say that employee is a chronic complainer." He said papers should document action taken to investigate employee complaints.

Among other things, Zangerle advised the newspaper executives to "look for alternatives," look for products that do not contain hazard labels. He noted that many newspapers are switching to ink made from treated mineral oil to avoid using a product bearing a cancer warning label [presstime, Oct. 1985, p. 40]. "From a legal perspective, it seems to me to make eminent sense to avoid the labeling and avoid the risk in an abundance of caution," he said.

"I think you do not have a hazard," said Francis W. Weir, director of environmental safety at the University of Texas Health Science Center at Houston. Weir is the author of a study that concluded, based on a review of scientific literature, that few if any current newspaper pressroom workers are exposed to significant levels of hazardous chemicals.

> *"We have to take all employee safety and health concerns seriously."*

James G. Tucker of The Bakersfield Californian (left) discusses ink labeling with NAPIM's Renson.

The study was conducted for the National Association of Printing Ink Manufacturers. That organization's executive director, James E. Renson, spoke at the symposium and supported Weir's conclusion.

"Even though the trigger provision of the standard requires that news inks containing untreated oils must be labeled, there is no established basis" to conclude that they pose a risk to humans, Renson said. He suggested that "it will be extremely difficult to formulate an ink" that is free from all hazardous chemicals as defined by the OSHA standard.

Other topics covered at the symposium were ANPA's Hazpak manual on compliance with the OSHA hazard standard, the experience of Philadelphia Newspapers Inc. with the Superfund hazardous waste cleanup program, the effort by The Globe and Mail in Toronto to eliminate smoking in its plant, newspaper disaster planning, newspaper safety programs, VDT issues, newspaper office design, occupational health nurses at newspapers, indoor air pollution and corporate wellness programs.

Audio cassette tapes of the symposium are available from ACTS Inc., 1025 East Clayton Rd., Ballwin, Mo. 63011. Texts of several of the speeches are available from the ANPA Public Affairs Department, The Newspaper Center, Reston, Va.

—Margaret Genovese

COURTS

Newspapers' right to reject advertising insert upheld in one court, challenged in another

As one newspaper won a court battle over its right to reject an advertising insert, the issue surfaced at another paper.

The Idaho Statesman of Boise won the battle in the 9th U.S. Circuit Court of Appeals. The court upheld a lower court's decision to dismiss an antitrust lawsuit against the paper.

In the new case, a California company that conducts high-tech job fairs filed suit against the Los Angeles Times. The company charges that the newspaper's refusal to carry its preprinted recruitment advertising insert violates federal antitrust law.

The Idaho case was brought by Philip J. Drinkwine, who produced inserts for four Boise merchant associations. Drinkwine, whose company went out of business, sued the Statesman after it refused to continue carrying local inserts printed elsewhere.

The case was dismissed Aug. 31, 1984, by U.S. District Judge Ray McNichols, who held that Drinkwine had failed to produce sufficient admissible evidence of liability and damages [presstime, Oct. 1984, p. 47].

The Court of Appeals Oct. 22 affirmed that decision. A three-judge panel said the Statesman's refusal to accept "shoppers" from independent producers "must be analyzed for its effect on consumers, competitors, and competition."

It concluded that the effect on consumers "is not detrimental because the merchants have competitive alternate distribution channels." And it said the effect on Drinkwine "is that he could not distribute his shopper through the Statesman, but he too had alternate distribution routes."

The court labeled the opinion "not for publication." Unpublished opinions generally cannot be cited as precedents.

In the California case, Westech Expo-Corp of Santa Clara asked the U.S. District Court in Los Angeles for an injunction to compel the Times to carry the insert High Technology Careers.

The Times has filed a brief in opposition to the injunction. A hearing is scheduled Dec. 2.

"We are confident that a court will not compel the Times to distribute another newspaper, because that is essentially what we feel Westech is trying to have done," said Jeffrey S. Klein, senior staff counsel for the Times. "We don't think that the antitrust laws compel one newspaper to be the delivery vehicle for another publication."

According to Laurie L. Watts, director of public relations for Westech, the Times initially agreed to carry the insert, then refused, "telling us that they would not accept recruitment preprints." She said the Times' rate card lists "career opportunity pages" as a category of advertising.

Westech subsequently placed ads in the Times' classified section, Watts said, but they did not draw the numbers of people to the fair Westech would have expected from the insert.

The company filed its suit Oct. 11 and held a press conference Oct. 23 to announce it. "We wanted to bring it to the press' attention because we felt there were probably a lot of independent publishers throughout the country who were experiencing this monopoly power," said Watts.

Westech has placed inserts in the San Jose (Calif.) Mercury News for job fairs in that city, according to Watts.

It also has conducted job fairs in Denver, Seattle and Phoenix, but has not attempted to have inserts placed there, she said.

In other recent newspaper antitrust actions:

- Tribune Publishing Co., which publishes The Tacoma (Wash.) News Tribune, has entered into a consent decree with the state attorney general that ends an investigation into the effects of its 1983 purchase of Puyallup Publishing Co., which publishes the tri-weekly Pierce County Herald.
- A suit brought last January by shopper publisher Platte Valley Marketing Inc. of North Platte, Neb., against the publishers of two Nebraska daily newspapers was dismissed Oct. 18 by stipulation of the parties [presstime, Feb. 1985, p. 30]. ☐

COURT BRIEFS

- A U.S. District Court jury in Honolulu found Oct. 31 that The Pacific Daily News in Guam did not **libel** Hammer DeRoburt, president of the South Pacific island republic of Nauru.

Although the jury found that a 1978 Daily News article contained information that was false and defamatory, it found the newspaper had not acted with "actual malice" in publishing it.

- In a case said to be the first to test Wisconsin's eight-year-old **privacy law**, a Dane County Circuit Court jury found that The Capital Times of Madison did not invade the privacy of a 14-year-old girl by naming her as the driver of a car involved in an accident in which two people were killed.

- The Arizona Supreme Court was scheduled to hear arguments in late November on whether the state's **retraction statute** violates the Arizona constitution. A state appeals court ruled last February that the law violates the "abrogation clause," which says no one may abolish a person's right to recover damages for injuries.

The Arizona retraction law provides that a libel plaintiff may recover no more than "special" damages if a correction is published within three weeks after it is demanded.

The dispute stems from a case involving The Phoenix Gazette.

- ANPA has requested "intervenor" status in two cases before the U.S. Court of Appeals, District of Columbia Circuit.

The Association Nov. 20 asked for permission to intervene in support of 12 media organizations that are challenging the Federal Communications Commission's **fairness doctrine** report. The FCC concluded that the doctrine no longer serves the public interest, but it declined to repeal the doctrine and turned the matter over to Congress instead.

Two weeks earlier, ANPA asked to be allowed to intervene in support of the FCC in a case challenging the commission's ruling in a **cable-television** matter. The commission overturned a Nebraska Public Service Commission order that would require Cox Cable Communications to seek common-carrier certification for voice and data transmission services it is offering over cable-TV lines in Omaha [presstime, Sept. 1985, p. 35]. The National Association of Regulatory Commissioners asked for the review.

Cable-TV's First Amendment rights to be tested

The U.S. Supreme Court has agreed to review a case that questions the constitutionality of awarding a cable-TV franchise to only one company.

"To a large extent, this case has the potential to determine the long-term, First Amendment rights of cable television systems, long thought to be mere public utilities with only insignificant free-press protection," said W. Terry Maguire, ANPA vice president/general counsel. "This case could firmly establish significant First Amendment rights for cable systems."

A three-judge panel of the 9th U.S. Circuit Court of Appeals ruled March 1 that awarding exclusive cable-TV franchises when public utility facilities can accommodate more than one cable company violates the First Amendment [presstime, April 1985, p. 34]. The city of Los Angeles sought the high court's review in the case, *Los Angeles v. Preferred Communications.*

The court also refused to hear the following press-related cases:

- *Capital City Press Inc. v. Buratt.* The court let stand a Louisiana Court of Appeals libel decision against Capital City Press, which publishes the Advocate and State Times of Baton Rouge. The case involved an article based on public records [presstime, Oct. 1985, p. 42].
- *Lorain Journal Co. v. Milkovich.* Two justices dissented from the high court's decision not to review the decision of the Ohio Supreme Court that a high school wrestling coach was not a "public figure" under libel law. Justices Thurgood Marshall and William J. Brennan argued that the Ohio decision "is especially unfortunate in that it most affects reporting by local papers about local controversies that constitute their primary content. Moreover, it is these local papers that are most coerced by the threat of libel damages since they can least afford the expense of damages awards."
- *In Re Grothe.* The Dallas Morning News had asked the court to review a ruling by the Texas Court of Criminal Appeals that upheld a subpoena for unpublished photographs. ☐

Cookeville editor indicted in theft of papers

A Putnam County, Tenn., grand jury has indicted the executive editor of the daily Herald-Citizen in Cookeville on two counts of petty larceny in connection with the theft of copies of The Dispatch, a tri-weekly newspaper in Cookeville, from a newsrack.

Charles Denning has applied for "pretrial diversion" in the case, according to his attorney, Robert L. DeLaney. Pretrial diversion is a "statutory device" in Tennessee whereby an individual who is charged with crimes may have the prosecution of the offenses suspended for a period of time, DeLaney said. If the individual is not charged with further alleged criminal activity and if other conditions contained in a diversion agreement are met, charges against the individual may be dismissed and his record expunged [presstime, July 1985, p. 54]. ☐

LEGISLATION

Publishers blast 'VAT'

The ANPA, the Magazine Publishers Association and the Association of American Publishers have written to each member of the House of Representatives opposing a measure they say would impose "a value-added tax on information."

The levy, an excise tax of 0.08 percent imposed on the sale or import of tangible personal property by the manufacturer or importer of the property, is contained in HR 2817, a bill to fund the Superfund cleanup program for abandoned hazardous waste sites.

The bill has been approved by the Ways and Means Committee and is awaiting action by the full House. The Senate already has approved the tax.

The associations representing newspaper, magazine and book publishers consider the excise tax to be a "value-added tax" because it taxes the value that is added to a raw material during the manufacturing process.

In the case of publishers, the "value" added to the materials they use is information. Because the tax could lead to higher publication prices, the associations say the measure "would impose a government fee for acquiring information."

In their Oct. 31 letter, the associations said "the value-added approach would be harmful to society, whose democratic tradition would suffer from imposition of a new obstacle to diverse and easily accessible information; to consumers, who ultimately must pay the cost of the tax hidden in retail publication prices; and to publishers, who would be penalized because they are engaged in a labor-intensive business."

A labor-intensive business would suffer disproportionately, they contend, because it could make less use of the credit provision of the bill than other companies. That provision allows a business to deduct from the tax it would pay an amount equal to the tax paid by the producers of the raw material and equipment the business uses.

The associations also said the tax on printed information would be discriminatory because no tax would be applied to media not producing tangible personal property.

They asked that the excise tax be removed from the bill.

ANPA counsel Brigette Rouson said the tax paid each year by a newspaper "could be sizable." The tax would apply to circulation income and possibly income from job printing, she said, but not income from advertising.

ANPA expressed similar concerns to members of the House Ways and Means Committee earlier in October [presstime, Nov. 1985, p. 43]. ☐

House defeats job layoff bill

On a 208-203 vote, the House of Representatives Nov. 21 defeated a bill that would have required companies with more than 50 workers to give 90 days' notice of intent to close a plant or permanently lay off more than 50 workers.

During earlier consideration of the bill, a provision requiring employers to consult with union representatives over alternatives to layoffs or closings was deleted.

On Nov. 8, ANPA issued a "Labor Alert" to member-newspaper executives advising them of the expected House action on the bill.

U.S. Labor Secretary William E. Brock told ANPA committees in September that the Reagan administration opposed the bill [presstime, Nov. 1985, p. 40]. ☐

Human rights court decries licensing of journalists

In what is considered a stunning victory for press freedom, the Inter-American Court of Human Rights issued a unanimous decision Nov. 13 against licensing of journalists.

Although technically only an advisory opinion limited in official jurisdiction to the 19 signatories of the 1978 American Convention on Human Rights, observers say it could have a significant impact even beyond the Western Hemisphere.

As the first decision on this topic by any international tribunal, it will have "an immediate worldwide effect," predicted Leonard H. Marks, treasurer of the World Press Freedom Committee and a Washington, D.C., lawyer, who represented WPFC and other free press groups and testified before the court.

Floyd Abrams, a New York City lawyer who filed a friend-of-the-court brief for several public-interest groups, commented: "I think it will be taken very seriously within United Nations bodies. The next time UNESCO considers licensing journalists for their supposed safety, it will be taken very seriously indeed."

The decision that licensing is incompatible with the convention grew out of the case of an American convicted of practicing journalism in Costa Rica without a license because he lacked membership in a "colegio"—a group granted authority by the state to establish criteria for journalists.

The colegio required that practicing journalists have a journalism degree from the University of Costa Rica. Stephen Schmidt, who wrote for the English-language Tico Times and the Spanish-language La Nacion, had a degree from another Costa Rican university [presstime, Sept. 1985, p. 39].

In effect, the court's 46-page decision, supported by three concurring opinions, rejected the premise of a December 1984 decision by the Inter-American Commission on Human Rights. The commission had upheld the Costa Rican Supreme Court's decision against Schmidt and denied his request to have the case referred to the inter-American court.

Debated throughout Latin America for years, the issue of "colegios" reached the inter-American tribunal through a convention procedure allowing a member-government to seek an advisory opinion.

At the urging of the Inter American Press Association, the Costa Rican government requested an advisory opinion on the broader issues brought to light by the Schmidt case.

Thomas Buergenthal

What stunned many observers was the unanimity of the decision. Three of the seven judges from countries with such "colegios"—Peru and Venezuela as well as Costa Rica—joined in the assertion that membership requirements for journalists were anathema to basic press freedoms. Currently 11 countries in the Americas have such "colegios"; the others are Brazil, Bolivia, Ecuador, Guatemala, Haiti, Honduras, Panama and the Dominican Republic.

After the decision, ANPA Executive Vice President Jerry W. Friedheim said, "Now it's important for Costa Rica—and other countries which have laws requiring journalists to be licensed—to repeal those laws." He added: "Other governments considering similar measures should forget about them."

ANPA submitted an amicus brief in the case, joined by the American Society of Newspaper Editors and the Associated Press. The International Federation of Newspaper Publishers informed the court that it concurred with ANPA's brief.

Going beyond the proximate issue of "licensing," ANPA Vice President/General Counsel W. Terry Maguire said the decision will have an impact on related issues of press freedom, both in the United States and elsewhere.

"It certainly provides tremendous support for the idea that there should be no licensing of journalists in any country in this hemisphere," said Maguire. "But perhaps as important, it also states very clearly that fundamental free press rights in the United States—those that relate to prior restraint and the like—have the potential to become as fundamental in this evolving international law as they are here."

The seven-member tribunal heard the case in two parts. On Sept. 5, arguments were limited to determining whether the 1969 Costa Rican Law 4420—establishing the powers of its Colegio de Periodistas to set criteria for journalists—was in conflict with the 1978 human rights convention. On Nov. 7, the court considered the general principle of licensing, not limited to the Costa Rican case.

The decision was delivered to a packed courtroom in the court's San Jose, Costa Rica, headquarters. After being read in Spanish, it was summarized in English by Chief Justice Thomas Buergenthal, who is professor of law and human rights at Emory University School of Law in Atlanta.

Although considered unanimous, the decision was actually signed by only six of the seven judges, because one was unable to obtain transportation to the hearing from Honduras.

Concurring opinions by judges from Peru, Venezuela and Costa Rica were viewed as strengthening the main document. For example, one held the licensing provision to be a violation of still another right guaranteed by the 1978 convention—freedom of assembly.

Other participating judges were from Colombia and Jamaica. —*Marcia Ruth*

WORLD PRESS NOTES

- In the past two months, Malaysia has begun to include journalists in its enforcement of the **Official Secrets Act**, previously used only against politicians.

In October, James Clad, bureau chief for the Far Eastern Economic Review, was fined the equivalent of about $4,000 for reporting on a classified document on Malaysian trade with China.

In November, reporter Shabry Sharif was charged with violating the act for writing articles in the New Straits Times—the country's leading English-language daily—about defense arrangements with the United States. He is awaiting trial.

- The French daily Le Monde has **appealed to its readers** to raise more than $1 million to keep the financially troubled newspaper in business.

UNESCO conference results in little change in communications policy

International communications policy appears to have changed little as a result of the UNESCO General Conference in Sofia, Bulgaria, that ended Nov. 12.

"We may have just swapped one set of code words for another," said Dana Bullen, executive director of the World Press Freedom Committee.

"A distinction without a difference," observed ANPA Secretary K. Prescott Low, publisher of The Patriot Ledger in Quincy, Mass., who represented both the Inter American Press Association and the International Federation of Newspaper Publishers as a non-governmental observer at the five-week conference.

Of the more than $300-million budget voted for the next two years, about 6 percent is allocated for communications studies and programs.

But for many observers, the public agenda hid more than it revealed about the future direction of the organization—still reeling from the withdrawal of the United States and its 25-percent share of the budget [presstime, Jan. 1985, p. 25].

Underlying overt debate was the often unspoken issue of whether Great Britain, which has publicly concurred with basic U.S. criticism that the United Nations agency is fiscally irresponsible and anti-Western, would pull out at the end of 1986, perhaps carrying other countries with it.

If Britain stays, Low predicted, the future of press freedom in this arena would be dim. The Massachusetts publisher explained that in the last two conferences, the "linchpin" for holding the line on press restrictions demanded by Communist and Third World nations has been the United States' and now the British threat of withdrawal.

If the British remain in UNESCO, thereby isolating the United States in opposition to the agency's policies and procedures, "it will be open season on press freedom and the West" in UNESCO, Low said. ☐

Curbs imposed on South Africa coverage are roundly criticized by U.S. media

A chorus of protests from U.S. media greeted the South African government's most recent crackdown on press coverage of black opposition to the racial-separation policy of apartheid.

Louis D. Boccardi, president and general manager of the Associated Press, called the ban on television, radio and photographic coverage of the racial violence that has swept the country in recent months an "attempt to draw a curtain of silence across [these] events." Announced Nov. 2, the ban was "unwise and inevitably self-defeating," he added.

Other protests from the presidents of the three major TV networks and the American Society of Newspaper Editors echoed Boccardi's.

In a telegram to South African President Botha, ASNE President Robert P. Clark expressed "regret" that South Africa, which "had previously allowed relatively free inquiry by journalists," had resorted to such measures.

"The record is clear. Dictatorships, communist and noncommunist, solidify political domination by securing control of the information which reaches their peoples," said Clark, vice president for news of Harte-Hanks Newspapers. "By this action, your government marches further down that path."

Still photographers are covered by the ban. Print reporters, while not banned from demonstrations, are severely restricted in their movements. Under the decree, they are allowed to cover such events only under police escort.

A few days after the most recent media crackdown, The Cape Times of Cape Town defied another prohibition—one that has stood for more than a quarter of a century—against quoting people "banned" by the white-dominated government.

Charged with publishing an interview with Oliver Tambo, black leader of the underground African National Congress, Editor Anthony Heard faces a possible three-year jail sentence and the closing of his paper. He was arrested Nov. 8, and his trial is scheduled for Dec. 9. ☐

AP

Jerry Levin of Cable News Network, former hostage in Lebanon, unveils a plaque at the National Press Club in Washington, D.C., dedicated to journalists killed in duty. Applauding is Carmella LaSpada of No Greater Love, which aids terrorist victims' children. The group sponsored the plaque with the Committee to Protect Journalists and the press club.

ANPA urges attention to safeguards in new FCC rules review

A more sophisticated, national telecommunications network will enable diverse sources of information to reach the public, but safeguards are needed to foster such diversity, according to ANPA.

That diversity can develop, ANPA said, only if all competitors are playing on a level field; in other words, checks are needed to ensure that AT&T and the Bell regionals do not have unfair advantages in areas like access to the network and subscriber lists.

ANPA offered supporting arguments and facts for this position in a 25-page filing Nov. 13 with the Federal Communications Commission. The FCC is conducting a full-scale review of rules affecting telecommunications common carriers in a proceeding dubbed Computer III.

Saying it favors increasing "efficiencies and capabilities" in the telecommunications network, ANPA said it "would, therefore, encourage the commission to facilitate such improvements with appropriate safeguards."

The Association urged the FCC to clarify "that nothing in this proceeding should be viewed as a relaxation" of the consent decree that has governed the breakup of AT&T. Pressure has been growing to loosen restraints on the Bell regional companies and their former parent [presstime, Nov. 1985, p. 46].

Among other restrictions, the decree indefinitely bars the seven Bell regionals from providing information services; it also bans AT&T from electronic publishing until 1989 whenever that company's transmission lines would be involved. The bans were imposed in large part because of concerns that the companies could use their monopoly transmission facilities to inhibit competition in the electronic information market.

In its comments to the FCC, ANPA noted that AT&T's dominant position as a long-distance carrier and the regionals' monopoly status as the provider of local telephone exchange services are intact.

Should the decree's restrictions be removed, the FCC's "public interest responsibilities will require it to consider the potential adverse consequences" of the companies' participation in the electronic information publishing industry, ANPA said.

To ensure competition in the telecommunications industry, strong safeguards should be in place before removing rules that require AT&T and the Bell companies to use separate subsidiaries when they diversify, ANPA said.

Separately, two media companies—Gannett Co. and Lee Enterprises Inc.—have filed comments on Computer III. □

Newspaper firms join phone company in videotex

Subsidiaries of two companies in the newspaper business will participate in Pacific Bell's test of a videotex service using a new technology that converts one telephone line into seven communications channels.

During the field test, known as Project Victoria, 200 participants will use personal computers to receive information sent over what the telephone company calls its "seven-in-one phone line system."

Of the seven channels, two transmit voice messages and five carry data, according to Pacific Bell, which is owned by the Bell regional company Pacific Telesis. Patents are pending on the system.

The six-month test in Danville, Calif., is scheduled to start in February.

Pacific Bell announced that information providers will include Chronicle Information Services—the public access videotex arm of Chronicle Publishing Co. of San Francisco—and Dow Jones Information Services, a subsidiary of Dow Jones & Co.

In a separate development, another company in the newspaper business has agreed to serve as information provider for Covidea, an electronic-services partnership that includes AT&T.

The New York Times Co. said it will provide material from its syndicated wire services and consumer publications to New York Pulse, an electronic information service that Covidea will offer this spring to homes and offices in New York.

The Covidea partnership, which was announced in June [presstime, July 1985, p. 64], was recently formed, a Covidea spokesman said. Besides AT&T, it consists of Time Inc. and Chemical Bank of New York City. Covidea is now providing home banking services in three states. □

Another free paper loses rate battle

For the second time in as many months, a free newspaper has lost a challenge to rules prohibiting it from using in-county, second-class rates.

The Postal Rate Commission said the paid-subscriber rule, requiring that more than half of all copies of a publication be purchased to qualify for the rates, allows the public to determine which periodicals "warrant the second-class status."

Tri-Parish Journal Inc. of LaPlace, La., argued that its free-circulation River Parishes Sun is a legitimate newspaper and should be entitled to low mailing rates like any newspaper, regardless of circulation price [presstime, Nov. 1985, p. 44]. □

Veto could result in higher rates

Some second-class postal rates could go up much more than the 40-60-percent increase that was scheduled for Jan. 1.

President Reagan Nov. 15 vetoed an appropriations bill including the "revenue forgone" subsidy for in-county newspapers. Congress was expected to respond by reducing the level of proposed subsidy [presstime, Nov. 1985, p. 45]. Current rates will not change at least until Dec. 14, when stopgap funding expires. □

ANPA asks dismissal of Advo complaint

After discussing a possible settlement in Advo-System Inc.'s formal complaint against newspapers' second-class total-market-coverage practices, ANPA has abandoned those talks.

Instead, it has asked the Postal Rate Commission to dismiss Advo's case, saying the complaint is groundless.

In a brief filed Nov. 15 with the Postal Rate Commission, ANPA said existing regulations, if enforced, "generously protect" the integrity of second-class mail and are sufficient to preclude any abuses [presstime, Sept. 1985, p. 38]. □

Blair 'restructuring'

John Blair & Co., parent firm of Advo-System Inc., said it may sell its printing and coupon marketing companies. It said it will not sell Advo. The "major restructuring" is intended to restore Blair's profitability [presstime, Oct. 1985, p. 6]. □

Three newspapers leave ABC, citing need for readership data

Dissatisfaction with practices of the Audit Bureau of Circulations has caused three newspapers to withdraw from the bureau.

In early November, The Toronto Globe and Mail announced its resignation from ABC, saying advertisers care about readership and demographics rather than the paid circulation that ABC measures.

In late November, the Democrat and Chronicle and the Times-Union of Rochester, N.Y., resigned, citing the example of The Globe and Mail.

Douglas E. Evans, vice president of The Globe and Mail, said advertisers care more about the number and demographics of readers than the count of copies sold. He called "really ludicrous" ABC's preoccupation with copies sold while it counts circulation in schools and prisons as paid. The 313,647-circulation daily is owned by Thomson Newspapers Ltd.

The resignation of the Rochester newspapers, owned by Gannett Co., was announced by Publisher Vincent E. Spezzano. "We have long had the feeling that ABC employs archaic and outmoded procedures and demonstrates an unwillingness to update its methods and operations," Spezzano said.

Echoing The Globe and Mail, he said readership research has become the preferred measure for advertisers in making media buying decisions. The Rochester dailies have a combined circulation of 232,329.

Spezzano also is a regional president of Gannett, with responsibility for its newspapers in the Northeast. Charles L. Overby, vice president/communications for Gannett, said he did not know if other Gannett papers would join the Rochester papers in leaving ABC.

ABC spokesman Charles O. Bennett declined comment. The resignation of The Globe and Mail was reported at the meeting of the ABC Board of Directors that immediately followed the close of ABC's annual conference in Chicago Oct. 30-Nov. 1, he said.

At that meeting, the ABC Board approved bylaw changes providing for special assessments of members and requiring consistent dating of editions.

The special assessments provision allows ABC to collect extra dues when the board judges they are needed.

The other new bylaw requires that a newspaper date editions consistently once a pattern is established. For instance, if a predated Tuesday edition goes on sale Monday night, then predated editions that follow during the week must also appear the day before the date on the edition.

No action was taken on a proposed bylaw that would shift all litigation costs to individual publishers named in a suit over circulation figures. The board previously gave the proposal the first of two favorable votes it needs to pass [presstime, Sept. 1985, p. 46].

The ANPA/Newspaper Advertising Bureau-ABC Liaison Committee told ABC Oct. 30 that the two newspaper organizations oppose the bylaw as proposed. The liaison committee is expected to present suggestions to ABC in mid-December on providing for "fault allocation" and on improving ABC's appeals process, according to Robert L. Burke, ANPA vice president/industry and public affairs.

The board elected as chairman David K. Braun, director of media services for General Foods Corp. Directors re-elected at the conference include three who represent newspapers: Grover J. Friend, president of Calkins Newspapers of Levittown, Pa., who also was elected ABC treasurer; John O. Emmerich Jr., editor and publisher of The Greenwood (Miss.) Commonwealth; and William C. Green, publisher of The Huntsville (Ala.) Times and vice president of The Birmingham News Co.

Study will explore newspaper 'starts'

A yearlong study tracking why people start and retain newspaper subscriptions is scheduled to start no later than March.

Virginia Dodge Fielder, the study's coordinator, said nine U.S. daily newspapers are considering participation. Fielder, director of news and circulation research at Knight-Ridder Newspapers Inc., said current plans call for a series of interviews with about 200 new subscribers at each paper.

The American Society of Newpaper Editors, the International Circulation Managers Association and the Newspaper Research Council are sponsoring the study, which was being designed and reviewed in late November [presstime, Sept. 1985, p. 45].

Parade, USA Weekend challenge Simmons data on readership

Both Parade and USA Weekend have challenged the results of Simmons Market Research Bureau's attempt to bring readership figures up-to-date following recent shakeups in the Sunday magazine field.

In October, Simmons said Sunday Magazine Network publications had 2.25 readers per copy, compared with Parade's 1.93 and USA Weekend's 1.71.

Charging Simmons with figures "inconsistent with reality," Parade President and Publisher Carlo Vittorini in November said it was "mathematically impossible" to gain circulation in papers with high readership, yet show a drop in readers per copy. He called for an investigation by a committee of the American Association of Advertising Agencies.

In response, Simmons President Frank Stanton said some of the newspapers gained were in areas already receiving Parade in competing newspapers, and Simmons does not count such readers twice.

With USA Weekend, the debate centered on what both parties agree were sampling errors, and after a Nov. 22 meeting they began working together on a solution. "We agree we have a problem," said Stanton. "We're not incensed anymore," said Paul Kessinger, vice president of marketing for USA Weekend, who said he was "confident" the "unusual problem" could be solved.

As both sides explained, the reduction in papers carrying the former Family Weekly, repackaged as USA Weekend after it was purchased by Gannett, increased Simmons' sampling errors. New techniques must be devised to measure readership in concentrated circulation areas not equally distributed throughout the area currently measured, they said.

Athenas awarded

Two agencies each won two of the 1985 Athena Awards given by the Newspaper Advertising Bureau for excellence in 14 categories of newspaper ads.

Fallon McElligott Rice of Minneapolis and The Marshalk Co. of San Francisco were the major winners this year among agencies. Holiday Erickson Petroleum of Minneapolis was the only advertiser to win an Athena for an ad prepared in-house. No newspapers won Athenas [presstime, Nov. 1985, p. 22].

White House ends foreign reporters' embassy-letter requirement

Acceding to requests from ANPA and other news media organizations, the White House has eliminated a controversial condition for accreditation of foreign journalists.

Removed from the White House credentialing procedure in mid-November was a requirement that people working for foreign news organizations attach to the application for press credentials a letter from their embassy certifying that their employer is a bona fide news organization. ANPA and others had complained that this amounted to licensing of these journalists by their own governments.

A White House official said the complaints "raised legitimate concerns." The requirement was eliminated after White House press and legal staff had assured themselves through meetings with the Secret Service that "we could do so without creating adverse security concerns," he said.

"We are highly pleased," said Robert M. White II, chairman of the International Working Group of the ANPA Government Affairs Committee. "We think it is exactly the position the White House and every American government news source should adopt.

"After all, our traditional position has always been against any form of government licensing, and whenever a reporter or correspondent has to request the approval of his government in order to represent his news agency, that has to be taken as a form of licensing, which is totally unacceptable to all media dedicated to a free press," said White, editor and publisher of the Mexico (Mo.) Ledger. (See story, p. 40.)

Government Affairs Committee Chairman George W. Wilson, publisher of the Concord (N.H.) Monitor, said the outcome was "a wonderful demonstration of how effectively ANPA staff and committees . . . and individual ANPA members can work together to solve a problem that bothers the industry."

He credited Martin Casey, ANPA manager/government and international affairs, for coming up with what he called the "key" that enabled the problem to be resolved to the satisfaction of the White House and the press. Casey suggested that the reference checks with the foreign governments were not needed because, with the exception of those from Canada, foreign journalists already had to receive special "I" visas from the U.S. consulates in their countries. The consulates must check the journalists' credentials before issuing the visas.

Wilson also noted that the Government Affairs Committee provided the issue with high visibility by raising the question with presidential spokesman Larry M. Speakes and White House Chief of Staff Donald T. Regan [presstime, Nov. 1985, p. 40.]

Also "delighted" with the development was Mel Sufrin, vice president of the Canadian Press wire service. Sufrin pointed out that CP was the first news organization to challenge the policy several years ago after its former chief Washington correspondent, Carl Mollins, "objected to it on priniciple."

David Kraslow, publisher of The Miami News and a member of the board of directors of the Inter American Press Association, said the development "will be very reassuring to our Latin friends."

Other international press organizations that protested the requirement are the Canadian and American committees of the International Press Institute and the World Press Freedom Committee.

—Margaret Genovese

APME reports cover broad range of newsroom topics

As they have in years past, the 1985 Continuing Studies reports issued by committees of the Associated Press Managing Editors Association take a broad look at how newspapers gather and report the news.

Reports for this year were released at APME's convention Oct. 28-31 in San Francisco, the second-largest in APME's 53-year history, with 757 registrants.

During the convention, James F. Daubel of The News-Messenger, Fremont, Ohio, succeeded Michael J. Davies of The Hartford Courant as APME president. Daubel said the association this year will add two committees: one on small newspapers and the other on marketing and research.

Single copies of 13 of the 19 reports are available from the ANPA Public Affairs Department at The Newspaper Center in Reston, Va. Those reports and their committee chairmen are:

- Business: Michael R. Fancher, The Seattle Times
- Changing Newspapers: Ralph Langer, The Dallas Morning News
- Commentary: Paul Janensch, The Courier-Journal and The Louisville Times
- Foreign News: Diane Benison, The Evening Gazette, Worcester, Mass.
- Freedom of Information: Sue Reisinger, The Miami News
- Journalism Education: Janet Brandt, Journal-American, Bellevue, Wash.
- Minority News: Trueman E. Farris Jr., Milwaukee Sentinel
- Newsroom Management: Don Hatfield, The Herald-Dispatch, Huntington, W.Va.
- P.M. Newspapers: Lawrence K. Beaupre, Westchester Rockland Newspapers, White Plains, N.Y.
- Photo & Graphics: Susan Miller, Scripps Howard, Cincinnati
- Professional Standards: David Hawpe, The Courier-Journal, Louisville
- Sports: W.F. Cento, St. Paul (Minn.) Pioneer Press and Dispatch
- Writing and Editing: Leonard Pardue, The Courier-Journal and The Louisville Times.

The other APME reports and their committee chairmen are:

- Credibility: Robert W. Ritter, The Sun, San Bernardino, Calif. Copies of this study are available for $5 each from Ritter.
- General News: Thomas W. Jobson, The Asbury Park (N.J.) Press
- Media Competition: Robert Baker, The Free Lance-Star, Fredericksburg, Va.
- Minorities Research: George R. Blake, The Cincinnati Enquirer

SPJ, SDX sets its agenda

Robert Lewis

The main thrust of the Society of Professional Journalists, Sigma Delta Chi in the next year will be "Project Watchdog," a program to "educate the public to the value of a free press."

That's the aim of the society's new president, Robert Lewis, chief Washington correspondent for Booth Newspapers.

The "two-pronged" program, Lewis said, will involve an ad campaign after SPJ,SDX is approved for "public service" advertising and a "grass roots" effort by chapters to reach community leaders.

The new president disclosed his agenda following his election at the society's mid-November convention in Phoenix.

The convention stressed professional development, featuring 18 seminars on topics ranging from libel to the changing job market.

There was also a short-lived controversy swirling about the society's plans for press coverage at its convention. With an irony not lost in that press coverage, the convention began in a hail of criticism over barring C-SPAN cameras from a "roast" of veteran CBS newsman Walter Cronkite. The society quickly reversed its position.

New officers elected in addition to Lewis are: president-elect Robert H. Wills, editor of the Milwaukee Sentinel; secretary James Plante, managing director of news support services for NBC News; and treasurer Paul M. Davis, news director of WGN-TV in Chicago. ☐

ANPA's Hines elected First Amendment Congress president

Judith D. Hines

Judith D. Hines, vice president and director of ANPA Foundation, was elected president of the First Amendment Congress.

Other new officers elected by the organization's board of directors at its Oct. 26-27 meeting in Chicago are: vice president, Paul M. Davis, news director for WGN-TV in Chicago; secretary, Richard Gage, public affairs director, WFBF-AM and WFBF-TV in Rock Island, Ill.; and treasurer, John Shurr, Associated Press bureau chief in Columbia, S.C. [presstime, Sept. 1985, p. 44]. ☐

Cartoonists show there's nothing funny about hunger

The funny papers were serious places Thanksgiving Day, as more than 175 cartoonists focused their strips on combating hunger.

Initially organized by Garry Trudeau (Doonesbury), Charles Schulz (Peanuts) and Milton Caniff (Steve Canyon), the campaign included ads appealing for contributions to United Support of Artists for Africa, a Los Angeles-based group working for famine relief.

Well-known as the coalition of 45 artists that recorded the song "We Are The World," USA for Africa has asked newspaper editors to run the ads free as a public service. Universal Press Syndicate, which donated the ads, said at least 200 papers had agreed to participate by the week before Thanksgiving.

"The comics page has always been something of a public utility. It is simply there, day in and day out—for 80 years a totally dependable part of our national culture," said Doonesbury cartoonist Trudeau.

"What better way to reach people than through characters they've known all their lives?" he asked.

He said the cartoons provided "a troubling but hopeful message—that world hunger persists, but there is something we can do about it."

USA for Africa plans to raise more money by taking the original drawings on tour, then auctioning them off.

An anthology, *Comic Relief*, will be published by Holt, Rinehart & Winston, with proceeds also going to the famine-relief fund. David Stanford, who is Holt, Rinehart book editor for Schulz and Trudeau, said its publication will be timed to coincide with the May 25 Hands Across America event, in which people are supposed to link hands across the United States. ☐

Retailer asks researchers to standardize

At a meeting focused primarily on the application of computers to research, the Newspaper Research Council heard a strong plea from a major newspaper advertiser, Sears, Roebuck and Co., for use of standardized retail data.

Sears and newspapers can be "dynamic partners," James J. Rys, the company's manager of advertising research, said. But in order to make it easier to match newspaper distribution patterns with a retailer's customer profiles, newspapers should make shopping and purchasing data consistent from market to market, he said.

For example, Sears bases its ad campaigns on consumer patterns of the "past year" and the "past two months," while newspapers vary in their measurements, Rys said.

Other presentations during the NRC's Oct. 28-30 meeting in Kansas City ranged from a demonstration of a "one-person/one-computer" research department by David R. Jones, research analyst at The Fresno (Calif.) Bee, to a description of nationally available database systems such as VALS, P.R.I.Z.M. and X-1.

Such databases are currently being used by many large advertisers to establish markets for their products and by direct mailers to target delivery of their ads. For example, VALS uses "psychographics," to separate people according to their values and lifestyles, while P.R.I.Z.M. merges demographic description with geography, identifying ZIP codes or even residential blocks with certain types of people.

According to Eleanor F. McConnell, survey research manager for the Chicago Tribune, newspapers are now beginning to explore the use of such systems to increase their ability to target advertising and circulation.

At the meeting, Gerald T. Silvers, research director of The Cincinnati Enquirer, was elected NRC president. The Tribune's McConnell was elected vice president and program chairman. Also elected were Mark Schneider, research analyst of The Courier-Journal and The Louisville Times, secretary; and Diane Moser, research manager, St. Paul Pioneer (Minn.) Press Dispatch, treasurer.

Glenn H. Roberts, a former Des Moines Register vice president and research director, was appointed executive director. He will run NRC's office in Des Moines.

Education

Pacemaker winners named

ANPA Foundation, the National Scholastic Press Association and the Associated Collegiate Press have announced winners of the 1984-85 Pacemaker Award.

The award honors excellence in high school and college newspapers. The papers are judged on overall content and appearance, with an emphasis on quality of writing, design and coverage.

Winners of the high school competition are: The Little Hawk, City High School, Iowa City, Iowa; The Epitaph, Homestead High School, Cupertino, Calif.; The Union Street Journal, Cherry Creek High School, Englewood, Colo.; Featherduster, Westlake High School, Austin, Texas; and The Blue and White, Tamaqua (Pa.) Area High School.

Winners of the college competition are: The Lookout, Lansing (Mich.) Community College; The MATC Times, Milwaukee Area Technical College; University Daily Kansan, University of Kansas, Lawrence; The Daily Collegian, Pennsylvania State University, University Park; The Daily Beacon, University of Tennessee, Knoxville; and The Daily Texan, University of Texas at Austin.

Information compiled on youth pages

ANPA Foundation has compiled a list of newspapers that publish youth pages.

The list includes the name and address of each newspaper and a brief description of the type of material published. It was compiled to assist newspapers interested in creating their own youth pages [presstime, June 1985, p. 70].

To obtain a copy, contact Foundation Publications Editor Rosalind G. Stark at The Newspaper Center, Reston, Va.

Helping recruitment

Newspapers that have produced videotapes or films of their operations for recruitment, personnel, public relations or other purposes are asked to contact ANPA Foundation at The Newspaper Center.

The Foundation is working with other newspaper organizations to create a multi-media package for recruiting young people in all newspaper departments.

Transportation

Safety campaign invites papers to participate

The Safe Driving Campaign cosponsored annually by ANPA and the International Circulation Managers Association is seeking additional participants. Information regarding the campaign is being mailed to publishers of U.S. and Canadian daily newspapers in November.

The campaign, started in 1941, is designed to reduce highway fatalities and injuries in the United States and Canada and to build a safe-driving record in the newspaper business leading to lower insurance premiums for newspaper-distribution vehicles.

The accident rate in 1984 was more than 44 percent lower than that of 1941. In the intervening years, many insurance companies have reduced newspaper premiums industry-wide on several occasions, resulting in savings conservatively estimated at $1.5 million a year.

Officials note that 612 daily newspapers participated in the program last year [**presstime**, June 1985, p. 82]. The campaign is open to all dailies at no charge.

Details are available from the ANPA Newsprint and Transportation Department or from ICMA, both located at The Newspaper Center in Reston, Va.

Contracts for rail shipping rise significantly

Rail contracting now accounts for about 27 percent of the railroad industry's total revenues, according to the Interstate Commerce Commission. That figure takes into account only pacts covering regulated shipments. Contracts covering deregulated movements—such as single-line boxcar and piggyback shipments—need not be filed with the ICC.

Until deregulation in 1980, railroads were not allowed to enter into shipping contracts with customers. All rates were regulated by the ICC.

The ICC's Contract Advisory Service has been receiving contracts at a rate of 1,150 a month, and there are now more than 30,000 on file with the agency. Forest products, lumber and paper account for 18 percent of those contracts.

The commission predicts that almost all rail traffic will move under contract within five years.

Speeches

Robert P. Clark

Larry Fuller

Ralph Bubis

Keith Reinhard

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Women in Journalism: All's Well That Ends Well
Katharine Graham, chairman, The Washington Post Co. National Press Club, Washington, D.C., Oct. 22.

Editorial Quality and Computer Systems: The Best Is Yet to Come
Maurice J. Buchart Jr., vice president and general manager, The Courier-Journal and Louisville Times Co. International Federation of Newspaper Publishers Management and Marketing Symposium, Brussels, Belgium, Oct. 25.

"Thank God, We Ain't Where We Was"
Robert P. Clark, vice president/news, Harte-Hanks Newspapers, San Antonio. ASNE Minorities Conference, Cleveland, Oct. 17.

Freedom of Speech: Can It Survive?
John V. R. Bull, assistant to the executive editor, The Philadelphia Inquirer. Newspaper Features Council fall meeting, San Francisco, Sept. 18.

Taking Charge and Planning for Career Advancement
Lester B. Korn, chairman and chief executive officer, Korn/Ferry International, New York City. Wharton and Columbia Business School clubs, New York City, Oct. 29.

Computing and Communications: A New World or a Fantasy?
Jack M. Scanlon, group vice president/computer systems, AT&T. Association of Computing Machinery annual conference, Denver, Oct. 14.

From the International Newspaper Financial Executives annual meeting, Dallas, Oct. 20-23:

Newspapers in the Age of Information
ANPA Chairman and President Richard J. V. Johnson, president, Houston Chronicle

Specialized Information Services
Larry Fuller, president, Gannett New Media Services, Rosslyn, Va.

Selecting and Implementing Telephone Systems
Helen Waicunas, manager/telecommunications, The Hartford Courant

The Outlook for Newsprint Demand and Supply
David A. Wilson, director/economics and forest policy, Canadian Pulp and Paper Association, Montreal

Marketing Information to Help Financial Executives
Ralph Bubis, president, Belden Associates, Dallas

Economic Consequences of Libel and Privacy Law to the Newspaper Industry
R. James George Jr., partner, Graves, Dougherty, Hearon & Moody, Austin, Texas.

From the Audit Bureau of Circulations conference and annual meeting, Chicago, Oct. 30-Nov. 1:

Questions for Advertisers and Agencies, and Newspaper Publishers
ANPA Chairman and President Richard J. V. Johnson, president, Houston Chronicle

The New Perspective From Where I Stand
Keith Reinhard, chairman and chief executive officer, Needham Harper Worldwide, New York City.

Publication order revised by NLRB

The North Jersey Herald-News of Passaic is not required to publish a reporter's weekly column under a revised order of the National Labor Relations Board.

The second board order in a case involving Mitchell (Mike) J. Stoddard stemmed from a 1984 remand from the U.S. Court of Appeals, District of Columbia Circuit [**presstime**, July 1984, p. 64].

In its first ruling, issued in 1983, the board ordered the newspaper to resume publication of Stoddard's column, finding that the daily's decision to drop it was an unfair labor practice under the Taft-Hartley Act.

The column had been discontinued after a representation election that led to certification of a local of the Graphic Communications International Union as bargaining agent for the newspaper's editorial employees. The board found that the company's action was "a reprisal" against Stoddard for having taken "an active role" on behalf of the union.

The appellate court ruled, however, that the board does not have the authority to order a newspaper to publish material it chooses not to publish. While agreeing with the board that the terms and conditions of Stoddard's employment had been adversely affected as a reprisal for engaging in union activities, the court remanded the case to the NLRB with instruction to fashion a remedy that would conform to the First Amendment.

ANPA filed a friend-of-the-court brief in the case in 1983, arguing that the board's remedy of compelled publication was unconstitutional.

In its Sept. 25, 1985, supplemental decision, the board ordered the company to restore Stoddard to column-writing duties and to "decide whether to publish his submissions based upon any factors other than his union or protected activity." It added that "nothing in this order shall be interpreted as a requirement that the [Herald-News] publish any of the columns submitted by Stoddard."

Under its revised order, the board said, the newspaper "remains free to apply its publication standards" in deciding whether to publish Stoddard's submissions. The decision does not "inject the board into the editorial decision-making process," which was a concern raised by the court, the board noted.

Company officials had no comment on the decision. The Herald-News was recently acquired by W. Dean Singleton and Richard B. Scudder from Austin C. Drukker, but the change in ownership does not affect the board's decision.

Meanwhile, a lawsuit filed by Stoddard against the Herald-News and present and former executives of the newspaper—alleging that he has been blacklisted—is pending [**presstime**, May 1985, p. 72]. Stoddard resigned from the paper between the time of the court's remand and the board's second decision.

When contacted by **presstime** in late November, Stoddard said he had not seen the board's latest decision and therefore had no comment.

(Passaic Daily News t/a The Herald News, 276 NLRB No. 78)

Social Security reminder

The maximum Social Security tax paid by both employees and employers will rise to $3,003 in 1986 from the current maximum of $2,791.80.

Effective Jan. 1, the wage base subject to the F.I.C.A. tax will expand from $39,600 to $42,000.

The tax rate will rise to 7.15 percent for employees and employers from the current rate of 7.05 percent.

ITU and Guild advise locals on resignations

Both the International Typographical Union and The Newspaper Guild have advised their U.S. locals that restrictions on resignations from membership as set forth in the ITU's bylaws and the Guild's constitution are invalid.

The unions' actions stemmed from a U.S. Supreme Court ruling last summer that union members have an unrestricted right to resign at any time, including during a strike or when a strike is imminent [**presstime**, Aug. 1985, p. 35].

The ITU Executive Council said that although members have the right to resign, that does not mean they have the right to resign or withdraw "honorably" without the approval of the local union.

"It does mean that local unions may not discipline members who resign 'dishonorably,' " the council said.

The council also said local unions should not bring charges against foremen who are instructed by employers to withdraw from membership; instead, the locals should request advice from the council.

The Guild International Executive Board's Constitution Committee said that restrictions on resignations are unenforceable with the exception of the requirement that resignations be submitted in writing.

The Guild's Executive Board said it would propose "appropriate" amendments to the union's constitution to the 1986 convention.

Complaint against daily dismissed

A National Labor Relations Board administrative law judge has recommended that the board dismiss a complaint against The Daily Republic of Fairfield, Calif.

The complaint was based on charges filed with the NLRB by the Northern California Newspaper Organizing Committee—a group of newspaper unions that includes locals of the Graphic Communications International Union, The Newspaper Guild, International Typographical Union and Teamsters. The committee alleged that the newspaper, through two supervisors, had made coercive statements to employees with the intent to discourage union activities in violation of the Taft-Hartley Act.

Judge Earldean V.S. Robbins found that the charges against the supervisors lacked credibility.

In a related matter, the Republic has appealed an April 8, 1985, board order to bargain with the committee over an initial labor agreement. The appeal is pending before the 9th U.S. Circuit Court of Appeals [**presstime**, June 1985, p. 88]. The newspaper contends that the committee is not a labor organization within the meaning of the act.

(Fairfield Publishing Co. and Northern California Newspaper, JD-[SF]-154-85)

Arbiter upholds discharge of longtime employee for submitting false mileage report

An arbitrator has affirmed the proposition that a discharge for dishonesty is appropriate regardless of the amount of loss incurred by an employer or the length or quality of the employee's prior record.

The Tacoma (Wash.) News Tribune fired a newsstand delivery driver in the circulation department after he left work several hours early and turned in a mileage report showing a total number of miles driven that would normally be associated with a full shift's work.

The day before the incident, the drivers had been reminded of the need to work full shifts.

In addition to leaving early without permission, the grievant had also submitted an incorrect timecard.

He had worked for the company for 16 years, and except for one minor incident had an unblemished record.

Local 763 of the Teamsters argued that the driver had not intended to deceive the company, noting that the timecard for the week had been filled out in advance.

Although the man violated a work rule by leaving work before the end of his shift, his psychological state at the time should mitigate the infraction, the union argued, referring to a problem involving real estate. It asserted that an appropriate penalty would be a short suspension.

Arbitrator Janet L. Gaunt, a Seattle attorney, said she had "a great deal of sympathy" for the union's argument that the grievant's behavior was triggered by anxiety over the purchase of property. "Had I been the employer, that fact would probably have led me to conclude that the grievant's behavior would not be repeated," she said. "That does not mean, however, that I can conclude it was unreasonable for the company to reach a different conclusion.

"Once the grievant demonstrated a willingness to deliberately record false information on the records he submitted to the company, he rendered his future conduct suspect. In light of that, I cannot conclude that the company was unjustified when it decided that the element of trust so essential to continuation of an employment relationship no longer existed."

Gaunt also noted that because the grievant worked in a position that involved little direct supervision, "that element of trust was all the more important."

She concluded "that it is not appropriate to reduce the penalty of discharge and require the company to continue the employment relationship." ☐

BLS reports increase in workplace injuries

The U.S. Bureau of Labor Statistics, in its annual report on work-related injuries and illness, recorded an increase at newspapers in 1984 compared with 1983.

The "incidence rate"—expressed as incidents per 200,000 employee hours worked—went from 6.1 in 1983 to 6.5 in 1984, BLS reported in November. The rate for the printing and publishing industry overall was 6.4 in 1983 and 6.5 in 1984.

The figures were still below those reported for all non-durable manufacturing, which were 9.6 in 1983 and 9.8 in 1984.

Labor Secretary William E. Brock said the increases were caused in large part by a strong economy that brought many new and inexperienced people into the work force. But the AFL-CIO blamed weak enforcement of government regulations on job safety and health. ☐

NLRB confirmation

The U.S. Senate has confirmed President Reagan's nomination of James M. Stephens to be a member of the National Labor Relations Board.

Stephens, who had been labor counsel to the Senate Committee on Labor and Human Resources, will serve a term running to Aug. 27, 1990 [presstime, Oct. 1985, p. 52]. ☐

"Meeting the Challenge of the Future"

The Guild Reporter

Officers of the International Typographical Union and the Graphic Communications International Union met during the AFL-CIO's recent convention in Anaheim, Calif., and agreed to resume merger talks in early 1986. Shaking on the agreement are (from left) ITU President Robert S. McMichen, AFL-CIO President Lane Kirkland and GCIU President James J. Norton.

UPI's purchasers scrutinized

As United Press International and its prospective new owners worked out final purchase details, some newspaper executives were wondering how the next chapter in UPI's tumultuous history will read.

They also were wondering what kinds of changes may be in store for UPI.

"Maybe new ideas could improve it," said Harold L. Gonzales, editor of The Crowley (La.) Post-Signal. Many changes to UPI over the past couple of years, he said, have been "like changing a bald tire with one just like it."

Gonzales and other editors and publishers contacted by presstime said they wanted to know more about Mario Vázquez-Raña, the Mexican publisher who teamed with Houston businessman Joe Russo Nov. 12 to buy the ailing company for about $41 million.

"I think many UPI subscribers are like me," said John Seigenthaler, publisher of The Tennessean of Nashville and editorial director of USA Today. "They want to be reassured that this company is going to be operated in the free-press tradition that has characterized" UPI since its inception. "If management leans toward some other tradition, it'll be a sad day for journalism."

A big question, Seigenthaler said, is what ties, if any, Vázquez-Raña has with the Mexican government. Vázquez-Raña said in a prepared statement that he has been "close to five presidents of Mexico" but has "no political affiliation."

The government, Vázquez-Raña said, "has never tried to get me to change a story. My relationships with public figures has nothing to do with my work. They don't ask me for any favors."

Vázquez-Raña, reported to be one of the richest people in Mexico with holdings that include the country's largest newspaper group, will be the majority UPI owner with about 90 percent of the shares. Russo, a developer-financier with no previous ties to the newspaper business, will own about 10 percent. Several newspaper executives in Houston said Russo is highly regarded locally. Officials said it is still possible that other parties could assume ownership positions.

There was speculation that Vázquez-Raña teamed with Russo largely to have a U.S. ownership presence in UPI. But those who know Russo say he will take an active role. "He's a very bright, innovative Houston developer-businessman," said Gene E. McDavid, vice president and general manager of the Houston Chronicle. "If (Vázquez-Raña) thinks that Russo's going to be a token anything, he's in for a real shock."

UPI spokesman David Wickenden said in late November that the sale agreement would be included in a UPI reorganization plan to be submitted to U.S. Bankruptcy Judge George F. Bason Jr. It could be two or three months after that before Bason signs off on the plan and the wire service is out of Chapter 11 bankruptcy, Wickenden said.

Court approval is expected because the deal has been endorsed by UPI management, employees and a committee of the wire service's major creditors.

The few possible hang-ups include a federal lawsuit filed by current UPI owners Douglas F. Ruhe and William E. Geissler. They effectively have been squeezed out of sale negotiations and would receive no money from the sale. Ruhe and Geissler asked the U.S. District Court in Washington, D.C., to state that they have a voice in the disposition of UPI. The suit was pending at press time.

In addition, a seven-member business consortium led by Financial News Network that lost in the bidding for UPI said it may challenge the sale in bankruptcy court [presstime, Nov. 1985, p. 69].

Yet another possible hang-up could be claims of some creditors who will not be paid off fully under terms of the sale.

Vázquez-Raña nine years ago bought the Mexican Publishing Organization, a group of 36 newspapers that was $78 million in debt and "a bigger problem than UPI is now," the Mexico City businessman said. The newspaper group has expanded to 70 newspapers and is now profitable, he added.

One of the central elements of that chain's turnaround was installation of new production equipment, Wickenden explained, adding that Vázquez-Raña has similar plans at UPI.

"I'll tell you," said Nashville's Seigenthaler, "what's needed now is good management and very deep pockets."

—*C. David Rambo*

AP

Vázquez-Raña (left) and Russo announce purchase plans.

Columbus gets morning competition

Columbus, Ohio, will continue to have two daily newspapers. But they will go head to head in the morning.

That's the gist of separate announcements made about the future of The Columbus Dispatch and the Columbus Citizen-Journal.

First, the Dispatch Printing Co. announced Oct. 31 that the Dispatch, a 202,114-circulation afternoon paper, will become a morning newspaper on Jan. 1—the day after its joint operating arrangement with the morning Citizen-Journal expires.

Two weeks later, Citizen-Journal owner Scripps Howard announced it had sold the 117,902-circulation paper to a company headed by an Ohio business consultant, Nyles V. Reinfeld.

The Dispatch had announced two years ago that it would not renew the JOA, under which the Dispatch prints, distributes and sells advertising for the C-J.

"Since the agreement was made, more than 25 years ago, lifestyles and the economic climate have changed dramatically," the Dispatch said in announcing its conversion to a.m. "These changes in the newspaper industry have generally been heavily in favor of morning newspapers."

C-J Editor Richard R. Campbell, who had told employees Sept. 16 he believed the paper would close, reported in late November that "only a couple" of people had left, thanks to the offer of "a nice severence pay" to C-J staffers who remained with the paper through the end of the year [presstime, Oct. 1985, p. 61]. ☐

Newport News dailies may be sold; third offer to buy Freedom considered

BUSINESS ROUND-UP

Two dailies in Newport News, Va., appear to be headed toward sale.

The board of Daily Press Inc., which owns The Daily Press and The Times-Herald, has asked investment bankers to provide a financial evaluation of the company and to make a recommendation on a possible sale.

Daily Press Inc. employees and the public were told of the board's action Nov. 15. The Van Buren and Bottom families own the privately held company.

The properties include Piedmont Cablevision of Danville, Va., and Newport News Cablevision as well as the Press (morning, circulation 63,481) and the Times-Herald (evening, 36,343). Sunday circulation is 108,024.

The newspapers circulate primarily in Newport News and Hampton, which are part of the Hampton Roads urban complex that also includes Virginia's largest city, Norfolk, plus Portsmouth, Virginia Beach, Suffolk and Chesapeake.

President William R. Van Buren Jr., who described the board's action, declined further comment other than to say it was "in the best interest of the employees and the community."

Elsewhere, directors will be considering the potential purchase of two other family-owned media companies.

At Freedom Newspapers Inc., President D. Robert Segal said the board expects to consider "sometime soon" a third offer from Freedom stockholder Harry H. Hoiles. "We've asked people how they feel about it, and we haven't heard yet," he said in mid-November. The newspaper and broadcasting company, which is based in Santa Ana, Calif., has rejected Hoiles' two earlier offers.

In his new proposal, Hoiles raised his offer from $98 to $108 per share, making his bid for the company worth about $1 billion. As an alternative, Hoiles has offered to sell his family's one-third interest back to Freedom [presstime, Nov. 1985, p. 68]. If the company refuses, he has indicated he will offer the shares outside the company.

At The Tribune Publishing Co. of Tacoma, Wash., news that the company is for sale brought calls from many media companies, according to Francis J. Calcagno, director of investment banking for Cyrus J. Lawrence Inc. However, Calcagno said the sale will not be "a bidding contest."

Tribune Publishing, a family-owned company, cares about a potential buyer's "operating philosophy" and is "going to be very selective," he said. Although no date has been set, Calcagno said the board will probably meet early this month to decide which company is best suited to make the purchase. The company's properties include The Tacoma News Tribune.

Elsewhere on the acquisition front:

- An option to buy the St. Louis Globe-Democrat has lapsed as have negotiations with investors who were considering buying the newspaper. The Globe-Democrat filed a Chapter 11 bankruptcy petition Sept. 26.
- The Washington Post Co. and Gannett Co. increased their shares of Minneapolis-based Cowles Media Co. from 17 percent and 14 percent, respectively, to about 20 percent each.
- Knight-Ridder Newspapers Inc. agreed to buy three television stations from Gannett for $160 million. Gannett is selling the stations because of cross-ownership conflicts that would arise after its forthcoming purchase of the Evening News Association of Detroit. Signals of the TV stations, which are in Tucson, Oklahoma City and Mobile, Ala., reach markets already served by Gannett newspaper or broadcast properties.
- The Federal Communications Commission has granted Rupert Murdoch a temporary cross-ownership waiver that gives him two years to sell the New York Post and the Chicago Sun-Times. ☐

ANR relocates to Midwest

American Newspaper Representatives, the advertising "rep" firm that is a subsidiary of the National Newspaper Association, has relocated from the East Coast to the Midwest.

It opened a service office in Minneapolis and is in the process of establishing a sales office in Kansas City.

ANR's headquarters had been in Brooklyn, N.Y., since 1969. Officials said the move will improve efficiency and sales and reduce rental expenses. ☐

USDA proposes kenaf program

The U.S. Department of Agriculture proposes to implement a "large-scale" program next year to spur the commercial use of kenaf as a source of fiber for newsprint.

Under the program, the U.S. government would pay farmers to grow between 3,000 and 5,000 acres of kenaf, a fibrous annual plant. The government then would sell the kenaf to pulp mills.

The largest scale on which kenaf has been grown in this country was 40-50 acres harvested by a Yuma, Ariz., farmer in 1980-81 to provide material for mill trials [presstime, March 1981, p. 48].

The Agriculture Department believes that if it can interest American farmers in growing kenaf, there can be a reduction in the amount of surplus crops such as cotton, sugar cane and soybeans that the government must buy, according to C. Michael Hoback, an aide to the assistant secretary for science and education.

Although the department wants to start the kenaf "commercialization development" program next year, it could be held up because its funding was not included in the department's budget approved by Congress for the current fiscal year, Hoback said. "At the present moment, we are exploring every possible avenue of funding this project in FY 1986," he added.

The program is not one the department wants to support on a "long-term" basis, Hoback said. "We would hope by the end of the second year, this would be [picked up by] the private sector."

In addition to its commercial component, the program also has a research aspect in which the department would work with farmers on problems that have surfaced with growing and harvesting kenaf, Hoback said.

The Agriculture Department has been conducting research into kenaf since 1943, Hoback said. The new program grew out of contact made with the department last June by Donald N. Soldwedel, president of Western Newspapers Inc. of Yuma, Ariz., and a prime mover in the kenaf-to-newsprint effort.

The department contracted with Kenaf International, which is promoting the development of kenaf as a fiber source, to provide cost estimates for a large-scale program. KI and USDA staffers visited several Southern newsprint and pulp mills. "Every one of the mills expressed some interest in kenaf," Hoback said. He declined to name the mills that would participate in the program but said he believed six would be involved.

In addition to the development program, Hoback reported that two other USDA groups are studying kenaf's potential:

- A task force on new uses of farm and forest products, which is composed of representatives of the private sector, universities and three federal agencies, including USDA.
- A working group, which is being formed to establish a system within the department to accelerate the development of industrial agricultural materials.

Also on the kenaf front, Charles S. Taylor, general manager of Kenaf International, said company representatives met in September with officials of the government of Trinidad. That country is considering a kenaf specialty pulp mill built with a combination of government and private funding.

KI also is discussing with Phoenix Pulp & Paper Co. Ltd. of Thailand the possibility of a joint venture to establish a kenaf seed farm in that country, Taylor reported.

In Thailand, Phoenix operates the world's only kenaf pulp mill. Earlier this year, mill officials experienced a shortfall in kenaf, Taylor said. "They have been having difficulty with kenaf production over there because they have very low quality varieties and their farm management needs to be improved," he said.

—Margaret Genovese

Statistics delayed

Newsprint statistics for October were not available by press time. They will be published in the January 1986 issue.

Demand and capacity increase

Newsprint demand in the United States, including consumption and inventories, increased from 10.5 million metric tons in 1983 to 11.6 million tons last year, according to Newsprint Data, an annual survey published by the Canadian Pulp and Paper Association.

Japan, at 2.7 million tons, had the world's second greatest demand, the survey showed.

Canada was first in production with 9 million tons. The United States was second at 5 million, and Japan third at 2.6 million.

In Scandinavia and Japan, capacity actually decreased in 1984 by 55,000 and 10,000 tons, respectively. There were small increases in Canada (50,000 tons) and the United States (70,000 tons), while capacity in Western Europe (excluding Scandinavia) and in the rest of the world increased by 250,000 and 308,000 tons, respectively.

Among other facts cited in the report:

- World newsprint demand reached 27.3 million tons, an increase of 7.8 percent over 1983. World demand was 87.3 percent of capacity compared with 82 percent in 1983.
- World capacity reached 31.3 million tons, an increase of 1.3 percent over 1983. It was the smallest increase since 1975.

A limited number of copies of the report are available from the ANPA Newsprint and Transportation Department at The Newspaper Center, Reston, Va. ☐

NEWSPRINT NOTES

- Quebecor Inc. President Pierre Peladeau and a Quebec real estate and cement firm **plan to build a 180,000 metric-tons-a-year newsprint mill** in Matane, Quebec. The $250 million project—a 50-50 joint venture between Quebecor and Redec Inc.,—is dependent on the partners' ability to secure government assistance equal to 25 percent ($62.5 million) of the mill's capital cost. If approval is given, construction would begin next year and the mill would begin making paper in 1988.

  Quebecor publishes three Canadian dailies as well as a group of weeklies and several magazines. A third of the mill's output would go to the company's newspapers.

- Preliminary results of a **feasibility study** of building a newsprint mill in Richmond, Calif., look hopeful, according to the sponsors. They also indicated that the 160,000-metric-tons-a-year mill would cost about $186 million, with a projected start up in 1989. A final report is expected shortly [presstime, June 1985, p. 85].

Here comes K-Flex.

Here comes the new generation of flexographic newsprint from Kruger.

Count on Kruger for leadership in flexographic technology. K-Flex newsprint has been developed with special surface characteristics to help you get the full potential from your flexography investment.

Video-to-print makes gains

Some ideas are like express trains: They acquire passengers or freight, slowly accelerate and then speed to their destination. One such idea focuses on using video cameras to produce pictures in newspapers: It's on a roll right now.

In the last few months, several vendors have introduced either complete video systems or individual products that can be used to capture pictures and produce prints from videotape. Other vendors appear ready to board the train.

Also, at least one daily, The Record of Hackensack, N.J., is capturing network television broadcasts of video images for reproduction in its newspaper. (See story, facing page.)

Replacing traditional photography with video cameras has intrigued newspaper executives for several years.

One of the earliest indications that it could be possible was the development of an electronic video camera with charged-couple device sensors. Such a camera was demonstrated by a National Geographic magazine photographer at the 1980 ANPA trade show in Atlanta [presstime, July 1980, p. 9].

When the camera scanned an image, voltage readings were recorded on a light-sensitive silicon chip. The electrical charges, representing the elements of the picture being photographed, were stored on the chip until being transmitted and reassembled.

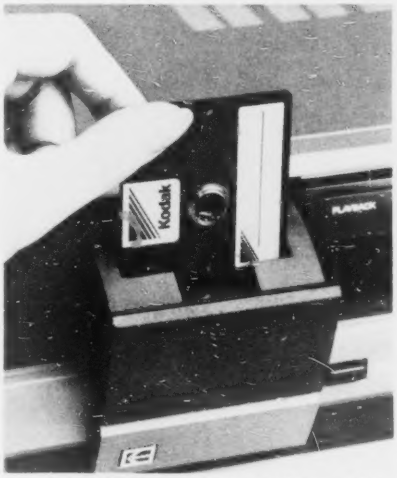
The camera's major drawback was cost, which exceeded $25,000.

Then, in August 1981, Sony Corp. introduced its Mavica, a "magnetic video camera" that took still black-and-white shots [presstime, Oct. 1981, p. 44].

The Mavica also employed a charged-couple device to convert images into digital data and a two-inch disk to record about 50 pictures. For viewing the pictures, the disk was then inserted into a video playback unit linked to a television monitor.

While there were drawbacks to the Mavica, newspapers saw solutions in it to many problems inherent in newspaper photography. The Mavica offered hope for a shorter time period between picture-taking and viewing, for eliminating the chemicals and silver-based films required in photography, and for exploiting the advances in editing pictures electronically.

Its price was attractive—about $650.



Images are stored on small Kodak floppy disk.

However, the Mavica never really pulled out of the station. Its 35-millimeter format had the equivalent resolution of a 65-line-screen halftone.

"And newspapers weren't going to run a 35-millimeter (wide) picture. They were going to blow it up, which meant even less resolution," noted Erwin Jaffe, former director of research at what was then known as the ANPA Research Institute, predecessor of the current Technical Research Department. "It was a nice possibility but not a realistic solution for newspapers," Jaffe added.

So much for the Mavica.

Jaffe and other newspaper production experts believe the current crop of vendor offerings are more than just steam in the pursuit of video-to-print technology. They say that existing video equipment can be used to supply newspapers with timely pictures if all the components can be linked.

Several vendors have introduced products that can be used to capture pictures and produce prints from videotape. Others appear ready to board the train.

The first revelation of vendors' activity in this area came at last June's ANPA trade show in New Orleans:

- Advanced Imaging Devices Inc. of Mountain View, Calif., demonstrated a system that employs a video camera and optical disks to make photographic prints of video images. One component of the equipment allows broadcast video images to be reproduced as prints, without the scan lines characteristic of older print-making methods.
- Hell Graphic System Inc. demonstrated a modified Chromacom color separation system using a video camera, frame grabber and editing device to alter video images and produce color separations.

Since then, Eastman Kodak Co. announced it was conducting experiments with a "still video system" that allows the display of photographic images on television monitors and produces hard-copy prints of the images almost instantaneously. The system would be used with existing video recording equipment.

Recently, the Japanese introduced high-definition video cameras, primarily for industrial applications. These cameras produce 1025 horizontal lines and therefore about twice the detail of cameras now being used in television programming. They cannot be used for normal broadcast because they require more band width. However, ANPA experts believe high-definition cameras can be used to put newspaper file photos into electronic storage.

Other vendors are marketing devices that enhance the resolution of video images and compress digital data so that video pictures can be transmitted over telephone lines, according to Andrew Wilson, senior technical editor of Digital Design magazine.

Also, much work is under way by a number of vendors, including DuPont, to introduce optical-laser-disc storage in the United States. An optical laser disc is a high-density, random-access digital storage device that is erasable and reusable. It is ideal for electronic picture storage. Once such a device is available, it will be possible to store 50,000 or more pictures in a box smaller than a normal file cabinet. It has the potential to replace today's picture "morgues" in newspapers, said William D. Rinehart, ANPA vice president/technical.

TV cameras currently in wide use in broadcasting require bright lighting to capture images properly, but Wilson said he expects the newest generation of high-speed, video cameras will solve lighting problems. And ANPA's Rinehart pointed out that the CCD TV camera custom-built for National Geographic has the equivalent of ASA 5000 speed. Used for deep-sea photography, it can take pictures in almost total darkness.

Wilson acknowledged there are other problems involved in capturing broadcast video images because of the type of signal they require. But, he said, non-broadcast video images captured by a mini-camera "offer both better quality and resolution. You will see as stable a picture as you took" after it is sent back to the newspaper.

Also, questions remain regarding accurate reproduction of color video images and the feasibility of transmitting the pictures over conventional telephone lines or via cellular radio.

"The work that needs to be done is in transferring the digital images to a negative (film) process," said Wilson. "The problem is transferring the color images and producing quality color separations."

Over the long haul, though, the experts believe video-to-print technology is on track and on its way to finding a niche in the time-sensitive world of newspapering.

—Paul Kruglinski

Newspaper, CBS conduct test of video photographs

BY WILLIAM D. RINEHART

Experimentally, The Record of Hackensack, N.J., has been videotaping Columbia Broadcasting System network news programs and printing various video frames in full color.

CBS and The Record have an agreement permitting the newspaper to use CBS News pictures on a trial basis. If the test is successful and there is sufficient interest by newspapers, CBS intends to issue licenses permitting use of its pictures. CBS indicates its affiliate stations may also be willing to license local newspapers to use local video news pictures.

For the time being, CBS has imposed an embargo on the reproduction of pictures obtained from non-CBS sources for the network national news. If the test proves successful, CBS hopes to broaden the scope of picture availability. No proposed license fee has been established, but CBS officials say such fee would be competitive.

In the test, The Record has placed a new broadcast TV receiving antenna on its roof. It feeds a Sony commercial-grade, three-quarter inch videotape recorder that tapes certain CBS network news programs.

An editor scans tape replay on a TV monitor. Seeing a video frame that could be a good photo, he or she can signal the equipment to make a print.

At The Record, there are several different methods of connecting the color video frame to hard copy. One piece of equipment is a color video printer of Matrix Instrument Inc., Orangeburg, N.Y. It will print the selected color video picture on either a color Polaroid camera providing an instant 3-by-5 inch color print without the TV raster lines, or a 35mm color transparency [color slide]. Either of these is put on a Royal Zenith color scanner, and screened separations are made for paste up.

The other output device the New Jersey daily is experimenting with is the video print output device manufactured by Advanced Imaging Devices Inc. of Mountain View, Calif. It yields continuous-tone black-and-white-prints of the process colors. These are then screened, and the resulting prints are used in paste up.

The basic colors used in video are red, green and yellow [projection colors]. The basic print colors are red [magenta], cyan and yellow [reflection colors]. Consequently, any device making color printouts from a video signal must electronically convert the video color to print colors. Internal electronics of the Matrix and the Advanced Imaging printout devices make this color conversion.

In Hackensack, N.J., The Record's photograph of New York Mets first baseman Keith Hernandez was taken from a television broadcast with a Matrix video printer.

ANPA laboratories previously experimented with screened black-and-white prints of video using an AIDI output device. In that instance, the AIDI black and white prints were processed in an Autokon camera, and the resulting screened picture was used in the page paste up. One could not detect that the picture came from a video frame.

The approximate cost of a quality three-quarter-inch video tape recorder is about $4,000. The cost of the video color picture printer is about $20,000. The price of the AIDI output device has not been firmly established but is expected to exceed $30,000.

Michael H. Heath, president and chief operating officer of the Bergen Evening Record Corp., is pleased with the result of the experiment and is confident that the developing new technology will provide his newspaper with an increasing number of color news prints.

ANPA has been in contact with a number of electronics companies to encourage development of a total electronic news picture system whereby news photographers will be equipped with special video cameras to replace conventional 35mm photography [**presstime**, April 1985, p. 13]. If this is developed, the newspaper printout device could be used either to make prints of the newspaper photographers' video or that received from outside sources such as broadcast television, cable TV or satellite TV.

It is not known at this time whether other networks also will consider granting print rights to their video pictures. However, this technology could offer instant availability of color pictures of sports and other news events not now available through normal sources. ☐

Rinehart is ANPA vice president/technical.

Teleram falls victim to cheaper competition

Teleram Communications Corp., which introduced the first portable video display terminal in 1974, has gone out of business because of competition from cheaper and more powerful machines now available.

The firm will be liquidated to pay off creditors under Chapter 7 bankruptcy proceedings.

Charles Satuloff, Teleram president, said his firm was "caught in a mousetrap" in the industry. It was squeezed between the Radio Shack Tandy Model 100 and the IBM PC personal computer.

The need for a portable VDT was recognized in the early 1970s by ANPA. The Association developed the concept and sought out companies to make it commercially available. Teleram was founded to provide the device.

The company subsequently expanded its product line to include portable and stationary terminals, printers and data-storage systems. Many newspapers have used Teleram equipment extensively in bureaus and other remote locations.

ANPA has learned that some former Teleram employees are forming a company to provide spare parts and other services to users of the equipment.

Scheduled to be operating by early this month, the company will be known as Electronics Systems Associates and located at 1215 Liberty Ave., Hillside, N.J. 07205. The telephone number will be (201) 374-6183.

According to officials of the new firm, it will stock formatted floppy disks and formatted cassettes for the 1800, 1888, P-81 and 2277 models.

Tandy markets Model 100 successors

Many newspapers over the last several years have started to use Radio Shack Tandy Model 100 portable terminals because the battery-powered machines are relatively inexpensive, fit easily in a briefcase and are efficient.

Tandy since has introduced two successors to the 100, which costs $599: the Tandy 200 and, recently, the Tandy 600.

The 200, at $999 ($799 on sale recently), offers a flip-up, 16-line-by-40-character display screen, compared with the 100's smaller 8-by-40 display. The 200 also features more built-in software.

The 600, at $1,599, has a 16-by-83 screen, a built-in 3.5-inch disk drive and even more resident software. Its standard 32 kilobytes of random-access memory can be expanded to 224K.

William D. Rinehart, ANPA vice president/technical, said the Model 100 successors can serve small- and medium-size newspapers particularly.

For example, he said the cost of moving stories from remote newsrooms using phone lines is less expensive than message facsimile. The stories can be moved directly into the main newsroom computers or can be printed on an inexpensive printer. □

TECHNOLOGY CALENDAR

- **Digital Equipment Computer Users Society** will hold a symposium Dec. 9-13 at the Disneyland Hotel, Anaheim.
- **Graph Expo '86 West** will be March 1-4 at the Los Angeles Convention Center.
- The sixth annual **Seybold Seminars** on eletronic publishing systems will be March 9-14 at the Beverly Hilton Hotel in Los Angeles.
- The **Newspaper Hardware Users Group** will meet March 27-28 at the Astro Arena Complex in Houston.
- The **Metro Users Group** will meet April 6-9 at The Lincoln Hotel in Dallas.
- The **58th Annual Operations Management Conference & Exposition** will be June 21-25 at the Georgia World Congress Center, Atlanta.

Marketing pact signed

Crosfield Electronic Inc., an East Rutherford, N.J., supplier of color separation equipment, has signed a market agreement with MacDonald Dettwiler Technologies Ltd. of Vancouver, British Columbia, which manufactures electronic image equipment.

Under the agreement, Crosfield will market Dettwiler's Instant Fire 300 digital color proofer within its product line. □

Wildcat fans invoke polecats against paper

What would a newspaper have to do to attract a letter to the editor like the following?

"May the sprays from a million polecats fall inside your pressroom and linger on through eternity."

At the Lexington Herald-Leader, all it takes is a series on payoffs to former University of Kentucky basketball players at the time they were on the team.

Reflecting an apparently popular belief as to who runs the state, another letter maintained: "The stories should not have been released without the prior approval of UK President Otis Singletary and athletics director Cliff Hagan."

All of which left Publisher Creed Black unshaken in his belief that the stories contained more than a hint of truth.

Professing himself to be "saddened if not surprised," Black nonetheless was put off by his fellow Kentuckians' lack of perspective.

He wrote in a column Nov. 10: "One wonders what would happen in this state if just a fraction of the righteous indignation stirred up by the basketball stories could be directed toward getting more money for the university's academic programs or lifting the state's public schools from the cellar of national rankings of spending and achievement."

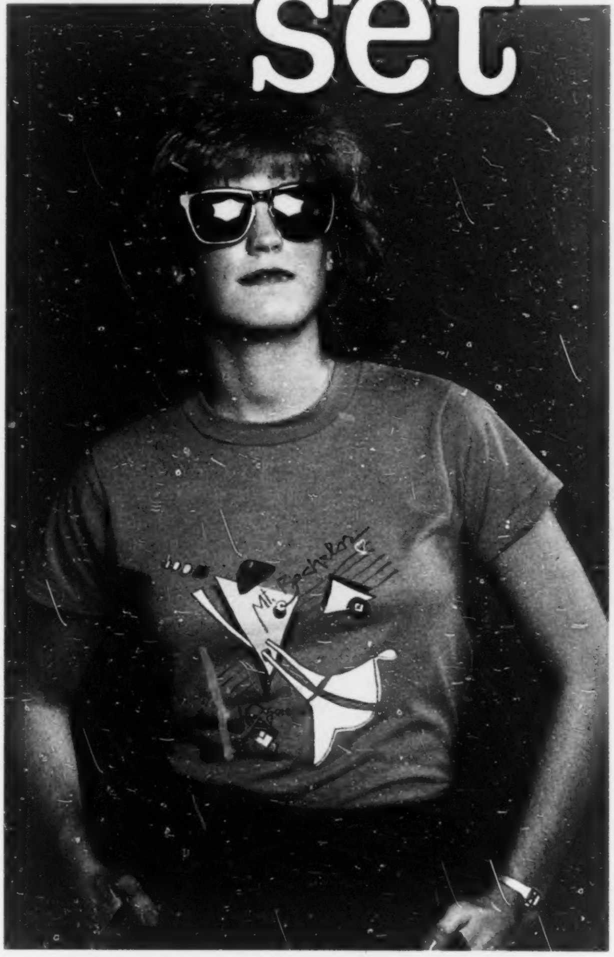
Newspaper numbers

15—number of U.S. newspapers with weekday circulations of at least 500,000.

16—number of Canadian newspapers with weekday circulations of at least 100,000.

4.5—percentage increase for wages paid newspaper craft and delivery employees in 1985.

11.79—dollars being paid on the average to journeyman pressmen at U.S. newspapers for an hour's work on the day shift.



It's no smoke screen: Newspaper has scanned the horizon for this sideline

The Bulletin of Bend, Ore., has a sideline that fits it to a tee—printing messages on T-shirts, sweat shirts and other items of apparel.

Because it is located in the newspaper plant, Sportswear Imprints, a division of The Bulletin, has advantages over other silkscreen businesses, says its manager, David J. Shores. "We have all the camera equipment that The Bulletin has—equipment that most screen printers only dream of or aren't even aware exist," he explains.

One piece of machinery being used is an electronic scanner, which makes color separations for silkscreening as well as for preparing pictures for printing in the newspaper. Few silkscreeners in the country print color photos, and the Bend operation may be the only one with in-house, color-separation capability, according to Shores, a former Bulletin pressman.

The silkscreening operation was the brainchild of Randy S. Entler, assistant pressroom foreman.

Because of the newspaper's profit-sharing program, Entler and other employees stand to benefit if the seven-month-old venture takes off.

Information on parade

An exhibition called "The Information Revolution" is scheduled to open in 1989 at the Smithsonian Institution's National Museum of American History in Washington, D.C.

The Smithsonian has launched a campaign to raise $4.3 million for the 12,000-square-foot exhibit, which will include newspaper computer equipment. The computer and communications industries are being asked to contribute.

Early experimental laser devices will be part of the exhibit.

A heart and pin made of gold

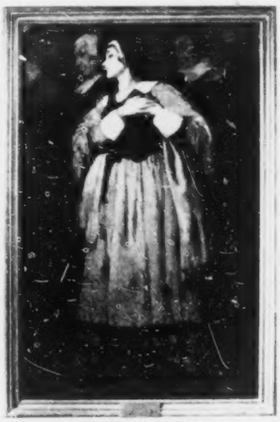
In a gesture symbolic of the affection and regard with which he holds fellow board members of the National Association of Black Journalists, outgoing President Mervin Aubespin presented each with a very special NABJ pin.

Bearing the initials of the organization, the pins were molded from the gold of a watch owned by Aubespin's late father.

A founding father of NABJ in 1974, Aubespin is associate editor for development at The Courier-Journal and The Louisville Times, and vice chairman of the Steering Committee of the Task Force on Minorities in the Newspaper Business.

Facsimiles of Zenger works published

To commemorate the 250th anniversary of the historic trial of John Peter Zenger, the American Antiquarian Society has published facsimilies of the six issues of the New-York Weekly Journal that caused Zenger to be charged with seditious libel for printing criticism of the colonial government. Zenger was tried and found not guilty on Aug. 4, 1735.



ANPA Foundation painting shows Anna Catherina Zenger reacting to the verdict in her husband's trial.

The issues have been in the collection of the library of the Worcester, Mass., society since its founding in 1812. Marcus A. McCorison, director and librarian, believes they were purchased by the society's founder, Isaiah Thomas, another renowned printer, at the end of the 18th century.

Publication of the paperback booklet containing the facsimilies was made possible by a donation from an anonymous benefactor.

Copies may be purchased for $8.95 plus $1 for postage and handling from University Press of Virginia, Box 3608 University Station, Charlottesville, Va. 22903.

Cronkite airs some good advice on how to read a newspaper

A testimonial to newspapers is given by noted broadcaster Walter Cronkite in the latest International Paper Co. advertisement in support of reading.

In the two-page ad, the former anchorman for the CBS Evening News tells "How to read a newspaper." He concludes:

"Now that I've told you about the basics of getting under the skin of a newspaper, let newspapers get under your skin.

"Tonight, pick an important story that interests you on the TV news. Dig into the story—in your newspaper. Follow it, and *continue* to follow it closely in print. See if you don't find yourself with far more understanding of the event.

"And see if you don't have a far more sensible opinion as to the 'whys' and 'wherefores' of that event, even down to how it will affect you—and maybe even what should be done about it."

That Cronkite holds such views should not be regarded as surprising. Having begun his journalism career as a writer and editor for Scripps-Howard and United Press, he has long referred to TV news as a "headline service."

Reprints of the ad are available from International Paper Co., Dept. 15, P.O. Box 954, Madison Square Station, New York, N.Y. 10010. The company says at the end of the ad: "Today, the printed word is more vital than ever."

Becker patrols New Hampshire highways.

Here's one newspaperman who takes the police beat extra seriously

For candidates entering New Hampshire's first-in-the-nation presidential primary, the Manchester Union Leader can provide a kind of Armageddon.

But to stranded motorists on the state's highways, the paper's executive vice president, Richard H. Becker, can appear to be a personal savior. He serves in off-hours as an "auxiliary trooper" for the state police.

Toting a Magnum 357 as he helps patrol the roads, man the communications dispatch center or control crowds, the 63-year-old executive is one of 47 part-time troopers that augment the regular force of about 200. The job is partly for pay and partly volunteer.

Membership in what Becker proudly calls this "elite corps of citizens" has "never presented any conflict between the state's largest newspaper and the state police," he says. Becker, who has worked for The Union Leader for 38 years, has spent at least 20 hours a month with the force since the late 1970s.

The auxiliary force frees up regular troopers for "crucial services to the state," he says, such as criminal and accident investigations and regular highway patrol duties.

Taking issue with sports departments

The publishers and editors who came up the ranks through sports quoted in your October presstime forgot one essential element about why they're where they are. Sports was and is male-dominated. For years, many of your city-side, and all of your women's department personnel have been women. And, face it, women weren't promoted because they were women. The only place a publisher could go to get editors was in sports.

Sports may provide training not ordinarily available to city staffers, on large papers at least. But you'll find that the same sort of training, sans deadline pressures, occurs in feature departments at all size papers. And feature departments, the old women's departments if you will, always have had the added challenge of filling pages by their imagination. There aren't the games to cover or coaches to interview or pre-game stories to write, as sports have, or meetings to cover for city-side. Feature sections have to create their own news.

And if the sports-route publishers think they're dealing with the real world because sports freaks tell them if they err, they don't know nothin' yet. That's a locker-room jock myth perpetuated by the good-old-boy network.

The real world is the mother who's pleading for special treatment on her daughter's engagement announcement and having to gently handle her request as you deny it. Or the teacher who wants all those students on the honor roll listed. Or the cubmaster who wants all 63 of his scouts in a photo. Or the president of the civic club who wants his six new officers and 14 new board members in a photo. Or the woman who knows her neighbor who casts Bambi in ceramics would make a wonderful newspaper story. Or the family with the five-generation photo.

Some of these former feature-department personnel finally are moving into editor ranks and bringing with them a much-needed dimension to our news pages, something that says the newspaper actually cares about its readers and will give them news that is useful in their everyday lives.

On smaller dailies, and weeklies everywhere, city-side reporters are as apt to finish their stories, help edit someone else's, write a headline or two, check pages, and process and print film, as anyone from sports is.

Add to that the fact that news reporters always have known what news was. Sports only now is learning. The dearth of news judgment or news sense on the part of many sports departments has prompted a session at our January Tennessee Press Institute called "Sports Is More Than The Games People Play." We want to address the recent—and welcome—change in sports sections, a change that has occurred on larger papers, but alas on too many smaller ones sports personnel still fear offending the almighty coach, or they wouldn't know a sports story if it was slam-dunked in their faces.

At least news reporters glean the entire newspaper and can tell you what's going on in the rest of the world. I'll warrant that many sports people rarely go beyond the agate package.

Obviously there are exceptions—sportswriters who know what's going on in Washington (in Congress rather than with the Redskins) or in the state houses or in their own communities. But that isn't because they're in sports. Perhaps it's in spite of it.

I'm just glad that we're finally—albeit slowly—breaking the jock-hold on our newspapers. It can't be fast enough for some of us.

La Prensa's plight

I want to thank you sincerely for having run the story on La Prensa (November) and also thank Marcia Ruth for an excellent writing job.

The exposure of our struggle in presstime will be extremely helpful in keeping the free press alive in our country.

I. Roberto Eisenmann Jr.
Publisher
La Prensa
Panama City, Panama

Enough on p.m. to a.m.

Stop already!!!!

I can't believe your November presstime, page 66 story "Ranks of a.m. papers continue to swell."

Your article probably means well but is hardly accurate in my estimation when it says "continuing the long running shift towards morning papers" and headlines the "swell."

According to ANPA's "Facts About Newspapers '85", in the last two years morning papers have increased 24 to 458 and evening papers have decreased 53 to 1,257. Now if a.m.s increase at their current rate, I figure it will take almost 40 years before a.m.s will equal p.m.s in our nation. Facts that hardly justify presstime emphasis.

Let's put this p.m. to a.m. conversion into proper perspective and realize that actually a very small amount of our total newspapers in America are interested in changing, and most p.m.s are happy to have their newspaper delivered into their readers' homes when they have time to read.

Lindsley Wellman
President-general manager
The Herald

Kudos for 'creativity'

I have just finished reading Marcia Ruth's (November) cover story on "Creativity in newspaper advertising."

As one who has spent almost his entire business life in one or another area of the "creative" function, including 18 years as a big-agency copywriter and copy group head, I can tell you that Marcia did an outstanding job. "Creativity" is a difficult, complex subject, not easy for outsiders to understand, but Marcia got it all, and she got it all right.

The article is a great service to the newspaper advertising business.

James Dunaway
Vice president, director of information
Newspaper Advertising Bureau

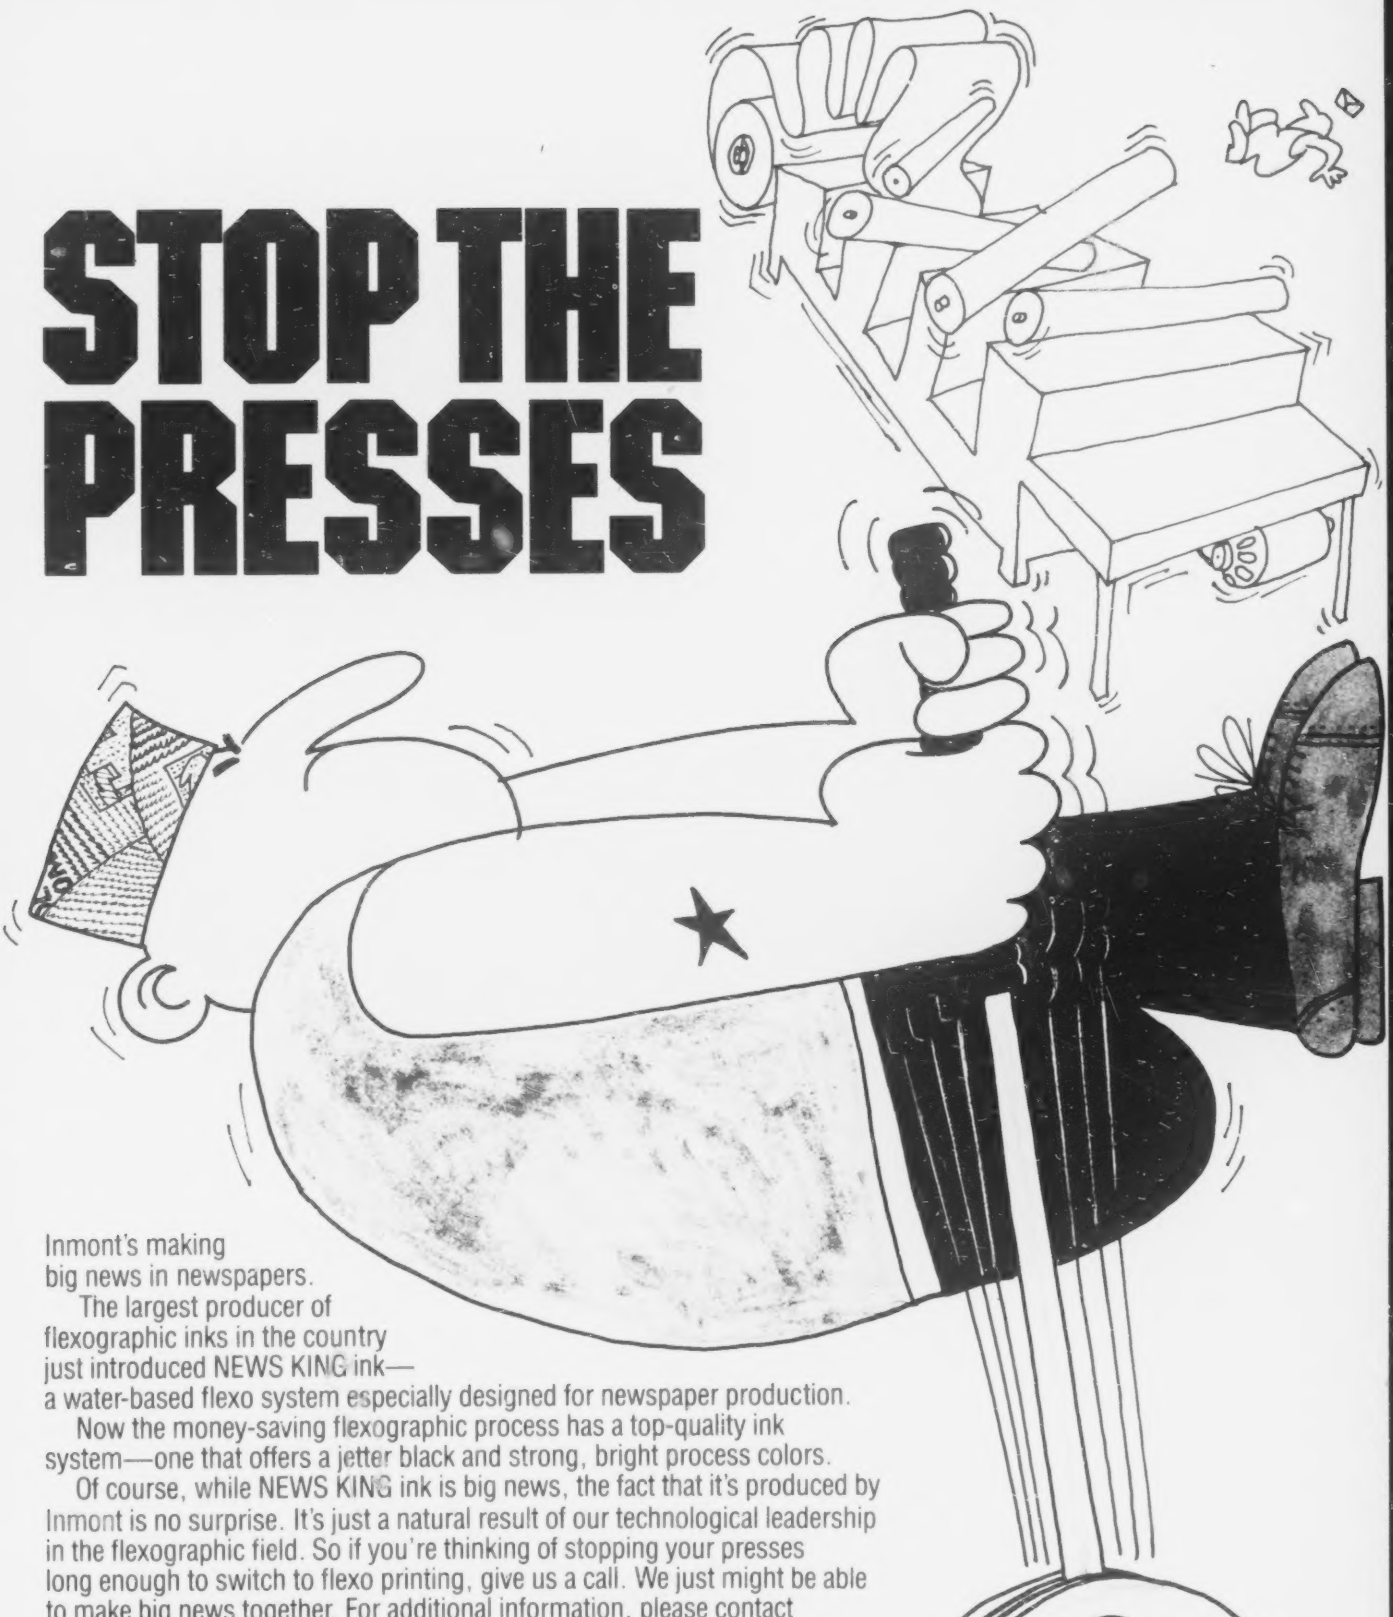
STOP THE PRESSES



Inmont's making big news in newspapers.

The largest producer of flexographic inks in the country just introduced NEWS KING ink—a water-based flexo system especially designed for newspaper production.

Now the money-saving flexographic process has a top-quality ink system—one that offers a jetter black and strong, bright process colors.

Of course, while NEWS KING ink is big news, the fact that it's produced by Inmont is no surprise. It's just a natural result of our technological leadership in the flexographic field. So if you're thinking of stopping your presses long enough to switch to flexo printing, give us a call. We just might be able to make big news together. For additional information, please contact Richard M. O'Keefe, director of marketing, BASF Inmont Corporation, 150 Wagaraw Rd., Hawthorne, NJ 07506. Telephone (201) 427-6700.

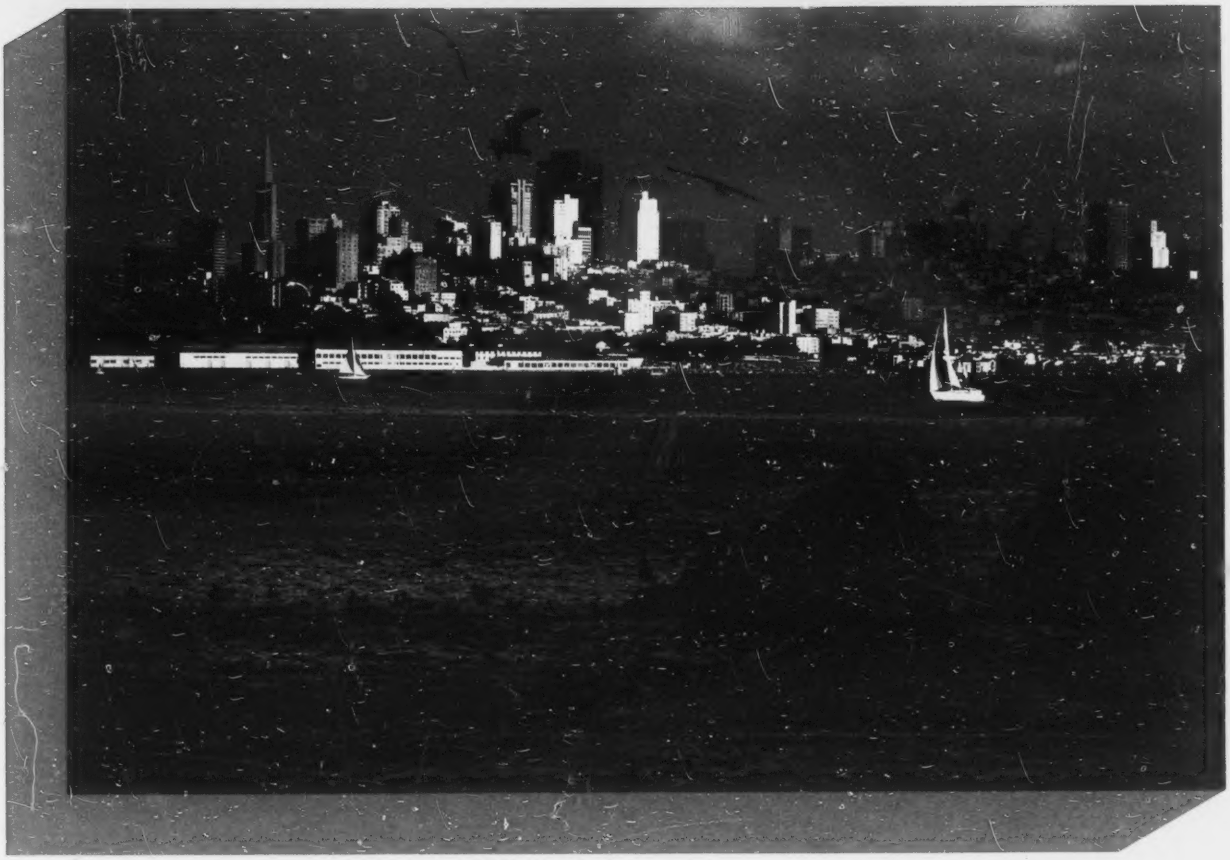
SPECIAL REPORT

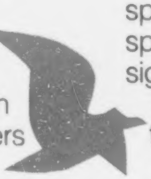
Postal Service: Friend or Foe Of Newspapers?

An 'Up' Year Forecast For Newspapers

SAN FRANCISCO



100th Annual Convention



Don't miss this special Convention as ANPA reaches a century of championing the cause of a strong, free press. Mark your calendar now!

The program will include an array of distinguished speakers on national and international events—focusing on an in-depth review of the "Pacific rim"—as well as informative, useful topical clinics on subjects vital to newspaper operations.

And enjoy the beauty of one of the most scenic cities in the world, which offers a broad spectrum of performing arts, special events, dining, sightseeing and much more.

Special tours will be arranged for Convention attendees.

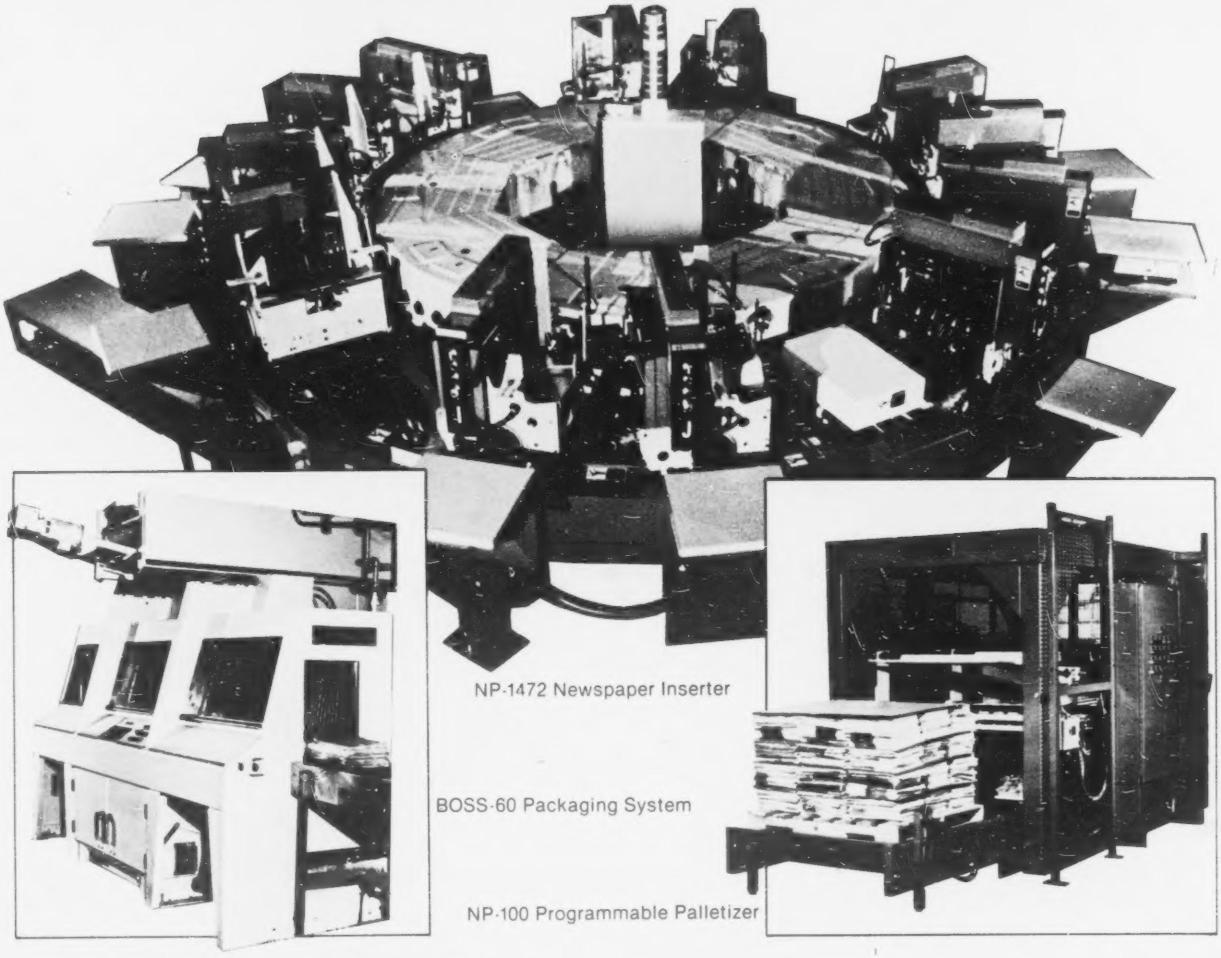
Registration forms will be in the mail to you early this month. Watch for them.

April 21-23
Fairmont Hotel
San Francisco

ANPA

. . . entering its one-hundredth year of dedicated service to newspapers

Automation is one thing. Productivity is three.



NP-1472 Newspaper Inserter

BOSS-60 Packaging System

NP-100 Programmable Palletizer

Harris Graphics' NP-1472 inserter, BOSS-60 packaging system and NP-100 programmed palletizer are designed to bring new productivity to newspaper mailrooms.

The NP-1472 has the versatility to adapt to any inserting job quickly and easily. It produces packages of up to 300 broadsheet pages in many jacket formats and automatically repairs incomplete sets.

The BOSS-60 automates packaging by doing the work of two conventional lines in half the floor space and with half the labor. The integrated functions produce high quality, strapped or unstrapped bundles at up to 50 per minute.

The NP-100 neatly palletizes stacks or bundles quickly, for better product protection and improved storage/retrieval. A programmable logic system controls all functions.

Alone, each is a dependable unit that pays off investment with lower operating costs and increased speed.

Together, the three form an integrated system that will raise mailroom efficiency higher than it's ever been. Each machine is designed to work smoothly with the others, moving product from press to pallet quickly, precisely, and with a minimum of labor.

The NP-1472, BOSS-60, and NP-100 bring more than automation to material handling. They deliver productivity.

"There is no constitutional right to publish a fact merely because it is true…"

CHIEF JUSTICE HUGHES

HOW TO PREVENT LIBEL AND INVASION OF PRIVACY SUITS

Publishers have been made painfully aware of the economic implications of the lawsuit. The last two decades have presented new challenges to publishers, editors, reporters and photographers in keeping abreast of the rapid changes in constitutional law. In response to these new challenges, Mutual Insurance Company Limited, Hamilton, Bermuda, offers a seminar on methods to prevent libel and privacy suits.

New interpretations of what constitutes libel have arisen in the past few years. Busy publishers and working journalists often are not privy to decisions which could have serious consequences for their newspaper… until it's too late. That's why The Mutual Insurance Company Limited, Hamilton, Bermuda, offers more than insurance protection. It provides a measure of prevention with this informative seminar.

Mutual offers a daylong seminar, entitled "How to Prevent Libel and Privacy Suits", to insured members. Created to meet the special needs of newspaper publishers and working journalists, the course offers legal expertise and an explanation of current court decisions. It addresses libel, public and private people, actual malice, negligence, embarrassing truths, lies, distortions, and other appropriate issues. Offered to insured members, the seminar offers instruction on applied law and documentation techniques to prevent lawsuits while getting the story out!

INDEX VOLUME 8, NUMBER 1 JANUARY 1986

Special Report *It's a whole new world for newspapers and the U.S. Postal Service, which have a relationship that goes back to the early days of the nation. Today, the USPS is competing with newspapers for advertising. Tomorrow, some experts think newspapers may compete with the mails to carry letters and parcels. Whereas yesterday newspapers only worried about second-class rates, now all classes of mail are cause for concern. And in the current debate on postal issues, some publishers have found themselves aligned against other publishers.* 20

Mostly sunny forecast *Newspaper executives and analysts predict a good year for newspapers in 1986, with a warming trend in the second half.* 6

No rush to executive contracts *Unlike other businesses, newspapers rarely provide executives with employment contracts.* 10

Production in retrospect *ANPA Vice President/Technical William D. Rinehart reviews 25 years of developments in production technology.* 14

Circulation debts *Increasingly, newspaper credit personnel are taking on collecting duties for the circulation department.* 17

Those are the breaks *The Orlando Sentinel develops innovative program to battle newsprint web breaks.* 18

Papering the world *Several international editions of U.S. daily newspapers join the International Herald Tribune in spreading news around the globe.* 28

Profile: Jay T. Harris *The executive editor of the Philadelphia Daily News believes advocacy and journalism can mix.* 32

Essay: Research resources *Maxwell E. McCombs describes ways smaller newspapers can obtain and use research.* 33

Physicians prescribe ad ban *Over ANPA protests, the American Medical Association is calling for a ban on advertising of tobacco products.* 34

The ABC uproar *Little support is found among advertiser and ad agency members for changes sought by newspapers quitting Audit Bureau of Circulations.* 40

Fellowships galore *Mid-career journalism fellowships are plentiful, but there are some concerns about longer-term programs.* 44

CHAIRMAN'S CORNER

Some heartening news about press freedom on international fronts

Let's start off the New Year right—with some good news.

In recent weeks, there have been significant gains for free-press groups such as ANPA that strive to defend on the international scene the principles of independent, free news media.

First, the Inter-American Court of Human Rights has ruled that compelled licensing of journalists violates freedom of expression.

Richard J. V. Johnson

Second, the International Red Cross has established a "hot line" for journalists in trouble on hazardous professional missions.

Third, the White House has dropped a requirement that foreign correspondents in Washington, D.C., need a letter from their governments to get credentials.

These "wins" don't end the fight for a free press, by any means. But they show what can be accomplished by our continuing alertness and hard work.

There is a common thread. In each case, it was cooperation among a number of free-press groups that achieved the victory. Three organizations (ANPA, World Press Freedom Committee, Inter American Press Association) filed briefs in the licensing case. Ten others—including American Society of Newspaper Editors, Associated Press, International Press Institute, International Federation of Newspaper Publishers and The Newspaper Guild—added their names to these briefs. Eight groups, among them FIEJ, WPFC and IAPA, sought Red Cross help for journalists—resisting proposals by Communist-led groups to license them in the process. ANPA carried the ball across the goal line in the White House negotiations, but WPFC, IAPA and the American and Canadian committees of IPI all were involved in that one, too.

ANPA and IAPA have proven track records in the effective defense of press freedom and access. The steady, effective coordination and monitoring of WPFC play a significant role, too. All of the persons and groups who have shared in this deserve credit and our thanks.

Let's keep up this good work.

Economic Forecast '86

Newspapers are looking forward to a good, though not a great, year for growth in revenue, earnings and linage

BY MARGARET GENOVESE
presstime staff writer

For U.S. daily newspapers, 1986 will be an "up" year. But in this, the year a journalist is slated to be launched into outer space, growth will not be stratospheric, according to analysts and newspaper executives.

"I see a comparatively slow start, but I see a fairly strong finish," says media analyst J. Kendrick Noble Jr., first vice president of PaineWebber Inc.

Noble predicts "a pretty good year, overall," for newspapers. "While revenues are not going to be growing dramatically, in all probability their costs will not be soaring either," he told presstime during the final day of his firm's 13th annual Outlook for the Media conference for stock analysts.

Major, publicly owned newspaper companies that made year-end reports at the Dec. 9-13 conference in New York City said they looked forward to a good year, following what turned out to be a softer-than-anticipated 1985 for some newspaper companies. Several reported they had implemented cost-cutting measures during the year.

Executives of individual newspapers also are optimistic about 1986, but few look for substantial gains over 1985.

The U.S. Department of Commerce's newspaper analyst also believes newspapers will experience somewhat stronger growth this year than last. Rose Marie Zummo Bratland says newspaper receipts, in constant (adjusted for inflation) dollars, could be up as much as 3 percent.

She estimates that when all the figures for 1985 are in, they will show receipts rose only about 2 percent during the year.

Newspapers "seemed to reflect a cooler economy," she says, and advertising receipts grew at a much slower rate than 1983 and 1984.

Bratland's 1986 forecast is a modification of one she made at mid-year, in which she said receipts probably would not grow more than 2 percent. She revised the prediction after 1986 forecasts for the U.S. economy as a whole began to brighten. If advertisers believe the economy is on the upswing, it could mean more advertising for newspapers, she observes.

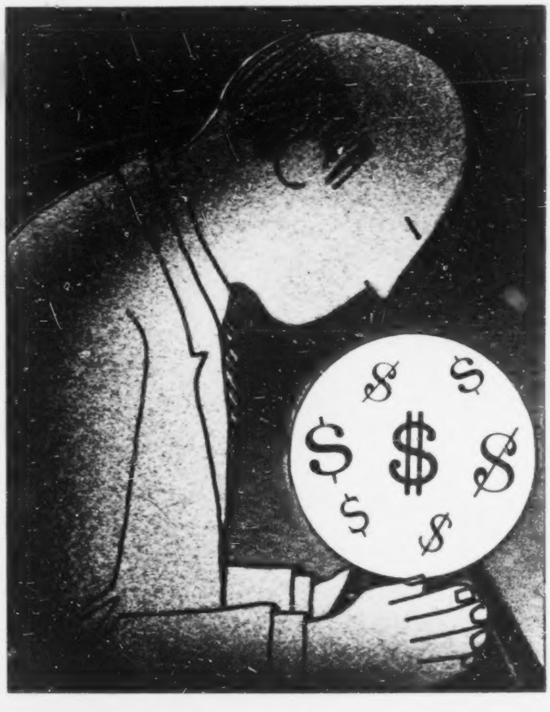
Speaking on the outlook for '86 at the PaineWebber conference, Edward T. Parmelee, vice president of marketing for Knight-Ridder Newspapers Inc., said he anticipates a 7.5-to 8-percent increase in total newspaper advertising revenues over 1985.

This would match or slightly better newspapers' ad-revenue performance in 1985, which Parmelee pegged at 7.5-percent higher than the 1984 level.

Robert J. Coen, senior vice president of McCann-Erickson Inc., told the New York City gathering that he expects total media ad revenues in 1986 to top 1985's by 8 percent. He also said he thinks better growth will occur in the second half of the year.

Later, asked for a prediction covering newspapers separately, Coen told presstime he expects newspapers will experience an overall ad-revenue increase of about 7.9 percent, with an increase of about 8 percent in local advertising and between 7 and 7.5 percent in national advertising.

Both Parmelee and Coen observed before the New York City gathering that 1986 elections will bring extra advertising dollars to newspapers. Parmelee predicted they will enjoy "substantial" volume from political advertising, particularly in areas where hard-fought primary contests develop.



In the main, however, both men saw the revenue increases coming more as a result of rate increases than increased linage.

Ad agency executive Coen predicted newspapers will impose rate increases averaging 7 percent. Newspaper executive Parmelee's forecast was for increases in the range of 6.5-7 percent. "ROP (run-of-paper) pricing increases in all classifications are likely to be in the 7-percent range, but minimal preprint rate increases due to competitive direct mail pressure and ROP discount programs will reduce the total rate increase yield," Parmelee said.

He added that newspapers look for 1- to 2-percent gains in full-run ROP linage, with part-run ROP linage growing more than 5 percent because of continued expansion of zoned sections and total market coverage products. He predicted growth in full- and part-run preprint volume will continue, but at a slower pace than in recent years.

Ad revenue review. In addition to issuing their predictions for 1986, the prognosticators explained why 1985 did not live up to their expectations.

In late 1984, industry analysts had said advertising revenue growth in U.S. newspapers in 1985 would decrease from about 14 percent in 1984 to 10-11 percent in '85 [presstime, Jan. 1985, p. 36].

They were right about a slowdown but wrong—on the low side—about its magnitude.

"We overestimated the strength of retail and national advertising and underestimated the continued strength of classified," said Parmelee, who had forecast a minimum 10-percent gain.

1985 also confounded Coen. A year ago, he predicted advertising in all media would increase 9.7 percent in 1985; it rose only an estimated 8.3 percent.

Coen noted that 1985 was the first year in a decade when the increase in national advertising in the "major mass consumer media"—television, radio, magazines and newspapers—failed to keep pace with the economy, posting only a 4.2-percent gain, compared with a rise in the gross national product of 6.2 percent.

The "big surprise," said Coen, was network TV, which had its first decline since 1971—falling 2.5 percent in the national column.

Newspapers gained 7 percent in national and 8.5 percent in local advertising, according to Coen's figures.

The main explanation of 1985's weaker-than-anticipated growth, Coen said, was the "final arrival of disinflation to the advertising sector of business" and the rebellion of advertisers against media rate increases that were substantially higher than the rise in consumer prices.

Costs. One factor in newspapers' profitability in 1986 will be newsprint prices. Despite producers' repeated efforts, newsprint prices did not rise in 1985. The outlook for 1986 is unclear.

One Canadian forest products analyst believes producers will not be able to make a price hike stick in 1986, either. "Basically, I don't see any price increases period in 1986," says Brian F. Topp of Midland Doherty Ltd. in Toronto.

As Topp sees it, the reasons are excess supply and the probability that the Canadian dollar will continue to fall vis-a-vis the American dollar, enhancing profitability for Canadian producers whose U.S. customers pay in U.S. dollars.

However, he adds, if 1986 turns out to be a "very strong year" economically, producers may be able to raise prices in the fourth quarter, although the increase would be unlikely to take hold across the board until the first quarter of 1987.

ROP *rate increases likely will be about 7 percent, but preprint rate increases will be minimal and will reduce the total rate increase yield.*

Edward T. Parmelee

Newsprint prices have not risen since July 1984, when eastern Canadian producers raised the list price to $535 a metric ton; the West Coast followed soon after. Topp says the bulk of Canadian newsprint is being sold for about $450 a metric ton, with some spot discounting to $390 a ton or less.

Other analysts hold contrary views. Jim D. Rowland, publisher of the Canadian Paper Analyst, predicts discounting will begin to disappear and that by mid-year, "there should be a move afoot for some formal price increase." As reasons, he cites an improving economy, very little additional papermaking capacity being added in North America and the continuing drop in the value of the U.S. dollar against some other currencies, which makes the United States less attractive as a market for papermakers outside North America.

Rowland also says there is a "good possibility" that 1986 will see the formalization of a two- or three-tiered pricing structure in which higher quality newsprint will command a higher price [presstime, Nov. 1985, p. 62]. For example, he says, "USA Today-type quality (paper) will be charged off at a premium (compared with) traditional letterpress quality."

One major U.S. newsprint consumer that sees a price increase coming in 1986 is the firm that publishes USA Today, Gannett Co. Douglas H. McCorkindale, vice chairman/chief financial and administrative officer, told analysts at the PaineWebber conference that the company expects newsprint prices to increase 7 percent in late summer to early fall.

The other major cost consideration for newspapers is wages. According to the labor outlook panel of The Conference Board, a New York City-based business and economic research firm, wages for U.S. workers will rise only slightly in 1986. The panel projects average hourly earnings of production and non-supervisory workers will increase by 3.6 percent, up from 3.2 percent in 1985.

The Commerce Department's Bratland reports that hourly earnings for newspaper production workers rose in 1985 to an estimated $10.76, 5-percent above the 1984 level of $10.25.

Also affecting some newspapers' expenses this year will be the Jan. 1 increase in in-county and limited circulation out-of-county postal rates. For most of these papers, the increase will be about 50 percent, according to ANPA. (See Special Report, p. 20.)

Major companies report. Also at the PaineWebber conference, publicly owned newspaper companies made their traditional, end-of-the-year reports. They included:

- For *The New York Times Co.*, 1985 was a year that "set a new high for profitability," according to Walter E. Mattson, president and chief operating officer.

Mattson noted circulation at the Times is "at an all-time high," and in November 1985 the paper carried its largest-ever advertising volume.

Circulation of the Times' "regional" dailies grew 4 percent on weekdays and 5 percent Sundays while its regional weeklies grew 6 percent, Mattson reported.

Retail advertising at those newspapers is "recovering," he said, and they will close the year flat in volume and "strongly ahead in revenues."

- Richard D. Simmons, president of *The Washington Post Co.*, reported "excellent" results for his company in 1985 and said he expects it to have "another good year" in 1986.

The Post Co.'s earnings per share will be on the order of 25 percent compared with 1984, excluding gains from the sale of TV sports channels and cellular radio interests. Simmons said the newspaper division's operating income rose about 15 percent over the year before.

- *Dow Jones & Co.* 1985 earnings will be only 5 to 7 percent over 1984, including a gain from the sale of land and dilution from the purchase of a 32-percent interest in Telerate, a supplier of computerized financial databases, according to Warren H. Phillips, chairman and chief executive officer. He compared this with earnings-per-share growth of more than 20 percent annually over the past five years.

Advertising linage in The Wall Street Journal, the company's biggest revenue source, declined 6.1 percent in the first 11 months of 1985. Phillips said the decrease was "part of a widespread softening this year in national advertising." But he added that the national newspaper's chief competitors—business and news magazines—had been more severely affected. Journal circulation remained even with 1984, Phillips said.

Newspapers' ad revenue will increase about 7.9 percent, with increases of about 8 percent in local and 7-7.5 percent in national.

Robert J. Coen

On the other hand, the company's Ottaway Newspapers subsidiary had an increase of 19 percent in operating income for the first 11 months of 1985, he reported. Ad linage for the group of community dailies was up 3.7 percent, excluding preprints, and ad revenues rose 12.9 percent. Circulation also grew, he said.

Phillips said the company has been cutting costs. "Our aim is to keep percentage cost increases in line with percentage revenue increases as we adjust to the transition to a disinflationary economy."

- *The Times Mirror Co.* also instituted "very tight expense control" in 1985 as a result of the disappointing economy, reported Robert F. Erburu, president and chief executive officer.

Erburu said there was a slowdown in advertising revenue growth at his company's newspapers in 1985. "The added costs of dramatically increased Sunday circulation in Denver, the impact of market softness in Denver and Dallas, and a slowdown in classified advertising at the Los Angeles Times have lowered our original expectations in newspaper operations," he said.

Erburu said the company has "some hope" that advertising trends will improve in the second half of 1986, with linage growth hanging in the balance. Ad rate increases will exceed inflation, he said, but added: "Advertisers are increasingly resistant to large increases, and continued improvement in circulation is very important."

In sum, Erburu said, "we expect 1986 to be a good year, but how good will be very much dependent on the broader economic context."

- *Gannett* is looking forward to a "satisfactory year" in 1986, perhaps better than 1985, when a variety of factors depressed fourth quarter earnings, according to McCorkindale.

For the firm's newspapers, excluding USA Today and USA Today Weekend, McCorkindale predicted advertising linage will be up about 2 percent, circulation up about 1 percent, and rate increases in the 5- to 7-percent range for both advertising and circulation.

On the expense side, he said employment will be up less than 1 percent with payroll costs climbing 6 percent.

Looking back, John J. Curley, Gannett president and chief operating officer, reported business at the company's newspapers was "moderately good" in 1985.

Three-quarters of the company's newspapers were above the year before in total revenues, he said, including all of its large, so-called "metro" papers—in Des Moines, Cincinnati, Westchester-Rockland, N.Y., Honolulu, Nashville and Wilmington, Del. He said the East Coast and South were the strongest areas, with the Midwest and West spotty.

Advertising linage group-wide grew 8 percent, led by classified, which was up 12 percent for the first 11 months of 1985. Circulation for the group was flat for papers published in the morning, down 2 percent for afternoon papers.

In late 1985, Curley said, the company "tightened our belt on expenses," and it expects to keep the restraints in place at least for the first quarter of 1986.

- *Knight-Ridder* should have "a booming increase in earnings" for 1986 as a whole in comparison with 1985, during which the company's Philadelphia newspapers suffered a 46-day strike, reported Robert F. Singleton, chief financial officer. Even with the stoppage, Knight-Ridder said its earnings per share in 1985 would be up.

The company's newspapers look for 1986 advertising revenue gains of around 7.5 to 8 percent as well as gains in circulation revenue, according to William A. Ott, senior vice president, operations.

Affiliated Publications, which publishes The Boston Globe, reported earnings per share growth of about 10 percent in 1986.

Individual markets. An informal polling of executives at privately held newspapers in a half-dozen U.S. cities and towns around the country found that they, too, are expecting growth in 1986. Of course, expectations vary by market.

For example, in Naples, Fla., where the local economy is healthy, Timothy A. O'Connor, chairman of the board and president of the Naples Daily News, says his projections are for a "strong year" in advertising and circulation.

For most of 1985, ad linage at the independently owned paper had been flat, but it showed signs of considerable gain in the fourth quarter, says O'Connor.

However, in Kansas, David J. Cazalet Jr., editor and publisher of the Hiawatha Daily World, looks for the ad revenue picture to be only "a little bit better" in 1986. His paper, which is part of the Walls Newspaper Group, does not expect to raise its advertising rates, he says, despite feeling the effects of the postal increase.

Cazalet says he does not expect the community's farm economy to be very good in 1986. "A lot of people, from the farmer to the retail merchant, seem to be holding on by their toes, by their fingers," he says.

Looking back, 1985 was a "tough year" for the daily, which instituted cost-cutting measures including dismissal of two employees.

On the West Coast, Emmett J. Jones, general manager of the Donrey Media Group's Lompoc (Calif.) Record, is counting on a "good year" in 1986, although he is not looking for significant gains. He foresees increases in newsprint costs and in costs attributable to the implementation of the federal government's hazard communication standard.

Also in California, Robert Robinson, business manager of The San Diego Union and The Tribune, expects ad linage to be flat or slightly higher than 1985. ☐

To Loading Dock
Automatic Rolling

- PrintRoll winds newspapers and preprints into large diameter, stationary rolls. Space-efficient to take advantage of full ceiling height.
- Automatic rolling and retrieval of main sections and preprints from buffer or storage eliminates manual pallet or roll handling and special equipment.
- Zoned editions may be stored in preselected rolls.
- Rolled products are compressed to allow more efficient processing through inserting machines.
- Shingle stream integrity is maintained throughout to assure smooth movement of the product by conveyor without need for single-copy synchronization.
- PrintRoll eliminates the need to start or stop the press for temporary mailroom problems or interrupt mailroom production if the press is down.
- Average rather than maximum press output determines inserting capacity.

Automation From Press To Loading Dock

Muller-Martini offers you complete mailroom systems, including conveyors, automatic storage, stackers and on-line inserting machines.

Executive Contracts

Newspapers Prefer a Handshake

BY CLARK NEWSOM
presstime labor writer

Alberto Pacheco

Despite a growing trend toward individual employment contracts for executives in a number of industries, they are scarce in the newspaper business.

"I don't know very many people running newspapers who have employment contracts," says Michael A. Walker, a partner in the executive recruiting firm Youngs, Walker & Co. of Inverness, Ill. The firm specializes in the newspaper, broadcasting and cable fields. "I do know some, but they are by far in the minority."

Another executive recruiter active in the publishing industry, Patrick J. Quinn, of Gordon Wahls Co. in Media, Pa., says, "I have not seen any trend developing in the newspaper business regarding employment contracts."

In contrast, such contracts are common in broadcasting, experts note.

David M. Richardson, president of Richardson & Runden Co.—an executive recruitment firm based in Upper Montclair, N.J.—notes a growing trend on the part of middle managers in industry generally to ask for written agreements. "More and more of the individuals we are attempting to recruit are looking for agreements in writing," he says. "They want to lock themselves in in case things don't work out." The trend is partly a result of company cost-containment programs and "skinnier" management, he says.

Sometimes, employers are the instigators of executive contracts, especially in highly competitive industries where raiding of corporate staffs is commonplace.

A basic employment contract used in industry typically has a term of one to three years and includes provisions for severance pay in the event the employment relationship is terminated by one of the parties. It also includes details related to bonuses, deferred compensation, insurance, expenses and may provide for arbitration of controversies arising from the agreement.

Details about specific contracts covering newspaper executives are sketchy. One executive who has a three-year contract with a newspaper company and who asked **presstime** not to identify him by name, says, "It's a touchy subject. No one wants to talk about it."

It is known—having been announced publicly in 1983—that Allen H. Neuharth, chairman and chief executive officer of Gannett Co., has an employment contract that runs until March 1989. But Madelyn P. Jennings, senior vice president/personnel and administration, says, "Individual contracts are limited to a tiny, tiny number of very top executives" at the company.

It is also known that a few high-visibility columnists such as Mike Royko of the Chicago Tribune have personal employment contracts. One newspaper ombudsman, Sam Zagoria of The Washington Post, has a non-renewable, two-year contract that helps to assure his independence as "readers' representative."

But at the Tribune, Editor and Executive Vice President James D. Squires notes that the number of editorial contracts there is now down to a handful from a dozen five years ago. Such contracts used to be a "status symbol" in Chicago, he reports.

Other newspaper executives confirm the scarcity of such contracts in the newspaper industry.

"I don't have one," says James H. Hale, publisher and board chairman of the Kansas City (Mo.) Star Co., which is owned by Capital Cities Communications.

Fred A. Stickel, president and publisher of The Oregonian in Portland, says that not only is he without a contract, "I'm not aware of any" in the Newhouse Newspapers group of which his paper is a part.

Roger C. Schoemaker, vice president of human resources and labor relations for Newhouse-owned Booth Newspapers Inc., says he has never even had a request for an employment contract.

Other groups reporting that they do not have employment contracts in their newspaper operations include Harte-Hanks Communications Inc., Knight-Ridder Newspapers Inc., Scripps Howard and Southam Inc.

Most independently owned newspapers also have no employment contracts for executives, according to specialists in the newspaper personnel relations field.

Various reasons cited. Speculation varies on why this is so.

Executive recruiter Richardson says it could be because "the newspaper business over the years has been highly organized from a union standpoint. When top management thinks of contracts, they think of people putting out the product." The word "contract" may be "taboo," Richardson adds, "because of the history with the blue-collar side."

Donald L. Lowman, a media compensation specialist for the management consulting firm of Towers, Perrin, Forster & Crosby, says another reason for the scarcity is the fact that "historically, newspaper companies grew from family-owned operations" where there was no need for contracts.

A newspaper executive from a privately owned company made a similar point: that employment contracts are more widely associated with hiring from outside the organization, while newspaper companies tend to promote from within.

Another view is that such contracts are "not useful" in the newspaper industry. "As long as the real efficacy of an employment contract is in doubt, they are probably not going to be prevalent in our industry," says Joseph F. Barletta, president of the San Francisco Newspaper Agency.

"To the individual, an employment contract is little more than some severance conditions. From the standpoint of the employer, the contract does not do much except ensure that the executive can't leave and go to a competitor," says Barletta, whose agency performs the non-editorial functions of the San Francisco Chronicle and San Francisco Examiner.

"They're not good for either side in most situations," says executive recruiter Walker. Studies by psychologists show that money is not at the top of the list of what makes people satisfied in their work, he notes. While salary is important, the working environment is more so, the psychologists say.

For an executive hoping to land a new job, "Contracts muddy up the situation at a critical time," Walker warns. Perquisites differ from company to company and can usually be worked out without a contract, he says.

Walker says he wouldn't go so far as to say that if a person under consideration for a key executive slot asked for a contract, that would be an indication the person is not worth taking a chance on. "But it would raise a red flag. What's lacking? Why do they feel they have to have one?"

One danger cited by Walker is that problems can be created when one person has a contract and another executive at the same level who does not have one finds out about it.

All in all, the benefits of a contract may be delusory, says Charles D. Cole, ANPA manager/labor relations. "The desired security may be no more lasting than the term of the agreement," he notes. "The periodic necessity of renewal will bring about a more thorough examination of the need of employment continuation that likely would not arise in the absence of an employment contract." ☐

By the year 2000, 2 out of 3 Americans could be illiterate.

Read that again, just to be sure you read it correctly.

Because, believe it or not, it's true.

Today, 75 million adults, about one American in three, can't read adequately. And by the year 2000, *U.S. News & World Report* envisions an America with a literacy rate of only 30%.

Before that America comes to be, you can stop it…by joining the fight against illiteracy today.

Call the Coalition for Literacy at toll-free **1-800-228-8813** and volunteer. You'll be fighting illiteracy for generations to come.

Volunteer Against Illiteracy. The only degree you need is a degree of caring.

OMBUDSMAN

Sometimes the editors get it wrong

Lane Smith
Times assistant managing editor

A CORRECTION notice in last Sunday's editions on a story forecasting a $2 billion purchase order for Boeing airplanes didn't go far enough. The correction should have pointed out that it was an editor's — not a reporter's — mistake.

Because the correction was incomplete, reporter Polly Lane felt her

Only 35 newspapers in the U.S. and Canada have ombudsmen. The Seattle Times is one.

Ombudsman Lane Smith is the personification of The Times' commitment to ethical standards and credibility. His main job is to answer readers' complaints about accuracy and fairness.

"I try to return every phone call and answer every letter," Smith explains. "I want to find out what our readers are thinking and what they want in a newspaper."

Smith does accuracy checks on stories picked at random from throughout The Times by sending out questionnaires to the people who were interviewed. When there are errors, he finds out how they occurred and draws them to the editors' attention.

By keeping the lines of communication open, the ombudsman can track trends and monitor readers' reactions to The Times' entire presentation, from news and sports to features and comics.

"Historically, newspapers haven't done a good job explaining how and why they do things. I explain the news process to readers."

It's a demanding job, but the rewards are worth it. According to Smith, "To be a top newspaper, you need the respect of your readers, as well as your peers."

The Seattle Times

Newspaper Technology: Reflections and Projections

BY WILLIAM D. RINEHART

Printing technology has always played an important role in the expansion of the newspaper business, but never to the extent it has in the last 25 years.

What has occurred in these years has helped save the small paper from extinction, allowed all papers to prosper in the face of unprecedented diversity of media and, of course, changed the face of the newspaper business forever.

William D. Rinehart

Two centuries ago, North American newspapers used Washington hand-operated presses that limited circulation to a few hundred. In the first half of the 19th century, steam-driven rotary presses were developed that permitted circulations to increase to 30,000 to 40,000. In the second half of the 19th century, lead stereotyping was perfected, enabling metropolitan papers to run multiple presses and to expand circulation vastly. In the late 19th century, the Linotype typesetting machine was invented, allowing newspapers to increase their page count from 8-page dailies to 64 or more pages.

The processes that were invented in the 19th century dominated the newspaper business until the early 1960s. They were labor-intensive and required metropolitan dailies to have as many of 1,200 printers setting hot-metal type and making up pages. Even small-circulation dailies needed 40 or more printers. What's more, the Linotype and associated hot-metal processes required highly skilled workers who proved difficult to find and hold, particularly in smaller cities.

Until the 1960s, small-circulation papers were a labor of love by the owners and publishers. The cost of hot-metal typesetting was excessive. It was a constant battle to get the daily newspaper out with a constant shortage of typesetters. As a result, the profit margins of most smaller newspapers were low—too low to afford new equipment.

This meant two things: First, press manufacturers did not design units for small papers; second, when it came time to buy, the small papers tended to purchase Linotypes and presses from metropolitan newspapers. The overall situation made it practically impossible to sell a small-circulation newspaper to a new owner.

Fortunately, a few farsighted newspaper publishers realized a new technology was needed to keep newspapers in business.

> *A few farsighted publishers realized a new technology was needed to keep newspapers in business.*

In Texas, a publisher named Staley McBrayer formed a little press company called Vanguard that developed a 16-page offset press with a price tag of $69,900—a cost publishers could afford.

In Massachusetts another publisher, G. Prescott Low, formed a research group to seek a less costly typesetting process; this led to formation of Photon, the world's first phototypesetting producer.

A Pennsylvania publisher, J. L. Stackhouse, and others convinced ANPA to build a newspaper printing research center; it produced new technology such as automated engraving, which was necessary to utilize the initial forms of photocomposition.

Hot to cold. In the early 1960s, all the new technology started to fall in place. ANPA recognized the dire straits of many small-circulation dailies and, with the assistance of many publishers, went to work to make offset a practical method of producing newspapers. The Association's staff of engineers and printing experts recognized that newspapers had to be freed of the yoke of hot-metal composition or else the newspaper business would decline. Offset, as a photo-plate process, would provide the means to utilize the yet-to-be-fully-developed cold-type systems.

Cooperative research between ANPA and newspaper vendors sparked development of page film processors, offset platemaking machines and much other new equipment needed to make the offset process feasible. ANPA also conducted national offset seminars to convince newspapers that it was the way to go.

The net result was new printing processes affordable for smaller papers and cost-justifiable because of labor savings. Such newspapers switched to cold-type offset by the hundreds in the 1960s, and profit margins shot up. Suddenly, too, the values of these papers—particularly those in the suburbs—skyrocketed. (Unfortunately, the Internal Revenue Service discovered the enhanced value of the suburban press, and in many instances, potential inheritance-tax problems made it impossible for the heirs to continue private ownership. This gave rise to tremendous growth of corporate groups.)

Also made possible by the cold-type offset process was the surge in free-distribution newspapers, shoppers and advertising preprints.

By 1965, although much low-cost, high-speed, cold-type equipment had been developed, metropolitan newspapers remained hot-metal letterpress. ANPA labs undertook development of a photo-imaged plastic plate so that the metropolitan dailies could effectively introduce computerized cold type.

(Editor's note: Rinehart recently marked a quarter-century as a member of the ANPA staff. As vice president/technical, he oversees the Association's technical arm and is recognized as an authority in the field of newspaper production. Prior to joining ANPA in 1960, he was chief engineer and assistant national production director for Hearst Newspapers, and chief electrical engineer for Wood Newspaper Machinery Corp. In this article, he looks back at how newspaper technology has evolved over the past 25 years—and ahead at where it seems to be going.)

Phototypesetting quickly replaced the Linotype machine.

Intensive cooperative research projects were initiated with Xerox Co., Celanese Corp., W. R. Grace Inc. and others. In May 1968, the South Bend (Ind.) Tribune started using a Grace-manufactured plate. About the same time, ANPA developed DI-LITHO, a process that enabled a letterpress newspaper to use photo-imaged offset plates. These two processes enabled large newspapers to cut the cost of composition dramatically. Equally important, it provided the means for a newspaper to zone editions for particular circulation segments.

The development of offset and photo plastic plates also enabled newspapers to print finely registered color because it basically transferred registration of the color to a light table.

With the hot-metal plate system, registration had been a hit-or-miss proposition. Stereotype mats were cut and spliced together with tape. They had to be dried after molding, and each one shrank differently; consequently, the printing of color pictures was more often than not a disaster.

The use of photo plates, both for offset and letterpress, also eliminated the use of metal photo-engraving and the use of powerful acids. In this day of close government scrutiny of the workplace, newspapers would be encountering serious problems with regulations if they were using hot-lead metal and engraving acids.

The utilization of photographic platemaking processes and the resulting ability to print color pictures successfully, gave rise to the development of electronic color separation equipment that is widely used today. The equipment allows newspapers to set quality separations even if the original photographs are faulty.

Also in the '60s, newspapers began looking at developments skyward as well as earthbound.

In June 1963, at the ANPA technical conference, there was a demonstration of a communications satellite. News copy was transmitted from London to the conference site in Chicago. In October 1967, ANPA demonstrated the first facsimile transmission of complete pages from London to San Juan, Puerto Rico.

Seven years later, The Wall Street Journal initiated transmission of newspaper pages from Chicopee Falls, Mass., to South Brunswick, N.J., and pioneered use of small-dish receivers. This technology gave birth to national daily newspapers such as the Journal, USA Today and The New York Times, and to the international editions of U.S. newspapers. (See story, p. 28.)

Starting in 1967, ANPA began to design the fully electronic newsroom and later issued periodic bulletins on the proposal. This led to cooperative ANPA-supplier research into the development of electronic terminal hardware specially designed for both the newsroom and composing room.

Harris Co. and ANPA worked closely on the initial designs, which were first field tested in Cocoa, Fla., because Harris had a plant in nearby Melbourne. Today, there are more than 60,000 video display terminals in use at ANPA newspapers.

The editorial terminals gave the newsroom complete control over copy. When newspapers set type with the Linotype from typewritten or handwritten copy, they employed a staff of proofreaders. Any Linotype itself generated 3- or 4-percent errors, and, consequently, most type had to be reset. Editing terminals and photocomposition eliminate the need for such costly re-keyboarding.

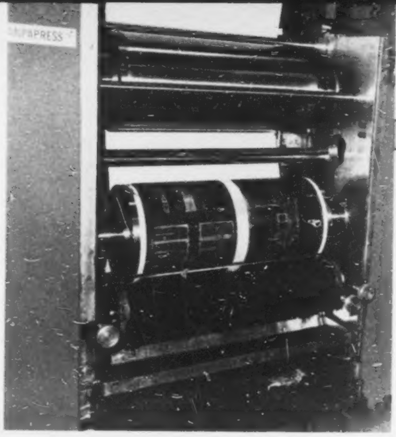
In 1970, ANPA started a series of electronic editing hands-on seminars that were attended by hundreds of editors from newspapers of all circulation ranges. Typewriters moved out of the newsroom by the hundreds.

In April 1973, the School of Journalism of the University of Missouri presented ANPA Research Institute with its award for "Distinguished Service in Journalism," primarily for its work in the development of electronic newsroom technology.

Presses, paper. In the early 1970s, metropolitan offset presses had been developed, and as letterpress units wore out, big-city dailies joined the swing to offset.

The middle of that decade saw ANPA technical researchers turn their attention to a search for an alternate source

Cold type also gave chase to this scene.



ANPA by 1979 had built and demonstrated the first flexographic press modified for newspaper printing.

of pulp to be used in the manufacture of newsprint. Research was conducted on a number of alternatives such as a plastic or alternate natural fibers. ANPA and others concluded that an ideal substitute pulp could be made from the plant kenaf.

Kenaf newsprint was run in seven newspapers, with excellent results. Research in this area is continuing. (See story, p. 54.)

Unfortunately, kenaf is a warm-weather crop, and most existing newsprint mills in North America are in cold climates. Current newsprint manufacturing machines are very expensive—in excess of $150-million apiece—and the basic process is hundreds of years old.

In order to reduce the cost of newsprint, there is a need for a new manufacturing process that would dramatically reduce the expense of paper machines. If this were to happen, kenaf would become the primary source of raw material for newsprint in the United States.

By the late 1970s, with the cost of metropolitan presses having soared, ANPA technical staffers were assigned the task of researching new press technology. By 1979, they had built and demonstrated the first flexographic press modified for newspaper printing. The flexographic concept has the potential of offering the newspaper business a new, more efficient printing process, substantially reducing newsprint waste, labor and ink rub-off. It could eventually replace offset as the predominant newspaper press technology.

The '70s also saw research and development of the first full-page pagination systems that give full control of the final product to the news and advertising departments. More importantly, they expand the possibility of zoning news and advertising content.

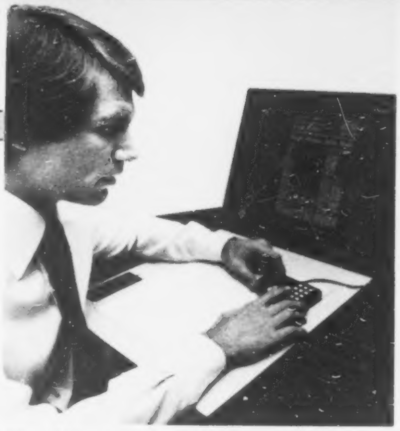
Another key development of the '70s was the development of microwave technology whereby newspapers could send facsimile pages to suburban printing plants. This was followed in the current decade by installation of fiber-optic systems that also are being used to link downtown and remote printing sites.

The future is now. Already developed, but not yet in place, is the technology to send material via satellite simultaneously to any number of newspapers across the country. The recipient newspaper can receive the material in hard copy or directly into its pagination system.

The immediate application being considered would provide instantaneous distribution of national advertising copy to designated newspapers. It also could be used to transmit advertising preprint originals, co-op advertising and retail ad copy. Another application could be distribution of feature sections or high-quality photos.

Also in the photographic realm, experiments are under way to convert video frames to newspaper photos [presstime, Dec. 1985, p. 54].

On the horizon and in limited use, particularly in Japan, are digital storage systems using laser-optic technology. They promise to decrease dramatically the cost of data storage and will make full-page pagination systems economically feasible even for small-circulation newspapers.



The 1970s also ushered in full-page pagination.

Once such systems are in widespread use, they will provide a market for all-electronic newspaper imaging systems, and the current, three-hundred-ton hunk of iron we call a press will be obsolete. Electronic imaging will enable newspapers to customize newspaper content and advertising, even for specific subscribers if desired, and the cost of production will be reduced.

After Marconi invented radio, there were predictions about the demise of newspapers. The advent of television brought more doom-and-gloom forecasts for newspapers. The growth of cable television and the development of other video technologies were accompanied by similar predictions.

Had not American newspaper publishers sought out new technology, such predictions might have been accurate. If future newspaper technology isn't pursued, they still might be. But so long as newspapers can deliver a tremendous news and advertising package at nominal cost, newspapers' future is secure. And when the false prophets pass on, we will learn of it in our daily newspaper. ☐

More newspapers are using credit departments to collect bad circulation debts

BY BARBARA J. FRIEDMAN
presstime staff writer

When a subscriber or a carrier is late paying money owed a newspaper, who should oversee the collection? The automatic answer used to be the circulation department.

These days, credit managers at some papers are getting into the act.

Jerry Hughes

Credit managers are mainly concerned with bad debts on the advertising side of the business, and they are a minority among circulation collectors. However, according to a survey by the Advertising Media Credit Executives Association, their use in collecting circulation accounts is increasing.

Of 110 members responding to the survey conducted during the organization's recent meeting in San Francisco, 38 percent said they had responsibility for circulation department collections or circulation-related credit checking. That percentage is "up in recent years, from almost zero," according to the association.

Jim Ralph, vice president of ANPA/Credit Bureau Inc. and assistant editor of the credit association's newsletter, says about 95 percent of the group's members work for newspapers. "More and more newspapers are coming around" to the idea of having the credit and collections department play a role in processing delinquent circulation bills, he says.

That is a change from the time when credit and circulation departments rarely mixed, Ralph says. In the mid-1960s, while credit manager of The Montreal Star, he got involved in circulation collections. "I didn't know anyone else doing it at the time," he recalls. "I will always remember taking that thing over. It had to be done because so much money was owed that the situation had become a problem for the paper."

Credit executives offer varied reasons for taking or considering a role in collecting overdue circulation bills. But several say it gives circulation staffs more time for selling and distributing newspapers while allowing the credit department to use its experience in collecting debts.

Jerry Hughes, credit manager of the Los Angeles Times, says that newspaper's 1977 decision to have its credit department handle circulation collections was based in part on a desire to give circulation employees more time to concentrate on retaining subscribers.

A similar goal led the Richmond (Va.) Times-Dispatch and Richmond News Leader to get its credit department involved officially in collecting delinquent circulation bills, according to Controller Scott Leath. That change was scheduled to take effect the first of this year.

Accounts receivable in circulation are generally small compared to advertising accounts—the traditional focus of credit departments—but the effort to collect is still worthwhile, credit executives say.

Leath says the dollar losses in circulation were "significant enough we felt we had to do something." Moreover, they had escalated over the past two years, says Leath, who once worked in the circulation department.

Besides producing cash and trimming bad debt expense, the collection effort spreads the word that a newspaper is not going to allow overdue circulation bills to slide. Credit managers such as Clif Neal of the Richmond newspapers say that sort of reputation discourages people from delaying or foregoing circulation payments.

If a newspaper pushes hard on collections, Neal says, "word gets out on the street that these people are serious." If the newspaper is lax, that reputation spreads, and "you end up losing even more."

The system gives circulation staffs more time for sales and distribution.

Among other reasons cited for the entry of credit departments into circulation collections is the ability of carriers on some motorized routes to amass four-figure bills quickly.

Leath says his credit department is looking into an arrangement that would give it influence in the signing of independent contractors for the bigger routes. A motorized route tends to be a second job for an adult, he says, and "they're not doing this unless they're in an income crunch." People with motorized routes as well as single-copy distributors can run up sizable bills for copies bought, he says.

Tim Kucheman, credit manager of the Akron (Ohio) Beacon Journal, makes a similar point. "A monthly bill of $8,000 to $10,000 can hurt you very badly if you have the wrong guy out there," he says.

The Beacon Journal's credit department is involved in collecting delinquent circulation bills and—like its counterpart in Richmond—would like more say in the selection of motorized-route carriers. Kucheman observes that circulation personnel are "very good at getting the paper out and getting subscribers." But he adds that collecting money was not "their prime goal," as it is for people in his department.

Although there are many good reasons for the trend toward more involvement by credit departments in circulation collection, there remains one ideal situation in which the step isn't needed. It is found at the Daily Star-Progress of La Habra, Calif. Past-due circulation accounts do not exist there, says business manager Patricia G. Young. "Everything is paid in advance or they don't get the newspaper." □

Web Breaks

ORLANDO SENTINEL TAKES A SWAT AT CUTTING AMOUNT OF WASTE PAPER

BY PAUL KRUGLINSKI
presstime technical writer

A few years ago, Charles A. Edwards, pressroom manager at The Orlando (Fla.) Sentinel, bought some baseball caps with no particular purpose in mind. One day a Sentinel pressman asked Edwards when he was going to get one. No sooner had the question been asked than a web of newsprint running through the press broke. "When you run 100 rolls without losing a web," Edwards challenged the pressman.

It is debatable whether the Sentinel's newsprint waste reduction program started then, or whether it really began several weeks later when the pressman—having met the challenge—marched into Edwards' office and demanded a cap.

"That's how the program started," Edwards says. "It wasn't planned."

More importantly, the Sentinel's program—"SWATS," for "Stop Waste At The Sentinel"—has grown substantially. Its program is attracting a lot of attention at many other newspapers as interest rises in finding ways to cut down on the frequency with which the press has to be stopped because the paper passing through it has snapped.

Web breaks are costly and getting costlier as more newspapers convert to offset printing and pursue four-color reproduction, experts say.

The offset printing process has a tendency to increase the frequency of web breaks. "Offset presses involve two more variables than letterpress presses," notes George Cashau, ANPA director/technical research—"balancing water with ink." Water tends to weaken the web, making it more susceptible to breaking.

Printing process color by the offset process increases the time required to reweb presses. "Printing color involves three variables: water, ink and registration," says Cashau, and getting all three in balance requires more time. The web leads for color printing are invariably longer and more complex. Thus web breaks will become more costly as newspapers pursue offset printing and process color reproduction.

Although circumstances vary from newspaper to newspaper, a break requires a minimum of 10 minutes to thread and splice. Including labor, wasted newsprint and ink, each one can set a newspaper back $27 to $65, according to newspapers and newsprint suppliers. Such breaks in four-color runs also result in about 300-500 wasted copies to correct registration problems and ink and water settings.

This excludes smashed rubber blankets, which are sometimes the result of web breaks, costing about $125 each for double-width newspaper presses and $75 for single-width units.

Over time, the accrued expense of web breaks can be considerable. Edwards estimates that since the inception of the Sentinel's program in August 1982, press crews there have prevented more than 7,000 web breaks that would have cost the newspaper about $200,000 and nearly 1,200 hours in downtime.

To encourage pressmen to reduce web breaks, the Sentinel has created a series of six-month competitions among its nine press crews. The crew that runs the most rolls without a web break is rewarded with a trip to a newsprint mill that includes a stay at a wilderness lodge and a fishing trip.

But there is more to the Sentinel program than prizes, Edwards notes.

The campaign to reduce web breaks was preceded by a wider quality-control program that dates from earlier in 1982, when the central Florida daily switched to the offset process and decided to print more process color.

The quality-control program made projections for newsprint waste, but Sentinel executives found in short order that actual waste greatly exceeded projections. "This (web break) program came about because we missed our six-month estimates by quite a bit," Edwards says. "Then we set some ambitious goals."

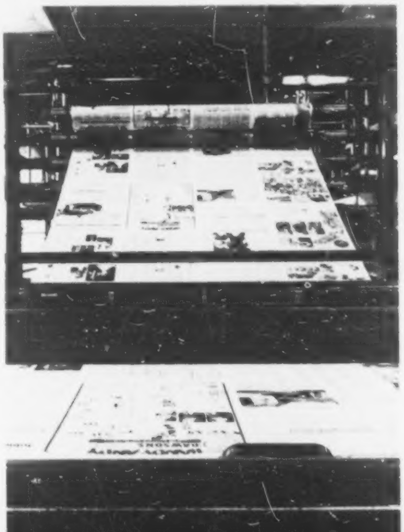
The program built on suggestions contained in an eight-page "Newsprint Conservation Methods" report ANPA issued in 1974 and reissued in 1979.

The report described, by department, how newspapers could cut newsprint waste. In terms of reducing the frequency of web breaks, it offered dozens of suggestions ranging, for example, from storing rolls on edge—"This helps prevent misshapen rolls which can often cause running problems on the press"—to maintaining pressroom relative humidity between 40 and 50 percent.

The Sentinel has realized other benefits besides the savings in newsprint, ink and downtime, Edwards says. "We have much better record-keeping now, and we have a much better rapport with our newsprint suppliers."

The performances of some of the Sentinel crews have been spectacular by industry standards. The record to date, achieved last spring, was 696 rolls without a break.

The averages for the Orlando press crews are also impressive. After the first SWATS competition, average rolls per break was 26.4; in the most recent one, it



Web breaks can be costly.

was 54.8 rolls per break.

That contrasts with one break for every 24.2 rolls that is the current average for 126 newspapers participating in the Pressroom Data Management program of Abitibi-Price Inc., the world's largest newsprint manufacturer. That figure represents an improvement from 1982, when the PDM program showed an average of 18.5 rolls per break, according to Archie M. Bruce, Abitibi-Price's director of marketing services.

"There has been a steady industry improvement over the years," he says. Contributing to that, Bruce says, have been:

- Better communications between user and supplier
- Higher and more uniform moisture content of newsprint
- More attention being paid to press maintenance, newsprint waste and other considerations that affect web breaks.

Bruce calls Orlando's program "relatively unique," adding that the daily's management "seems to have struck a responsive chord in the press crews."

At the Sentinel, Edwards reports that the results have drawn a parade of newspaper visitors to Orlando, but he is unaware of any cases where another paper was so inspired that it adopted his pressroom's whole program.

Many newspapers monitor newsprint waste through their press preventive maintenance programs or by participating in Abitibi's PDM program—the only one of its kind. But some newspapers add a wrinkle or two.

For instance, The Detroit News and a few other dailies measure the temperature of incoming newsprint rolls.

Jack Delphy, assistant production manager at the News, says newsprint must be no colder than 40 degrees Fahrenheit to run well on the press. Using an inexpensive Heathkit thermometer with a probe, "we've found a way of taking the temperature of a roll," he says, by reaching into the core with the probe. If the roll is too cold, it is moved to a warmer location.

The consensus among production executives is that the matter of minimizing web breaks will become more of a priority. These executives see the trend toward building offset plants continuing, along with the corresponding desire to print more color.

In addition, ANPA's Cashau points out that despite the current stabilization of newsprint prices, publishers can expect price increases in the future.

On the positive side, technological advances offer the hope of reduced web breaks and wasted newsprint. Bar code technology that is now beginning to make its way into the newsprint industry eventually will help newspapers pinpoint more accurately who is responsible for an excessively large number of web breaks—the mills, the pressroom crew or the press itself.

Although newsprint experts say that bar codes and other developments will help newspapers reduce web breaks, the "human factor" is still the most important variable.

"The 696-roll figure at Orlando proves that most web breaks cannot be attributed to (problems with) newsprint" alone, adds Cashau.

That's why the Sentinel's Edwards will rely on baseball caps, fishing trips or whatever else it takes to keep web breaks and newsprint waste to a minimum. ☐

ANPA
PRESSROOM OPTIONS III
SYMPOSIUM

March 18 & 19, 1986
The Hyatt Regency
O'Hare International Airport, Chicago

This will be the third symposium sponsored by the ANPA Technical Committee focusing on current technical developments, operational experiments, and quality enhancements in the pressroom, including flexographic, letterpress and offset configurations.

Other important topics will include:
- New Ink Technology
- Newsprint Specifications and Color
- Effects of the New Hazard Communication Standard in the Pressroom
- New Press Decisions
- Pressroom Accessories

The $335 registration fee includes admission to all sessions, continental breakfast on both meeting days, luncheon on Tuesday, March 18, and a reception on Monday evening, March 17.

Please call Fred Warner (703) 648-1186 for more information and a registration form **today**.

NEWSPAPERS AND THE POSTAL SERVICE

THE MAILS ARE PRESENTING NEWSPAPERS WITH A VARIETY OF NEW CHALLENGES AFFECTING ALL DEPARTMENTS

BY C. DAVID RAMBO
presstime staff writer

ewspapers and the U.S. Postal Service have one big thing in common: They are the only service providers that still make daily house calls.

But beyond that one happy similarity, the ties that bind the two are frequently frayed.

Increasingly, newspapers and the Postal Service are finding themselves at odds over a number of issues, many of which did not even exist 10 years ago.

Gone are the days when newspapers worried only about their second-class rates, which have been increasing, and the mail service, which has been generally good at the local level [**presstime**, Dec. 1980, p. 18].

Alan Tepper

"Today, because of the profound impact of nearly all postal rates on our business, we are concerned not only with second-class but also with first-and third-class," says Sandra Hardy, vice president of Calkins Newspapers, Levittown, Pa., and chairman of the ANPA Postal Committee. "The high first-class rates significantly increase our expenses, while the low third-class rates drain our revenue base" through direct-mail firms like Advo-System Inc.

Those rate realities are among the major issues that have led newspapers to the crossroads in their relationship with the mails.

The postman once was mainly a partner of the newspaper publisher in efforts to deliver news and information. The relationship is deep-rooted in history, as the first postmaster general, Benjamin Franklin, was also a publisher who relied heavily on the mails to deliver his newspaper.

But the nature of postal operations in the United States changed drastically in 1970 when Congress passed the Postal Reorganization Act, which effectively depoliticized the post office and set the Postal Service on a road toward self-sufficiency.

As one result of this movement toward more businesslike, less-subsidized operations, USPS has emerged as a competitor for newspapers in the delivery of free-standing advertising materials.

The competitive change in the newspaper-USPS relationship only recently was acknowledged by top postal authorities. In March 1984, then-Postmaster General William F. Bolger insisted in a speech to the National Newspaper Association that USPS had not "entered into a partnership with bulk business mailers" and was not "competing with second-class mailers. The Postal Service is your partner, not your competitor."

A personnel shift at the top of the USPS bureaucracy brought a new assessment of the situation.

"The Postal Service can be considered as a competitor of the newspaper industry," Postmaster General Paul N. Carlin said in remarks last September before the ANPA Government Affairs

Committee. "Some retailers who traditionally advertised almost exclusively in newspapers now view mail as an attractive alternative."

Some experts say newspapers, whose total annual revenues about equal the USPS 1984 revenue of $26.5 billion, themselves one day may go on the offensive. If Private Express Statutes are amended, they may expand use of their own carrier forces for delivery of mailable matter—maybe even letters. A more likely example is product samples, says Daniel L. Sikorski, circulation manager of the North Platte (Neb.) Telegraph.

Over the next three to five years, Sikorski predicts, "We are going to have another form of postal delivery in the United States," and newspapers will be part of it. The United Parcel Service, he adds, "sets a good precedent."

The postal maelstrom swirling around the newspaper industry has been further stirred up by lawsuits brought by free-circulation newspapers that want to use second-class rates rather than the generally more expensive third-class for delivery. That issue, some experts have begun to speculate, could lead to an eventual merger of the second-and third-class mail categories.

On a broader scale, newspapers and all other mailers must keep an eye on developments that could seriously weaken the Postal Service's ability to remain viable. Some observers worry, for example, that the combination of ever-increasing postal rates and the potential of electronic, information-transfer technology could lead to the dismantling of Ben Franklin's 210-year-old system.

It all piles up in a large mailbag of issues. They weigh heavily on newspapers' marketing efforts and ultimately on their ability to gather and deliver the news. Thus every department of the newspaper now is concerned with USPS, including advertising, marketing, circulation and even the newsroom.

On the third-class issue alone, "The threat is that with continued loss of advertising revenue, we will not be able to publish quality news products," explains Hardy of the ANPA Postal Committee. "A strong revenue base is essential for a free and independent press."

"The key is fairness," says Jerry W. Friedheim, ANPA executive vice president and general manager. "Newspapers use all classes of mail, and they are entitled to fair rates and service for each class. If unfairly structured rates and unpredictable service damage the ability of newspapers and the Postal Service to serve the public with abundant information flow, then first the public and finally a free society suffer."

Of late, postal affairs have constituted the largest ANPA lobbying effort since the Association in the early 1980s addressed the threat to newspapers posed by telecommunications carriers, especially AT&T, that were eyeing electronic publishing. In the past three years, ANPA spent an average of $400,000 a year on the postal effort. This year it expects to spend about $475,000.

The bulk of the effort will center on issues that have erupted over the past five years:

- Whether the rate for bulk third-class pieces that are presorted to the carrier-route level is unfairly low, and whether "detached labels" used in conjunction with third-class ad packages get an unfair "free ride" because they do not pay full postage independently
- The extent to which Congress will continue to fund subsidies for "preferred" categories, such as the mailing of newspapers within the county of publication
- Some daily newspapers' controversial use of second-class mail as part of their total-market-coverage programs

> *"The threat (from third-class) is that with continued loss of advertising revenue, we will not be able to publish quality news products."*

- Whether delivery service, especially service outside a newspaper's market area, has deteriorated and can be improved
- Whether free newspapers, which now must use third-class mail, should have the right to use the cheaper in-county rates.

The debate has been growing sharper and has resulted in division within newspaper ranks. For example, while the newspaper business through ANPA has espoused a single position on third-class rates—that they should be raised because they are unfairly low—some publishers using third-class have opposed that position.

There even has been a break in harmony between ANPA and its longtime ally, the National Newspaper Association. NNA objects to the use by many daily newspapers of in-county, second-class rates for delivery of total-market-coverage products. ANPA believes that newspapers should be allowed to use the mails however existing regulations allow.

Alan Tepper

Mail copies of Loudoun Times-Mirror, Leesburg, Va., receive address labels.

Who's on third? At the heart of the postal brouhaha for the last couple of years has been the rate for third-class bulk mail that ANPA claims is unfairly low and results in higher-than-necessary first-class rates. Thus, the argument goes, first-class directly subsidizes unsolicited, third-class advertising mail.

Calkins Newspapers' Hardy observes that third-class mail represents 39 percent of total mail volume but only 20 percent of mail revenue. First-class mail accounts for 50 percent of volume and 58 percent of revenue.

Moreover, she maintains, third-class mail does not contribute enough to the Postal Service's "institutional," or overhead, costs. USPS internal accounting procedures assign 61 percent of all institutional costs to first-class but only 15 percent to third-class,she says. "The net result is that for institutional costs, each third-class, regular-rate piece pays 3.3 cents while each first-class piece pays 8.8 cents. Yet an average third-class piece weighs about four times that of the average letter."

USPS maintains that first- and third-class mail "each covers its own costs and makes a suitable contribution to fixed costs. Each class is better for the existence of the other. The main reason that third-class's rates are lower is that its costs are lower."

In addition, the Postal Service says weight "is not a major factor in costs, especially for third class." One reason is that third-class, unlike first-class, is not transported by air, it says.

USPS adds that these and other issues have been argued in regulatory proceedings and before the 2nd Circuit, which "vindicated completely the rates in question. The Postal Service believes the time has come to stop reiterating rate positions that have been tried and found wanting."

Low third-class rates were a big reason for the rise of direct mailers' shared-mail programs that cost newspapers millions of dollars in preprint revenue over the past several years.

In shared mail, two or more preprints are united into a single package and mailed as one piece at relatively low rates.

Reduced rates for third-class mail presorted to the carrier route were instituted in 1979 as part of a major rate case, as USPS recognized an opportunity to increase volume and revenue. True to expectations, volume soared.

Newspapers' Major Postal Concerns

Issue	Major parties involved	Status of legal or regulatory activity
Third-class rates	**ANPA**, which argues that current rates for bulk, carrier-route mail are too low—at the direct expense of first-class mail. In part, because of low rates, direct-mail firms have been able to lure preprinted advertising from newspapers **Advo-System Inc.**, which contends it is entitled to even lower rates because it does much of the sorting and handling typically done by the Postal Service **USPS**, which maintains that growth in third-class is bolstering total revenues to the benefit of all mailers **Direct-Marketing Association**, which generally is satisfied with existing rates but challenges some of the rate-making methods	Appeals filed by ANPA and others over last rate case that took effect Feb. 17, 1985, were rejected in early December by the **2nd U.S. Circuit Court of Appeals.** Issues included propriety of bulk carrier-route rates: 8.3 cents for pieces weighing less than 3.5 ounces, or 38 cents per pound for pieces weighing 3.5 ounces or more. Separately, **USPS governors** are examining the issue, saying "entire area" of third-class "warrants continued attention and study." **Postmaster General Carlin** in late September said filing of next rate case is not "imminent."
Third-class detached labels	**ANPA**, which argues that USPS should collect separate postage for these postcard-like pieces **USPS**, which insists detached labels save money and time **Advo**, which is the biggest user of detached labels and also extols virtues of greater efficiency and savings	Complaint filed by ANPA against detached labels is **pending before the Postal Rate Commission.**
Second-class rates	**Congress** **President** **USPS governors**	**Governors imposed higher rates** effective Jan. 1 based on funding cuts contained in congressional stopgap funding resolution.
"Second-class TMC"	**ANPA**, which upholds the right of newspapers to use second-class mail within confines of existing rules **National Newspaper Association**, which opposes use of second-class for TMC partly because of negative long-term effect it could have on the federal in-county mail subsidy **Advo**, which argues that daily newspapers are trying to mail a separate publication under existing permits **USPS**, which originally sided with ANPA on the issue but now agrees with the Advo position	Complaint filed by Advo against second-class TMC, or "Plus" issues, is **pending before the Postal Rate Commission.** Limitations on use of in-county mail contained in congressional **stopgap funding resolution.**
Use of second-class in-county rates by free-circulation newspapers	The Enterprise of Winchester, Tenn., Tri-Parish Journal Inc. of LaPlace, La., Times Publications Inc. of St. Louis and Gulf Times Inc. of Beckley, W.Va.—**free newspapers** mailed third-class, that want to use in-county rates. They claim that the only difference between them and other newspapers is circulation price, and that rules prohibiting them from in-county rates are unconstitutional **ANPA**, which supports the paid-subscriber rules, saying they prevent distinctions being made between the classes based on content **USPS**, which is resisting free newspapers' bid **Advo**, which also supports paid-subscriber rules but bases position on arguments made in the "second-class TMC" case	Enterprise federal lawsuit was dismissed and **sent back for review by the Postal Rate Commission.** Newspaper plans appeal to the U.S. Supreme Court. **Postal Rate Commission upheld** paid-subscriber rules in Tri-Parish Journal case. Newspaper plans to take case to USPS governors and, if necessary, to appeal in federal court. Lawsuits filed by Times Publications and Gulf Times Inc. are **pending.**

> *Advo's eye-popping expansion seems to have been leveling off, and partly for that reason, third-class volume overall has been growing more slowly.*

Shared mail actively began in 1981, fueling the trend toward higher volume. Hardy describes the evolution of shared mail as a "bonus" for third-class mailers because the mailing technique effectively cut already low per-piece rates.

Those rates now are 8.3 cents for pieces weighing less than 3.5 ounces, and 38 cents per pound for pieces weighing 3.5 ounces or more. For participants in shared mail, the cost could be a fraction of the per-piece cost.

ANPA went to court to protest the case establishing the latest rates, but in December the 2nd U.S. Circuit Court of Appeals rejected the lawsuit. The Association claimed that the Postal Service had insufficient evidence in hand when it settled on those rates, and that the Postal Rate Commission failed to provide an adequate explanation of the rationale for its allocation of overhead costs.

While there is a great difference between first- and third-class rates, there may be less difference in service, and that also irritates newspapers. Last year an ANPA survey in seven cities disclosed that third-class pieces were being delivered nearly as fast as first-class letters [presstime, Aug. 1985, p. 38]. Yet the first-class pieces cost eight times more.

ANPA Chairman and President Richard J.V. Johnson said the study proved that "advertising mailers are getting gourmet service for fast-food prices, and the public is picking up the tab for the difference."

The Postal Service has not commented officially on the survey.

An adjunct to the third-class rates issue is the controversy over detached labels—the postcard-like address cards that accompany shared-mail packages. The Postal Service in March 1980 approved use of the separate labels to "increase efficiency."

Users of detached labels, most frequently direct-mailer Advo, do not pay separate postage even though the labels are handled by mail carriers as separate pieces of mail. Instead, the miniscule weight of the card is added to the weight of the shared-mail piece, and only a charge for the total package is paid.

In October 1983, ANPA filed a complaint with the Postal Rate Commission over the labels, arguing that the Postal Service is losing vital revenue by not charging separately for the labels.

"By charging one price for a detached label and its unaddressed flat, two pieces are traveling for the price of one," Hardy says. "One piece of mail is traveling for free."

In fact, the Association has determined that USPS could have collected about $1 billion for detached-label mail since 1980. Ironically, that is the amount the Postal Service borrowed from the federal government last year for capital expenditures.

The loan was made against a backdrop of USPS losses in 1985 of $251.5 million—an amount Postmaster General Carlin says was less than once projected. The Postal Service anticipates a budget surplus this year.

Although the concern about these issues remains high, the activity surrounding them appears to be easing. Advo's eye-popping expansion of the last few years seems to have been leveling off [presstime, Oct. 1985, p. 6], and partly for that reason, third-class volume overall has been growing more slowly.

Economist Sharon Chown, a consultant to ANPA on postal matters, observes that growth in third-class for the first three quarters of fiscal 1985 was less than 9 percent while the same period a year earlier experienced greater than 20-percent growth.

Third-class rates present not only challenges but also opportunities for newspapers. For example, many papers use the rate for distribution of total-market-coverage publications. Use of third-class, demanded by some retailers who prefer delivery of their ad message by a mailman instead of a youth carrier, offers the ability to target an audience or saturate the market.

Such usage may grow. W. Terry Maguire, ANPA vice president and general counsel, looks for "increasing use of third-class by newspapers to reach a variety of people—non-subscribers, target groups" and others. He says this could come in conjunction with newspapers' making more complete use of the marketing possibilities of their subscriber/non-subscriber databases.

Second-class status. Of more immediate concern to many newspapers than third-class rates and the detached-label issue are second-class rates, historically kept low to facilitate timely delivery of news. Some papers now are finding that because of recent increases, the rates are no longer so attractive. As a consequence, many are using less mail delivery for their regular editions and more carrier delivery.

The Wall Street Journal, for example—which once mailed nearly all its subscribers' copies—in recent years has stepped up use of alternative delivery forces because of rising mail costs. It

Chairman Hardy (left) and ANPA Counsel Tonda F. Rush review Association positions.

now mails only about 60 percent of its 1.9-million circulation, says Paula A. Jameson, house counsel and director of the legal department of Dow Jones & Co. "Our plans are to increase our use of private delivery" in proportion to the extent of increase in second-class mail rates, she says.

Despite such moves on the part of newspapers, second-class volume in the first three quarters of fiscal 1985—which ended Sept. 27, 1985—increased almost 10 percent after years of little or no growth. The Postal Service is not yet sure of reasons for the increase.

Included in the second-class rate structure are: *regular* rates, used for mailings of 5,000 or more copies outside the county of publication; *limited circulation* rates, for fewer than 5,000 copies outside the county; and *in-county* rates. The latter two are subsidized by the federal government in an allocation called "revenue forgone."

In-county and limited-circulation rates are used mainly by small- and medium-size newspapers that mail a hefty portion of their total circulation in the immediate market area, usually in the county of publication. Regular rates apply chiefly to larger dailies that mail relatively few copies. Large newspapers often mail less than 5 percent of total circulation, and those mainly are to pockets of very light penetration in the market area or to far-flung subscribers.

One part of the revenue-forgone subsidy provides money so that mailings in these categories do not pay full institutional, or overhead, costs. The concept dates to Ben Franklin's time when it was established that delivery of news is of utmost importance in a democratic society and should be publicly supported.

The other portion of the revenue-forgone subsidy provides money for USPS direct operating costs attributable to second-class mail. But Congress, recognizing today's greater diversity of information sources, in 1970 set the stage for a phase-out of this portion of the subsidy as part of the Postal Reorganization Act.

Congress established a 16-step phasing schedule to end in 1987 with "full-phased rates." However, the portion of the subsidy for operating costs came to a halt prematurely as 1986 began. (See story, p. 39.) Higher rates were the result.

Norfolk (Va.) papers use second-class for TMC paper Extra.

A big question now is what to expect in terms of continuation of the subsidy to cover institutional costs.

"A lot of people think the days of the subsidy are over, but I disagree," says Robert Brinkmann, general counsel of the National Newspaper Association. He believes that Congress recognizes the importance of small newspapers and that the funding will continue. Brinkmann thinks newspapers will continue their long-term commitment to using the Postal Service, and that USPS in turn will stay committed to serving the newspaper business. The Postal Service wants to keep newspapers, Brinkmann says, partly because "it does not want to become just the deliverer of junk mail."

ANPA's Maguire also thinks the institutional-cost subsidy likely will be extended in the foreseeable future, but, he adds, "I think that it will continue to be a major challenge. There's no permanency here at all."

Hardy says the subsidy "appears likely to decline as Congress focuses on budget-cutting." She warns that "newspapers would be wise to anticipate the possibility that Congress may one day cease to fund the (reduced) in-county rates."

Some newspapers already are prepared for that day. The News-Herald of Panama City, Fla., dislikes the "cost and complications" of mail and tries to "hold down" the number of mail subscriptions, says Publisher Scott A. Fischer.

In fact, Fischer describes himself as "one of the few (newspaper publishers) who don't agree with subsidies for our business." He says he does not believe that newspapers should receive special taxpayer assistance to deliver copies.

There is mounting pressure to curb what some believe are "abuses" of the subsidized in-county rate. One often cited practice is the large, in-county mailings of People and Playboy magazines. Subsidizing those publications violates the historical intent of the revenue forgone subsidy, critics claim.

TMC controversy. Gossip and "skin" magazines are not the only kinds of publications under legislative scrutiny. Daily newspapers' TMC products are also under review. This has set up a squabble mainly between big and small newspapers.

In the late summer of 1983, a number of newspapers found that with some imagination they could extend their benefits under the paid-subscriber rule. The rule requires that to qualify for second-class, at least 50 percent plus one of all copies must be paid. Some newspapers took that to mean that, for example, a newspaper with 10,000 paid circulation could mail up to 9,999 copies to non-subscribers.

Some newspapers consequently mailed entire copies of the regular paper to a large number of non-subscribers.

But many others created what they called another issue of the paper—a "plus" issue—that was distributed to subscribers and non-subscribers alike. Many plus issues contain local news and other information.

Publishers of small newspapers and competitors of big dailies—including direct-mail firms—charge that such publications were created mainly for the purpose of delivering advertising to non-subscribers. Use of the subsidy for this purpose violates the intent of in-county, second-class mail, opponents say.

Some publishers say they had little choice but to use second-class. Sikorski of the North Platte Telegraph points out a problem many have had: His newspaper, when folded in half, is a half-inch too long to qualify for the lowest third-class rates. Current regulations allow a maximum size of 11½-by-13½-by-¾ inches. ANPA has said this requirement prevents "the vast majority of newspapers from qualifying for the third-class presort discount." Postal officials say they do not plan to change the restrictions.

"We never would have [used second-class for TMC] if we'd been allowed to go third-class," Sikorski says. "They forced us, really, to take advantage of a postal loophole."

Many newspaper executives concede that what they are doing is subject to debate. For example, Mark A. Brown, circulation manager of the Scottsbluff (Neb.) Star-Herald, says while his newspaper's second-class TMC project is "complying with the letter of the law . . . we kind of stand on the line and lean over a little bit."

Others say the concept goes way beyond that. They charge that second-class TMC amounts to a "prostituting" of in-county rates.

"We're seeing a real threat to the continuation of second-class, in-county rates" because of the TMC practice, says Geoffrey Edwards, publisher of The Journal Newspapers, a group of five suburban dailies in the Washington, D.C., area that mails nearly 90 percent of its 150,000 circulation via in-county mail. Loss of the subsidy "will drive many [newspapers] out of business," he adds. The Journal Newspapers do not have a regular TMC program, but on occasion the group mails special supplements on a total-market-coverage basis via third-class.

John M. Andrist, publisher of The Journal, a 3,600-circulation weekly in Crosby, N.D., says he mails about 2,000 copies in-county. Recent postal rate increases have been passed on to subscribers who now will bear the brunt of any additional increases, he says. "That's what makes me so defensive when I see my big-city brethren using this in-county [rate] for their advertising-related purposes."

Andrist is a member of the NNA Board of Directors, which opposes the second-class TMC practice. NNA represents primarily weeklies and small dailies, and its board is concerned about long-term effects on most members' delivery operations. In fact, its concern led it to side with Advo in the complaint against second-class TMC the direct-mail company filed with the Postal Rate Commission.

ANPA, on the other hand, believes that newspapers should be free to use existing rules to their best advantage. Representing newspapers of all sizes, the Association "supports the integrity of second-class mail and believes its flexibility is essential to the existence and growth of the newspaper business," says Hardy. "Using second-class mail for TMC programs is an example of this flexibility, and it must be undertaken carefully to preserve the integrity that we all find so important." ANPA also believes that abuses can be corrected if the USPS will enforce existing regulations, and that new rules and legislation are unnecessary.

Carl W. Mangum Jr., president of The Virginian-Pilot and The Ledger-Star of Norfolk, Va., which have a second-class TMC program, says he understands concerns of newspapers that rely on

Postmaster General Carlin last year "told NNA, 'If you have any problems, let us know.' We did, and they responded."

Ledger-Star of Norfolk, Va., which have a second-class TMP program, says he understands concerns of newspapers that rely on
in-county rates. But he also says postal regulations clearly "allow . . . what we're mailing." The Norfolk newspapers' TMC program does not use in-county mail, Mangum adds.

There have been several legislative proposals to curb the practice. Two of them became effective Jan. 1 under terms of a stopgap funding measure that Congress passed in late December.

The changes put new limits on the number of pieces that can be sent at in-county rates. Under the first change, use of the in-county mail category is limited to publications with less than 10,000 circulation, or to those that have more than half of their entire circulation in that county of publication.

Under the second change, new curbs have been imposed on in-county sampling rules that benefit some second-class TMC programs. The allowable weight of "sample" copies if now based on the weight of a newspaper's total in-county mail—not the weight of *all* mailed copies as formerly permitted. The change reduces the base on which some newspapers figure a big part of their second-class TMC activity.

Alan Tepper

Bundles of Loudoun Times-Mirror are put in mailbags for delivery to Post Office.

The upshot of all this? "It may force me into more carrier delivery for TMC products," says Sikorski of North Platte.

Delivery service. Everyone who uses the mails—and that, of course, covers all of us—has at least one bungled-delivery story.

Washington Post labor reporter Peter Perl tells of getting a delayed, mangled letter in December that "looked like a dog had gotten to it." It was accompanied by a "form note" apology from the Postal Service. The letter? An invitation to the Christmas party of the National Association of Letter Carriers.

Such horror stories aside, most newspaper publishers report fairly reliable local mail service. They say they have developed bonds with local postmasters. Problems that arise are solved amicably.

Trouble spots have appeared mainly in long-distance delivery. In those cases, newspaper executives report, USPS personnel from the highest levels have responded quickly.

Daniel L. Sikorski

Robert E. Work, publisher of The Los Angeles Daily Journal, the nation's largest daily newspaper specializing in coverage of law and government, says Postmaster General Carlin last year "told NNA, 'If you have any problems, let us know.' We did, and they responded."

The Daily Journal's problems stemmed from delivery irregularities for its 30,000 copies mailed mainly to locations in California. "Service was getting worse and worse," Work says. "We had people writing letters canceling their subscriptions, saying, 'If you can't get your paper to us on time, we're going to give it up.'"

To get an idea just how bad service was, Work says his company last summer inserted postage-paid cards on which readers could comment on quality of delivery. About 2,000 responded.

The Postal Service selected 200 of those responses as a cross-section of the audience and interviewed them. Since then, "Service has improved," Work says.

Frank A. Strupeck, executive director of the Red Tag News Publications Association, membership of which consists mainly of certain time-sensitive magazines such as Advertising Age and ComputerWorld, attributes long-distance service problems to three factors.

One is the merger last year of so-called "non-preferential" and "preferential" mail. It resulted in second-class mail such as monthly magazines ending up in the surface-mail network that carries more time-sensitive publications. USPS is known to be considering a reversal of that merger. "Somewhere along the line, priorities have to be set," says Strupeck, adding that postal officials say "they can deliver it all, but they can't."

Directly after the "pref/non-pref" merger, "we noticed a direct effect on how fast our newspapers were being delivered," says Scottsbluff Circulation Manager Brown. "For a while, we really got second-class, second-class service."

Brown says copies mailed to what he calls "fringe-local" areas 75-100 miles from his Nebraska town took two or more days to be delivered. They "really should have gotten same-day delivery," he says.

The Star-Herald lost some mail subscribers at that time because of late delivery coupled with a recent subscription price increase, but the situation "seems to have gradually straightened itself out," Brown reports.

The second factor cited by Strupeck is the effect of airline deregulation on mail service. Some airline freight rates "have jumped dramatically," he says, and there has been a reduction of some routes. Overall, he adds, the airlines do not pay USPS

A Lot of People Get Involved in Setting Rates

Newspapers can raise rates whenever they want, within confines of the marketplace. Not so for the U.S. Postal Service.

As a quasi-governmental agency, it must follow a much more encumbered procedure: a rate case that can consume a year or more.

The process greatly resembles a lawsuit. It involves testimony, briefs, comments by any interested party and—like most other Washington, D.C., endeavors—some politics.

The "exercise of power" of the Postal Service is "directed" by the **Board of Governors**, made up of 11 people, nine of whom are appointed by the President and confirmed by the Senate. Each of the nine serves a nine-year term on the board, which is a part-time position. The other two members are the postmaster general and the deputy postmaster general, who are selected by their fellow board members. Current chairman is John R. McKean, president of a San Francisco accounting firm.

Before the governors exercise their authority to establish "reasonable and equitable" classes of mail and rates, however, the USPS must request that the independent **Postal Rate Commission** submit "a recommended decision on changes" in rates or classes. Thus begins a rate or classification case.

The rate commission is made up of five people also appointed by the President and subject to Senate confirmation. They serve six-year terms. Current chairman is Janet D. Steiger of Washington, D.C., author, scholar and consultant, and widow of Rep. William A. Steiger (R-Wis.)

The commission must act on a request for a recommended decision within 10 months. When considering rates, it looks at numerous factors, including financial needs of the Postal Service; impact on the public; "the educational, cultural, scientific, and informational value to the recipient of mail matter"; and anything else the commission deems appropriate.

Once the commission makes its recommendation, it goes to the governors who can take any action they choose. They can accept it, reject it, return it for reconsideration, implement the recommended rates "under protest" or make changes to the recommendation.

Any party dissatisfied with the governors' actions can file an appeal with one of the U.S. Circuit Courts of Appeals. ANPA and several other parties filed such an appeal over the last rate case in December 1984, but it was unsuccessful. (See story, p. 39.)

There have been nine rate cases filed in the 15 years since current procedures were established by Congress in the Postal Reorganization Act. Six have been general rate cases involving all classes of mail; three have involved rates for one type of mail, such as those for Express Mail.

special heed as they did before deregulation.

The third factor is that since the last postal rate case, the USPS staff's workload for long-distance deliveries has increased. The reason is that changes in the rates made it less advantageous for mailers to haul their publications to drop points closer to the destination. Fewer mailers are doing so, putting more burden on USPS.

Many newspapers sum up their mail delivery experiences in a fashion similar to the words of Joseph P. Armenia, publisher of the Tonawanda (N.Y.) News. "It's always just been an ongoing thing," he says, with problems "sporadic" and "few in number."

The News mails about 2 percent of its circulation out of state. Most of those copies are destined for Florida, which also happens to be the paper's "biggest problem state" for delivery, Armenia says.

But sometimes people exaggerate, Armenia believes. "We find that problems aren't as bad as the subscriber makes it out to be," he says.

Postal mandate and the future. The main reason newspapers get good treatment at relatively low rates lies in the historic postal mandate to aid in dissemination of important information. Newspapers and magazines traditionally have been distinguished from other non-first-class mail—such as unsolicited advertising materials and shoppers—by their purchase price.

But there are some strong constitutional challenges that could lead to the elimination of the "paid-subscriber rule." ANPA General Counsel Maguire says it is possible the challenges could lead to a union of second- and third-class. If that were to happen, newspapers might have to pay a surcharge to receive delivery before matter such as shared mail, he says. "For better or worse," he adds, "the trend is going to be toward increasing pressure to treat mail regardless of its content." An indicator of this is the Postal Service's Express Mail, which makes no distinction between "a brick and a book," Maguire points out.

Another indication of the trend is the constitutional challenge raised by four free weekly newspapers. They claim that, except for lack of a purchase price, they are like many other paid publications mailed at in-county rates. They say that they, too, should be allowed to use the low rates rather than third-class, which is more expensive and possibly less efficient.

The four weeklies—The Enterprise of Winchester, Tenn.; Tri-Parish Journal Inc. of LaPlace, La., which publishes the River Parishes Sun; Times Publications Inc. of St. Louis; and Gulf Times Inc. of Beckley, W. Va.—originally filed separate lawsuits.

The Enterprise won a round in U.S. District Court, but the 6th U.S. Circuit Court of Appeals reversed the decision, saying the Postal Rate Commission should initially hear matters pertaining to rates and classification. The Enterprise plans an appeal to the U.S. Supreme Court while proceeding to the commission as the 6th Circuit directed.

The Tri-Parish Journal case was filed in U.S. District Court, which sent it to the rate commission. The commission in November upheld the paid-subscriber rules, saying they allow the public, not USPS, to determine which periodicals "warrant second-class status." Tri-Parish Journal plans to take its case to the postal Board of Governors and then, if unsuccessful, to a federal appeals court. The other two cases are pending in separate U.S. District Courts.

John M. Andrist

The next decade holds many of the same kinds of challenges for newspapers in their relationship with USPS. But there may be many opportunities as well.

Maguire paints a variegated picture.

For first-class mail, he predicts that newspapers will focus more on how much they spend in this category. Some already are doing so. The New York Times deposits into the mailstream more than 600,000 first-class pieces every month. It receives more than 400,000. The Times has installed computerized equipment to make the handling of such mail more efficient and less expensive.

ANPA is planning a study on newspapers' first-class expenditures to get a better idea of how much newspapers contribute to overall first-class volume and revenue.

There may be special opportunities in the first-class realm. Maguire says if certain "Private Express Statutes" were lifted, "and they may be lifted in some form over the next 10 years," newspapers may consider using their own carrier forces to offer the public a delivery service for letters and other mail currently the exclusive province of USPS.

Regarding second-class, Maguire predicts that newspapers will build upon their experience in using the Postal Service and "explore other ways that newspapers can meet challenges posed in the circulation field today."

As an example, newspapers might want to explore with USPS new delivery services as Belgian newspapers did with the Belgian post office. In that country, Maguire notes, the post office since Jan. 1, 1985, has made a second daily delivery run so that the majority of addresses in the country are able to receive a newspaper before 8 a.m.

> *The next decade holds many of the same kinds of challenges for newspapers. But there may be many opportunities as well.*

Twice-a-day delivery was provided in most parts of the United States starting in the early 1900s. But it was phased out in 1950 except in those cities where there are high volumes of business mail.

To all those possibilities add an uncertainty: the future of electronic delivery of news, advertising and other information, and electronic transactions such as bill-paying. The market-research firm International Resource Development Inc. of Norwalk, Conn., predicts there will be 180 billion first-class letters mailed in 1994, but that figure would have been 20-percent higher were it not for the advent of electronic mail.

"I think this is going to be one of the central issues over the next decade," says NNA's Brinkmann.

Above all, ANPA Executive Vice President Friedheim says, newspapers will continue to face the challenge of meeting "unfair competitive threats" with the appropriate "public-policy response," and of meeting "a general competitive threat with a general competitive response." ☐

INTERNATIONAL EDITIONS

More U.S. newspapers have followed the International Herald Tribune overseas

BY MARGARET GENOVESE
presstime staff writer

Americans traveling or living abroad, and English-speaking citizens of foreign countries with a yen for news reported with an American accent, have a variety of U.S. daily newspapers available to them today.

They range from the venerable International Herald Tribune to an assortment of newer arrivals on the global scene: international editions of The Wall Street Journal, USA Today, The Miami Herald and The Christian Science Monitor.

The circulation of these international editions and the Herald Tribune has been growing and now totals about 300,000.

But because the audiences being served are so widely dispersed, distribution can be a logistical nightmare. The papers attempt to recover these costs by charging a premium for single copies or subscriptions, with the cost tending to increase as distance from the central distribution point increases. In some cases, a copy, which may be 16 pages or even smaller, can cost the foreign-currency equivalent of more than $2.

With advertising for these specialized publications not always easy to come by, only the International Herald Tribune and The Asian Wall Street Journal are making a profit.

Publishing abroad has other risks, too. In a recent court case, the editor of The Asian Wall Street Journal felt compelled to apologize for publishing an editorial critical of the judicial system in Singapore.

Shortly after that, an edition of the International Herald Tribune was confiscated by the government of Kenya because of an article on AIDS in Africa. "Something like that is happening somewhere in the world almost every week," says IHT Publisher Lee W. Huebner.

The granddaddy. Begun 99 years ago as the Paris edition of the New York Herald, the "IHT" is the granddaddy of international editions of U.S. daily newspapers. It outlived its parent publication and now is owned jointly by The New York Times Co., The Washington Post Co. and Whitney Communications Co.

Huebner does not view The Wall Street Journal or USA Today, which circulate daily in many of the same areas as the IHT, as head-to-head competitors. What convinces him of this, he says, is that the circulation of the IHT has grown at a record pace in recent years, even as these publications have entered the market.

"We see ourselves occupying a special niche," says Huebner. "That means that these publications don't compete directly with us." The Journal is financially oriented, while the IHT is more of a general-interest newspaper, he observes. USA Today, he adds, "is aiming at American tourists and American military people, which are not a large part of our audience."

Although it began in 1887 as a newspaper for Americans living in Paris, the IHT today calls itself "the global newspaper"—and its readership reflects that. Only 35 percent of its readers are American citizens. Of those, 56 percent have lived in their country of residence for more than five years.

Huebner describes the IHT reader as "an international business, professional or government person, usually . . . a person whose work or whose interests go beyond national boundaries" and who needs the IHT to supplement a national or local newspaper.

As full-page ads in The New York Times and other publications have been trumpeting in recent months, the IHT's circulation has been growing dramatically, from 129,827 in 1980 to 164,639 in 1985, a 27-percent increase.

What accounts for the growth? "I think it's two things principally," says Huebner. "I think the newspaper editorially is getting stronger all the time. And I think our distribution is improving."

The IHT began expanding its printing sites beyond Paris in 1974 when it began publishing in London. Then sites were added in Zurich, Switzerland, in 1977; Hong Kong in 1980; Singapore in 1982; Marseille, France, in 1983; and The Hague, Netherlands, in 1984. It plans to start publishing in Miami early this year for markets in North, Central and South America.

The company uses a satellite to beam completed pages to the Asian print sites and may switch to satellite distribution this year in Europe, where it currently uses land lines. It also will use satellite transmission to Miami.

Over the years, the IHT's ownership also has expanded. In 1934, the Paris Herald absorbed

THE WALL STREET JOURNAL

In Paris, reader scans The Wall Street Journal/Europe.

the Chicago Tribune's 16-year-old Paris edition. In 1966, The Washington Post acquired an ownership interest, and the next year, The New York Times became a part owner after closing the international edition it had operated for 18 years.

When the IHT competed with the Times' international edition, both papers lost money, Huebner says. Since the early 1970s, however, the IHT has been profitable. When all results for 1985 are in, they will show that profits were "easily double" the amount made in 1984, he adds.

About 60 percent of the IHT's total revenue is derived from advertising, the remainder from circulation, says Huebner. This is a significantly greater reliance on circulation revenue than the U.S. daily newspaper average of about 22 percent [presstime, March 1985, p. 6].

Major international corporations are a leading source of the IHT's advertising. In 1985, high technology firms were big advertisers, according to Huebner. Other large categories are financial institutions, luxury products and travel-related advertising.

About 25 percent of its advertisers are U.S. companies, another 25 percent come from the United Kingdom. The rest are broadly distributed around the world. Advertisers can buy the Asian circulation (approximately 30,000), the non-Asian circulation or the entire circulation. "The vast majority of our advertisers do buy the 'whole world,'" reports Huebner.

While the advertising may change depending on where the edition is published, editorial copy is the same worldwide.

Because most of the copy comes from The New York Times and The Washington Post, the IHT's 50-member editorial staff consists mainly of editors. The paper supplements that copy with stories from its correspondents in London, Frankfurt, Singapore and New York City.

It was a Times story that caused the confiscation of the IHT in Kenya in November. While the newspaper does not usually have a problem in Kenya or most parts of Africa, the Middle East is "often difficult," says Huebner. For instance, the IHT did not circulate for three or four days in Saudi Arabia recently when the paper carried a series on that country.

However, only in "very, very few cases" has the newspaper been kept out of a country for more than a day or two, says Huebner.

Because the audiences being served are so widely dispersed, distribution can be a logistical nightmare.

The business specialist. The political censorship problem "can be exaggerated," says Peter R. Kann, president of the international division of Dow Jones & Co. Inc.

From "time to time," articles have been clipped out or blacked out of The Asian Wall Street Journal and distribution has been held up; "very, very occasionally" there have been more serious problems with content, Kann says.

"The trend has been toward more political confidence among the Asian countries and thus, a somewhat more benevolent or, I would say, smarter attitude toward the press," he says.

Kann declines comment on the Asian Journal editor's recent apology to Singapore because the matter is still before the courts there.

A larger headache, he observes, is distribution. "Circulations are not so high in any particular country for an English-language publication that you can justify having printing plants in every one of them, so you are constantly looking at how you get newspapers from one part of a continent to the other and trying to effect same-day distribution," he says. "That is a real challenge."

Distribution difficulty is the primary reason the Journal has not gone ahead with a Latin American edition that it has been considering for several years, according to Kann.

The Wall Street Journal was introduced internationally first in Asia in 1976 and then in Europe seven years later.

Based in Hong Kong and originally printed by a contract printer, the Asian edition got its own printing plant there last year. It also has a satellite operation in Singapore. The Wall Street Journal/Europe has offices in Brussels and transmits pages by land lines to a printer in the Netherlands.

Publishing internationally causes U.S. newspapers to face a "distinct choice," Kann says. They can essentially transfer their U.S. edition overseas, reduce it, perhaps add more international coverage and retitle it an "international edition." Or they can take a more expensive, alternative path and produce a different edition, recognizing that while some news is of common interest around the world, there is other news of more regional interest. "In our case, we have gone very much that latter route," says Kann.

That means each of the Journal's international editions has its own staff of about 30 reporters and editors.

"They operate, in large part, like separate newspapers," Kann says. "On any given day, they will pick up some portion of The Wall Street Journal's news coverage, because the United States remains the major business/financial center, but in Asia the percentage of Asian news might run up to 50 percent, Europe might run anywhere from 25 to 40 percent."

From a distance, the European edition might easily be mistaken for the domestic version. But the Asian edition discarded the Journal's traditional vertical make-up and column rules after discovering that its Asian audience was accustomed to horizontal layout.

A 1985 readership study revealed that 63.3 percent of the readers of the Asian edition are Asian and

USA Today is now available via satellite in Singapore.

66.3 percent of the readers of European edition are European.

In two years, the latter edition has achieved circulation of 32,000, surpassing the 28,000 circulation of the older Asian edition. "We thought the growth (in Europe) would be nice and slow the way it was in Asia," says Lawrence A. Armour, Dow Jones director of corporate relations.

He attributes the success in Europe to the experience and knowledge that the Journal developed in Asia and to the fact that the European market had been primed by publications such as the international edition of London's Financial Times and the IHT.

"The Asian Journal is never likely to be a huge-circulation paper," says Armour "but it is read by the decision makers, the opinion makers, the important people throughout the Asiatic community."

Furthermore, The Asian Wall Street Journal is profitable, having broken into the black after six years. The European edition, as yet, is not. But Armour says its losses are dwindling.

Dow Jones officials declined to elaborate on revenues of the Asian Journal, other than to say advertising accounts for a bigger share than circulation.

The largest part of the advertising in The Asian Wall Street Journal comes from Asian advertisers, according to Kann. "That is something we consider a very healthy trend because it shows acceptance out there by advertisers as well as readers," he says. Advertisers in the United States and Europe, in about equal proportion, are the two main sources of advertising for the European edition.

Advertisers in the domestic Journal can add one or both of the international editions at a discounted rate.

Like the IHT, the Journal believes it has its own niche. "We are trying very hard—and succeeding I think—to be the global business and financial and economic newspaper, and in that sense I think we more or less stand alone," Armour says.

The upstart. Likewise, USA Today "fits" into the mix of English-language publications available abroad "in a way that is totally separate from the others in that we are the only ones that produce essentially an American newspaper," says Gannett Co. International President David Mazzarella.

Aside from the juggling of some editorial copy, the deletion of some ads, and the addition of European and Asian weather maps, USA Today's International Edition basically is a condensed version of its domestic counterpart, right down to the heavy use of color.

In fact, the only way to tell at a glance whether a particular copy is domestic or international is that the international version is so identified in the right-hand ear of the front page and the cost of the paper in local currency appears above the nameplate.

Mazzarella says because it does not emphasize international news, it rarely encounters censorship problems. However, he recalls that it ran into some problems in several Middle East countries with a front-page story that included a photograph of a woman in a bathing suit.

Reversing The Wall Street Journal's path, USA Today first went international in Europe and then expanded to Asia.

The international edition has been distributed in Europe since July 1984. After being made up at USA Today headquarters in Arlington, Va., pages are sent by satellite to New York, where Gannett's Westchester Rockland Newspapers prints the papers that are airlifted to London. In May, it intends to begin printing the Europe-bound papers in Zurich.

The Latin American market is becoming a hot spot for U.S. publishers.

Last October, Gannett began printing via satellite link to Singapore for distribution in Asia.

European circulation hit a high in August 1985 of 20,000, according to Mazzarella. "It's an encouraging result," he says, "after having been there barely a year, without a printing site . . . and without excessive publicity."

Asian circulation numbers are not yet available—more than 15,000 copies a day are being printed in Singapore—but Mazzarella expects "the same results, comparatively."

The number of U.S. residents in Europe—including U.S. military personnel and their dependents—totals 1.2 million, compared with 350,000 for the Asian markets the newspaper "is most interested in," he reports. American tourists are in roughly the same ratio, about 2.1 million a year in Asia and 6 million in Europe.

Although USA Today has set its sights partially on U.S. military personnel overseas, it has not had any discernible impact on either the European or Pacific editions of The Stars and Stripes, according to Air Force Col. Stanley F. Jensen, spokesman for the newspaper published by the Defense Department for military personnel and their families stationed overseas.

USA Today, the international editions of The Wall Street Journal and the IHT are all sold at overseas U.S. military bases.

In addition to Americans traveling or living abroad, Gannett hopes to attract some foreign readers. A study about a year ago showed that 23 percent of the people buying the paper in Europe were foreign nationals, a higher percentage than expected, according to Mazzarella.

In an interview published in the newspaper last September, Gannett Chairman and Chief Executive Officer Allen H. Neuharth called the international edition "a prestige item, rather than a quest for high profitability."

But that does not mean Gannett believes the international edition will never make money, says Mazzarella, although he says it's "too early to say" when profitability might be achieved. "Our first priority was to get distribution in place and make sure the paper was getting to where it was supposed to be getting on time and was available," he says.

Although advertising has been steadily increasing, "it still is not a major factor at this point." The leading advertiser in the international edition in 1985 was AT&T; others were airlines, hotels and FTD, the floral delivery organization.

As with The Wall Street Journal, advertisers in the domestic version of USA Today can place the same ad in the international edition at a discount.

USA Today hopes to expand its distribution in Latin America, says Mazzarella, although he adds that the company has no plans at this time to print the paper there. Currently, the domestic version is distributed in some Caribbean, Central American and South American countries from printing sites in Miami, Houston and Los Angeles.

The Latin American connection. Until recently, The Miami Herald did not have to worry about competition: It was the only U.S. daily publishing an international edition circulated in Latin America. Now the Latin American market is becoming a publishing hot spot.

"We expect quite a bit of competition in the market in the next few months because of the International Herald Tribune's entry," says Mark E. Seibel, the Herald's foreign editor.

In response, deadlines for the Herald's international edition were pushed back in late November to enable the paper to carry closing stock prices, expanded business coverage and later news in general. "There are other product improvements planned," says Seibel.

Dating from 1946, the Herald's international edition is printed in two locations: Miami for distribution in Guatemala, El Salvador, Colombia, Argentina and Brazil; and Panama, for distribution there. Page negatives are flown from Miami to the Panamanian print site.

"The whole initiative for the international edition was the American community in Panama," Seibel explains. However, with ratification of the Panama Canal Treaty in 1978, the American population there has declined. Now, the Herald believes the audience to be, more generally, U.S. citizens throughout Latin America, plus some tourists and bilingual local citizens. "We think it primarily is a business audience, says Seibel.

The paper contains much of the same news and features of the domestic edition, plus an expanded Latin American report. It does not have a separate reporting staff. One editor is assigned to see that all of the pieces of the publication come together.

The edition's circulation is 6,500 daily and 8,900 Sunday. The venture "breaks even," according to Kathryn Killingsworth, administrative assistant to the president of the Herald.

Advertisers may buy the international edition separately or in combination with the domestic edition at a discount.

The weekly overview. The international edition of The Christian Science Monitor differs markedly from others in the field. For one thing, it is owned by a religious group—the First Church of Christ, Scientist.

For another, its target audience is not people looking for news about events as they happen, but people who are interested in "what is going on behind the news," says J. Anthony Periton, international manager.

And as a weekly, it competes not against dailies but against other weekly publications.

Although printed in Nottingham, England, the edition is edited and composed at the Monitor's Boston headquarters. Page negatives are flown to London.

Composed primarily of stories that have appeared in the daily Monitor, it is the only one of the U.S. overseas newspapers that is not entirely in English. Each week, one political article and one religious article are translated into French and German.

Currently, circulation of the international edition is about 17,000. Nearly half of the subscribers are in the United Kingdom, with another 5,000 on the continent of Europe and 2,000 in Australia. The majority are believed to be Christian Scientists. Jeffrey J. Carmel, managing editor of the international edition, says he is trying to make the newspaper attractive to a broader audience.

Since becoming editor last year, Carmel has experimented with graphics, color and content, including increasing the number of stories written exclusively for the international edition.

The edition was begun in 1975 after the Monitor folded an uneconomical daily international edition published in London since the 1960s. The weekly edition has not proved to be profitable either, says Periton, but it "is something that the Monitor is committed to."

Remarkably, the advertising to circulation revenue ratio for the international edition of the Monitor is almost completely the reverse of most U.S. daily newspapers. It receives only about 25 percent of its revenue from advertising, about 75 percent from circulation, according to Richard E. Ralson, manager of the Monitor's marketing group.

He expects advertising volume to grow this year when the Monitor begins a program aimed at doubling the international edition's circulation, primarily in the United Kingdom and Canada. Heretofore, the international edition has not been available in Canada.

Ralston says that initially the edition will be flown to Canada from London, but eventually the Monitor plans to print it "somewhere in North America." ☐

Publishers from other countries enter the U.S. market

Just as U.S. publishers are extending their reach overseas, some foreign publishers view the United States as a land of opportunity.

The Standard in St. Catharines, Ontario, began publishing a weekly edition in Florida in 1982 to keep Canadian "snowbirds" who have retired to or vacation in the southern United States informed of developments at home.

Published between Nov. 1 and April 30, the Canadian News will probably have a circulation exceeding 6,000 at the height of the winter season in mid-March, according to William C. Leeder, the edition's general manager.

Printed by The News-Chief in Winter Haven, it contains Canadian news edited by The Standard's staff plus some news about the social activities of Canadians in the United States gathered by Leeder.

Farther afield, China Daily, an English-language newspaper in the People's Republic of China, began publishing a North American edition in New York in 1983 using satellite transmission. It now has a circulation of about 4,000 in the United States and Canada, according to Karen C. Tse, business manager.

More recently, Renmin Ribao (People's Daily), the official publication of China's Party Central Committee, began printing an overseas edition in six cities around the globe, including San Francisco and New York, in July. The Chinese-language paper already has a circulation of between 20,000 and 25,000 in the United States and Canada, reports Christopher Noyes, president and general manager of China Books & Periodicals Inc., the U.S. agent for People's Daily.

The Financial Times, London's business daily, also began printing its international edition in Bell Mawr, N.J., in July. It had been flying copies to the United States from Frankfurt, West Germany, since 1979, according to Laurance V. Allen, executive vice president of FT Publications, the Times' U.S. company. Since starting to print in the United States, it has increased North American circulation from 6,000 to 8,750, he says.

Soon to debut here is an English-language version of Pravda, the organ of the Central Committee of the Communist party in the Soviet Union. It will be published by a U.S. firm, Associated Publishers Inc. of St. Paul, Minn., which has a team of translators that will convert the paper from Russian. Charles C. Cox, president of Associated Publishers, says Pravda is "aware" of his company's intentions. "Everything is non-committal, and we kind of like it that way," he says.

Cox does not look for a "mass audience" for the paper. He sees the market as the academic world, libraries, government agencies and the news media. However, he adds, he has heard from distributors who want to put it on their newsstands.

Jay T. Harris

An Advocate for Minorities and Newspapers

BY MARCIA RUTH
presstime staff writer

As Richard Smyser remembers it now, he and Jay T. Harris were driving one night through the South Side of Chicago when Harris, then assistant dean of the Medill School of Journalism at Northwestern University, pointed to the lighted windows of low-income housing and challenged the chairman of the American Society of Newspaper Editors Minorities Committee: "What are we going to do to get these people to read newspapers?"

"I never forgot it," says Smyser, editor of The Oak Ridger in Oak Ridge, Tenn., and a former ASNE president. Harris has the ability to bring forward "obvious" things "in a very tactful way, showing how blind we've been," Smyser says.

Initially known best for his work behind scenes to increase minority employment in newspapers, Harris has moved into the limelight over the past few years. After working at Northwestern since 1973, he went to Gannett News Service in 1982, first as a reporter, then as a columnist. This March, at the age of 36, he suddenly emerged as executive editor of Knight-Ridder's Philadelphia Daily News.

Currently in demand as a speaker, Harris often addresses the touchy subject of "advocacy" in journalism, which he relates to his long commitment to minority hiring and coverage.

Anticipating that some might be "at least mildly troubled" by his views and "insist that advocacy and journalism must never be mixed," Harris defines his terms. He rejects "completely" journalists who "tell only part of the story, twist the truth, who mask opinion as news," Harris explained in an enthusiastically received speech to the annual convention of the Society of Professional Journalists, Sigma Delta Chi, last November in Phoenix. "The advocacy of which I speak is done through the telling of the whole story of American life, not just part of it."

Harris sees his commitment to minorities and to advocacy as related. "I have never put [minority employment] in the context of just jobs," he says. "It is always in the context of the Kerner Report, which said the press—by its failure to include the full range of views—contributes to a problem. And I care enough about the craft and enough about the society to see these problems solved."

It was such qualities that drew Daily News editor Zackary Stalberg to Harris: "Basically, I needed somebody who I really felt could keep pushing the basic values of the Daily News within the newsroom"—values Stalberg defines as beginning with "a real commitment to covering the city."

When word got around that Harris "didn't have city desk experience, that's all people talked about, but he got here and quickly demonstrated it didn't matter," says City Editor Michael Freeman. "He's got great instincts. He's aggressive. . . . He sort of bores through an issue like an electric drill through balsa wood."

"He's a major talent in our business," says James K. Batten, president of Knight-Ridder Newspapers Inc. "A number of us have been interested in Jay Harris for a number of years."

In a kind of baptism by fire, Harris' style came forward immediately. Barely a month after he arrived, Philadelphia police dropped a bomb on MOVE, a fortified commune in a residential neighborhood, killing 11 people and destroying more than 60 homes. Since then, the incident has become a central metaphor for Harris, who believes lack of extensive coverage of MOVE's gradual buildup of arms and explosives as well as the city's longstanding failure to diffuse the potential for violence contributed to the tragedy.

In subsequent coverage, the Daily News tried to "expose all sides to the public, not just take a side," says Harris.

The new editor's reporting skills first received public recognition when he and Ralph S. Moyed shared the Associated Press Managing Editors' 1972 public service award for a series on heroin trafficking in Wilmington, Del., where Harris worked for the News-Journal papers.

His intellectual gifts came to the attention of Medill Dean I.W. Cole when Harris won a year-long Gannett Urban Journalism Fellowship in 1973. Observing the young reporter sharpening his skills in social science research and what later became known as "precision journalism"—the application of computers to news analysis—Cole asked Harris to stay.

"He's absolutely outstanding, one of the best persons I've ever worked with," says Cole, who recalls Harris as "very perceptive, very bright, very hard-working, quite independent," as well as "inner-directed" and "rational."

It was during his years at Northwestern that Harris began The Consortium for the Advancement of Minorities in Journalism Education, which drew minority students from black colleges into the journalism programs of mainstream universities from 1978 to 1984. Harris himself earned a bachelor's degree in English in 1970 from a predominantly black institution, Lincoln University in Pennsylvania. From 1978 to 1984, he also produced the statistical base for ASNE's campaign for minority employment in the newsroom.

Harris and his wife, Christine, are frequently described as a "team." A former Chicago radio and television anchor and commentator, she was director of the minorities consortium for its last four years. The Harrises now live in Philadelphia with their two daughters, Jamarah and Shala. □

Newspapers' research projects must be carefully tailored for individual market needs

BY MAXWELL E. McCOMBS

If you have teenage children or grandchildren, stereo components probably were on your Christmas shopping list, confronting you with a bewildering array of choices among speakers, consoles and turntables of every make and price. Add the complexities of tape, plus the options of Dolby sound (types A, B or C yet), and you have something like the situation faced by many purchasers and consumers of newspaper research. The options are numerous and technical, the price-tags varied, and it is not easy for the buyer to make meaningful choices.

Increasingly, daily newspapers with circulations of 100,000 or more—and even some smaller ones—are adding research managers and analysts to their staffs to guide these choices. During the past decade, the Newspaper Research Council has grown from a few dozen newspaper researchers to approximately 200. This growth is testimony both to the increased use and value of research and to the recognition that skillful use of research requires technical expertise and competence.

But the increased use of research and the need for technical expertise pose major problems for most smaller newspapers. Without an in-house researcher to guide the design and implementation of research, smaller papers frequently do not obtain the best possible return on their research investments. Newspapers in smaller markets cannot blindly follow the results of national research or studies done in major markets. Nor should they routinely purchase off-the-shelf products offered by commercial researchers.

Using research is not a magic solution to editorial, management and marketing decision-making. Research is feedback. Unless this feedback is carefully calibrated to be in tune with the local community and a particular newspaper's management style, the research will not yield good dividends. Design of good research begins with the local situation and with the questions a newspaper needs answered in order to improve its product, service and profitability. Only a person steeped in this local situation can specify the design of research that will yield useful answers.

Maxwell E. McCombs

But while good research begins with questions derived from the local situation, in practice, research frequently draws upon questions and techniques honed in other people's studies. Published national studies (such as those done by the Newspaper Advertising Bureau) and compilations of local studies (such as the work of the "NRC Mining Company") suggest research perspectives and provide benchmarks for comparing local results. The standard designs of various commercial research firms offer polished starting points. But all such sources for tactical research operations must be evaluated in the context of the local situation.

Too often research designs developed elsewhere are applied by rote to smaller markets. The results can be reams of demographic analyses, which don't really explain *why* things are the way they are; or psychographic analyses, which currently are in favor as a research perspective. For example, I have seen studies without any questions on ethnic background in markets with major ethnic populations, because the borrowed design hadn't included that variable.

One vastly under-utilized resource for designing research for smaller newspapers is the research-trained faculty from journalism programs at nearby colleges and universities. While you may think of teaching as the primary activity of college faculties, all first-rate colleges and universities stress a trilogy of activity: teaching, research and public service. Working with your newspaper to design new research is an important public service activity for these faculty and offers them a research opportunity as well. These faculty members also bring their knowledge of newspaper and social science research to your situation.

Because this kind of activity is expected of faculty—or put another way, because much of the overhead costs of this counseling is absorbed by the campus—these people can spend time learning your situation without charging the rates attendant to commercial operations. Many projects that can be completed at smaller newspapers by campus researchers for a few thousand dollars simply are not viable commercial accounts. But these projects do bring together local newspapers and local campuses in profitable relationships not measured just in dollars.

The extra dividend in this relationship is the successful implementation of research findings. Thoughtful implementation requires a major investment of time, especially at newspapers where few executives or staff members are experienced in working with research findings. But it is this investment of time with an outside consultant that yields extra dividends.

Casually assembled research, like the casually selected stereo set, creates little satisfaction. Avoiding cacophonous results requires thoughtful investments of time and money. Caveat emptor! ☐

McCombs is chairman of the Department of Journalism at the University of Texas. Austin. Once a reporter for the Times-Picayune of New Orleans, he was director of the Communications Research Center at Syracuse University in 1973-85 and director of the ANPA News Research Center in 1975-84.

LEGISLATION

AMA opposition to tobacco ads finds support in Congress

Less than a week after the American Medical Association advocated federal legislation to prohibit all forms of tobacco advertising—a move that was protested by ANPA and others on grounds it would infringe on First Amendment rights of free speech—two bills were introduced in Congress aimed at making tobacco advertising economically unattractive.

Sponsors of the legislation believe their measures avoid the constitutional issue because they would not prohibit tobacco advertising but rather would deny business tax deductions for costs associated with such advertising.

However, opponents said these measures also could be found by courts to be unacceptable restrictions.

Meeting in Washington, D.C., the AMA's 371-member House of Delegates Dec. 10 overwhelmingly adopted a resolution to "oppose any form of media advertising of tobacco products by initiating and supporting legislation prohibiting such advertising."

Prior to the vote, ANPA and the Magazine Publishers Association urged the AMA to "recognize the fundamental constitutional problem" presented by a ban on tobacco advertising.

In a letter cosigned by ANPA Executive Vice President Jerry W. Friedheim, the publishing organizations said: "Products that can be legally sold in our society are entitled to be advertised; if it is legal to sell a product, it should be legal to advertise it."

Other organizations opposing the AMA call for a ban included the American Association of Advertising Agencies, the American Advertising Federation, the Association of National Advertisers and the American Civil Liberties Union.

In 1971, Congress banned cigarette advertising on radio and television. The U.S. Supreme Court later affirmed the ban without issuing an opinion.

Kirk B. Johnson, general counsel of the AMA, said that organization believes it has a "very strong case" in favor of an ad ban and "would be very likely to prevail" in a Supreme Court test of its constitutionality.

The high court only recently began giving any substantial protection to commercial speech, Johnson noted. "We are talking about the fringe, at best, of the First Amendment," he said. "We're talking about commercial advertising of a dangerous substance."

The court recently agreed to hear a commercial free speech case in this term. *Posadas de Puerto Rico Associates v. Tourism Co. of Puerto Rico*, challenges the constitutionality of a Puerto Rican law that bars advertising of legal gambling casinos to Puerto Rican residents.

In a follow-up letter to AMA officials Dec. 19, ANPA's Friedheim noted that in a 1975 decision, *Central Hudson Gas & Electric Corp. v. Public Service Commission of New York*, the court recognized "truthful advertising is entitled to First Amendment protection, even in the face of substantial state regulatory goals."

According to the Newspaper Advertising Bureau, $236 million was spent in 1984 to advertise tobacco products (including cigars and smokeless tobacco) in newspapers. This represented about 7.7 percent of national advertising expenditures in newspapers but only about 1 percent of total newspaper ad expenditures of $23.5 billion.

Although no legislation has yet been introduced to prohibit tobacco advertising, Sen. Bill Bradley (D-N.J.) and U.S. Rep. Fortney R. (Pete) Stark (D-Calif.) Dec. 16 introduced the bills to deny tax deductions for tobacco advertising expenses. Stark's bill also would deny deductions for expenses stemming from other promotions of tobacco products.

"It is doubtful that we can stop tobacco manufacturers from advertising, but we can eliminate the taxpayers' subsidy to the industry for this purpose," said Bradley.

Bradley is a member of the Senate Finance Committee, which will consider the bill.

Stark is the chairman of the Health Subcommittee of the House Ways and Means Committee, which will take up his bill.

The medical profession considers the bills to be "consistent with our concern, and we applaud the action," said the AMA's Johnson. "But we don't think they are going to be, on balance, as effective as the approach that we are suggesting."

Similar legislation has been introduced in the past and never went anywhere, noted Daniel L. Jaffe, senior vice president of the Association of National Advertisers.

On the other hand, the legislative counsel for the American Heart Association believes oversight hearings into the issue of tobacco advertising and promotion will be held this year, perhaps as early as the spring. Scott D. Ballin predicted the hear-

- ANPA Foundation, others name Pacemaker Award winners, Dec., p. 46
- ANPA Foundation, others working to create multi-media package to recruit young people to newspapers, Dec., p. 46

EMPLOYEE RELATIONS

Arbitration: discharge, discipline cases

- Copy writer's discharge sustained, July, p. 61
- Discharge of pressman for causing press web break leading to work stoppage sustained, July, p. 61
- Disciplinary suspension given circulation department clerk for not following instructions sustained, July, p. 61
- Discharge of mailroom helper for continual tardiness converted to disciplinary suspension, July, p. 61
- Newspaper upheld in discharge of 12-year reporter, Aug., p. 48
- Discharge of outside advertising salesman for unsatisfactory job performance sustained, Aug., p. 48
- Discharge of truck driver for failing to report an accident converted to 11-month disciplinary suspension, Aug., p. 48
- Discharge of truck driver for violating company's check-cashing policy sustained, Aug., p. 48
- Discharge of pressroom utility worker for being insubordinate to foreman converted to six-month disciplinary suspension, Aug., p. 48
- Apprentice pressman discharged for "suspicion of attempted theft" reinstated with back pay, Sept., p. 55
- Discharge of pressman for punching holes in newsprint web converted to six-month disciplinary suspension, Sept., p. 55
- Discharge of delivery helper for refusing work assignment sustained, Sept., p. 55
- Arbiter sustains discharge of substitute printer for assaulting a foreman while under the influence of alcohol, Sept., p. 55
- Arbiter upholds three-day suspension of reporter for signing agreement with news source, Nov., p. 60
- Discharges of pressmen for allegedly stealing coupons converted to four-month suspensions, Nov., p. 60
- Discharge of janitor for "sneaking off" during work shift sustained, Nov., p. 60
- Arbiter upholds discharge of longtime employee for submitting false mileage report, Dec., p. 49

Arbitration: interpretive disputes

- Employees required to work on a holiday not entitled to further compensation in addition to premium pay for the holiday, July, p. 61
- Company found not in violation of agreement in reassigning clerical work, July, p. 61
- Grievance over printer's transfer dismissed after finding it was filed more than two years after transfer occurred, July, p. 61
- Management's right to establish and change minimum requirements for job applicants upheld, July, p. 61
- Newspaper directed to restore pay and duties to former assistant editor reassigned to reporting position, July, p. 61
- Company properly computed electronic maintenance technicians' pay, July, p. 61
- Company did not comply with remedy order over editorial page makeup work, July, p. 61
- Union's position that Centrex telephone room supervisor should be included in bargaining unit upheld, July, p. 61
- Newspaper must grant leave for union organizing activity, Aug., p. 48
- Company's position in dispute over sick leave upheld, Aug., p. 48
- Stock clerk's duties do not require job title reclassification, Aug., p. 48
- Composing room employee's layoff ruled not the result of "electronic computer," which would have entitled him to $18,000 severance pay, Aug., p. 48
- Company properly assigned computer-generated mailing lists production work to circulation department employees rather than mailers, Aug., p. 48
- Company found to have properly denied grievant's claim for supplemental maternity benefits, Aug., p. 48
- Guild wins dispute over ad pagination, Sept., p. 55
- Circulation district sales representative ruled not entitled to $20-per-week salary increase, Sept., p. 55
- Company improperly discontinued employees' sick-pay benefits during 1984 strike, Sept., p. 55
- Company did not violate labor agreement by having non-bargaining-unit employees enter certain ads into computer system, Sept., p. 55
- Company properly refused to give printer training in new technology, Sept., p. 55
- Company violated agreement by subcontracting computer work previously performed by bargaining unit employees, Nov., p. 60
- Company ruled not in violation for retaining services of answering service to take calls from new subscribers, Nov., p. 60
- Company did not violate agreement by changing to a staggered lunch-period system for pressroom employees, Nov., p. 60
- Photographers attending voluntary meeting downtown not entitled to overtime pay, Nov., p. 60
- Circulation clerk unable to return to work after expiration of sick leave entitled to "dismissal" pay, Nov., p. 60
- Permanent layoff of garage department body mechanic did not violate agreement, Nov., p. 60
- Company did not violate electricians' agreement by contracting with firm to install lighting fixtures, Nov., p. 60
- Mailroom helper "constructively resigned" by accepting compensation claim, Nov., p. 60

ANPA

ings will be held by the Subcommittee on Health and the Environment of the House Energy and Commerce Committee.

The Heart Association called for a ban on tobacco advertising in mid-November. It is part of a coalition with the American Lung Association and the American Cancer Society that is seeking the hearings. U.S. Surgeon General C. Everett Koop also is supporting an advertising ban.

William Kloepfer Jr., senior vice president of the Tobacco Institute, an association of manufacturers of tobacco products, said the pending legislation and the AMA resolution result from a "notable lack of understanding" of the role of cigarette brand advertising. He said the objective is to sell specific brands of cigarettes.

"There is no evidence in academic studies, in surgeon general reports or anywhere else that I know of that brand advertising serves to make non-smokers become smokers," he said.

In countries where there is no cigarette advertising, or where it has been discontinued, there has been the same kind of "modest increase" in cigarette consumption as in markets where advertising is permitted, he said.

Kloepfer added that the measures should be looked at for their potential to create a "terrible precedent."

"Despite how anyone feels about cigarette smoking, I think one's attitude towards cigarette smoking should become secondary to an examination of this precedent question," he said. "If measures such as Bradley's or the AMA's were to succeed, the simple question is, 'What's next?'" —*Margaret Genovese*

Senate passes 'smokeless' warning

The Senate Dec. 16 approved a bill to require health warnings on packages and advertising of smokeless tobacco products.

S 1574, which passed on a voice vote, would require the display of one of three warning statements in print advertising. "Warning: This product may cause mouth cancer," "Warning: This product may cause gum disease and tooth loss," or "Warning: This product is not a safe alternative to cigarettes." The statements would be rotated every four months.

A similar bill, HR 3510, was approved by the House Health Subcommittee in October [presstime, Nov. 1985, p. 43]. That bill, which is awaiting action by the full Energy and Commerce Committee, also would ban smokeless tobacco advertising in the electronic media. ☐

LEGISLATIVE NOTES

- Before passing a bill on the "Superfund" Dec. 10, the House of Representatives deleted a provision for a manufacturers excise tax to finance the cleanup program for hazardous waste sites.

ANPA and other publishing organizations had protested that the excise tax would be a **"value-added tax on information"** [presstime, Dec. 1985, p. 39].

The bill now goes to a House-Senate conference committee, along with a Senate bill that contains the excise tax.

- The tax revision bill passed by the House Dec. 17 would make no change in the law regarding the business **deduction for newspaper circulation expenses** [presstime, July 1985, p. 55].

ANPA staff is studying other ramifications of the proposed massive overhaul of U.S. tax law.

- ANPA Dec. 16 wrote to members of a House-Senate conference committee urging that the Federal Trade Commission not be allowed to **regulate advertising on the basis of "unfairness."**

The committee will reconcile differences between a Senate bill that would deny the FTC authority to issue rules on unfair advertising and a House bill that contains no such prohibition [presstime, Sept. 1985, p. 36].

REGULATIONS

Newspapers advised to switch microwave band

ANPA Dec. 4 advised newspapers operating microwave systems in the 12-gigahertz band to make every effort to relocate to another band in the radio spectrum.

The Federal Communications Commission has reassigned priority status in the 12-GHz band to direct-broadcast satellite service.

"While sympathetic to the difficulties newspapers are encountering in attempting to relocate, the FCC remains committed to DBS," said ANPA Assistant General Counsel Claudia M. James.

The FCC Nov. 27 denied an Association-supported petition to extend the 1988 relocation deadline to 1993 [presstime, Aug. 1985, p. 37]. ☐

COURTS

COURT BRIEFS

- The Kansas Supreme Court Dec. 6 ruled 5-2 that preprinted advertising inserts in newspapers are **not subject to the state's sales tax** because they are part of the newspaper, which as a unit is subject to the tax.

"Advertising, whether run of the press, preprinted supplements provided by the newspaper or preprinted supplements provided by the advertisers, is a component part of the newspaper," said Justice Richard W. Holmes.

The case dates from 1980 when K mart challenged an assessment on preprints.

- The San Jose (Calif.) Mercury News is being sued in Santa Clara County Court for wrongful death in the case of a child who allegedly **suffocated after putting a plastic newspaper wrapper** over his head.

The child's family claims the newspaper violated a part of the California Business and Professions Code that requires a cautionary label to be placed on plastic bags used for delivery of goods to consumers if the bags are less than one mil (.001 inch) thick and large enough to fit over a child's head.

- U.S. District Judge Edward C. Reed Nov. 18 **dismissed a $6-million libel counterclaim** filed by McClatchy Newspapers against U.S. Sen. Paul Laxalt (R-Nev.) [presstime, May 1985, p. 6].

- An Oklahoma state judge ruled Dec. 13 that The Wall Street Journal may be printed and circulated in Oklahoma even though the newspaper contains liquor advertising and Oklahoma has a law **banning alcoholic beverage advertising**.

Dow Jones & Co. had sought the ruling from District Judge James B. Blevins because it plans to build a printing plant in Oklahoma City [presstime, Nov. 1985, p. 42].

- ANPA has filed **friend-of-the-court briefs** in two cases before the U.S. Supreme Court. They are *Press-Enterprise Co. v. Superior Court of Riverside County, Calif.*, and *Posados de Puerto Rico Associates v. Tourism Co. of Puerto Rico* [presstime, Nov. 1985, p. 42].

State issues aired at annual NAM Legislative Conference

Communications between state, regional and national newspaper organizations were strengthened during an intensive, day-and-a-half meeting in December where more than 20 topics affecting newspapers were reviewed.

Thirty-five organizations were represented at the third annual Legislative Conference of the Newspaper Association Managers. ANPA served as host for the event at The Newspaper Center in Reston, Va.

"It's the only time of year we get together to tip off others to pending legislation" in particular states, said NAM President R.E. (Reg) Ivory. State legislatures are continually getting bills that would affect newspaper advertising and circulation, added Ivory, executive director of the Inland Daily Press Association in Chicago.

"The horrendous things that come up in state legislatures scare a person," commented Linda I. Falkman, manager of the Minnesota Newspaper Association.

Falkman said that besides the exchange of information, she was pleased with the conference handout material—which weighed 3.5 pounds—covering postal matters, restrictions on the advertising of alcoholic beverages and lotteries, antitrust issues, video display terminals, the Freedom of Information Act, libel, legal notices, taxes, newsracks, telecommunications and the federal government's new hazard communication standard.

From the information gathered at the conference, she commented, "You know exactly where to go to get help."

As an indication of what can be expected to arise in other states, Morley L. Piper, executive director of the New England Newspaper Association in Salem, Mass., noted that the Maine Lung Association is seeking a ban on cigarette advertising in that state's newspapers by May 7, 1986.

Another warning of what states can expect in the way of legislation was given by Richard D. Shelton, executive director of the Florida Press Association. He noted that measures that would restrict regular telephone solicitations and solicitations by sequential dialing have been defeated twice in the Florida Senate, but another bill "will be coming back next session." Such legislation is of particular concern to large-circulation dailies and their campaigns to solicit subscriptions, he said.

Also in the circulation area, ANPA's director of telecommunications affairs, Kathleen Criner, said audiotex "dial-up" technology is developing to the point where it could be used to sell newspaper subscriptions.

NENA's Piper discusses cigarette ad ban sought in Maine.

In a discussion of VDT legislation, Paul R. Conrad, executive director of Allied Daily Newspapers in Tacoma, Wash., said his association has joined a VDT coalition in Washington state.

"A lot of organizations are involved," he reported, and they have "a lot of legislative contact." It is important to remind legislators how VDT legislation would affect state government in terms of costs and taxes, because the machines are widely used in government, said Conrad, who served as conference moderator.

Participants were given a preview of a new, eight-minute videotape, "VDTs in the News," developed by the Center for Office Technology in Washington, D.C. COT Executive Director René Ross said the educational film will be available to newspapers. Ross also noted that COT is working with state VDT coalitions and will hold a seminar Jan. 23 in New York City cosponsored by the New York State Publishers Association.

When legislation to regulate VDTs is defeated at the state level, organizations supporting regulations on their use may go to city councils in large cities, warned ANPA Assistant General Counsel Claudia M. James.

In the libel area, several speakers noted a move in some states to enact legislation that would eliminate punitive damages and put a cap on attorneys' fees. A show of hands indicated that only two of the association managers had been involved in libel legislation in their states in the past five years.

The attendees also heard David R. Gergen, managing editor/news for U.S. News & World Report magazine, discuss the relationship between the press and the federal government in Washington.

Gergen, who is a veteran of three Republican White Houses—serving most recently as communications director for President Reagan in 1981-83—asked, "How can the lonely print reporter get representation" in light of the overwhelming presence of the TV networks. One way, he said, is for newspapers to bring in their "heavyweights" from the home office "to deal with the power brokers in this city."

"Publishers back home should give more support" to their Washington bureaus, he said. *—Clark Newsom*

The parade to USA WEEKEND continues... circulation is now 13,208,466 strong!

The parade to USA WEEKEND began just 18 weeks ago when Family Weekly became USA WEEKEND. The parade has continued to grow, from major market to major market. USA WEEKEND's circulation now exceeds 13.2 million, more than Family Weekly ever had in its 32 year history. In record numbers, readers and advertisers are joining the parade to USA WEEKEND.

ANPA nominates Cape Town editor for Golden Pen of Freedom

The ANPA Board of Directors has nominated Anthony Heard, editor of The Cape Times in Cape Town, South Africa, for the 1986 Golden Pen of Freedom.

The annual award for outstanding contributions to press freedom will be presented in May at the 39th Congress of the International Federation of Newspaper Publishers in Lisbon, Portugal, after the FIEJ board makes its selection from among various nominations in January.

Heard faces a possible three-year prison sentence for violation of a government law against reporting on a "banned" person, one who is not allowed to speak, write, travel or appear in public. The reporting was based on an interview Heard conducted in London with banned person Oliver Tambo, a leader of the outlawed African National Congress political party.

"In the interview, Tambo issued a non-strident appeal to the Botha government to negotiate peaceful solutions to the country's growing racial strife. The government's response was to arraign editor Heard on criminal charges," said Jerry W. Friedheim, executive vice president of ANPA, in the nomination letter submitted on behalf of the Board.

"We feel that award of the Golden Pen to editor Heard will focus appropriate public attention on South Africa's practice of 'banning' persons—a practice wholly inimical to the concepts not only of press but of individual freedoms," he said. "Further, it will recognize Heard's courage in publishing newsworthy information in spite of the government's law."

Heard, who was arrested Nov. 8, faces a court hearing this month after a postponement Dec. 9 [presstime, Dec. 1985, p. 41].

The Cape Times interview came less than a week after the latest in a series of South African press bans—this one against photographing demonstrations against the government's racial-segregation policy known as apartheid. Since Nov. 2, print journalists have been required to have police escorts to cover such events.

Heard leaves Cape Town court after his arrest.

AP

In mid-December, several television crews were roughed up and detained briefly by South African police during an otherwise peaceful funeral procession in the black township of Mamelodi.

A native South African, Heard began work at the Cape Times while he was still a student at the University of Cape Town in the 1950s. Now 48, he has been editor of the paper since 1971.

The Cape Times, the oldest daily newspaper in South Africa, was founded in 1876.

If chosen for the Golden Pen, Heard would be the third South African journalist to receive the award. It was presented to Percy Qobozo and Donald Woods in 1978.

Last year's Golden Pen went to Joaquin P. Roces, former publisher of The Manila Times [presstime, June 1985, p. 58].

Low to succeed Neuharth on FIEJ board

A Massachusetts newspaper executive has been selected to represent ANPA on the board of the International Federation of Newspaper Publishers.

He is K. Prescott Low, president and publisher of The Patriot Ledger in Quincy. Currently ANPA secretary, Low was selected by the ANPA Board of Directors.

His six-year term on the federation's board will begin at the 39th FIEJ Congress in Lisbon, Portugal, in May. He will succeed Allen H. Neuharth, chairman and chief executive officer of Gannett Co., who is currently FIEJ first vice president.

Journalists assess Britain's withdrawal from UNESCO

Western journalists say the latest defections from UNESCO should not significantly harm efforts to monitor the organization for moves that could affect press freedom around the world.

Having learned to operate without the powerful presence of the United States within the international forum in the past year, free-press groups are predicting little real change in their relationship to UNESCO after the British departure Dec. 31. At UNESCO, they work through their own status as (non-voting) Non-Governmental Organizations; outside the organization they have expanded their own projects with private funding.

Meanwhile, the United Nations agency is struggling with a budget reduced by nearly one-third.

"The International Press Institute is not greatly affected" by the pullouts, said IPI President Richard Leonard. "We are still fighting against the 'new world information order' provisions in UNESCO and elsewhere, and we are still active in practical projects that will aid journalists," said Leonard, who is senior vice president and associate editor of The Milwaukee Journal.

For example, this month IPI will cooperate with the International Project for Development of Communication to send Chinese journalists to a Tokyo conference of editors. IPDC was established by UNESCO to improve communication systems, particularly in developing countries.

Nebraska newspaper executive Harold W. Andersen, who chairs the World Press Freedom Committee, agreed that "we can help build practical programs without getting into irreconcilable conflict [in UNESCO] over how the media can be used by governments." The president of the Omaha World-Herald Co. also said the British withdrawal "adds pressure on UNESCO to move from contentious, philosophical . . . debates to more practical programs."

Joseph P. Rawley, chairman of the International Press Telecommunications Council, predicted only "very minor alterations or changes" in dealings with UNESCO. Rawley is co-publisher and general manager of The High Point [N.C.] Enterprise.

Most say it is too early to assess the full impact of Britain's action. "We'll just have to see" if it will "diminish, maintain the status quo, or increase assistance to Third World journalism," said George Krimsky, executive director of the Center for Foreign Journalists, a Reston, Va.-based organization that does such work with private funds.

In-county rates jump 50%, another increase in '86 possible

Newspapers setting budgets for 1986 have had to factor in a relatively large percentage increase for at least one of their costs this year: in-county, second-class mail.

Rates for "preferred" mail such as newspapers with destinations in the county of publication increased about 50 percent Jan. 1 by order of the U.S. Postal Service Board of Governors.

There was the possibility in late December that the rates could go up even more later in 1986.

The Jan. 1 hike in preferred-mail rates—which are subsidized by Congress—was larger than what has been normal recently because it represents an increase from step 14 to step 16 on the 16-step phased-rate-increase schedule instead of the regular one-step annual increase of past years.

The reason for the governors' two-step action was that Congress did not appropriate enough money to hold the increase to step 15. Instead, Congress granted a "full-phased" amount of $748 million in a stop-gap funding measure that might carry over for the rest of the current fiscal year [presstime, Dec. 1985, p. 42].

The reason that rates could go up again later in the year is that the governors based the new rates effective Jan. 1 on the expectation that Congress would appropriate $820 million in the postal subsidy known as "revenue forgone." That was $72 million more than Congress subsequently agreed upon Dec. 19. Previously, Board of Governors Chairman John R. McKean had said that if the revenue forgone appropriation were less than $820 million, "we would expect to revisit this issue at a later date and consider whether any further action may be necessary."

Postal experts in late December refused to speculate on what the eventual outcome might be. W. Terry Maguire, ANPA vice president and general counsel, said the funding issue is "in extreme flux."

In addition to in-county newspapers, preferred mail includes newspapers with fewer than 5,000 copies mailed outside the county of publication, certain third-class nonprofit mail such as church bulletins, fourth-class library mail and certain other mailable matter.

Operating costs that were subsidized under terms of the phasing schedule are one of two types of costs covered by revenue forgone for preferred mail. The other kinds are institutional, or overhead, costs.

ANPA pointed out in a postal "alert" to newspaper executives that if Congress should decide in the future to cease or diminish appropriations to cover overhead costs, preferred rates could rise again.

Jan. 1 rate changes applicable to in-county newspapers are:

- Per-pound rate, from 5.8 to 7.9 cents
- Per-piece rate, 3.3 to 4.3 cents
- Per-piece rate for pieces presorted to the carrier-route level, 1.5 to 2.5 cents. ☐

Appeals court upholds rate-case decision

The 2nd U.S. Circuit Court of Appeals has upheld current postal rates that became effective last February, saying rate-making authorities used proper procedure to arrive at them.

The court rejected arguments of ANPA and others that the rates were decided on insufficient evidence. The Association claimed, among other things, that the Postal Rate Commission failed to provide an adequate explanation of the rationale for its allocation of U.S. Postal Service overhead costs.

The court said Dec. 3 that the actions of the commission and the USPS governors met all legal requirements.

"We may not substitute our judgment for that of the agencies designated by law to carry out" the rate-making function, the court added.

It rejected ANPA arguments relating to detached address labels, which are used in mailing advertising flyers as one piece of third-class mail. The Association had asked the rate commission to recommend that a separate charge be imposed for those postcard-like labels. The commission refused on the grounds that consideration of the matter might take too much time for purposes of the general rate case before it.

The appeals court, without ruling on the legality of detached labels, said the commission "properly exercised its discretion."

ANPA was one of five petitioners in the case. In late December, the Association had not decided whether to make a further appeal.

One of the petitioners, the Alliance of Nonprofit Mailers, Dec. 17 asked for a rehearing. ☐

UTU ratifies pact with railroads

The possibility of a rail strike was averted when the United Transportation Union ratified a tentative settlement with U.S. railroads. More than 72 percent of UTU members approved the contract.

Among its provisions is a 10.5-percent increase in wages over the life of the contract, which runs until June 30, 1988. The settlement also adopts recommendations from a Presidential Emergency Board that suggested eliminating fireman positions by attrition.

Also, the Brotherhood of Locomotive Engineers in late December reached a tentative settlement with the nation's major railroads on a contract giving its 25,000 members pay increases averaging about 10.5 percent over the next two and a half years.

Under the contract, the daily wage of a freight train engineer would increase to $118.90 on Jan. 1, 1988. ☐

CSX announces restructuring

CSX Corp. of Richmond, Va., the railroad and natural resources company, has announced a major restructuring that will include a 12-percent reduction in railroad employment through use of an accelerated attrition program.

Realignment will include breaking CSX into four strategic areas: transportation, technology, energy and properties. ☐

Track sale discussed

The parent company of the Illinois Central Gulf Railroad is negotiating the sale of a 314-mile portion of its trackage to a group of investors in a deal that could be worth about $125 million.

The track runs from Meridian, Miss., to Shreveport, La. For years, IC Industries has been trying to sell its railroad properties. ☐

Seaway repaired

Shipping along the St. Lawrence Seaway resumed after repairs were made to one of the locks in the Welland Canal. The seaway links the Atlantic Ocean with the Great Lakes [presstime, Nov. 1985, p. 62].

The closing cost shippers about $1 million per day in operating losses. ☐

ABC foes have little support among ad, agency members

If newspapers dropping out of the Audit Bureau of Circulations think ABC will accede to all their demands, their chances appear to be about nil.

In mid-December, a presstime telephone poll of advertiser and ad-agency members of the ABC board and its advisory committee on newspapers turned up no takers for two proposals being advanced by anti-ABC elements in the newspaper industry: counting bulk sales as general circulation and auditing readership as well as circulation.

Responding to questions were 10 of the 19 advertiser or ad agency members of the board, two of whom also serve on ABC's Newspaper Buyer Advisory Committee.

Also interviewed were two non-board members of that eight-person committee—Chairman Sonja Larson, senior vice president of Target Stores, and Jack Cohen, vice president and director of print media buying for Doyle Dane Bernbach.

The current tumult over ABC stems from the withdrawal over the past two months of 15 papers from the organization, all but one of them—The Globe and Mail of Toronto—owned by Gannett Co. Following the Canadian pullout were the Democrat and Chronicle and the Times-Union of Rochester, N.Y. [presstime, Dec. 1985, p. 43], the Des Moines Register and the 10 dailies and one weekly that make up Westchester Rockland (N.Y.) Newspapers.

After these withdrawals, Gannett announced plans to organize an alternative service. "There is no rule that says there can be no more than one auditing organization," said Vincent E. Spezzano, publisher of the Rochester dailies.

Discussions are already under way with private firms "doing readership research or auditing," he said. "What we need to do is not start a new company. What we need to do is go to credible companies that are already in the business of providing information."

Spezzano said he is "pretty confident there will be others in and out of Gannett (leaving ABC) once they realize there might be an alternative."

Advertiser and agency members of the ABC board reacted harshly to the withdrawals.

David K. Braun

Sonja Larson

Cohen of Doyle Dane Bernbach characterized the behavior of departing papers as that of children who don't get their way: "I'll take my ball and bat and go home." Calling ABC "the backbone of the credibility of auditing of newspapers," he predicted: "Chaos is what we'll have if they pull out."

ABC itself was formed out of chaos in 1914, when advertisers made it clear to publishers that they wanted to be able to verify circulation figures [presstime, Nov. 1984, p. 12].

As emphasized in the interviews, advertisers and agencies use readership data from a variety of sources but rely on ABC to provide a verified circulation base.

"It's pretty clear from our standpoint that circulation is the bedrock of knowing what we get for our money in printed media, and auditing in a consistent reliable and comparable fashion from a single source is the best way to get that information," said newly elected ABC Board Chairman David K. Braun, director of media service for General Foods.

Answering his own rhetorical question—"Would a private audit from any reputable, reliable audit firm suffice?"—Braun said: "My answer is 'No.'"

Retail advertisers, who in the aggregate account for the majority of newspaper ad-

Keil urges defectors to reconsider

Expressing "disappointment" at recent defections from the Audit Bureau of Circulations, President and Managing Director M. David Keil has circulated a letter to more than 3,600 advertiser, agency, and daily and weekly newspaper members of the bureau.

The best interests of all concerned would be served if the newspapers that have resigned would reconsider, Keil said in his Dec. 18 letter. Addressing three major issues, he said:

- After more than two years of discussion, the bureau's board of directors in November 1984 gave "overwhelming approval" to a policy statement against ABC involvement in audience or readership research. That statement pointed out that "other established nonprofit tripartite associations in the United States and Canada currently function for the purpose of establishing and reviewing survey-based audience research, and that numerous private companies currently offer a variety of audience research services." The policy statement "reaffirms the Audit Bureau's primary mission of reporting and verifying the circulation information of member publications."
- The subject of "bulk sales," or sales in quantities of 11 or more, is currently before an ABC committee. After lengthy review ending in June 1983, a questionnaire "revealed no consensus on the issue among ABC newspaper publisher members, but ABC did receive a very strong expression from retail advertiser members that the Bureau should make no change in the manner in which bulk sales are currently reported." Current discussion focuses on "the possibility of establishing separate standards for national newspaper membership."
- The ABC board recently acted "to include a limited number of subscriptions, purchased by a prison or institution for use in its educational programs, in paid circulation as school sales." This action "followed a long-standing practice of the Audit Bureau of supporting established" ANPA Foundation Newspaper in Education programs."

vertising, were particularly adamant about the need to separate bulk sales from paid circulation.

"Airline copies or hotel copies or complimentary copies have value to the Coca-Colas or the IBMs of the world, but not to the retailer who is trying to sell the item the next day," said James F. Boynton, manager of media services for J.C. Penney, one of newspapers' largest advertisers.

"If you allow every newspaper to do that (count bulk sales with paid circulation), it could cost Target (Stores) millions of dollars a year . . . which is why we are so concerned with paid subscriptions," said Larson of the Minneapolis-based chain. Target places about 75 to 80 percent of its advertising in newspapers.

At the same time, many advertiser and agency executives said they were open to giving special consideration to USA Today and its advocacy of counting the national daily's bulk sales as regular paid circulation—not in a separate category as is current ABC policy.

"I think the treatment of bulk for USA Today is an open question," said Michael D. Moore, senior vice president of the Benton & Bowles advertising agency. "I think it is entirely appropriate to look at USA Today as a publication distinct from (other) daily newspapers, and I believe the ABC will be considering the prospect of considering what is called a 'national newspaper category.'"

With USA Today's request for counting bulk sales as part of overall paid circulation now under consideration by an ABC committee, many of those polled see a rule change only if it is coupled with the creation of such a new category.

"Bulk has a connotation of 'not as good as,' but that's not true (with USA Today)," said John J. Meskil, executive vice president for media and administration for Warwick Advertising. "However, if you allow Gannett to throw it in and not reclassify it, then you are allowing local newspapers to do it, and that would be a big mistake."

He added, "We want all the data broken out separately so we know what's what."

While advertisers and agencies appeared willing to consider exceptions for USA Today on the issue of bulk sales, there was no sign of bending so far as to encourage ABC measurement of readership.

"It is ludicrous . . . to ask an auditing company to do anything with audience research when the industry itself can't agree," said Joseph W. Ostrow, executive vice president and director of communications services for Young & Rubicam. "It is an entrepreneurial area where research companies sell their own products, and their products are quite different. Even the ARF (Advertising Research Foundation) has difficulties coming up with guidelines, so it is absolutely silly to consider (that) as part of the perspective of the ABC."

Many are open to giving special consideration to USA Today on bulk sales.

Advertisers and agencies agreed they use readership data in deciding ad placement, but they were unanimous that ABC should stick to its specialty—circulation.

"We want basically what ABC has been providing," said Dan F. Pearson, director of media for R.J. Reynolds Industries, one of newspapers' primary advertisers.

Readership profiles, said Pearson, "can be derived from any number of research departments, using any number of techniques. But ultimately, they are based on a sample, and that sample is projected against something—and that's circulation. If there is no substantiation of what that sample is, then you've got nothing."

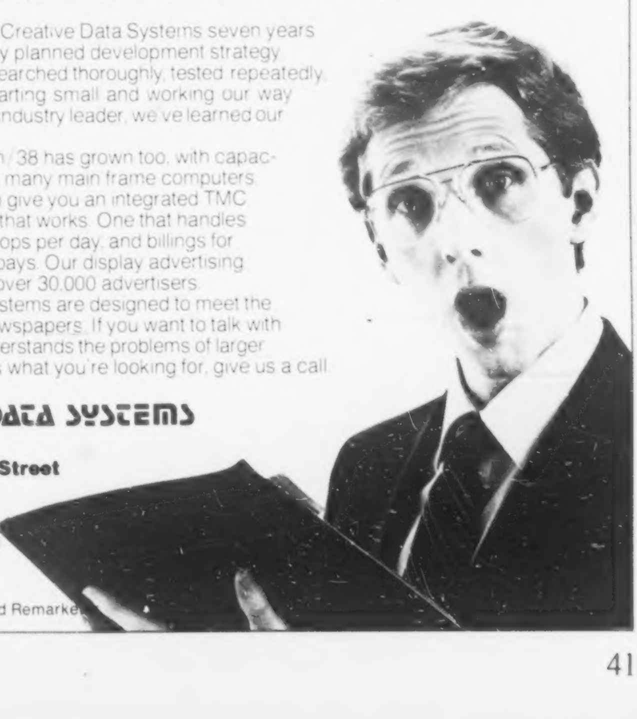
As for the end results of the recent withdrawals from ABC—whether those papers will find themselves pulled out of ad schedules—executives polled were non-commital on specifics, but they were clear that lack of ABC-certified audits would not go unnoticed.

"We have had a policy: We seek to put our advertising in media we can document the delivery of," said Braun. "How we will respond to it, I don't know, but I can assure you we are studying it."

"Right now, we only buy ABC-audited (daily) newspapers," said Meskil. Implying that the ball was in the exiting papers' court now, he said, "It's not what we're going to do, it's what they're going to do to document the circulation."

"It could backfire," he said.

—Marcia Ruth



OUR ABILITY TO HANDLE A DATA BASE OF 2,000,000 HOMES IS OPENING SOME EYES.

It's a surprise to some people in the newspaper industry that we offer a CIS system that handles over 2,000,000 subscriber homes.

We started Creative Data Systems seven years ago with a carefully planned development strategy. Each step was researched thoroughly, tested repeatedly, and proven. By starting small and working our way to a position as an industry leader, we've learned our lessons well.

The IBM System/38 has grown too, with capacities now equalling many main frame computers. That's why we can give you an integrated TMC data base system that works. One that handles 5,000 starts and stops per day, and billings for over 100,000 pre-pays. Our display advertising software handles over 30,000 advertisers.

Our powerful systems are designed to meet the needs of larger newspapers. If you want to talk with someone who understands the problems of larger papers and knows what you're looking for, give us a call.

An IBM Value-Added Remarke

Unusual range of economic factors faces newspapers in 1986

BY CRAIG C. STANDEN

As we enter 1986, the job of predicting what will happen to the American economy, and to the newspaper advertising business, is even chancier than usual.

A few months ago, many economists were saying that the current, three-year expansion would slow in 1986. Lately, of course, we've seen some reasons to be more optimistic. Interest rates have shown a persistent downward trend, OPEC has announced the end of its price support policy, and the Dow Jones industrial average (generally a reliable leading indicator) has reached unprecedented highs.

Craig C. Standen

Nevertheless, the consensus among forecasters points to a 10-million passenger-automobile year, housing starts in the 1.75 to 1.85-million range, a 7-percent unemployment rate and continuing high real interest rates. A year, in other words, of relatively slow growth.

In addition, government action (or lack of it) in three key fiscal areas—the budget deficit, the international balance of payments, and the scope and nature of tax reform—could have an important effect on industrial investment and consumer spending, one way or the other. But which way?

All in all, newspaper managements are confronted with a wider range of possible economic conditions than they ordinarily face. Let's take a closer look.

Early in December, Robert Coen of the McCann-Erickson advertising agency predicted an 8-percent growth in total U.S. advertising expenditures in 1986, and about the same increase for print media—6.5-percent for national and 8.5-percent for local advertising, which includes retail and classified. This would be slightly above his predicted growth of 6.9-percent for the gross national product in 1986 and of 7-percent for newspaper advertising rates.

I'd like to share with you some of our expectations, both in terms of problems and opportunities, for the coming year.

Retail. Alfred Eisenpreis, our vice president for retail marketing, sees some areas of concern: weaker auto sales, a very low savings rate and high consumer debt, and no more than moderate growth in consumer income. But he also notes that retailers' inventories are healthy and that there is considerable unused industrial capacity.

Because spring 1986 retail ad budgets were set when retail sales forecasts were bearish, Al expects that growth in newspaper ad expenditures will be slowest in the first quarter and will gradually rise after that.

"1986 will put a premium on practical marketing ideas," Al recently wrote in a letter to newspaper advertising and marketing directors. He outlined six such ideas newspapers can use to increase retail linage: the National Floor Show (April 18-27), the Outstanding Mother contest (April), the Father of the Year contest (May), the National Bedding Sale (June 6-16), Footwear Week (Sept. 21-28), and the National Furniture Sale and Sweepstakes (Sept. 26-Oct. 6). If you'd like a copy of Al's letter, write or call him at the bureau.

Automotive. Val Corradi, the bureau's automotive expert, expects that total automotive sales will drop from about 15.5 million units in 1985 to about 15-million next year, with almost all of the decrease coming from a smaller number of car sales. He reports that automotive advertising in newspapers was up 38-percent for the first nine months of 1985, but that the prospects are for more modest increases in 1986.

Increases in spending are most likely to come from factory and dealer association advertising, reflecting the intense fight for market share as import restrictions end and new brands from Korea and Yugoslavia come into the U.S. market. "The factories are going to have to do more advertising, even if sales are off, just to hang on to their shares," says Val.

> *Growth in retail ad expenditures will be slowest in the first quarter and will gradually rise after that. In national, we can have another pretty good year because it's going to be a very competitive market.*

National. Despite a major drop-off in tobacco advertising, national had a strong year in newspapers, with a gain of 9.5-percent in expenditures for newspaper advertising in the first nine months, helped by the big increase in automotive noted above. And even though we expect much smaller increases in automotive, Mac Morris, our vice president for national sales, thinks we can have another pretty good year because it's going to be a very competitive market—for car makers, for airlines and other travel and transportation advertisers, and for financial and telecommunications companies.

In addition, personal computer advertising should come back strongly in 1986, and the rapidly growing market in health-care advertising should help swell the total.

Classified. Classified has led the newspaper advertising business in growth for the past three years, and it should continue this leadership with another double-digit gain in 1986, according to Eric Anderson, the bureau's vice president for classified sales. The real estate and automotive categories should be helped by lower current interest rates, and the ongoing corporate need to recruit highly qualified specialists will continue to buoy employment classified.

Classified revenues will also be helped by the increasing use of remote-entry computer terminals by agencies and advertisers. This not only makes classified easier to use and cuts down on errors, it also has enabled newspapers to close their classified sections later and thus increase the number of ads that run.

Political advertising. Special mention should be made of the important opportunities for newspapers provided by the

---

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

1986 elections. In non-presidential election years, 99-percent of political advertising is done at the *local* level. With broadcast rates soaring, newspapers have another strong selling point with candidates and their advisers in addition to those featured in "How to Win Votes and Influence People," the bureau's presentation designed to sell newspaper advertising to those who influence media buying for political advertising, which I described in the October 1983 issue of **presstime**. If you're interested in what you can do to get a bigger share of those local political dollars, call Hank Dain of the bureau at (212) 704-4507.

Overall, we anticipate the economy will show real but slow growth in 1986 and beyond. There is no evidence that we are headed for a major recession.

To sum up, newspaper managements are confronted with a wider range of possible economic conditions than they ordinarily face. Perhaps the best plan for 1986 is to combine a basic tight financial plan with provisions for rapid expansion in specific areas and activities as indicated by changes in the economy.

Blair sells coupon business to major printing firm

There is a new player in the newspaper coupon insert business that promises to become a major force in an already highly competitive industry.

John Blair & Co. has sold its free-standing newspaper insert coupon business, run by the John Blair Marketing subsidiary, to Quad/Graphics Inc. of Pewaukee, Wis., a major printer of preprint advertising, national magazines and direct-mail catalogs.

Quad/Graphics, which has printed about 10 percent of Blair's coupon volume in recent years, intends to stick to the previously announced Blair insert schedule this year, a Quad/Graphics spokesman said. John Blair Marketing had planned to insert free-standing coupon supplements in newspapers on 20 Sundays this year, the same number as in 1985.

The 1987 schedule will be announced in a few months, the spokesman said, adding that his firm intends to operate aggressively in the field.

In another development in the couponing industry, Valassis Inserts, one of the largest newspaper coupon insert companies, already has responded to the new competition from Quad/Graphics by announcing it will expand by four dates its newspaper insert schedule for the second half of this year. The change, which Valassis officials said is intended to fill voids caused by "many changes over the past year" in the industry, will bring the dates to 33 for 1986.

Valassis officials said the company expanded printing operations in Livonia, Mich., Durham, N.C., and Wichita, Kan., before adding the four new insert dates. The dates are July 20, Aug. 3, Sept. 21 and Oct. 19.

Blair also announced John Blair Marketing has turned over its entire Network Mail operation to Advo-System Inc., another Blair subsidiary that together with John Blair Marketing make up the parent firm's Marketing Division.

Both changes are part of an overall restructuring program to restore Blair's profitability [**presstime**, Dec. 1985, p. 42]. Blair incurred financial losses after it acquired Advo in March 1984 and as it experienced "continuing problems" in the coupon insert business, the company said.

Harry V. Quadracci, president and founder of Quad/Graphics, said his company will invest more than $50 million in the new couponing activities "in anticipation of the growth" in that business.

"Our move into couponing and promotion offers us a tremendous opportunity," Quadracci said. "It gives us exciting new growth markets that will support both the expansion of our facilities and the introduction of new graphics technological advances."

Quad/Graphics said it will form a new marketing and promotion subsidiary to handle its new coupon business. The subsidiary will be based at John Blair's existing offices in New York City and will be headed by Paul Moschetti, who has been an executive of John Blair Marketing since its entry into the newspaper-insert business in 1972.

Regarding the Network Mail development, Advo said it will adhere to Blair's previously announced schedule of 14 mailings this year.

Blair noted that Advo originally developed the concept of a national direct-mail coupon program "to enable advertisers to benefit from the synergistic promotional effect inherent in combining Network Mail promotions with local retailers' circulars."

4As to evaluate impact of campaign to improve advertising's image

The American Association of Advertising Agencies is planning to evaluate the impact of a national campaign to improve the image of advertising. Over the past year, about 70 publications, including newspapers, have used ads on this theme distributed by the organization.

The 4As sponsored the campaign after a series of surveys showed public attitudes toward advertising and advertising professionals to be unfavorable. For example, a 1983 Gallup Poll showed 39 percent of the public ranked advertising professionals low in ethical standards.

The 4As committee on the image of advertising, which proposed the ads, is particularly concerned about the results of the association's own studies, which show public attitudes toward advertising eroding. Although those surveys were done between 1964 and 1974, more recent similar studies by other organizations corroborate the 4As earlier findings.

In the 4As surveys, 89 percent of those responding in 1964 and 1974 said advertising was essential, but those who said advertising "insults the intelligence of the average person" increased from 43 to 59 percent over the 10 years [**presstime**, Nov. 1985, p. 25]. During the same period, those who said advertising presents a true picture of products dropped from 54 to 46 percent.

Additional studies cited by the 4As show negative public attitudes traced more to broadcast advertising than to ads published in print media.

The ads were produced by the Minneapolis agency Fallon McElligott Rice.

NAB publication aids in ad design

The Newspaper Advertising Bureau has inaugurated a new quarterly publication, LAYOUT, to help newspapers with ad design.

Each issue will focus on a retail theme, such as restaurants, men's wear, sporting goods or the home video market. The first one is about shoes.

Newspapers that are members of the bureau receive copies automatically. For additional copies, contact Stephen J. Van Osten, vice president, retail sales development, NAB, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 744-4527.

Fellowships abundant, but status of long-term programs a worry

Mid-career journalism fellowships have never been more popular or plentiful, as reporters and editors seek additional training in specialized areas.

There are some new programs this year, most of which are financed by private foundations and directed at improving the quality of reporting in science, business or international affairs.

But there is also concern that the longer-term fellowships, those that enable a journalist to gain new perspectives from a full or academic year away from the job, are in trouble.

"Now I worry we are moving backwards instead of forwards," said Eugene Roberts, senior vice president and executive editor of The Philadelphia Inquirer.

Roberts and another Knight-Ridder Newspapers executive, David Lawrence Jr., publisher and chairman of the Detroit Free Press, have led the fight to save the Journalists in Residence program at the University of Michigan. The university had trouble replacing National Endowment for the Humanities grants that stopped two years ago.

"Specialized reporting [presstime, Dec. 1985, p. 6] is in jeopardy" if newspapers do not act to save such programs, said Roberts.

"There are only about 50 [journalists in long-term fellowship programs] in the country, and to let any of those go would be just terrible for the future of our business," said Lawrence.

Knight-Ridder and the John S. Knight Foundation offered three-year challenge grants for the Michigan program totaling $1 million—$250,000 and $750,000, respectively. Those were followed by additional grants of more than $1.5 million, many from other newspapers and newspaper foundations.

An additional $2.5 million is still needed to put the program on firm ground, said director Graham Hovey.

Three years earlier, the Knight Foundation contributed $4 million to an equivalent program at Stanford University, when it also lost NEH funds.

Without such support, other long-term fellowships disappeared during the 1980s. The Program in Religious Studies for Journalists at the University of North Carolina at Chapel Hill lost its Rockefeller funding in 1984 after more than a dozen journalists attended the half-year program over a three-year period. Princeton University's Sloane Program in Economics and Journalism, some of the graduates of which now head business sections of major newspapers, lost its foundation funding in 1980 after five years of operation.

Faulkner biographer Joseph Blotner (left), professor at the University of Michigan, conducts seminar as part of Journalists in Residence program.

In Canada, where the picture is similar, there are no Louis S. St. Laurent Fellowships for Legal Journalism this year, while the Canadian Bar Association seeks new foundation funding. Since 1974, these grants have paid tuition and up to $2,000 in monthly expenses enabling two Canadian journalists to attend a year of law school.

Despite concerns over this trend, the annual listing by presstime shows that a broad array of fellowships—ranging from two weeks to one year—remains for journalists working at newspapers [presstime, Jan. 1985, p. 54].

Liberal arts programs. Three programs emphasize immersion in a liberal arts program for a full academic year. They provide a mix of course work and special seminars.

Each of the three—Harvard University's Niemans, Stanford's Knights and the Michigan program—include 12 U.S. and a few foreign journalists. Tuition to university courses is free, and fellows receive stipends: $14,000 at Harvard, $18,000 at Michigan and $20,000 at Stanford. Deadlines are Jan. 31 at Harvard, March 1 at Michigan and Feb. 1 at Stanford.

For information, contact:

- Nieman Foundation, Walter Lippmann House, 1 Francis Ave., Cambridge, Mass. 02138; (617) 495-2237
- John S Knight Fellowships, Department of Communication, Stanford University, Stanford, Calif. 94305; (415) 497-4937
- Journalists in Residence, University of Michigan, 2072 Frieze Building, Ann Arbor, Mich. 48109; (313) 763-2400.

Science and technology. Modeled on the 48-year-old Nieman Program, the 4-year-old Vannevar Bush Fellowships at the Massachusetts Institute of Technology are designed to improve the quality of writing on science and technology. About eight print and broadcast journalists audit courses at MIT, take part in special seminars and produce a report on individual research. They receive stipends of $18,000 for the academic year, plus $2,000 relocation allowance. Applicants should have at least three years of experience reporting in the field. Deadline is March 1. Contact Victor K. McElheny, Room E40-373, MIT, Cambridge, Mass. 02139; (617) 253-3442.

New this year is a fellowship at the Marine Biology Laboratory at Woods Hole, Mass. Five journalists will be funded for up to eight weeks for advanced graduate level courses and independent work with resident researchers in areas such as embryology, microbiology, neurobiology and parasitology. Contact George Liles, Public Information Office, Marine Biological Laboratory, Woods Hole, Mass. 02543; (617) 548-3705.

The Council for the Advancement of Science Writers is expanding its fellowship programs this year.

Continuing will be the four to six Nate Haseltine Fellowships of up to $2,000 to pursue graduate-level programs in science reporting, as well as two University Fellowships for journalists to work in the public information offices of a major research university in both medicine and science.

Deadline for the Haseltine fellowships is June 1. Contact William J. Chromie, Council for the Advancement of Science Writers, 618 N. Elmwood, Oak Park, Ill. 60302; (312) 383-0820.

A new offering from the council provides traveling fellowships for journalists to attend its annual New Horizons in Science briefings, which will be held at Texas A&M University in College Station next October. CASW also plans to offer writers-in-residence fellowships for journalists to spend several months in a scientific laboratory. Details will be announced by the council later this year.

The National Association of Science Writers offers two fellowships for a month at Duke University, one in the spring and one in the fall semester. Writers, who must have been members of NASW for five years, arrange independent study. The stipend covers tuition, expenses of $100 a week and travel equivalent to the distance from New York City to Durham, N.C. A Dec. 1 deadline has been extended for spring semester applications. Contact Diane McGurgan, NASW, P.O. Box 294, Greenlawn, N.Y. 11740; (516) 757-5664.

Aiming at both science and business writers, Carnegie-Mellon Fellowships provide tuition and a stipend for several experienced reporters and editors to attend graduate-level, executive programs in Carnegie-Mellon University's schools of management, engineering and science. Deadlines vary depending on programs selected. Contact Bernard P. Goldsmith, Carnegie-Mellon University, Box 10, Pittsburgh, Pa. 15213; (412) 578-8500.

Business and economics. Two university programs offer fellowships to mid-career journalists for a full or academic year.

The Walter Bagehot Fellowship Program in Economics and Business Journalism offers 10 experienced journalists an academic year of study at Columbia University. Open to both print and broadcast journalists with at least four years of work experience, the program includes regular university courses as well as special seminars. Fellows receive free tuition and a living stipend of $14,000. There is one minority fellowship. Deadline is April 4. Contact Mary Bralove, Bagehot Fellowship Program, Graduate School of Journalism, Columbia University, New York, N.Y. 10027; (212) 280-2711.

Jointly sponsored by the School of Journalism at Ohio State University and the Kiplinger Foundation in Washington, D.C., the Kiplinger Graduate Program in Public Affairs Reporting runs a full year. The 10 fellows must have at least three years' experience in the media and take the Graduate Record Examination by Feb. 1. They receive stipends of about $18,000, which includes tuition and living expenses, and receive a master of arts in journalism degree on completion of the fellowship. Deadline is Feb. 1. Contact John Wicklein, Kiplinger Program, School of Journalism, Ohio State University, 242 18th Ave., Columbus, Ohio 43210; (614) 422-2607 or 422-6291.

Gannett Fellowships in Asian Studies for Journalists

University of Hawaii

1986-87 ACADEMIC YEAR

OPPORTUNITY for up to six American journalists, preferrably mid-career, to broaden their knowledge of Asia through an academic year of Asian studies at University of Hawaii–Manoa.

COMMENCING August 15, 1986. Concluding May 31, 1987. Partially funded trip to Asia follows.

FINANCIAL SUPPORT: Stipend $15,250. Tuition and fees. Economy round trip to Hawaii from continental U.S. or comparable air fare costs. Portion of travel costs for Asia trip.

PROGRAM includes area and language study focused on a country or region of Asia. Some 400 courses with Asia-related content are taught at University of Hawaii.

DEADLINE: March 1, 1986.

ADDRESS for application forms: Gannett Fellowship Committee, Center for Asian and Pacific Studies, University of Hawaii, 1890 East-West Road, Honolulu, Hawaii 96822.

For those pursuing a master's degree in business or journalism on their own, a financial daily, American Banker, offers two $4,500 fellowships for graduate study in business or journalism. Fellows also get a paid summer internship at one of the paper's four offices—in New York City, Chicago, San Francisco or Washington, D.C. Deadline is March 14. Contact Joanne M. Bitterman or William E. Zimmerman, American Banker, 1 State Street Plaza, New York, N.Y. 10004; (212) 943-5714.

The Herbert J. Davenport Fellowships at the University of Missouri offer a month-long program in June to 20 journalists with about three years' experience. Deadline is April 1. Contact James K. Gentry, Business Journalism Program, School of Journalism, University of Missouri, P.O. Box 838, Columbia, Mo. 65205; (314) 882-7862.

Two, two-week programs specialize in banking.

The National Press Foundation offers seven fellowships to journalists for a two-week session at the Graduate School of Banking of the University of Wisconsin at Madison in August. Deadline is June 1. Contact National Press Foundation, National Press Building, Washington, D.C. 10045; (202) 662-7350.

The American Bankers Association offers two Hughes Fellowships to financial editors and reporters for a two-week session at the Stonier Graduate School of Banking at the University of Delaware in Newark, Del. Contact Barbara Scotland, American Bankers Association, 1120 Connecticut Ave. N.W., Washington, D.C. 20036; (202) 467-6698.

Law and public policy. For the 10th year, Yale Law School offers a master's of studies in law for up to five journalists. They take the regular law-school curriculum in the first semester and electives in the second. The stipend covers full tuition, but newspapers are encouraged to pay living expenses for their reporters. Deadline is Feb. 1. Contact Jamienne Studley, Yale Law School, Box 401-A Yale Station, New Haven, Conn. 06520; (203) 436-8890.

Two programs offer practical experience in government to a few journalists, along with other professionals.

The White House Fellowship program places 12-18 people at the senior staff level in the White House, cabinet departments or other government agencies. A salary range of approximately $50,000 is negotiated individually. Deadline is Nov. 15. Contact President's Commission on White House Fellowships, 712 Jackson Place N.W., Washington, D.C. 20503; (202) 395-4522.

The American Political Science Association includes a few journalists in its Congressional Fellowship Program of about 45 professionals. They receive $16,000 for the November through August program, combining jobs on Capitol Hill with APSA seminars. Deadline is Dec. 15. Contact Catherine E. Rudder, Congressional Fellowship Program, APSA, 1527 New Hampshire Ave. N.W., Washington, D.C. 20036; (202) 483-2512.

International. Two fellowships designed to strengthen U.S. newspapers' coverage of Asia are based in Hawaii.

The Jefferson Fellowships offer six U.S. editors an eight-week program in March and April. U.S. and Asian journalists share four weeks of study at the East-West Center; the other half of the fellowship provides Asian travel for U.S. editors and U.S. travel for the Asians. The stipend covers travel in Asia and a prorated equivalent of up to a $48,000 salary. Deadline is Oct. 1. Contact the curator, Jefferson Fellowships, East-West Center, 1777 East-West Road, Honolulu, Hawaii 96848; (808) 944-7324.

The Gannett Fellowship Program in Asian Studies at the University of Hawaii offers an academic year of study to six mid-career journalists. Deadline is March 1. Contact Gannett Fellowship Committee, Center for Asian and Pacific Studies, University of Hawaii, 1890 East-West Road, Honolulu, Hawaii 96822; (808) 948-8543.

Another Asian fellowship focuses on Japan. For the past 12 years, the International Press

■ The Gannett Center for Media Studies invites applications for its 1986–87 fellowship program. Fellows will implement individual projects and participate in the general activities of the Center, which is an institute for the advanced study of mass communication and technological change.

■ *Terms of fellowships:* Fellows will be in residence at Columbia University for three to 12 months. Stipend based on present salary, office space, clerical and research assistance and other benefits will be provided.

■ *Types of fellowships:* Fellowships are designed to attract media professionals from print and broadcasting, scholars from communications and mass media disciplines as well as from other academic fields. Twelve to 15 fellowships will be awarded.

Fellowships

■ *Application procedure:* Applicants should submit a letter of application, a brief summary of their project, a resume, references, and publications or work samples. Applications are due February 1, 1986; appointments announced in March 1986.

■ *Selection criteria:* Appointments will be based on (a) the proposal's significance and quality (b) the applicant's ability to carry out the work and (c) relevance of the project to the resources of the Center and its New York location.

■ *Requirements for fellows:* Fellows must be in full-time residence and not engage in outside employment or consulting. Participation in weekly seminars and dissemination of fellowship projects is required.

■ *Apply to:*

Residential Fellowship Program

Gannett Center for Media Studies

A Gannett Foundation Program at Columbia University

Institute and the Japan Newspaper Publishers and Editors Association have sponsored an annual three-week exchange of 10 U.S. and 10 Japanese journalists, with scheduled travel and interviews. The stipend covers travel and living expenses. Deadline is April 1. Contact Richard Leonard, The Milwaukee Journal, 333 W. State St., Milwaukee, Wis. 53203; (414) 224-2000.

Columbia University's Graduate School of Journalism screens candidates for two European programs.

The John J. McCloy Fellowship offers two U.S. journalists a month of study in West Germany, and two German journalists the equivalent in the United States. The Paris-based Journalists in Europe program offers two U.S. journalists with at least four years' experience $7,000 to participate in an eight-month program of study along with 35 journalists from countries throughout the world. They publish articles in Europe, a magazine, and can freelance during the program. Foreign language ability is not required but considered desirable. Deadline for both programs is Feb. 15. Contact Donald Shanor, Graduate School of Journalism, Columbia University, New York, N.Y. 10027; (212) 280-3837.

Two other international fellowships focus on Latin America.

In a program more than 30 years old, the Inter American Press Association offers 10 $5,000 scholarships to U.S. or Canadian journalists or journalism-school graduates for a year of study and reporting in Latin America, while 10 Latin Americans have an equivalent opportunity in North America. A good working knowledge of the host country's language is required. Deadline is Aug. 1. Contact Zulay Chirinos, IAPA Scholarship Fund, 2911 N.W. 39th St., Miami, Fla. 33142; (305) 376-3522.

The National Press Foundation provides tuition and travel expenses for seven journalists to attend an intensive, three-month Spanish language course at the Guernavaca Language School in Mexico. Publications are expected to cover living expenses, which are modest because journalists stay with local families. The fellowship begins in January. Deadline is June 1. Contact National Press Foundation, National Press Building, Suite 1160, Washington, D.C. 20045; (202) 662-7350.

Journalists may also be included in several international fellowships designed for a variety of professions.

Fulbright Fellowships offer an academic year of study in areas requested by specific countries. Funds provide for travel, living expenses and some professional needs. Now in its second year is a Fulbright-sponsored program for up to 15 professionals for year-long research or study projects in Japan. Deadlines vary: June 15 for Australia, New Zealand and South America; Sept. 15 for other countries. Contact Council for International Exchange of Scholars, 11 Dupont Circle N.W., Suite 300, Washington, D.C. 20036; (202) 939-5400.

The Rotary Foundation of Rotary International sponsors fellowships for more than 1,000 people between the ages of 21 and 50, including about 50 journalists. Applicants must be nominated by a local Rotary Club and may not be Rotary members. Deadlines vary according to local schedules, but final recommendations are due Oct. 1. Contact The Rotary Foundation, 1600 Ridge Ave., Evanston, Ill. 60201; (312) 328-0100.

The Robert Bosch Foundation Fellowship Program includes journalists among up to 15 professionals who work for national and local government or private industry in West Germany. The September-through-March program includes language instruction. Deadline is Oct. 15. Contact David Schluckebier , Robert Bosch Foundation Fellowship Program, The Carl Duisberg Society, 425 Park Ave., New York, N.Y. 10022; (212) 593-3004.

The Council on Foreign Relations has included a few seasoned journalists among the recipients of its International Affairs Fellowships, which place professionals in high-level jobs in government or the private sector. The stipend is $30,000. Applicants must be between the ages of 27 and 35.

"Specialized reporting is in jeopardy" if newspapers do not act to save one-year or longer programs.

For one highly experienced foreign correspondent, the CFR offers the Edward R. Murrow Fellowship for one year of reading, study and writing as well as participation in programs of the center. The stipend is based on the individual's pay but is not to exceed $60,000 a year prorated for the nine months of the fellowship.

Deadline is Oct. 31 for the International Affairs Fellowships and March 3 for the Murrow program. Contact Kempton Dunn for the former and Margaret Osmer-McQuade for the latter at the Council on Foreign Relations, 58 E. 68th St., New York, N.Y. 10021; (212) 734-0400.

Minorities. Since 1980, ANPA has offered fellowships to minorities employed by newspapers or to minority journalism educators to attend regularly scheduled newspaper-business seminars. The 25 fellowships for 1986 cover tuition, board and travel expenses. Deadline for seminars in the first half of the year is Jan. 27. Contact Nancy Osborn, ANPA Foundation, The Newspaper Center, Box 17407, Dulles Airport, Washington, D.C. 20041; (703) 648-1053.

The largest training center for minorities in newspapers, the Institute for Journalism Education, offers three programs at three locations to about 50 participants.

The first is an eight-week program offered by IJE's Management Training Center, now in its second year, for about 20 people already in management positions. Applicants must be sponsored by their newspapers, but some fellowships are available to papers with less than 100,000 circulation. Offered in cooperation with the J.L. Kellogg Graduate School of Management and the Medill School of Journalism of Northwestern University, the program is divided between classwork and practical experience. Contact Ellis Cose, IJE, School of Journalism, University of California, Berkeley, Calif. 94720; (405) 642-3503.

The second, a seven-year-old editing program, includes about 12 participants with at least one year's experience on a newspaper or in other media. In addition to classwork, they produce a weekly newspaper and work on the copy desks of Tucson's dailies during the June 8-Aug. 1 session. Deadline is March 1. Contact Diane Molina, Editing Program for Minority Journalists, Journalism Department, Franklin Building 101M, University of Arizona, Tucson, Ariz. 85721; (602) 621-5777.

The third is an 11-week reporting program now in its 16th year. It is open to minorities with little previous newspaper experience. The 15 participants in the June 1-Aug. 15 program are guaranteed job placement upon graduation. Deadline is March 1. Contact Robin Azi, Summer Program for Minority Journalists, IJE, School of Journalism, University of California, Berkeley, Calif. 94720; (415) 642-5962.

Beginning its fifth cycle is a year-long program for Hispanic reporters sponsored by the National Puerto Rican Coalition and funded by the Gannett Foundation. For $15,000, two reporters work with Hispanic Link News Service, which distributes columns and features in Spanish or English to about 200 newspapers. Deadline is in mid-summer. Contact Charles Ericksen, Hispanic Link News Service, 1420 N St. N.W., Washington, D.C. 20005; (202) 234-0737.

A new program designed to train reporters and editors to be more sensitive to minority issues in the newsroom as well as minority coverage in the newspaper will begin this summer at the University of Missouri. The program is expected to last four weeks and include about 12 participants, but curriculum and funding are still in the planning stage. Contact Ben Johnson, director, The Multi Cultural Management Program, School of Journalism, University of Missouri, P.O. Box 838, Columbia, Mo. 65205; (314) 882-4821.

Independent study. Other fellowships support independent projects outside of organized programs.

The Gannett Center for Media Studies sponsors 12 to 15 media professionals, about half of whom are journalists, working on independent projects for three months to a year. Fellows also participate in the activities of the center at Columbia University. The stipend, which is based on present salary, covers office space, clerical and research assistance and sometimes other expenses, such as travel. Deadline is Feb. 1. Contact Residential Fellowship Program, Gannett Foundation Program at Columbia University, 2950 Broadway, New York, N.Y. 10027; (202) 280-8392.

The Alicia Patterson Foundation offers $25,000 fellowships to about five journalists for a year's work on a specific project. Stories based on this research are published in the quarterly APF Reporter. Applicants must be print journalists with at least five years' experience. Deadline is Oct. 1. Contact Alicia Patterson Foundation, 655 15th St. N.W., Suite 320, Washington, D.C. 20005; (202) 639-4203.

Ohio State University offers a stipend of $25,000 plus a year's residence in the newly restored home of James Thurber. The "writer-in-residence" will teach a non-fiction writing course and serve as writing coach for the staff of The Columbus Dispatch. Applicants must have had a book published by a major publisher. Deadline is Dec. 15. Contact Thurber House, 77 Jefferson Ave., Columbus, Ohio 43215; (614) 464-1082.

The Society of Professional Journalists, Sigma Delta Chi, offers an annual $10,000 Eugene C. Pulliam Award to an editorial writer for work-related study and travel. Deadline is Aug. 1. Contact Pulliam Fellowship, SPJ,SDX, 53 W. Jackson Blvd., Suite 731, Chicago, Ill. 60604; (312) 922-7424.

The Scripps Howard Foundation presents 10 $2,000 Ellen B. Scripps Fellowships to journalists pursuing graduate studies in accredited programs. Requests for applications must be received by Dec. 20. Contact Scripps Howard Foundation, 1100 Central Trust Tower, Cincinnati, Ohio 45202; (513) 977-3035.

The Fund for Investigative Journalism bestows about 40 grants a year in amounts ranging from a few hundred to a few thousand dollars to journalists working on special projects. The fund will support both investigative reporting and news media criticism. Applications are considered throughout the year. Contact Howard Bray, FIJ, 1346 Connecticut Ave. N.W., Washington, D.C. 20036; (202) 462-1844.

For the third year, the National Press Foundation is offering journalists and journalism educators $2,000 grants for independent projects. Applications are accepted throughout the year. Contact NPF, National Press Building, Washington, D.C. 20045; (202) 662-7350.

The National Press Photographers Association awards $10,000 to a photojournalist during an unpaid leave of absence of about three months to work on a project. This year, the project should be on a theme related to "The Changing Face of America," such as recording new trends or documenting Americana. The grant is provided by Nikon. Deadline is Feb. 10. Contact Charles R. Freestone, NPP Foundation, 2709 Essel Drive, Tucson, Ariz. 85715; (602) 573-4157.

Canadian journalists with five years' experience in print or broadcasting are eligible for Southam Fellowships. These grants underwrite an academic year at the University of Toronto and pay two-thirds of regular salaries for at least three journalists. Deadline is Feb. 28. Contact Southam Fellowships, Office of Student Awards, Koffler Student Services Center, 214 College St., University of Toronto, Toronto, Ontario, M5T 2Z9; (416) 586-7956.

The Heritage Foundation offers grants of from $2,500 to $10,000 to one journalist a year for expenses associated with an independent research project. Deadline is March 31. Contact Herbert B. Berkowitz, The Heritage Foundation, 214 Massachusetts Ave. N. E., Washington, D.C. 20002; (202) 546-4400.

Third press-pool test 'worked very well'

The third test of a press pool assembled on short notice to cover a military operation was conducted successfully in December.

"It worked very well," said Frank A. Aukofer, Washington correspondent for The Milwaukee Journal, who was on the mission.

His comments were echoed by Dan K. Thomasson, editor of Scripps Howard News Service in Washington, D.C. "There was no leak," said Thomasson. A member of his staff was the only other newspaper representative in the pool.

The 12-person pool was activated in the early morning hours of Dec. 10 and told to report to Andrews Air Force Base outside Washington by 6 a.m. Its members were flown to an island 50 miles west of San Diego to cover a mock assault by Marines. The pool was back at Andrews before midnight Dec. 11.

Air Force Col. Robert J. O'Brien, the Pentagon's deputy assistant secretary of defense for public affairs, also said he was pleased with the operation.

The contingency pool was devised after reporters were barred from the 1983 Grenada invasion. The first test in April 1985 was marred when word of the pool leaked out before its members departed Andrews. The second test was conducted secretly last September [presstime, Oct. 1985, p. 61]. ☐

3 small Alabama dailies drop wire service

Three small Alabama dailies that pride themselves on local coverage have dropped their news wire service after deciding they are better off without it.

The Troy Messenger, The Alexander City Outlook and The Andalusia Star News, all morning papers, independently stopped using their Associated Press service within the past 10 months, their publishers say. The Messenger is in the Tillotson Publishing Group. The other two are owned by Boone Newspapers.

Publishers of the papers said they ran little wire copy and the cost exceeded its usefulness.

They also said their readers can keep up on state, national and international news from other sources, including larger dailies that have some overlapping circulation in their markets and radio and television stations. ☐

Hell introduces new "Pressfax" laser facsimile system!
High resolution "Pressfax" lends benefits to newspapers!
Pressfax P 100 Scanner
Pressfax!

Superior quality...high resolution...speed...and reliability. These are the proven benefits of the new Pressfax flat-bed laser facsimile system from Hell Graphic Systems.

Pressfax gives you the capability to directly and rapidly transmit complete text and image pages for newspapers, magazines, and catalogs to any remote site for printing. With this advanced, easy-to-operate system working for you, you're assured of high-resolution black and white and four-color reproductions of transmitted images. In fact, Pressfax is the only system capable of scanning up to 175-line, high-quality color separations, and recording exact facsimiles in accurate register at a remote location.

Best of all, Pressfax can grow with your changing requirements. Your investment is always working for you...year after year. To find out more, contact your Hell branch office.

Achromatic color test shows less ink used, better control

Research into the uses and advantages of achromatic color reduction, which is sometimes referred to as gray component replacement or undercolor removal, is progressing in the newspaper business. Essentially, the process removes nonessential colors from pictures.

In mid-December, ANPA ran its first press test comparing ink consumption, color consistency and the make-ready of color separations made conventionally with ones made using achromatic color reduction.

Early results bear out reports that ACR greatly reduces the amount of color ink required to print process color and yields reproduction that is superior to conventional separations, according to ANPA Development Engineer Gene Manasco, who conducted the press test. He and others involved, however, said questions remain concerning ACR's ability to improve make-ready on non-heat-set offset presses, which are used in printing newspapers.

Understanding the way ACR works involves some recognition of the way process color pictures are reproduced on a press.

In conventional color separation, color pictures are separated into halftones that represent the primary colors used in printing—cyan, magenta and yellow—plus black to add more contrast. Every portion of a picture contains dots of all these colors, even though some do not need to be there. A lemon, for example, will contain magenta and cyan in addition to yellow.

Usually, the unnecessary colors tend to cancel each other out, producing a neutral gray color, and are thus wasted in the color reproduction process.

ACR essentially eliminates these unnecessary color densities in the separations and, in effect, transfers the gray component they would produce to the black printing separation. As a result, the separations for the colors require less ink to accomplish their purpose, while the black printer needs more.

"Achromatic color has been around in theory for 100 years," said Dennis G. Ryan, scanner product manager for Hell Graphic Systems, who participated in the test. "But the technology wasn't available."

The current crop of high-performance scanners, which range from $175,000 to $225,000, have in them the necessary computers and software to analyze each minute picture element, divide the primary colors appropriately and send that data to the scanner.

The ACR process, which previously could be done manually in a conventional darkroom in about a day, now takes 10 minutes with an appropriately outfitted scanner, Ryan said.

In the test at The Newspaper Center in Reston, Va., Hell supplied the same picture as both conventional and ACR positive color separations, which were reversed, stripped into position and made into plates.

The sets of separations were run separately on the center's M.A.N.-Roland Uniman 4/2 press, using two full rolls of newsprint providing 32,700 copies. Samples were drawn from the press delivery every 1,000 impressions; the press was run at 30,000 impressions per hour. Color ink densities were set at .95 and black at 1.05. All press settings were returned to zero after the first press run.

In the first press run, which tested the conventional separations, 19.5 pounds of magenta, nine pounds of cyan and 12 pounds of yellow ink were consumed. In the run testing the achromatic separations, consumption dropped to 11.5 pounds for magenta, 4.5 pounds for cyan and 9.5 pounds for yellow.

However, "ink savings would depend on the copy" in a given situation, cautioned Manasco.

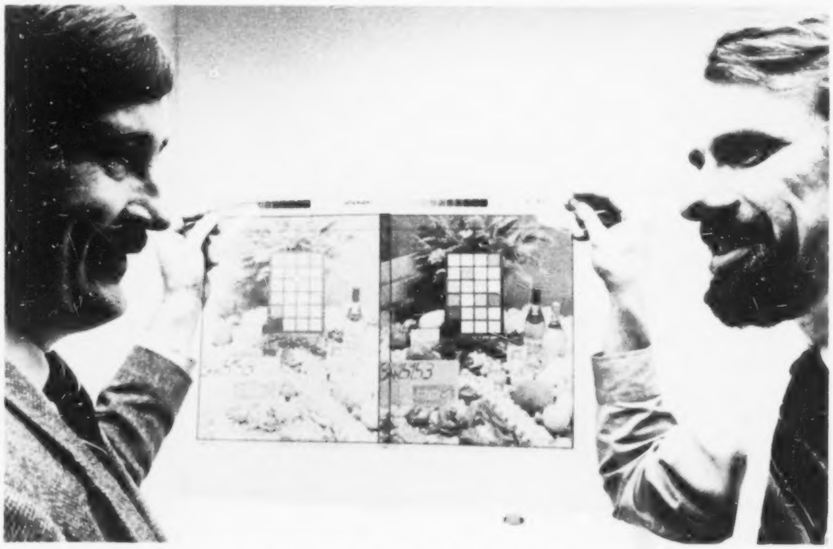
Although black ink consumption was not measured, Manasco said more black ink was used during the second press run.

"There would be an increase in black ink consumption, generally," Ryan said, "probably about 50 percent."

Manasco counted 29,000 salable copies in the press run of conventional separations and 31,000 in the ACR run. He qualified the better results of the achromatic tests by pointing out that the conventional separations were run "from a cold start, while [the achromatic separations] were run on a warm press."

Regarding color consistency throughout the press run—a subjective evaluation—Manasco said the achromatic outperformed the conventional separations. "The achromatic separations definitely ran more consistently," he said.

He attributed that partly to the reduced work load of the color printing units. Be-



Hell's Ryan (left) grasps conventional positive of black printer, while ANPA's John Harrington holds the denser achromatic black positive.

cause the plates running the achromatic separations needed less ink, there were fewer instances of "ink starvation"—ink backing away from the transfer roller—or other press maladies. In short, it was easier to control ink settings with the achromatic separations, he said.

"There were indications that makeready may be quicker, too," Manasco noted. "It cuts problems with trapping colors properly" and is "more forgiving" regarding mistakes in registration.

These characteristics give newspapers with ACR more control over the density of colors being reproduced, Manasco observed. Thus pressmen can change the color of portions of pictures without degrading other colors.

The end result, he said, is that newspapers will be able to produce salable copies more quickly.

Hell's Ryan said the added cost of ACR can be recouped through the 14-to-25-percent savings in color ink consumption. "What you're saving on ink will almost cover the annual payments on the scanner," he noted.

There will be at least two more tests of achromatic color replacement at The Newspaper Center, said Manasco. They will involve using lower and higher grades of newsprint, and the order of running each set of separations will be reversed to determine more accurately the potential make-ready savings of ACR.

—Paul Kruglinski

Exchange

For sale: six rebuilt dock loaders, chain-driven; 8-feet closed, 17-feet open; 18-inch belt width, 125 FPM; 3-phase, 200-volt motors, 120-volt coils. Contact Carl L. Poehler, assistant production director, Call-Chronicle Newspapers Inc., P.O. Box 1260, Allentown, Pa. 18105; (215) 820-6154.

For sale: LogE LD18 film processor; Goss Urbanite press parts—eight roll shafts with chucks, brake assemblies and shoes, one folder drive shaft with sprocket, chain, guard and 100-horse power motor sprocket; two tying machines—Saxmayer model 59 SRA serial number 1881, and Bunn package tier serial number 13974. Also, Compugraphic model 2961 typesetter with spare parts kit. Contact Victor Tardue, production manager, Daily Hampshire Gazette, Northampton, Mass. 01061; (413) 584-5000.

Editor's note: Exchange notices are published without charge as a service to ANPA-member newspapers.

How to test extent of ink rub-off

The ANPA and the National Association of Printing Ink Manufacturers have developed an ink rub-off test that ANPA is now recommending to newspapers.

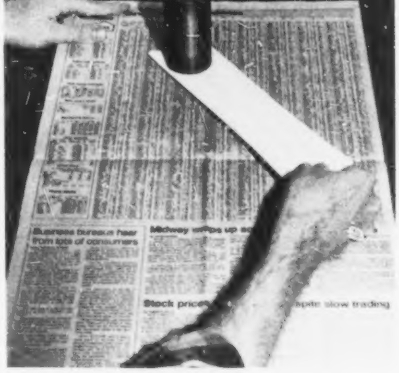
Although a given newspaper may want to conduct tests according to its particular operation, the ANPA/NAPIM test outlines some basic procedures that individual newspapers may adapt.

An example of this approach is the test currently being used by The Oregonian in Portland.

Materials needed are a standard 2-inch-diameter-by-3.49-inch-long steel weight, a pad made from plate backing, a densitometer, template, Kleenex "man-size" tissues, envelopes, labels, and a flat, level surface such as plexiglas.

According to The Oregonian, sample copies should be pulled when the press is running at full speed, ink density is between 0.95 and 1.0 uniformly across the page (using densitometer and square-target readings), optimum water settings are at 1,300 conductivity, and pH is between 9.0 and 9.5.

Sixteen papers are taken from the press to the foreman's office and opened one at a time. The sample pages—The Oregonian uses New York Stock Exchange listings—are torn out and placed squarely in a fixture under clamps. A tissue is placed on the upper left corner of the page, the fixture is closed, and the weight, blanket side down, is set gently—without twisting—onto the tissue. The tissue is grasped and pulled diagonally along the fixture, stopping at the lower right. The pulling is specified to take four seconds and be smooth and straight.



Kleenex is weighted, then pulled across page.

The weight is removed carefully, the fixture is opened and the tissue is folded to cover and protect any ink stain.

Both the tissue and the page are labeled. The page is folded into quarters, and both tissue and page are placed in an envelope, which is labeled.

The procedure should be repeated until four samples are taken.

The procedure is then repeated on the remaining 12 sheets at 30 minutes, one hour and two hours after the copies were pulled from the press. Time intervals must be kept.

Also necessary are test numbers (from a log book), the name of the ink company, edition dates and printed ink density.

Research by ANPA and others has uncovered additional information regarding ink rub-off, according to George Cashau, the Association's director/technical research. "The research will continue until a universally acceptable test for rub-off is developed, and the ink/paper relationships are known."

Cashau said the following is known:

- Print density is critical to ink rub-off. "Laboratory printed densities must be held to plus or minus 0.01 to ensure reproducibility."
- Newsprint surface characteristics affect rub-off. "A standard ink will perform differently on varying newsprints and varying inks will perform differently on standard newsprint." (ANPA is also beginning research to determine the extent newsprint affects the rub-off situation.)
- Rub-off is related to time after printing, but the results are not uniformly predictable. "Some ink and newsprint combinations do not significantly reduce rub-off after printing time, while others show a uniform curve of rub-off reduction."
- The ANPA/NAPIM rub-off test has its limitations when used in the field. "The rub-off test using standard weights, uniform drag across the sample, uniform substrates and standard printing density is not suitable for the pressroom, except as an internal comparison, because it is extremely difficult to keep the density levels within tolerances."

Cashau said densitometers used in various pressrooms would have greater variations in readings than those used in a laboratory, making comparisons of ink or newsprint among pressrooms unreliable.

Copies of ANPA's procedures are available by contacting Doris E. Kleintop at The Newspaper Center, Reston, Va. ☐

Team of tiers tackles 'football' bundles

Here's the scenario:

It's a heavy insert day. The inserting machines are stuffing odd-sized preprints and catalogues off-line from the press. The finished products then go to a stacking machine. Because of the preprints, the bundles produced by the stacker are bulging and "football" shaped. Consequently, they fall off the conveyors and spill onto the mailroom floor before being wrapped and tied.

Here's the result:

The stacker has to be programmed to produce smaller bundles, which means the mailroom staff and delivery people have more bundles to handle. Additional people must be employed to restuff the contents of the bundles that have fallen. And the inserting operations must be slowed—or stopped—because of the backlog created by the spilled bundles.

If all this sounds painfully familiar, take heed of a solution being used by Syracuse (N.Y.) Newspapers Inc., as well as some other newspapers around the country.

These Syracuse papers have found they can eliminate the problem of falling, football-shaped bundles by positioning a second tying machine just after the stacker in the conveyor line, according to Production Manager Michael Stern.

While this second tying machine does not eliminate the need for another one at the end of the conveyor, he said, it offers solutions to several problems associated with the odd-sized and odd-shaped preprints newspapers are getting.

In most automated operations at newspapers, there is a single tying machine located at the end of each conveyor. Its function is to tie a plastic band around a bundle. Typically, this is done after the newspapers have been stacked, kraft paper has been placed at the bottom of the stack and an identifying label has been affixed to the top.

Carl J. Single, Syracuse Herald-Journal and The Post-Standard

Mailroom worker labels bundle after it has left the first of two tying machines.

Economics, the complex nature of today's inserting operations, and the size and shape of preprints are forcing some newspapers to rethink this configuration, Stern noted.

"Bundles with inserts wouldn't stay together," Stern said. "You wind up with a mess on the floor. You had to have a lot of people along the conveyor to keep the bundles together. And we weren't getting any production out of our inserting operations.

"Necessity being the mother of invention, with papers all over the floor, we just did it out of outrage," he said.

While having the second tying machine just after the stacking machine may seem unusual, Stern noted the bottom line is that it works. "A, we are getting our job done now," he said. "B, we're using less people."

The Syracuse dailies have been using the second tying machine for about three months, and Stern said "it has permitted us to go back to a larger bundle," thus reducing handling problems. "Putting the second strap on improved the shape of the bundle. Our circulation department has been pleased with that."

Other newspapers with similar operations are also employing the tactic, he reported, some with improvements. "Other newspapers have worked out a cross-tying situation," he said, where the bundle is rotated 90 degrees before the second tie is applied.

Stern said newspapers can use secondhand or spare tying machines for the first step in a two-phase strapping process because the device is needed only on high-volume inserting days.

Editor's note: The preceding was submitted in response to ANPA Technical Committee requests for innovative ideas. Send submissions to Alan Tepper, Technical Services Department, at The Newspaper Center in Reston, Va. ☐

TECHNOLOGY NOTES

- Digital Equipment Corp. may **re-enter the newspaper business.** DEC ceased being an active vendor three years ago.

The manufacturer of large computer systems has hired an executive recruiter to find "top people with extensive knowledge about newspapers," a DEC spokesman said, and management is considering a proposal that the firm become "more actively involved in the newspaper business."

- DEC announced that **11 vendors have agreed to support** the Uni-File data format for its read-only optical disks.

According to the company, the development will give personal computer-based systems more storage capacity and will facilitate the exchange of data among different systems.

Among the firms supporting Uni-File are two vendors of newspaper electronic library systems—Battelle and DataTek.

- System Integrators Inc., a vendor of front-end systems, and the San Jose (Calif.) Mercury News have signed a letter of intent to **develop a newspaper pagination system** that will accommodate pictures and other graphics.

The daily said the first portions of the system, for display advertising, will be installed this year, and all of it should be in place by 1987.

- The Newspaper Agency of Salt Lake City, which publishes The Salt Lake Tribune and The Deseret News, **purchased a $3.37-million pagination system** from Information International Inc.

The system will be installed in two phases, beginning in April.

- Koppers Co. Inc., a large, diversified manufacturer, **ended its research and development of flexography** for newspapers.

Although Koppers called flexography a viable printing process for newspapers, a spokesman said high research costs and slow return prompted the decision.

- Muller-Martini Corp., a manufacturer of mailroom equipment, is **doubling the size** of its Grapha Manufacturing division in Newport News, Va.—to 150,000 square feet.

The company is also installing its Biliner Printroll mailroom system at the Times-Colonist in Victoria, British Columbia. It is the first installation of the on-line inserting and print-wheel storage system in North America.

Experimental ink moves closer to production

An experimental black letterpress ink that is similar in chemical composition to shoe polish may be moving closer to reality within the newspaper business—if quality control and pricing problems can be solved.

Saranda Trading Limited Partnership, a Newark, Ohio-based company, was organized recently to develop the ink further and to market it to newspapers. The firm is an outgrowth of Dayton Tinker Corp., which originally developed the ink [presstime, Oct. 1985, p. 26].

Thus far, Saranda has received a $250,000 grant from Ohio's Thomas Edison Program, which assists small businesses, and is working with the University of Dayton Research Institute on future development of the ink. Also, Saranda has purchased and reconditioned a resin-processing plant from Georgia-Pacific Corp. for an undisclosed sum. The 20,000-square-foot plant will have a capacity of manufacturing 30,000 gallons per day, according to Rodger L. Gamblin, Saranda's business manager and the ink's developer.

Unlike conventional inks, Saranda's replaces the carbon-black pigment with a stain similar to that used in shoe polish and ink-jet printers. Instead of the pigment's lying on the surface of the newsprint, the stain is incorporated into the fibers, said Gamblin. The result is an ink with greater rub-resistance.

The ink has been run under test conditions at newspapers in Louisville, Columbus, Ohio, and Fort Wayne, Ind., and on presses at The Newspaper Center in Reston, Va. The results have been "encouraging," according to several newspaper-industry sources, but more work needs to be done on the ink. No newspapers have purchased it to date.

Gamblin told presstime that the new ink would sell for 65 cents per pound. There are some rub-resistant black letterpress inks already available selling for 52 cents per pound.

Saranda will market its black letterpress ink this year and is also working on a black offset version as well as color inks for both printing processes.

"Our offset black ink is about six months away from development," said Gamblin. He added, "We are still unable to control the color offset inks." ☐

TECHNOLOGY CALENDAR

- **Graph Expo West**, the biennial graphic arts show, will be March 1-4 at the Los Angeles Convention Center.
- The **Collier-Jackson Users Group** will meet March 1-4 at the Lincoln Hotel in Tampa.
- The Southern Newspaper Publishers Association will hold its **1986 Production Conference** March 9-11 at the Radisson Hotel in Orlando, Fla.
- The sixth annual **Seybold Seminars** on electronic publishing systems will be March 9-14 at the Beverly Hilton Hotel in Los Angeles.
- ANPA's **Pressroom Options III** symposium will be March 18-19 at the Hyatt Regency O'Hare near Chicago.
- The **Atex Commercial Users Group** will meet March 23-26 at the Westin Hotel in Washington, D.C.
- The **Newspaper Hardware Users Group** will meet March 27-28 at the Astro Arena Complex in Houston.
- The **Metro Users Group** will meet April 6-9 at the Lincoln Hotel in Dallas.
- **DRUPA '86**, the international graphic arts trade show, will be May 2-15 in Dusseldorf, West Germany.
- **Type-X** will be May 6-8 at the Hyatt Regency Chicago.
- The **Mycro-Tek Users Group** will meet June 20 at the Georgia World Congress Center in Atlanta.
- The **58th Annual ANPA Operations Management Conference & Exposition** will be June 21-25 at the Georgia World Congress Center in Atlanta.
- The **Atex Newspaper Users Group** will meet Aug. 17-20 at the Westin Hotel Utah in Salt Lake City.
- The **International Newspaper Conversions Group** will meet Oct. 15-17 at the Capital Hilton in Washington, D.C.

Kenaf research authorized

Congress Dec. 18 approved legislation giving the U.S. Department of Agriculture the go-ahead to proceed with a kenaf commercialization program this year.

The President is expected to sign the bill, according to Agriculture Secretary John R. Block.

Under the program, USDA would contract with farmers to grow kenaf, a fibrous annual plant that is a possible substitute for wood in making newsprint, and sell the harvested kenaf to participating pulp and paper mills.

There were concerns that the program might be postponed because its funding had not been included in the department's fiscal year 1986 budget [presstime, Dec. 1985, p. 52].

In late November, the Senate approved three amendments to the massive 1985 farm bill that would allow the USDA to carry out the kenaf program. A House-Senate conference committee included the amendments in the compromise version of the bill.

Plant may be a newsprint pulp substitute.

One amendment, by Sen. John H. Glenn Jr. (D-Ohio), authorizes the USDA to spend at least $10 million in each of fiscal years 1986, 1987, 1988 and 1989 for research and development projects into new uses for farm and forest products. This gives the department the authority and the funds it needs for the kenaf program, according to C. Michael Hoback, an aide to the assistant secretary of agriculture for science and education.

A second amendment, by Sen. Dennis DeConcini (D-Ariz.), authorizes the department to contract with farmers to grow so-called developmental industrial crops, such as kenaf, and to pay the farmers either with cash or with surplus products from inventories of the Commodity Credit Corporation. The CCC is a government corporation that provides loans to farmers who put up crops for collateral.

The third amendment, by Sen. Robert C. Byrd (D-W.Va.), allows the USDA to enter directly into agreements with state land-grant colleges for agricultural research without going through the competitive-bid process. According to Hoback, this would continue the current process of USDA's contracting directly with the universities for the needed research. ☐

Labor talks set

Contract negotiations between management of four British Columbia mills and two unions are expected to begin Jan. 31.

The CPU represents workers at MacMillan Bloedel Ltd.'s mills at Port Alberni and Powell River, Crown Forest Industries Ltd.'s mill at Campbell River, and British Columbia Forest Products Ltd.'s mill at Crofton.

Some other workers at the Crofton mill are represented by the Pulp, Paper and Woodworkers of Canada.

Current contracts with the CPU and PPWC are scheduled to expire June 30 [presstime, Aug. 1984, p. 59]. ☐

14 newsprint makers donate to ANPA for technical research

ANPA's technical departments received donations of newsprint from 14 U.S. and Canadian companies in 1985.

They were: Abitibi-Price Inc., Bear Island Paper Co., Bowater North America Corp., Champion International Corp., CIP Forest Products Inc., Consolidated-Bathurst Newsprint Ltd., Domtar Pulp & Paper Inc., Donohue Inc., Garden State Paper Co. Inc., Great Northern Paper Co., Kruger Inc., Reed Inc., Ontario Paper Co. and MacMillan Bloedel Ltd.

The donations totaled 100 rolls representing a value of about $30,000. Director/Technical Research George Cashau said the longstanding program of such donations to ANPA "is invaluable to our continued research." ☐

NEWSPRINT NOTES

- The Times Mirror Co. has reached an agreement to **sell an 80-percent interest in its Publishers Paper Co.** subsidiary to Jefferson Smurfit Corp. of Alton, Ill. The $150-million acquisition includes two newsprint mills, 12 waste-paper reclamation plants, four sawmills and two particle-board plants.

Times Mirror retains a 20-percent share of Publishers Paper.

The sale, subject to government and shareholder approval, is expected to take place during the first quarter of this year [presstime, April 1985, p. 56].

Times Mirror intends to enter into a long-term contract for the supply of PPC newsprint to its papers.

- Donohue Inc. approved plans to install a **new newsprint machine** at its Clermont, Quebec, mill. The 180,000-metric-tons-a-year machine will replace an older unit with a capacity of 40,000 tons. The cost of the project is estimated at $170 million.

- Great Lakes Forest Products Ltd. **postponed construction** of a newsprint mill at Usk, Wash., until market conditions improve. The mill, whose capacity would be 154,000 metric tons annually, had been scheduled to begin making paper in early 1987.

The project is a joint venture between Great Lakes and four U.S. newspaper companies [presstime, Aug. 1985, p. 58]. Chronicle Publishing Co. of San Francisco dropped out of the project last year, and the remaining partners are looking for a replacement.

- Manistique Papers Inc. will install a twin-wire forming unit on its newsprint machine, **adding 10,200 metric tons a year** to the Manistique, Mich., mill's capacity. Completion of the project is expected by mid-1986.

U.S. dailies continue using more newsprint

For the 10th straight month of 1985, U.S. daily newspapers in October used more newsprint than they did in the same month a year earlier. The increase was 3.4 percent. For the first 10 months, their consumption was 4.1-percent higher.

Consumption by all U.S. users in October rose 1.2 percent compared with October 1984. For the 10-month period, it was 1-percent above 1984's level.

Newsprint inventories of newspapers in ANPA's statistical sample were down slightly from September to October, but they remained greater than the previous year—44 days, two more days than in October 1984. North American mill stocks were 19-percent above the previous October's level.

Compared with the same month a year earlier, October 1985 production decreased 2.8 percent in Canada and 4.5 percent in the United States. North American production was down 0.5 percent for the first 10 months of '85.

Shipments from Canadian mills decreased 0.7 percent for the first 10 months.

U.S. mills' shipments decreased 3.2 percent for the 10-month period.

The October operating rate for Canadian mills was 92 percent of capacity, and for U.S. mills it was 90.5 percent.

ACEJMC draws fire over curriculum standard

Key members of two newspaper organizations have expressed concern over the recent decision of the Accrediting Council on Journalism and Mass Communications not to penalize automatically those journalism schools that do not strictly conform to the council's curriculum standard.

The standard, known informally as the "75-25" rule, describes the kinds of courses an undergraduate journalism student should take.

In the past, it has been expressed in terms of a ratio of about 75 percent general academic courses, with an emphasis on the liberal arts and sciences, to 25 percent journalism courses.

At its last meeting, the council adopted a clarification of its standard [presstime, Nov. 1985, p. 54]. The clarification prescribes a *minimum* of 90 credit hours (75 percent of the normal 120-credit hour undergraduate program) in courses outside journalism, with at least 65 in liberal arts.

At the heart of the current controversy is the council's rejection of a proposal to automatically deny accreditation or place on probation schools not in compliance with the standard.

The move to reject the enforcement plan was led by the representative of the national organization of journalism deans, who argued that the curriculum standard is only one of 12 ACEJMC standards.

Reacting to the decision, the chairman of the Education for Journalism Committee of the American Society of Newspaper Editors said the standard is the "highest priority item" for ASNE members.

"While there are, indeed, accreditation standards other than 75-25, nothing is so basic to our need for well-informed, broadly educated graduates as the heavy emphasis on liberal arts education," said John L. Seigenthaler, publisher and president of The Tennessean in Nashville and editorial director of USA Today.

In a Dec. 3 letter to ASNE President Robert P. Clark, Seigenthaler suggested that the society consider options that range from remaining in ACEJMC and continuing to push for a large liberal arts component in journalism education, to withdrawing from the organization. Another option mentioned by Seigenthaler is for the council to separate the news-editorial segment from the rest of journalism education and apply the stricter liberal arts requirements to that segment.

The ASNE committee will discuss the matter at a Jan. 24-25 meeting in Nashville.

Similar concern was expressed by the Executive Committee of the Southern Newspaper Publishers Association, which said Dec. 4 that the decision not to put an enforcement mechanism into the standard "appears to erode the central place that the liberal arts long have held among the standards for accreditation."

ACEJMC President Joseph W. Shoquist denied there has been any erosion. "If there were a grievous erosion of this liberal arts standard, which is one part of one of the 12 standards, then I would be just as dismayed as anyone could be," said Shoquist, managing editor-special projects of The Milwaukee Journal. He also is vice chairman of the Seigenthaler committee.

The council historically has chosen not to apply its curriculum standard rigidly, added Shoquist, who will become dean of the College of Journalism at the University of South Carolina in March. ☐

Literacy program to be launched

ANPA Foundation Trustees have approved a three-year program to make newspapers aware of the problem of illiteracy and to get them involved in its solution.

Meeting Dec. 5 in New York City, the Trustees approved the recommendation of its Newspaper in Education Committee for a three-phase program, committing $80,000 in the first year.

"I hope that we will have the impact that I think is possible in the fight" against illiteracy, said Thomas Schumaker, chairman of the NIE Committee and publisher and editor of the Transcript-Telegram in Holyoke, Mass.

"I think it makes sense for newspapers to be in that fight, both for obvious self-serving reasons and also for humanitarian reasons," he added.

The Foundation will hire a full-time staff member to oversee the program.

Phase I, which will be implemented this year, seeks to create awareness among newspapers of the illiteracy problem in the United States and Canada through:

- A slide show on illiteracy presented to individual newspapers and state, regional and national newspaper organizations
- Workshops for newspapers on how to create projects to deal with illiteracy within their communities
- A booklet describing the illiteracy problem and providing suggestions for local efforts.

The goal of Phase II will be to expand local efforts. Phase III will involve reaching out to other media and businesses. ☐

Unique resource center opens at U. of Minnesota

A Media Management and Economics Resource Center will open Jan. 6 at the University of Minnesota.

The center, said to be the first of its kind in the United States, grew out of a conference last year on the Minneapolis campus for educators interested in teaching media management [presstime, July 1985, p. 59].

Housed within the university's School of Journalism and Mass Communication, the center will serve three constituencies, explained Director John M. Lavine, Cowles professor of media management and economics.

Educators interested in teaching in this field may obtain information on courses being offered around the country, he said. According to a study Lavine conducted in 1984, about 150 schools either had or wanted to offer such courses,

In addition, media executives who want information to use in training their employees may obtain a list of the latest training materials. Students and media professionals with questions about media management or media economics may obtain a list of information sources and materials. Much of the information will be in a computerized database, he said.

The center is seeking additional materials from professors and media professionals, said Lavine, who also is editor and publisher of the Lavine Newspaper Group of Chippewa Falls, Wis.

The center also will conduct studies and sponsor conferences, including one scheduled for May supported by ANPA Foundation. (See story, facing page.)

The center received a $45,600 grant from Gannett Foundation and $36,000 from the university and the Minnesota Journalism Center, a facility at the school that reaches out to media professionals. ☐

ANPA Foundation selects recipients of education grants

ANPA Foundation will fund five journalism-education projects in 1986.

The projects relate either to teaching media economics and management or to computer-based learning [presstime, July 1985, p. 59]. Approved Dec. 5 by the Foundation's Board of Trustees, the projects, schools, project leaders and grant amounts are:

- A seminar on enhancing the productivity of newspaper creative personnel, University of Minnesota, John M. Lavine, $7,500
- Additions to an existing computerized newspaper management game, University of Texas, Wayne Danielson and Martin Gibson, $8,000
- Development of bibliographic and instructional materials for an undergraduate course for students who want to understand the communications business but who are not economics or business majors, University of Illinois, Thomas Guback, $3,450
- A clearinghouse to monitor new developments in computer-based writing and editing tools and instructional software for education in journalism, University of Miami, William Oates, $9,000
- A book for journalism educators on teaching layout and design through inexpensive microcomputer systems, Florida A&M University, Michael Abrams and Ronald Norvelle, $5,000. ☐

NIE Conference slated March 19-21

This year's Newspaper in Education Conference sponsored by ANPA Foundation will be March 19-21 at the Los Angeles Hilton.

Topics of "focus sessions" will include using newspapers to teach economics, writing skills, English as a second language, and reading to illiterate adults.

Other program segments will examine the use of newspapers in special education and in "whole brain learning." Promoting and marketing NIE programs and creating statewide NIE organizations also will be among the subjects discussed.

Registration fees are $325 for employees of newspapers and educational organizations, and $450 for others.

For more information, contact Rose Ann Stormer at the Foundation, The Newspaper Center, Reston, Va. ☐

Content changes found widespread; journalist/public views compared; coverage of blacks studied

BY GUIDO H. STEMPEL III

We're all aware that many newspapers have changed graphics or layout in recent years, but what about content? A study by Leo Bogart, executive vice president and general manager of the Newspaper Advertising Bureau, found that content changes are almost as common as format changes.

Bogart sent questionnaires to all U.S. daily newspapers in the spring of 1983. He received replies from 1,310 (77 percent). He asked if they had made "substantial changes" in editorial content or in graphics or layout since 1979.

Seventy-one percent said they had made changes in graphics or layout, and 64 percent said they had made changes in content. For papers of more than 100,000 circulation, changes were even more common, with 83 percent reporting format changes and 82 percent reporting content changes.

Bogart was disappointed to find that of the papers that changed the ratio of hard news to features, two-thirds went to more features and less hard news. He also found that "five times as many increased local coverage at the expense of international coverage as did the reverse." He feels both of these trends run counter to interest in hard news and international news expressed by readers in surveys.

Bogart also found that 83 percent of the newspapers responding use color and 28 percent are using full color in weekday editions. These findings are reported in the Spring 1985 issue of the Journal of Communication.

Several studies have found that the great majority of journalists are liberal. Some have suggested their views are too far removed from those of their readers. A study by the Los Angeles Times indicates this is not a major problem.

The Times interviewed a national sample of 2,993 members of the general public and a like number of journalists on the newspapers those respondents indicated they read. They asked both samples their opinions on 13 major national issues. Fifty-five percent of the journalists and only 24 percent of the general public indicated they were liberal.

However, the public and the journalists were on the same side on nine of the 13 issues. Those on which they disagreed were prayer in public schools, the death penalty for murderers, deregulation of business and continuing American investments in South Africa. All these were supported by the public and opposed by the journalists.

There were six issues on which the public and the journalists agreed and took the position opposite that of the Reagan administration. These included allowing abortions, affirmative action, gun control, not increasing the military budget, a verifiable nuclear freeze and opposition to support of the rebels in Nicaragua.

The Times study also showed that the public rates the media as much more fair and honest than government, business or labor. The findings were reported in the Times in its Aug. 11 and 12, 1985, issues and have been reprinted in a booklet available from the Times.

• • •

The Kerner Commission report on civil disorders in 1968 criticized the press for acting as if blacks do not "give birth, marry, die and go to PTA meetings." Blacks tended to make news only in the context of the civil rights struggle, and the commission thought that was a problem.

A study by Carolyn Martindale of the journalism program at Youngstown (Ohio) State University suggests that the commission's concern may have been answered. She looked at coverage of blacks in The Atlanta Constitution, The Boston Globe, Chicago Tribune, The New York Times and The Youngstown Vindicator for selected periods in the 1950s, 1960s and 1970s.

She found that space devoted to blacks in the 1960s was seven times as great as it had been in the 1950s, with 70 percent of it being about civil rights. But in the 1970s, there was more coverage of blacks in everyday life than in civil rights. The margin was more than 2 to 1 for all these papers except the Globe.

These findings are reported in the summer 1985 Journalism Quarterly. ☐

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Spotting an absenteeism problem, and what to do about it

BY PATRICIA P. RENFROE

Although excessive absenteeism by employees is not a major problem in the newspaper business, it is one of the leading causes for dismissal, according to human resources executives. It is an individual, rather than a general, problem, they say.

Jim E. Eaton, personnel manager of The Toronto Star, cites a study showing that 90 percent of all absenteeism comes from 10 percent of the workforce.

"Look at individual trends" to identify excessively absent employees, suggests James R. Schober, employee relations director of the San Jose (Calif.) Mercury News. "Are they usually absent the day before or after a vacation, on Friday or Monday?"

Ninety percent of absenteeism comes from 10 percent of workforce.

The definition of "excessive" absenteeism frequently can vary from one department to another, depending upon what supervisors need to get the job done. "Excessive" at some newspapers may be four absences in six months. One newspaper employee handbook states that once an employee is identified as having an attendance problem, he or she is warned and told what will constitute excessive in the future. Under this plan, an employee with nine absences in seven weeks might be told that three absences in the next five weeks would be considered excessive.

There are certain things management can do to determine whether a problem exists.

Personnel relations specialists say that first on the list of actions to take is to maintain accurate and consistent records. Most of the more than 30 newspapers contacted for this article rely simply on the attendance sheets turned in by supervisors. The sheets are reviewed and used to track and analyze absenteeism patterns and trends.

An especially sophisticated program was developed in 1985 by Carol G. Voorhees, director of employee relations at The Morning Call in Allentown, Pa. Voorhees, who contacted a number of newspapers in the initial planning stages, found no model to use. So she based her program on a system devised by the Bureau of National Affairs Inc., a private research and information company in Washington, D.C.

Her program provides information on 10 variables concerning employee absenteeism.

She and her staff recently completed a study comparing the years 1982-83-84. The statistics brought good news, showing that there is not a company-wide problem at the Call. Employees there are away from the job far less than the averages for the Northeast, for manufacturing companies and for firms of the newspaper's size.

With the information that has been assembled, Voorhees is able not only to develop a company profile but also to narrow the focus to department and individual averages.

Another element of a well-formulated analysis program shows how much absenteeism costs a company. At the Peoria (Ill.) Journal Star, Employee Relations Manager John J. Swingle maintains a running total of hours missed each month and the dollar costs per month and year. Such statistics can be used to convince supervisors that the issue is an important one, and to remind them that they are responsible for consistently and thoroughly administering company policy for absenteeism control.

Some newspapers are rewarding employees who have good attendance records.

Controlling sick leave. Newspapers generally have three types of excused absences. They are given for illness, injury on the job and personal leave. The illness or sick leave category is the one employees can abuse most easily, according to personnel departments. For some newspapers, control of sick leave is achieved by limiting payment for the initial absence.

For example, non-exempt employees at the Kansas City (Mo.) Star and Times who are not working under a union contract do not draw disability pay for illness during the first three days of absence. The company found in a 1978 study that about 80 percent of absences were "short-term—under three days," says Personnel Director H. Kent Simcosky. In 1984, about 10 percent of non-exempt employees had perfect attendance, he reports.

At the Call in Allentown, employees who are absent receive half-pay for the first few days.

These types of pay programs are usually administered only for employees who are covered by federal labor law. Exempt employees most often receive full pay from day one of the absence.

Some people in the newspaper business maintain that management and labor are in the same corner regarding absenteeism.

Newspaper Guild contract language at the Press-Telegram of Long Beach, Calif., states, for example: "The parties pledge their full support of activities designed to ensure that the sick pay program is not abused. In this regard, the parties share the conviction that questionable absences and/or poor attendance patterns should be

---

Renfroe is ANPA manager/personnel relations.

rigorously investigated and abuse of the sick pay program by any employees should not be tolerated."

Another control, progressive discipline, is used at many newspapers in conjunction with the limited pay policy. Such programs start with a verbal warning, follow with a written warning, then suspension and end in dismissal [presstime, Oct. 1983, p. 34].

Exempt and non-exempt, union and non-union employees can be disciplined in this manner. In fact, many union contracts provide for a progressive discipline system, while others call for denial of future sick-leave benefits for the duration of the contract.

Causes, rewards. While agreeing that control is important, some experts caution that it is equally important to examine causes for excessive absences. Alvin Miller, vice president of The Record in Hackensack, N.J., points out that employees who are angry can get back at management by not being on the job.

Other personnel managers note that sometimes employees who are in need of new assignments or increased responsibility will resort to taking unnecessary leave. Examining absenteeism patterns for individuals sometimes also reveals serious personal problems that can be effectively handled through an employee assistance program.

"Our basic philosophy is not disciplinary," says Mable T. Phelan of The New York Times. "It's worked very well."

Phelan, who is director/employee relations administration, reports that the statistics on white-collar absenteeism at the Times "are not high compared with other industries."

White-collar employees at the Times who are absent on seven separate occasions or 23 or more days during a 12-month period go into an "absence control program" that requires submission of a doctor's certificate for each additional absence.

Some newspapers have taken steps to recognize good attendance and buy back unused sick leave days. These buy-back provisions can be found in some International Typographical Union composing room contracts and can mean that the employee receives one extra day of pay for perfect attendance.

In some cases, employees recieve full pay or half pay for sick leave that is unused as of Dec. 31. Similar arrangements are stipulated in some Graphic Communications International Union pressroom contracts.

At the Kansas City dailies, employees are rewarded for good attendance in this way: Each person working there has three personal days for absence during the year, but if they are not used, the individual receives a cash bonus of five days' pay at the end of the year.

Another positive approach can be aimed at creating a climate where employees are dedicated.

Miller of the Hackensack daily believes good attendance prevails there because employees are told from the very first day on the job about the necessity of publishing on schedule.

"We tell them that the newspaper must be printed and delivered regardless of any problem," he says, and that "their presence on the job is key in being able to accomplish this." □

Reporters-as-professionals issue moves to the fore

The question of whether newspaper reporters should be considered professional employees exempt from coverage under the Fair Labor Standards Act moves to the forefront this month in two arenas.

First, trial is scheduled to begin Jan. 20 in U.S. District Court in Concord, N.H., in a longstanding case on the issue involving the Concord Monitor.

Second, the U.S. Labor Department's Wage and Hour Division is considering whether to designate specifically newspaper reporters and others as professionals and therefore exempt from wage and hour provisions of FLSA. The division has issued an advance notice of proposed rule-making and will receive comments until Jan. 21.

The Concord case, which has been postponed several times in the past, revolves around overtime pay in the newsroom and stems from an audit by the Wage and Hour Division covering the period February 1978 through January 1980. The division claims the paper owes overtime pay to 54 present and former employees, primarily newsroom personnel.

The Monitor paid $31,000 in overtime during the period involved, but the division claims it owes $45,000 more. In addition to denying the claim on grounds the overtime was paid, the newspaper contends that most of the individuals involved are professional employees who are exempt under the act [presstime, Jan. 1982, p. 35].

"We hope it goes to trial this time," said Monitor Publisher George W. Wilson. "We've been prepared to go to trial for four years."

Under the FLSA, the primary duties of employees eligible for professional exemption must be performance of work requiring scientific or specialized study, of the type customarily acquired in an institution of higher learning as opposed to an apprenticeship. Doctors, lawyers and some teachers are specifically exempt.

An employee may be an exempt professional where the primary duty is original and creative work in a recognized field of artistic endeavor. The work must depend primarily on the invention, imagination or talent of the employee.

The division said in a 1975 explanatory bulletin that only writing that is analytical, interpretive or highly individualized is considered to be "creative."

In its notice of proposed rule-making published in the Nov. 19 Federal Register, the division asked for comments on whether such employees as newspaper reporters, court reporters, computer programmers, aircraft pilots and flight engineers should be recognized as exempt professionals.

ANPA plans to file comments in support of its position that reporters should be recognized as professionals under the act, said Claudia M. James, ANPA assistant general counsel.

"The goal of the act in the '30s was to protect employees who were fortunate to have jobs and to provide relief and opportunity for those who were unemployed during those depression years," said ANPA Vice President/Human Resources Roy W. Anderson. "Today, well-educated, experienced, qualified reporters are at earnings levels of those exempted under the act.

"In our highly competitive communications business, with its new technology, the need for management flexibility in this area is as important as those exemptions in marketing and managing our business," Anderson added.

The Newspaper Guild also said it will submit comments to the division. "We will take the position we traditionally have: that reporters should be included under coverage of the wage-hour provisions because they are not professionals as defined by the law," said David J. Eisen, director of research and information.

—Clark Newsom

Board reaffirms bargaining order in 11-year-old case

The National Labor Relations Board has reaffirmed a 1981 decision and ordered The Daily Advance of Dover-Roxbury, N.J., to bargain with Newark Mailers' Union No. 11 over an initial contract for a unit of circulation department employees.

The case has been tied up in NLRB and court proceedings since a representation election was conducted in 1974. The company had appealed the board's first order to the U.S. Court of Appeals, District of Columbia Circuit, which in 1983 remanded the case to the board. In 1984, an administrative law judge recommended that the board adhere to its 1981 decision [**presstime**, Dec. 1984, p. 51].

The bargaining unit includes drivers, mail clerks and mailroom helpers, but it excludes district sales representatives, delivery contract holders and office clerical employees.

Daily Advance Publisher James A. Wells was not available to comment on the board's latest decision.

(Drukker Communications Inc. and Its Wholly Owned Subsidiary The Daily Advance Inc. and Newark Mailers' Union Local 11, ITU, 277 NLRB No. 32)

Strike paper in Canada is sold

The Guardian Express of Welland, Ontario, which was established in 1982 by members of the International Typographical Union following a labor dispute with the The Evening Tribune of Welland, has been sold.

The twice-weekly tabloid had been subsidized by "lockout" benefits from the ITU's strike fund [**presstime**, Sept. 1985, p. 30].

The Guardian Express was purchased for an undisclosed sum by Baxter Publishing Co. of Toronto, a family-owned company specializing in publications for the travel industry.

Simultaneous with the sale, a two-year labor agreement was signed with the Guardian's 20 employees, who voted unanimously in favor of the contract and the sale.

The paper has a circulation of about 25,000, according to Publisher Sterling E. Lund, who will remain in that position.

The daily Evening Tribune, which is owned by Thomson Newspapers Ltd. of Toronto, has a circulation of 16,603.

Switch to contractors upheld

The NLRB regional director in Baltimore recently concluded that The Baltimore Sun did not violate the Taft-Hartley Act by switching from employees to independent contractors to deliver newspapers for street sales.

Regional Director Louis J. D'Amico also held that the company had no duty to bargain with Local 355 of the Teamsters over the conversion because the decision to convert was made prior to the time the union became bargaining representative of the employee district advisors. "Thus," he said, "the evidence indicates the employer considered and determined to convert to independent contractors for reasons other than the advent of the union."

The regional director also said the company's decision could not be considered to be "inherently destructive" of employees' rights. Therefore, he said, a complaint was "not warranted."

The union did not appeal D'Amico's decision.

In 1984, the NLRB ruled that the advisors were not supervisors [**presstime**, Aug. 1984, p. 50]. The employees subsequently voted to be represented by the union.

(A.S. Abell Co., NLRB Case No. 5-CA-17026)

Route carriers not employees, judge rules

Motor route carriers delivering the Monterey (Calif.) Peninsula Herald are independent contractors rather than employees, an administrative law judge has ruled.

Judge Lee Tyler of the California Unemployment Insurance Appeals Board granted the company a refund of more than $39,000 in unemployment, disability and state income taxes that had been paid under protest.

Tyler found that under a written agreement between the carriers and the company, the carriers were paid for each newspaper delivered. State auditors had taken the position that the payments were wages paid to employees.

The judge noted, among other things, that the carriers assumed the expenses of delivery, were free to deliver other publications, and did not receive benefits such as paid vacations and holidays. He also observed that the company "reserved little if any control over the manner and means of accomplishing the deliveries."

(The Monterey Peninsula Herald Co., Calif. Unemployment Ins. Appeals Bd. Case No. SJ-T-10403)

AP employees voting on new contract

Members of the Wire Service Guild will vote this month on a new one-year labor agreement with the Associated Press that includes a 3.5-percent pay increase.

If approved by the mail-ballot vote, the agreement would replace one that expired Nov. 30, 1985.

Under the proposed contract, reporters and photographers with at least five years' experience would earn $640 weekly, an increase of $21.50. They would continue to receive weekly geographic differentials of $15 to $35, depending on the cities in which they work.

The agreement also calls for an experiment with job-sharing and a four-day workweek. Under the job-sharing plan, two employees would share a single position by dividing hours, salary, vacation and benefits on a pro-rata basis.

The union represents about 1,400 reporters, editors, photographers and other employees at AP.

ANPA/NPRA personnel workshop scheduled

A personnel management workshop sponsored by ANPA and the Newspaper Personnel Relations Association has been scheduled Feb. 16-19 in Chicago.

The workshop is designed for personnel managers from both large and small newspapers. Enrollment is limited and will be handled on a first-come, first-serve basis. Registration fee is $350. For further information, contact ANPA Manager/Personnel Relations Patricia P. Renfroe at The Newspaper Center in Reston, Va.

NLRB law judge supports newspaper on wage issue

An NLRB administrative law judge has recommended that the board dismiss a complaint issued in 1983 against the Ventura County (Calif.) Star-Free Press.

The complaint alleged that the newspaper had unlawfully changed the working conditions of editorial employees represented by News Media and Graphic Communications Union Local 784 by withholding so-called "step" wage increases.

The employees had been represented by an independent union, but in 1982 they voted to affiliate with the International Printing and Graphic Communications Union. The next year, the IPGCU merged with the Graphic Arts International Union to form the Graphic Communications International Union.

NLRB Judge Burton Litvack found that in a Jan. 5, 1983, bargaining session, the company had given the union notice that it would not pay the step increases. The union, however, "stood mute" on the subject for the next four months—a period encompassing two more bargaining sessions and several wage proposals.

Litvack said that after the union received notice of the company's position, it was required under board law to request bargaining on the subject in "timely" fashion. Because it did not, the union "waived its right" to bargain over the company's refusal to pay the step increases, the judge ruled.

The company had also challenged the validity of the merger between the IPGCU and the GAIU, contending that it was under no obligation to bargain with Local 784 as an affiliate of the GCIU. However, Litvack said that because of his conclusion on the complaint, he did not need to make any findings on that issue.

(Ventura County Star-Free Press and Printing Specialties and Paper Products Union, District Council No. 2, JD-(SF)-170-85)

GCIU names Norton

The board of electors of the Graphic Communications International Union has declared James J. Norton president without an election.

Norton became acting president last year after the early retirement of Kenneth J. Brown [**presstime**, Oct. 1985, p. 51].

The board's action came after no candidate received sufficient support from local unions to be nominated to oppose Norton. His term runs to June 1988.

Union's discipline upheld

A newspaper union's discipline of a member did not violate the Taft-Hartley Act, an NLRB administrative law judge recently concluded.

Karl G. Byrd, a paper handler at The Baltimore Sun, filed charges with the NLRB alleging that his union, Baltimore Newspaper Graphic Communications Union Local 31, had interfered with his rights by bringing internal union charges against him and fining him $200 for violating the union's constitution and laws.

The union contended that Byrd, a black, did not follow an established grievance procedure in protesting alleged racial slurs made by a white union member. Byrd had given a copy of a protest letter, addressed to his union steward, to a supervisor before the steward saw it.

Judge Marvin Roth found that Byrd had not engaged in an activity protected by the Taft-Hartley Act. "By sending a copy of his letter to the company, Byrd disregarded a procedure established through collective bargaining, whereby the union was initially responsible for maintaining discipline in the workplace," he said.

Roth noted that the NLRB generally affords "considerable latitude" to a union's right to maintain and enforce its rules of membership. The union's conduct "did not impair any statutory policy, reflected a legitimate union interest, and involved enforcement of union policy in a reasonable manner," he said.

The judge recommended that the board dismiss the complaint against the union.

(Baltimore Newspaper Graphic Communications Union Local No. 31 and Karl G. Byrd, JD-327-85)

Board orders union to end secondary boycott

A three-member NLRB panel affirmed an administrative law judge's conclusion that the Newspaper and Mail Deliverers' Union of New York and Vicinity violated the secondary-boycott provisions of the Taft-Hartley Act by inducing its members not to handle Investor's Daily.

The judge found that union members employed by wholesalers refused to distribute the five-days-a-week publication to retailers because it was delivered to the wholesalers by non-union drivers.

The panel rejected the union's assertion that the judge's decision was the result of prejudice and ordered the union to stop its boycott [**presstime**, Sept. 1985, p. 54].

(Newspaper and Mail Deliverers' Union of New York and Vicinity and Raritan Periodical Sales Inc. and Investor's Daily Inc., 277 NLRB No. 64)

NLRB elections

La Opinion, Los Angeles, GCIU: Full-time video display terminal operators in the editorial department voted 4-1 in favor of representation by Local 388 of the Graphic Communications International Union. In a separate election, other editorial department employees at the Spanish-language daily voted 15-13 against representation by the union.

(NLRB Case Nos. 21-RC-17687, 17689)

Reading (Pa.) Times and Eagle, Guild: Accounting, advertising, circulation and editorial department employees voted 143-56 against representation by the Philadelphia Newspaper Guild.

(NLRB Case No. 4-RC-16046)

Recent contract settlements

Atlanta Journal and Constitution, GCIU: Three-year agreement covering platemakers; retroactive to Jan. 1, 1985.

Columbus (Ohio) Dispatch, GCIU: Three-year agreement covering pressroom employees; retroactive to April 1, 1984.

Houston Chronicle, ITU: Three-year agreement covering mailroom employees; retroactive to July 15, 1985.

Montreal Gazette, ITU: Thirty-four-month agreements covering mailroom and composing room employees; retroactive to July 1, 1984.

Toronto Star, GCIU: Two-year agreements covering pressroom employees, paper handlers, photoengravers and mailroom employees; retroactive to Jan. 1, 1985.

(Details in December 1985 and January 1986 ANPA Labor & Personnel Relations Letters.)

BUSINESS ROUND-UP

Cooke eyes 6 more dailies in addition to L.A. Daily News

Jack Kent Cooke, who recently agreed to pay $176 million in cash for the Daily News of Los Angeles, has his acquisitive eye on more newspapers.

"As many as I can acquire at reasonable prices," is the way Cooke described his view on newspaper buying. Specifically, he said he is interested in acquiring six family-owned newspapers, but he would not identify them.

Cooke, whose holdings include the Washington Redskins professional football team, various cable interests and the Chrysler Building in New York City, has already shown a liking for newspapers, which he calls "good investments" and "one of the most intriguing assets a man can have." Last year, he made unsuccessful attempts to take over Multimedia Inc., a newspaper and broadcast company based in Greenville, S.C., and the Evening News Association in Detroit.

This time Cooke was successful by submitting the winning sealed bid for the Daily News (morning, circulation 150,403), a newspaper he calls "a dandy."

A Tribune Co. spokesman said the sale, announced Dec. 10, is expected to be closed in the first quarter. It will erase a conflict under federal cross-ownership rules that arose when the Tribune Co. acquired Los Angeles TV station KTLA.

In other recent business developments:

- The News American of Baltimore was put up for sale by The Hearst Corp. of New York City.

Peter R. Kent, president of the investment banking firm Henry Ansbacher Inc., which represents Hearst in the sale, said prospective buyers inside and outside the newspaper business have expressed interest. He noted the newspaper's assets include valuable downtown property adjacent to Baltimore's redeveloped inner harbor.

It is Hearst's intention to sell the paper to someone who would continue its publication, Kent said. However, he added, "That could change. It depends upon what kind of offers are put on the table."

- The St. Louis Globe-Democrat suspended publication Dec. 6, and Jeffrey M. Gluck was removed as publisher by U.S. Bankruptcy Court Judge David P. McDonald. The Globe-Democrat sought the protection of a Chapter 11 filing Sept. 26 [presstime, Dec. 1985, p. 51].

In a memorandum accompanying his order, McDonald said the Globe-Democrat had withheld more than $300,000 from its employees in the form of union dues, federal, state and local taxes, and United Way contributions. "Such conduct is both dishonest and gross mismanagement of the affairs" of the newspaper, the judge said. He appointed Edwin S. Jones, a former banker, as trustee.

A Globe-Democrat spokeswoman said the newspaper has no plans to resume publication at a specific date. "It really depends on investors," said Katharine A. Smith, the newspaper's director of public relations. The Globe-Democrat "is not financially hardy enough" to begin publication on its own "without an infusion of new capital," she said.

- Shareholders of Freedom Newspapers Inc. turned down a third offer from Harry H. Hoiles, who has been trying to gain control of the newspaper and broadcast group based in Santa Ana, Calif.

Kent of Henry Ansbacher Inc., who also represents Hoiles, said Hoiles is exploring the possibility of looking for outside buyers of the one-third share of the company owned by him and members of his immediate family.

- The board of The Times Mirror Co. of Los Angeles has approved a plan to reincorporate the company as a Delaware corporation.

Observers have noted Delaware law makes it easier for companies to defend against takeover attempts. The Times Mirror plan must receive regulatory and shareholder approval.

- At a special meeting Dec. 20, shareholders of the Evening News Association of Detroit approved the sale of the company to Gannett Co. of Arlington, Va. The result of the vote was essentially a foregone conclusion inasmuch as shareholders owning 60.3 percent of Evening News Association's common stock had already committed themselves to supporting the transaction. The sale is to be completed Feb. 15. ☐

Globe goes to court to retain Murdoch features

Blood proved thicker than ink in December when the Rupert Murdoch-owned News America Syndicate announced that nine comics, an editorial cartoon and a column will move from The Boston Globe to Murdoch's The Boston Herald in 1986.

The Chicago-based syndicate and the Herald were acquired by Murdoch after the original contracts for these features were signed with the Globe three years ago.

Particularly angered at the loss of nearly half of its 20 comics, the Globe filed for a preliminary injunction in U.S. District Court Dec. 13. The Globe charged that News America Syndicate had terminated the contracts without a stipulated 90-day notification.

The Globe also charged that the syndicate engaged in "unfair or deceptive acts or practices" by "negotiating with the Globe without disclosing its intent to ultimately terminate the contract." The Globe said termination "was not a decision made solely by the syndicate, and was in fact contrary to the best interests and initial intention of the syndicate," but came "as a result of pressure from Murdoch and the Herald."

At issue are nine comics—B.C., Wizard of Id, Andy Capp, Steve Roper, Apartment 3-G, Judge Parker, Momma, Fred Bassett and Dennis the Menace—as well as Herblock's political cartoons and the op-ed column of Rowland Evans and Robert Novak. The Globe will keep News America's Ann Landers.

The Herald has expressed hope that the new features will help it further increase circulation. When Murdoch acquired the Herald in December 1982, it trailed the Globe by about 228,000 to 511,000 daily. Last Sept. 30, the Herald had weekday circulation of 355,253, up about 12,000 copies from the year-earlier figure, and the Globe was 509,464, down nearly 11,000.

In announcing the relocation of the features, the Herald said there were two previous situations in which a commonly owned syndicate and newspaper made a similar transfer of syndicated material. ☐

UPI sale still unsettled

Opposition to the sale of United Press International to a Mexican publishing magnate and a Texas developer continued with legal protests in late December.

The chief opponent of the $41-million sale, competing bidder Financial News Network, filed notice of appeal in U.S. District Court for the District of Columbia in an effort to overturn the transaction.

FNN acted after U.S. Bankruptcy Court Judge George F. Bason approved an interim sale agreement in which Mario Vázquez-Raña of Mexico City and Joe Russo of Houston would pump $1 million into UPI immediately and pledge additional financial assistance as needed.

"We're not out of the picture yet," said FNN attorney Neal A. Jackson of Washington, D.C. "There are an awful lot of arrows left in our quiver."

Financial News Network is a Santa Monica, Calif.-based cable programming company that reports mainly on financial and economic affairs. It also offers some sports programming, including coverage of live events.

Although it has approved the interim sale agreement, Judge Bason's Bankruptcy Court in Washington, D.C., still must approve UPI's reorganization plan, which includes Vázquez-Raña's owning about 90 percent of the wire service and Russo's getting the remaining 10 percent. Bason is overseeing UPI's Chapter 11 bankruptcy proceedings [presstime, Dec. 1985, p. 50].

FNN's notice of appeal of Bason's interim sale approval followed a series of developments in December that at one time put the proposed purchase in doubt but later appeared to leave it intact.

Shortly after UPI management and creditors endorsed the Vázquez-Raña/Russo bid, FNN submitted another offer giving unsecured creditors about 60 cents on each dollar of debt. They would receive about 40 cents under the Vázquez-Raña deal.

Vázquez-Raña then filed suit in Bankruptcy Court, charging FNN was trying to interfere illegally with the sale. Bason imposed a restraining order prohibiting FNN from soliciting individual UPI customers or creditors.

Following that action, the committee of UPI creditors that has been involved in sale negotiations asked Bason for permission to consider new purchase offers, whereupon Vázquez-Raña threatened to withdraw his offer unless Bason approved the sale. ☐

Recent acquisitions

Ogden Newspapers Inc. of Wheeling, W.Va., acquired the Marshfield (Wis.) News-Herald, daily circulation 15,360, and The Times-Leader of Martins Ferry, Ohio, daily circulation 23,530.

Gannett Westchester-Rockland Newspapers acquired from Ogden Newspapers The Star of Peekskill, N.Y., daily circulation 10,811.

Nixon Newspapers Inc. of Wabash, Ind., acquired The Courier-Times of New Castle, Ind., daily circulation 13,808.

Thomson Newspapers Inc. of Des Plaines, Ill., acquired The News-Item of Shamokin, Pa., daily circulation 15,015.

Price Communications of New York City acquired The Register, Shrewsbury, N.J., daily circulation 28,347. ☐

ANPA mails survey on telecommunications

The Telecommunications Department of ANPA is surveying member newspapers in an effort to help newspapers improve their telecommunications operations.

By a mailed questionnaire, newspapers are being asked to provide information on their telecommunications equipment, services and management.

The information will be the basis for four resource documents: summary of the survey's results; a directory of newspapers' telecommunications systems; a consultant list; and statistical analysis of information in the summary.

Responses are due by Jan. 10.

Uzal H. Martz Jr. of the Pottsville (Pa.) Republican, chairman of the Telecommunications Committee, said "a high response rate is mandatory if the information is to be truly representative of newspapers nationwide." ☐

Chapman, Wilson, Sulzberger, Cowles nominated as officers

Alvah H. Chapman Jr., chairman and chief executive officer of Knight-Ridder Newspapers Inc., will be nominated in April to serve as the Association's next chairman and president.

Also to be nominated at the 100th Annual ANPA Convention in San Francisco are:

- For vice chairman, George W. Wilson, publisher of the Concord (N.H.) Monitor
- For secretary, Arthur O. Sulzberger, chairman of The New York Times Co. and publisher of The New York Times
- For treasurer, William H. Cowles 3rd, president and publisher of The Spokesman-Review and Spokane Chronicle.

The slate of officers was approved by the Board of Directors during its Dec. 5-6 meeting in New York City. It will be offered at the Convention by the Nominating Committee headed by William C. Marcil, publisher of The Forum of Fargo, N.D.

Alvah H. Chapman Jr.

George W. Wilson

Arthur O. Sulzberger

William H. Cowles

Under new procedures adopted by the Board in September, officers will serve one-year instead of two-year terms and will follow an annual succession to the chairmanship [presstime, Oct. 1985, p. 64]. Current Chairman and President Richard J. V. Johnson will remain on the Board for one year and will chair the next Nominating Committee.

During the New York City meeting, the Board also adopted a 1986 Association expense budget of $12.1 million to provide continuing work and emphasis on printing quality, postal matters, training, legal, government relations, telecommunications, human resources and other programs.

Revenue for the year, with *no* change in the dues formula, is expected to be $12.8 million, with the balance over expenses going to reserves and capital-equipment expenditures. The expense figure represents an 8.9-percent increase over the 1985 budget; the revenues a 12.9-percent increase.

Postal affairs, both second- and third-class, will continue to receive priority status in 1986 with some $475,000 earmarked for such work. Presstime will continue monthly at about its current number of editorial and advertising pages. Two new technical publications will be produced—a Color Ink Book and an Advertising Specifications Manual.

The ANPA staff will increase to 154 with the addition of an industrial hygienist, an ink technician, a flexo-press technician and a computer programmer. ☐

Trustee nominations announced

Edwin L. Heminger and Charles T. Brumback have been nominated to the two top officer positions on the ANPA Foundation Board of Trustees.

Heminger, editor and publisher of The Courier in Findlay, Ohio, was nominated to serve a one-year term as chairman and president.

Brumback, president and chief executive officer of the Chicago Tribune Co., was nominated for a one-year term as vice chairman.

Edwin L. Heminger

Charles T. Brumback

Under new procedures adopted by the Trustees, the vice chairman moves up to the chairmanship after completing the term in the number-two position.

The nominations were made by the ANPA Nominating Committee and approved by the Trustees in December. ☐

Gov. Cuomo among speakers at Convention April 21-23

New York Gov. Mario M. Cuomo is expected to be among the speakers at the 100th Annual ANPA Convention in San Francisco April 21-23.

Others invited to address the gathering include President Ronald Reagan, who spoke at the 1983 ANPA Convention, and Britain's Prince Philip.

Mario M. Cuomo

Unlike four years ago when the Convention was in San Francisco's Fairmont Hotel, the 1986 Convention will be in at least two locations in the city.

The Fairmont will be the headquarters hotel used for most of the meal functions and the topical clinics. The Masonic Auditorium, about two blocks from the Fairmont, will be used for general sessions. Shuttle-bus service will be provided.

"We have some unusual logistical problems with this Convention because of the possibility of having meetings in different buildings," said Joseph F. Barletta, president of the San Francisco Newspaper Agency and chairman of the ANPA Convention Arrangements Committee.

Program plans currently on the Committee's drawing boards include a mock libel trial and sessions on telecommunications and terrorism.

Similar to the 1985 Convention in Miami that had a session focusing on nearby Latin America, the 1986 program also capitalizes on the location of the Convention city and tentatively includes a segment devoted to the "Pacific rim."

Among other subjects being considered for general sessions or topical clinics are: aging, excellence, literacy, MTV Networks Inc., a new look at readers, and the "radically reorganized newspaper."

Because the Convention will be the Association's 100th, speakers will be asked to predict what subjects will be in newspaper headlines 100 years from now.

There will be a couple of Tuesday scheduling differences in the Convention program. In order to provide another prime slot for a key speaker, ANPA will organize the Tuesday luncheon program, handled in recent years by United Press International. UPI may prepare a special segment for another program time. And, in order to provide a different Tuesday evening event this year, the usual dinner-dance will give way to a special reception affair leaving conventioneers more free time that evening, according to ANPA Senior Vice President Thomas C. Fichter, who manages the Convention.

Fichter said he expects a large turnout for the Convention. "Attendance has always been very strong in San Francisco; this time, I wouldn't expect it to be any different," he said.

The event will begin a cycle of Conventions in the West biennially: Honolulu, 1988; Los Angeles, 1990; and Vancouver, British Columbia, 1992.

For the second year, **presstime** will sponsor a "fun run" for Convention registrants and their families. It will be held at the Marina Green on San Francisco Bay.

Optional pre-Convention tours of California wine country are planned. Trips also will be scheduled during Convention week to the city archives, Filoli Gardens and Victorian homes.

Convention registration information will be mailed this month. ☐

Skover named ANPA Foundation assistant director

Linda B. Skover

Linda B. Skover has been promoted to assistant director of ANPA Foundation.

Manager of educational services since 1979, Skover joined the Foundation in 1977 as Newspaper in Education field services advisor. In addition to her new duties as assistant director, Skover will continue to oversee the NIE program as well as the new ANPA effort to combat illiteracy.

Since Skover has been manager of educational services, the number of newspapers sponsoring NIE programs has increased from 350 to more than 600.

Prior to coming to ANPA Foundation, Skover coordinated educational services for The Detroit News and taught in Detroit public schools. ☐

Books

A new resource on libel, privacy

Bruce W. Sanford's recently published book *Libel and Privacy: The Prevention and Defense of Litigation* is a historical and practical reference source for lawyers, editors and writers.

Sanford, a partner in the Washington, D.C., office of the Baker & Hostetler law firm, writes that libel lawsuits "serve as a soapbox—and an expensive, rickety one at that—for diatribes about the unaccountability and unfairness of the press."

The 720-page, hard-cover book is available for $70 from Law & Business Inc./Harcourt Brace Jovanovich, publishers, 855 Valley Road, Clifton, N.J. 07013. ☐

Assessing the future of electronic publishing

What will be the long-term effects of electronic publishing on such institutions as newspapers, universities and libraries?

Electronic Publishing Plus: Media for a Technological Future offers insight on this and other topics of the new information age.

The book is a collection of 39 articles written by participants of the 1984 forum of Annenberg School of Communications' Washington Program.

The 372-page book was edited by Martin Greenberger, professor of public policy and analysis at UCLA Graduate School of Management.

Copies are available for $45 from Knowledge Publications Inc., 701 Westchester Ave., White Plains, N.Y. 10604. ☐

Making the most of an interview

"Good interviewers learn to relax with their subjects so that the interview seems like a conversation instead of an inquisition," writes Shirley Biagi in *Interviews That Work: A Practical Guide for Journalists.*

Biagi, a journalism professor at California State University at Sacramento, discusses note-taking and organization, research, the interviewee, choosing and using quotes, legalities and more.

The 1,984-page, soft-cover book is available for $15 from Wadsworth Publishing Co., 10 Davis Drive, Belmont, Calif. 94002. ☐

over-set

Whisker watch

Another in the long stream of newspaper diversification efforts is a catfish ranch owned by Donrey Media Group.

Donrey Catfish Growers near Duckwater, Nev., is producing 2,500 pounds of the meaty fish weekly in spring-fed, man-made raceways. It hopes to expand to 7,500-10,000 weekly.

Lawyer unwinds in reel room

Elfie G. Holzwarth has an unusual way of dealing with stress. While other attorneys may play racquetball or golf on Saturdays, the 43-year-old civil attorney spends hers working part-time as a roll handler in the reel room of the Chicago Tribune.

She took the job to help out when three unions struck the daily last July, and to learn how a modern newspaper is published. Her Tribune paycheck is not really needed.

"Essentially, I thought it might be interesting," she explains. "When I finally did it, I found it invigorating."

The stress of reel room work is "more physical than the mental stress of practicing law," Holzwarth notes.

She plans to continue to strip wrappers off rolls "as long as they need me," she adds. "The people are a lot nicer to work with than attorneys. They help each other out."

Elfie G. Holzwarth

David J. Winkworth, manager of the Publishers Bureau of New Jersey, which facilitates newspaper labor negotiations, seems to have instilled healthy reading habits in his 1-year-old grandson, Stewart Winkworth.

Hoosier State is middling in population, but up high in number of dailies

he states with the largest number of daily newspapers are, in order, California, which ranks first in population, Ohio (7th in population), Pennsylvania (4th) and Texas (3rd).

Tied for fifth place are New York, the nation's second most populous state, and—surprise!—Indiana.

With current population estimated at about 5.5 million, Indiana ranks only 14th among the 50 states. So why does it have so many dailies—75, twice as many as two states of comparable population, Georgia and Virginia?

Richard W. Cardwell, general counsel of the Hoosier State Press Association, suggests it's because Indiana has a wealth of small, "self-contained" communities that are a good breeding ground for dailies.

However, Cardwell says competition from shoppers and direct mail is affecting advertising revenues of Indiana's dailies, and he expects to see some of them trim days of publication. One daily, the Mount Vernon Democrat, switched to semiweekly last year [presstime Dec. 1985, p. 24].

"We do have communities that marginally support a daily," he says.

Eating the losses of boffo promo

What's worse than failure? Sometimes, it's success.

In the case of Gannett Co.'s promotion of USA Today with General Mills products, the reach for subscribers may have caused corporate indigestion.

Seizing an opportunity presented in a coupon insert placed in Sunday newspapers around the country, about 450,000 households opted to turn food for the body into food for the mind. They parlayed eight proofs-of-purchase for cereal, baking goods and treats into six home-delivered months of USA Today.

A $59 value. For nothing.

At December's annual Outlook for the Media conference of securities analysts, which is normally devoted to more serious matters than Cheerios and Fruit Roll-Ups, Gannett Chairman and Chief Executive Officer Allen H. Neuharth conceded that his company's losses in the endeavor will be "significant."

Those who devoured the requisite boxes of Hamburger Helper, Betty Crocker Au Gratin Potatoes and Chewy Granola Bars will have a "definite negative impact" on Gannett. They may even have cost the company its coveted double-digit earnings increase in the fourth quarter of 1985.

Newspaper numbers

197—net increase in the number of U.S. Sunday newspapers since 1970.

155—number of U.S. daily newspaper groups (defined as ownership of two or more dailies).

68.3—percentage of U.S. daily newspapers owned by groups.

78—percentage of U.S. daily newspaper circulation accounted for by group-owned papers.

Greetings from
MIAMI

There'll be a new attraction in Miami this year.

It's brand new flexo press units at the *Miami Herald.* Less than two years ago *The Herald* bought two M.A.N.-Roland *Flexoman®* units for an experiment with flexography. The results were so gratifying that *The Herald* is adding seven more units to their press room.

Why? Because *Flexoman* produces superb quality. The smoother solids and vibrant colors appeal to advertisers and readers alike. And the quick-drying inks eliminate rub-off and set-off.

The *Flexoman* offers savings, too. Because press units are simpler, using one anilox roller instead of an ink train, there is less iron to pay for and less iron to move. Power consumption goes down. Web breaks are less frequent. There are no time-consuming and waste-producing ink and water adjustments. All contribute to economical running.

And *Flexoman* units are more compact than letterpress or offset units (more compact than most other flexo units, too). They slip in easily, and installation won't turn your pressroom into a machine shop.

The new attraction in Miami may hold exciting potential for you. Perhaps we can arrange a visit. Call or write to M.A.N.-Roland USA, 333 Cedar Avenue, CN 1112, Middlesex, NJ 08846-0604; (201) 469-6600.

100th Annual Convention

April 21-23
Fairmont Hotel
San Francisco

Don't miss this special Convention as ANPA approaches a century of championing the cause of a strong, free press.

The program will include an array of distinguished speakers on national and international events—focusing on an in-depth review of the "Pacific rim"—as well as informative, useful topical clinics on subjects vital to newspaper operations.

And enjoy the beauty of one of the most scenic cities in the world, which offers a broad spectrum of performing arts, special events, dining, sightseeing and much more.

Special tours will be arranged for Convention attendees.

Registration forms were mailed in mid-January. Additional copies are available from Priscilla Shingleton (703-648-1031) or Leesa Thompson (703-648-1097). Return your completed form to ANPA by March 15!

Advertising isn't harmful, but a government ban on information would be

The recent decision by some of our friends in organized medicine to lobby Congress for a ban on all advertising of tobacco products overlooks the basic ground rules that govern information flow in our free society, and it winks at the First Amendment protection afforded commercial speech.

Whether to smoke isn't the operative question. (I don't.) The question is whether government should ban information.

Richard J. V. Johnson

The First Amendment prohibits restrictions on the editorial presentation of social commentary and those same prohibitions have been applied broadly to advertising.

During the last decade, the U.S. Supreme Court has extended First Amendment freedoms to advertising, which is called "commercial speech." The court began with the basic principle that products which are legally sold and distributed in our society should be free of advertising restrictions—especially of governmental prohibitions like those suggested by some doctors.

The court established, also, that any such restrictions could be condoned only if they directly advance our government's interest in health. Moreover, if that first test is satisfied, then the restriction could be no greater than absolutely necessary to advance the government interest.

To date, the ad ban fans have been unable to satisfy the U.S. Constitution's test for prior restraint against advertising. I doubt that they ever will.

Truthful advertising of legally sold products and services—whether tobacco products, automobiles, newspapers or medical services—is entitled to full First Amendment protection and should not be suppressed. In other words, if it's legal to sell or do, it's legal to advertise.

We all have an interest in protecting the health of the American public. And we all agree our government has a role to play in encouraging the health of our people. But, in all honesty, advertising—especially advertising that already clearly indicates the potential hazards of using a particular product—is not harmful to anyone's health.

Given the facts, freely, Americans can decide what legal things they choose to do and not to do. That shouldn't worry us.

But we all, including doctors and publishers, ought to worry about asking government to ban information.

CABLE TV

Now seems to be a good time to sell or consolidate systems, and newspapers are reaping benefits both ways

BY BARBARA J. FRIEDMAN
presstime staff writer

The volatile cable television business is consolidating, but it's not a hunkering-down kind of consolidation. On the contrary, industry observers say the overall number of systems owners is shrinking in large part because many are finding it hard to resist selling to other operators at the current all-time high prices.

Newspaper companies are no exception. While one is getting on the cable merry-go-round for the first time, several more are jumping off and apparently getting paid well to do it.

McClatchy Newspapers is one of those getting off. "I think our timing has been rather fortuitous," says Frank Washington, the firm's vice president for electronic communications, commenting on McClatchy's decision to sell its four systems.

The Tribune Co. of Chicago is another one that recently decided to hop off. Like McClatchy, it gives strategic reasons for getting out of the cable systems business. Tribune talks of wanting to concentrate on areas where it is already strong, McClatchy of how cable no longer fits with its diversification plans.

If selling a cable system meshes with overall corporate strategy, it appears, then current prices do nothing to discourage the move.

Prices are at a level that makes cable executives such as McClatchy's Washington believe it is a good time to be selling.

The price level also leads experienced cable operators to think they can buy more systems and make money, according to Jack C. Clifford, chief executive officer of Colony Communications Inc., the cable subsidiary of the The Providence Journal Co.

That attitude on both sides of the table can make for the recent selling spree that has been widely reported in the business press.

In some instances, the decision to sell also may be influenced by takeover fears. Andrew M. Wallach, a media analyst at PaineWebber Inc., notes that a cable system's heavy startup expenses can lower a parent company's earnings and create potential for a takeover. By selling, the parent removes the drag and cashes in on a system's worth in a seller's market.

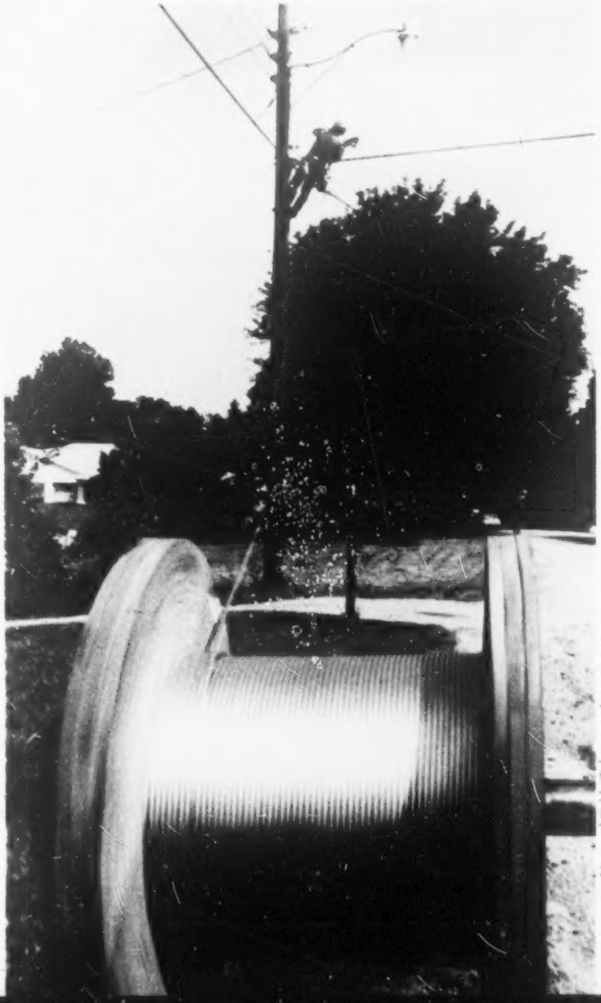
Clifford and others observe that nearly all the buyers are already cable systems operators, thus the consolidation of the industry. One reason for this is that operators with more subscribers are in a better position to reap economies of scale such as discounts for programming.

Another reason is that further economies can be had by cable operators clustering their systems to allow the same administrative, marketing and service staff to serve a larger geographic area. Swaps are changing the patchwork system of ownership created by the award of franchises.

The cable-system market is hot, Wallach believes, partly because costs are shrinking and earnings are growing. While cable systems require a huge initial investment, once an operator passes the break-even point, profits usually rise fast.

The period of intensive construction and costly competition for franchises is largely over, says Wallach, and companies now are more likely to grow by acquisitions rather than building. At the end of 1985, an estimated 73 percent of U.S. homes with television sets had been passed by cable.

The industry's prospects are



National Cable Television Association

With intense construction over, profitability is expected to rise.

also considered brighter because cable operators are no longer required by the Federal Communications Commission to carry local broadcasters' signals. And next year federal deregulation takes the ceiling off fees for basic service in those areas where they have not already been lifted.

Prices are up because "there are more people chasing systems than there are cable systems available to be purchased," Washington says.

However, Colony Communications' Clifford thinks the climb of prices is over. He identifies as reasons the flattening of revenues for pay television such as Home Box Office and the "high liabilities" of some urban cable systems that companies are committed to building with little chance of making them pay.

Clifford says that recent sales "seem to be more of an internal shifting about" than in the last period of great activity in the early 1980s when huge companies such as Westinghouse Electric Corp. bought into the cable systems business.

Now Westinghouse Electric Corp. is getting out by selling its Group W Cable, the country's third largest cable systems operator, to buyers that include cable giants TeleCommunications Inc. and Time Inc. The mammoth deal valued at $2.1 billion may be the biggest cable sale ever.

On a smaller scale, several other newspaper-related companies have been involved in recent cable deals.

Dow Jones & Co. Jan. 6 reduced its stake in Continental Cablevision from 24.5 to 16.5 percent by selling stock to Continental. The company noted that it was able "to take advantage of currently attractive TV cable stock prices." Shares Dow Jones bought in late 1981 for $25 each sold for $50, bringing the company $100 million.

The Times Mirror Co. has changed its cable holdings by numerous swaps of systems and is selling its half interest in one system, Community Cable TV of Las Vegas.

In a break from the selling pattern, The Washington Post Co. Jan. 3 bought into the business, purchasing 53 of the 55 cable systems owned by Capital Cities Communications Inc. (now Capital Cities/ABC Inc.) for $350 million. Cap Cities had to sell to avoid cross-ownership conflicts after its acquisition of the network.

The prices paid for systems vary, Wallach says, but generally they are averaging around $1,100 to $1,200 per subscriber or about 11 times cable cash flow, defined as a year's operating income before non-cash deductions of amortization and heavy depreciation.

Clifford puts the multiple of revenue per subscriber a little lower, "hovering around a grand." But that is a far cry from the $250 to $300 a subscriber that systems sold for in the mid 1970s. Prices jumped in the late 1970s then jumped again in the early part of this decade to around $1,000 to $1,100, where they have generally stayed, he says.

Demand from outsiders pumped up prices in the early 1980s, Clifford says, unlike now when the lift comes from insiders who want to accumulate more cable systems.

Goings and coming. For the Tribune Co. and McClatchy Newspapers, corporate strategy was the reason for getting out of cable ownership. For The Washington Post Co., it is high on the list of reasons for getting in.

At the Tribune Co., Joseph A. Hays, vice president/corporate communications, says, "We think it's a great business" with "great prospects."

"There are more people chasing systems than there are cable systems available to be purchased."

However, he says, the Tribune Co. is selling its cable systems because of "a major strategic decision" to consolidate activity "where we have major investments." To become a major player in cable, Hays says, the Tribune Co. would have needed to invest "much more than we wanted to spend, given our position in newspaper publishing and broadcasting." Also, he notes, the company was facing cross-ownership conflicts because signals of its newly purchased KTLA-TV station in Los Angeles overlapped with two of its cable systems.

Cash from the cable sales will be used, among other things, to help trim debt from the $510 million paid for KTLA.

Of Tribune Co.'s 15 systems, the company has announced agreements to sell all but four. The franchises with publicly announced buyers include one in Montgomery County, Md., an affluent suburb of Washington, D.C. County officials clashed with the Tribune Co. over whether the company was living up to the franchise agreement. However, this was not a factor in the company's decision to sell, Hays says.

McClatchy's decision to sell its four cable systems hinged on the company's changed perspective on the strategic fit between cable and newspapers. Vice President Washington says that in the late 1960s and early 1970s, the company believed cable would eventually be an electronic conduit for delivering newspapers to homes. Since then, "it's become more and more apparent any impact cable is going to have on newspapers is a lot less than anybody imagined," he says.

McClatchy's diversification is keyed to a goal of being a provider rather than a carrier of information. Thus, the company has chosen to sell, Washington says.

Other forces such as the federal government can determine involvement in cable. Federal cross-ownership rules prohibit a TV network from owning cable systems, so when Cap Cities announced its agreement to buy ABC last spring, the company's pullout from cable became inevitable.

For The Washington Post Co., acquiring the 53 Cap Cities' systems meant that in one swoop it had gained a substantial presence in a business company executives had previously avoided.

The company had disliked the uncertainties and politics of bidding for franchises, says Howard E. Wall, president of Post-Newsweek Cable Inc. "Everybody was expected to make overpromises, and we didn't want to participate in that." The overall risk and the heavy outlay of capital associated with building cable systems were enough to convince the company not to invest.

But the nature of the business changed, at least for some systems. By waiting and missing the early stages of cable's development, the Post paid more than it might have otherwise. In return, it has bought what Wall describes as a low-risk business.

Wall says the Post paid a "full price" but calls it in line with cash-flow multiples and revenue per subscriber paid by other recent buyers.

He describes the newly acquired cable systems as having characteristics that should make for smooth, uninterrupted sailing. Their average penetration of 67 percent of homes passed for basic service is well above the industry norm. Capital spending is slowing, and the franchising process is essentially complete. Also, Wall says, the systems are at a point where they are profitable as well as substantial sources of cash.

In addition, the Post gets the benefit of some shelter from taxes because with the change of ownership the depreciation process starts over.

Despite the pluses, the Post expects to

spend some time digesting its purchase before buying in the cable marketplace again, Wall says.

The timing of new acquisitions will also depend on the cable systems' ability to conform to a company-wide goal of 15 percent annual growth in net income, he says. However, when the company is ready to buy, he says he expects to be looking for systems in areas now being served by the Post's new cable holdings.

No millennium. While cable has reacquired much of its former glow, some in the business caution that the industry's millennium is far from at hand.

David K. MacDonald, vice president of NYT Cable TV, owned by The New York Times Co., questions some of the prevailing assumptions about the industry's future. Despite the fact that monthly revenue averages less than $20 per subscriber, "the industry sees itself as taking this quantum leap through deregulation [of basic service] and price increases," he says. MacDonald doubts there will be a huge increase in prices.

> "*I would suggest that most cable systems are pushing what they can charge even with deregulation.*"

Numbers like $30 per subscriber—$15 for basic service and $15 for pay television—are being bandied about, he says. To charge that, companies will have to increase substantially prices for basic services, which are averaging between $8 to $10 a month, he says.

"I would suggest that most cable systems are pushing what they can charge even with deregulation," he says, noting that cable is not a utility like electricity that a customer requires.

NYT Cable has made no major acquisitions since 1981, mainly because "the price is too dear," MacDonald adds. Instead, the company has focused on increasing penetration—which he sees as a key to a successful cable system. As a means to that end, the company is getting ready to kick off a program that "unbundles" basic services into smaller packages. Thus the perceived price of cable service drops, and that can attract potential customers who refused to subscribe before, he says.

With unbundling, a customer will be able to pay as little as $5 for cable—which buys only the local channels—instead of having to take the whole $10.75 package of basic services. For another $2.50, a customer can get sports satellite channels and for $2.50 more, the other satellite channels.

In a separate service, NYT Cable TV has had great success with pay-per-view television, MacDonald says. By letting cable customers order a particular movie, the company sold more than 100,000 movies in 1985, and MacDonald expects the number to double this year. Customers pay $4 per movie—more than the usual charge for renting a movie videotape—but they bypass the step of getting and returning it to a video store, he notes, and the expense of purchasing a video cassette recorder. ☐

NON-DAILIES HARDEST HIT

Fire-Prevention Efforts Pay Off, But the Arson Menace Continues

BY MARCIA RUTH
presstime staff writer

Improved fire prevention has paid off for newspapers in the last few years, particularly for dailies.

Although precise, industry-wide figures on the number of fires are not available—and observers say small blazes are often extinguished too quickly to be reported—a presstime poll of all state press associations and interviews with some newspapers show there were 26 newspaper fires in the past 42 months. More than half were at non-dailies.

This figure is down from an earlier survey showing 23 fires over a 20-month period [presstime, July 1982, p. 56].

But with the improvement comes continuing concern over arson, which is either proven or suspected in a number of cases. Newspapers are increasing their security protection to douse the problem.

Of fires at daily newspapers, only one since mid-1982 was so devastating that major production changes followed. After a $1-million blaze swept through their press, camera and composing areas on Dec. 18, 1983, The Intelligencer and the Wheeling (W.Va.) News-Register decided to convert from letterpress to offset printing—a shift that had been considered but not acted upon until the fire damage.

While that fire was started by an electrical short in the furnace room, the most common internal cause of fires reported at other dailies in the last three and a half years was electrical malfunction in the pressroom. All of these were extinguished before major damage occurred.

The pattern was different for weeklies. More than half of the fires there began in other business offices located in the same building or in adjacent buildings.

Overall, experts give newspapers high marks for fire prevention. There is a "high degree of safety and hazard or risk consciousness," says Warren Gumprecht, property manager of the Special Risk Department of the Chubb Group of Insurance Companies. "In other words, they know where they can have problems, and they keep a close watch on these areas. They monitor them, and they clean them up."

Among other reasons for the reduced incidence of fire in newspapers, he says, are the conversion from hot metal to computerized production, the move away from flammable solvents and the installation of automatic sprinkler systems in a growing number of newspaper plants.

Pressroom protection. Most modern pressrooms, an area historically prone to combustion, are protected by either water or carbon dioxide systems. A few use Halon 1301, a gas stored as a liquid, although the substance is used primarily in computer rooms.

Arson is suspected in $950,000 fire at The Orange County Register.

Each system has its own advantages and disadvantages:

- Water is inexpensive but can severely damage computer equipment, short-circuit electrical systems and ruin newsprint supplies.
- Carbon dioxide, which is also relatively inexpensive, can be lethal. Staff must be trained to evacuate in 90 seconds and use special breathing equipment.
- Halon 1301 is by far the most expensive but leaves no residue and is not deadly.

Deciding which to use is a matter of balancing costs and risks.

"If we were to use CO_2 in our pressroom in a fire where we had to release every one of our (CO_2) units, it would cost us $750. With Halon under the same circumstances it would cost us $6,000," says Harold E. Archer, general services manager of The Baltimore Sun, which began using Halon protection in the pressroom in 1981.

For the Sun, says Archer, Halon 1301 is worth the extra expense because it "gets the fire out very quickly, there is no residue, and if people are there it won't hurt them in any way."

The pressrooms of the Courier Journal & The Louisville Times Co.—including Louisville's two daily newspapers and Standard Gravure Corp., extinguishing fires without [illegible] the letterpress and rotogravure presses.

The latter prints about [illegible] of Parade magazine and [illegible] Sunday magazine supplements. The rotogravure press uses highly flammable chemicals, and there is a constant danger of fire," says Richard E. Newman, corporate director of safety and security.

For both Louisville press rooms, self-contained breathing apparatus — so-called Scott air packs — are kept [illegible] by newspaper security personnel [illegible] by the local fire departments.

Most newspapers use water sprinklers for pressroom protection, including the Chicago Tribune in its new Freedom Center plant. (See story, p. 10.)

Fire prevention experts also stress [illegible] cooperation with [illegible], notes William Happel, safety director of Philadelphia Newspapers Inc. [illegible] internal network. For example, when The Philadelphia Inquirer and The Philadelphia Daily News were installing a new fire alarm system, "we [illegible] checked with [illegible] to see that they were doing it the right way," says Happel.

Once sophisticated fire prevention and fire-fighting systems are in place, experts say, the most important ingredient is [illegible] maintenance.

"We make sure we inspect our sprinkler systems regularly. We inspect equipment regularly. . . . We try to limit exposure by removing combustibles,"

says Earl [illegible], an engineer for Risk Control, a Long Island, N.Y., company that serves as a safety consultant for Newhouse Newspapers.

Changing concerns. While the newspaper business has strengthened its safety programs, arson remains an outside cause of fires over which newspapers have little control.

Some executives cite cases in which arson apparently has been committed as an act of retaliation for a perceived grievance against the newspaper, or it can be part of a burglary.

"The sophistication of our firefighting systems" and the good dust-collection systems of newspaper presses "have reduced the possibility of electrical dust-fed

Summary of Newspaper Fires Since Mid-1982

1986

Jan. 2, The Wayne (Neb.) Herald (weekly, circulation 4,013), fire in adjoining bank; estimated damage: $49,000.

1985

Nov. 26, The Clark Fork (Mont.) Valley Press (weekly, 1,500), suspected electrical problem in building that also houses stores and law office; estimated damage to newspaper and bookstore under same ownership: $60,000.

Oct. 28, The Boston Herald (morning, 355,253), pressroom fire spread through ventilation shaft into mailroom; estimated damage: $300,000.

July 7, Edmonton (Alberta) Journal (morning, 162,374), arson; estimated damage: $20,000.

July 4, The Crete (Neb.) News (weekly, 4,388), chemical fire in adjoining welding shop; estimated damage to newspaper $6,000.

June 19, San Antonio Express-News (all day, 169,884), spark in electric motor ignited paper dust in pressroom; estimated damage: $60,000 to $70,000.

May 27, Columbia County Observer, Magnolia, Ark. (weekly, 3,750 paid; 13,500 free), fire in adjoining building; estimated damage to newspaper unavailable.

May 26, Liberty County Times, Chester, Mont. (weekly, 1,902), electrical fire; estimated damage: $99,000.

May 19, Courier Publishing Co., West Liberty, Ky. (publisher of three weeklies), suspected arson; estimated damage: $65,000.

Jan. 19, Daily Times Chronicle, Woburn, Mass. (evening, 15,279), arson; estimated damage: $250,000.

Jan. 10, The Payson (Utah) Chronicle (weekly, 1,800), fire in adjoining antique shop; estimated damage: $65,000.

1984

Dec. 31, The Canby (Minn.) News (weekly, 3,404), fire started in adjacent restaurant; estimated damage: $100,000.

Oct. 11, Le Droit, Ottawa (evening, 39,584), malfunction in offset printing plate developer; estimated damage: $30,000.

Sept. 26, Lincoln County News, Chandler, Okla. (weekly, 3,867), suspected arson; estimated damage: $100,000.

Sept. 21, The Daily Herald, Arlington Heights, Ill. (group of 13 newspapers in suburban Chicago; combined circulation, 70,000), welding torch ignited ink mist and paper dust in pressroom; estimated damage: $25,000.

Aug. 3, The Orange County (Calif.) Register (all-day, 287,946), suspected arson; estimated damage: $950,000.

April 3, Dallas Times Herald (all-day, 231,224), sparks in pressroom; estimated damage unavailable.

Feb. 25, Carolina Newspapers Inc., which publishes Yorkville (S.C.) Enquirer (weekly, 2,429) and Clover Herald (weekly, about 2,500), faulty electrical wiring; estimated damage unavailable.

Jan. 6 and Feb. 23, Manteca (Calif.) Bulletin (morning, 5,564), arson; estimated damages: $250,000 and $95,000.

1983

Dec. 18, The Intelligencer (morning, 24,142) and the Wheeling (W.Va.) News-Register (evening 25,881), short circuit; estimated damage: $1 million-plus.

Oct. 12, Daily Camera, Boulder, Colo. (morning, 30,359), electrical fire confined to press control panel; estimated damage: $9,500.

July 18, L'Anse (Mich.) Sentinel (weekly, 4,246), electrical wiring malfunction suspected; estimated damage: $400,000.

July 4, Colfax (La.) Weekly Chronicle (weekly, 3,335), arson; estimated damage: $300,000-plus.

Jan. 27, Roseau (Minn.) Times-Region (weekly, 4,699), arson; building and equipment destroyed; dollar amount unavailable.

1982

Dec. 21, Webb City (Mo.) Sentinel and Wise Buyer (weekly, 1,500 paid; 10,000 free), smoker fell asleep in adjacent apartment; estimated damage to newspaper unavailable.

July 22, The Arizona Daily Star (morning, 72,360) and Tucson Citizen (evening, 57,863), electrical explosions in a transformer adjacent to the Tucson Newspapers plant; estimated damage to newspaper: $195,000; damages totaling $7.75 million awarded families of four newspaper employees — one killed and three injured in the explosion — paid by electric companies, an architectural firm, engineering and construction companies, and the city of Tucson.

An Example of Thorough Planning

"No short cuts," is how Richard Burton defines the Chicago Tribune's attitude toward fire prevention.

As fire protection manager, he oversees the Tribune Co.'s three Chicago buildings—the editorial and business office housed in what is known as Tribune Tower, the transportation garage, and the $186-million, 690,000-square-foot Freedom Center, which houses production, circulation and a four-and-a-half-week supply of newsprint.

Different types of systems are used in different settings:

- Halon 1301 in the computer rooms backed up by a water-sprinkler system.
- Carbon dioxide in the garage, where there are flammable liquids and batteries.
- Foam in newsprint storage, allowing an entire room to be flooded in six minutes protecting all but the outermost layers of paper.
- Water sprinklers in the pressroom and throughout areas not otherwise covered.
- Smoke and heat detectors in electrical vaults that can shut off current.

Also, at Freedom Center, an "emergency response" team of about 30 people on each shift stands ready for quick action. The teams are equipped with self-contained breathing units and other protective gear. Another 10 to 15 people can be relied on in the less flammable office environment of the Tribune Tower.

All supervisors are provided with detailed instructions on firefighting and evacuation procedures. "Hand-picked" floor wardens and their assistants are trained in firefighting classes.

And access to the company's premises is limited. Employees must check in with photo ID's.

The Maryland Classified Service

[illegible]

fire in the pressroom to a very low possibility," says Thomas M. Grochow, assistant general manager of The Orange County (Calif.) Register.

"What concerns me more than anything else as a cause of fire is, I think, arson—fires caused by people who are for whatever reason upset with the newspaper—or accidental causes related to smoking," Grochow adds. The Register sustained damages of $950,000 in one 1984 fire, the cause of which is suspected arson, he says.

The newspaper has improved its security and has banned smoking except in designated areas. In a new building the newspaper is constructing, safety systems are being installed that far exceed regulatory requirements.

With "20/20 hindsight," Grochow says the following kinds of equipment often may be overlooked in fire-prevention planning but should be considered:

- "Pre-action" sprinkler systems activated by fire and smoke detectors, as opposed to other kinds of sprinklers that can be triggered by something or someone accidently bumping into them. Publishers might hesitate to install sprinklers because of the possibility of accidental water damage to newsprint, he said.
- Detectors to shut down a building's air-conditioning system so that smoke will not be sucked into it and spread to other areas of the newspaper plant.

Another newspaper that has taken steps to curb arson is the Daily Times Chronicle in Woburn, Mass. After several criminals set nine fires in the course of an attempted burglary last year, the newspaper "put in a very good alarm system," says Senior News Editor Daniel Kennedy.

There goes the neighborhood. While daily papers are protecting these and other new techniques, some small weeklies are faced with a more basic problem: location. Renting space on small budgets, they are often at the mercy of poor safety practices of adjacent stores or buildings.

"Don't locate next to a restaurant," warns Steve Lang, general manager of The Canby (Minn.) News, which with three other businesses was damaged severely in 1984 by a fire that started in a restaurant.

The same could be said for laundromats in Chester, S.D., welding establishments in Crete, Neb., and antique shops with wood-burning stoves in Payson, Utah. Fires that started in those establishments spread to and destroyed weeklies. Similarly, in Webb City, Mo., the local weekly learned too late to beware of smokers living in adjacent apartments who fall asleep with lit cigarettes. □

CONCENTRATED IN PRODUCTION AREAS

Largely Hidden from View, Sensors Are Newspaper Sentries

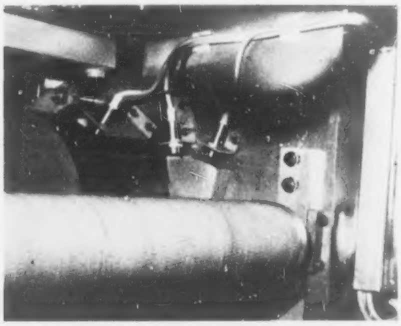
BY PAUL KRUGLINSKI
presstime technical writer

Newspapers can get pretty touchy about the efficiency of their operations. That's why vendors increasingly are installing a wide variety of sensing devices in the equipment newspapers use.

Use of sensors generally is on the increase. Annual shipments to all industries are currently worth $2.7 billion, according to International Resource Development Inc., a Norwalk, Conn., market research firm, and they are projected to rise to $4 billion by 1990.

The ubiquitous room thermostats and smoke detectors are probably the most visible examples of sensors. Less visible or audible are those that are making their way seemingly into every nook and cranny of newspapering.

"As newspapers become more complex environments," observes George I. Fischer, vice president/marketing for Seaboard Energy Systems Inc., "sensors will become more important to newspapers."



Sensors ensure perfect alignment of color deck.

Seaboard, a Virginia Beach, Va., supplier of energy and security systems to newspapers and other industries, uses an array of sensors within its products.

Some of them include a carbon monoxide detector that will shut off an air intake fan if the level of that poisonous gas becomes unacceptable; an oxygen analyzer that controls the burning efficiency of boilers; sonic detectors that automatically turn lights on and off or alert security personnel to the unauthorized presence of someone; and moisture detectors that measure water accumulation beneath the floors of computer rooms.

> *Sensors are in nearly every piece of prepress, pressroom and mailroom equipment.*

"Sensors are necessary to find out what's going on in the plant," Fischer says. "They provide management with the data to make better decisions."

While sensors are finding more applications generally, their greatest concentration is in the production areas.

Sensors can detect the presence, absence, number or weight of anything used to produce a newspaper. They can be found in nearly every piece of prepress, pressroom and mailroom equipment.

They can be as simple as wires with wheels on the end that lay across a web and close a circuit if the web breaks, stopping the press automatically. Or they can be as sophisticated as sound or light waves used to accomplish the same thing.

For most sensors, the primary purpose is to monitor the performance, or non-performance, of a piece of equipment.

Although sensors are largely hidden from view, their importance to revenue generation and operating costs can be substantial, newspaper production specialists say. In some instances, newspapers have lost tens of thousands of dollars in advertising revenues because of excessive "misses" while inserting advertising supplements into an edition. Or press units can suffer thousands of dollars of damage if a malfunctioning sensor does not detect a web break immediately.

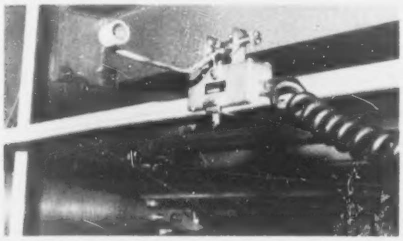
Sensors in use today range from such high-tech devices as retro-reflective photoelectric cells, proximity inductive sensors, magnetic sensors, load cells and lasers, to traditional scales, circuit breakers and limit switches. They can detect by use of light, sound, magnetism or air.

The devices have helped newspapers automate operations like the prepress department and the mailroom. Generally, they check for human or machine errors, make sure a task is performed correctly, or monitor the performance of other devices.

Sensors are not without their problems, however. While most do their jobs adequately, the ones used to count newspaper products are not fully effective, according to newspaper technical experts.

"The ones being used in the mailroom (for counting) are not that reliable," says George Cashau, ANPA director/technical research.

Consequently, counters continue to be the focus of research by ANPA and several vendors. In particular, Hall Systems Inc. and IDAB Inc. are working on counters that will meet newspapers' needs reliably.



Detector shuts off press in case of web break.

"At high speeds, most counters are not efficient," adds Nhac (Pete) Nguyen, ANPA research associate/engineering. Mechanical detectors tend to "hang up" at high speeds, he says, while optical sensors sometimes count bulges in the products as separate newspapers.

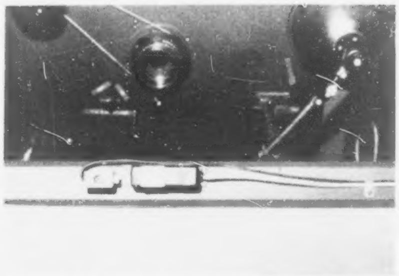
Currently, ANPA is looking into new technologies that may make future counters more reliable, Nguyen says.

Optical sensors. Most prepress and mailroom sensors use optics to carry out their jobs.

One venerable sensor is the photoelectric cell mounted on the copy boards of process cameras. The cell monitors the illumination from the camera's lights and determines whether the copy has been exposed sufficiently. In effect, the cell eliminates guesswork in setting timing and exposing film.

Chemco employs photoelectric cells with filters in one of its color separation systems to determine correct exposures.

Hall Systems uses a similar photoelectric cell, which reads laser beams, to detect the presence of newspapers in a belt-stream conveyor.



Camera light sensor helps determine exposure.

For years, the infrared, retro-reflective photoelectric cell, which both emits and detects light, has been used to monitor film as it moves through processing units. The sensor can detect the presence of photographic materials within the processor because the film breaks an infrared beam of light.

Eastman Kodak Co. recently introduced new infrared films that will be used in advanced imagesetters. Because these films are sensitive only to infrared light, the film processors with infrared detectors will have to be modified to use them [presstime, Nov. 1985, p. 50].

Hall Systems and other mailroom vendors employ retro-reflective sensors extensively in their products. They are used within bundle-distribution systems to count bundles, in bottom-wrapping machines to sense the bundle and start a timing sequence, and in weighing and tying machines to stop bundles in the proper location. They are also used in belt-stream conveying systems to detect gaps between products going through the inserting process.

In the last year, retro-reflective photoelectric cells have also come into use in platemaking. K&F Beach Manufacturing Co. now markets a plate punch, trim and bend machine that uses three electronic eyes to align the plate properly on the press.

"It can detect contrast," says Pat Kelsey, director of engineering. "The eye will look for a register mark and stop the motor when it finds it."

Taking some of the concepts used in this machine, K&F Beach developed a register verification system that uses a video camera. An operator can examine the register and punch marks at 50 times normal resolution. Also, the video camera allows the imposition of a grid onto the image so that an operator can tell what, if anything, is wrong with the plate and where in the production process an error was made.

"With this device, you can tell if the plates are right before they go to press," Kelsey adds.

Currently, The Washington Post is using the K&F Beach system within its flexography program and testing a similar system for its offset presses.

Hall Systems employs a helium-neon laser sensor, along with a "linear array" sensor, to detect the presence of newspapers in the belt stream. The laser beam measures the distance by detecting the higher position of the folded edge of newspapers in the stream.

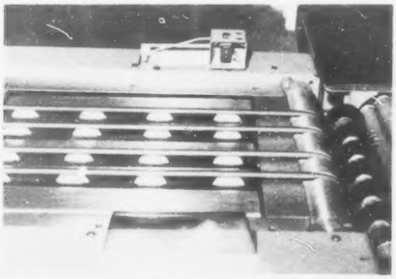
Mechanical-electrical sensors. Limit switches are the most basic form of mechanical-electrical sensors. Something will move, such as a press cylinder, until it comes into contact with a limit switch, which engages and completes a circuit. With the circuit completed, the action ceases much the same way the K&F Beach electronic eye stops its motors.

More often, the mechanical-electrical sensor will monitor levels of mechanical movement and convert that into a variable electrical current. Thus, if a screw is to turn a specific number of revolutions, the sensor monitoring it will produce a specific electrical current based on the movement.

At newspapers, sensors such as these are used primarily on presses. If a pressman makes an ink adjustment from the press console, the "ink actuator" verifies that the adjustment has indeed taken place.

Chemco incorporates an electro-acoustic sensor into some of its process cameras to determine accurately the distance between the vacuum back—the portion of the camera that holds the film parallel to the flats—and the copy board. The sensor relies on magnets, which give off a specific "sonic wave," depending on the distance separating them. The type of sonic wave detected by the sensor relates directly to the distance between the copy and the film emulsion, ensuring proper reproduction.

While most do their jobs adequately, the ones used to count are not fully effective.



System weighs and counts copies on conveyor.

Another kind of mechanical-electrical sensors—load cells—produce a variable electrical current based on something's weight. Such sensors are used in count verification equipment in the mailroom.

"What you're doing is measuring the change in resistance" caused by the bundle's weight, says William A. England, staff engineer with the St. Petersburg Times and Evening Independent.

Newspapers use devices such as the Hall Commander or the Icore Checkweigher to verify both the count and composition of newspaper products leaving the plant or the returns coming back.

Similarly, Harris Graphics Corp. has developed a compression platen on its new palletizer to monitor the presence of bundles being loaded. The approach represents a departure from the types of sensors used in other packaging.

Proximity detectors. A host of sensors—including those that control traffic signals and open store doors—fall into the category of proximity detectors. They can use light, sound or air to sense the presence of something, but most of those used by newspapers rely on magnetism.

"Proximity sensors have become the dominant component in our product lines in the last five years," says John E. Prim, newspaper products manager for Harris Graphics.

Currently, the most widely used magnetic proximity detector is the Hall effect sensor. In newspaper applications, this magnetic sensor is used mainly to count something, monitor speed or determine location.

Chemco uses the Hall effect sensor in its direct platemaking system to count the plates being made and to determine how long it is taking.

Goss uses two of the Hall sensors in the arms of its reel stands to monitor the speeds of both the expiring roll and the roll to be spliced. The two sensors help achieve a smooth splice.

M.A.N.-Roland (USA) Inc. uses several types of "inductive" proximity sensors on its press units to check a variety of press operations, including main impression, color-deck impression, color-deck alignment and coupling to the main unit, and drive-shaft engagement.

The sensors "replace mechanical limit switches that were used previously," says David R. Harris, electrical project engineer. "There are no moving parts on them" that can fail, he adds.

Polaroid cameras with automatic focus adjustment use some proximity detectors to determine the distance of the camera from the subject and adjust the lens focus. According to England, the same principle could be applied to newspaper operations for monitoring webs.

All sensors work together with other components such as motors, timers and counters. Increasingly, though, sensors are providing data to microcomputers contained within the equipment to help control production. In effect, the sensors are the eyes and ears of the computers.

"That's getting to be more and more the case," says Richard Oesterlin, manager of electronic engineering for the Graphic Systems Division of Rockwell International Corp., which manufactures Goss equipment.

Moreover, combinations of sensors are working together in complex systems coming into use at newspapers.

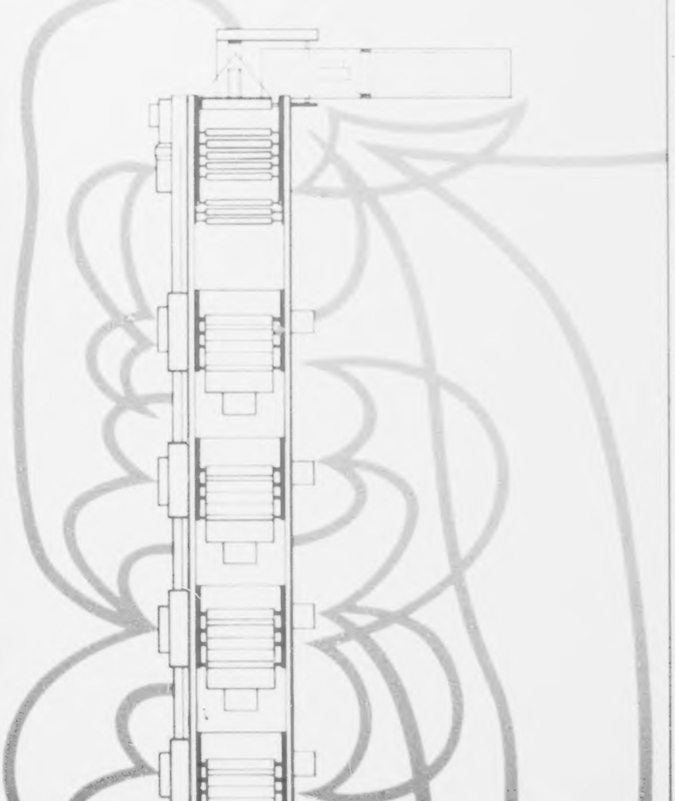
In automatic roll-loading systems, where newsprint is mounted on reel stands with no manual intervention, infrared sensors are used to detect the edge of the roll and help determine the x and y coordinates of the core. Once the edge of the newsprint roll is detected, the Goss roll-loading system also uses "position encoders" to align automatically the core of a newsprint roll to the chucks on the arms of the reel stand.

Harris Graphics' highly automated NP-1472 inserter uses retro-reflective photoelectric cells in the inserting process to spot instances of "misses," which are then recirculated for correction. Limit switches are used to detect double insertions. And proximity sensors detect the height of the preprints loaded into the 1472's hoppers.

Beyond that, sensing devices are moving to some interesting areas for future newspaper application, according to newspaper vendors.

For example, several press manufacturers are experimenting with sensing systems that will record "harmonic readings" of new press units. Later in the press's life, when malfunctions and failures begin to occur, trouble-shooting service engineers can take another harmonic reading and compare it with the original in an effort to pinpoint problem areas.

"Sensors are being used everywhere," comments John L. Bielland, engineering projects manager for Chemco Photoproducts Co., "and there are always new ones coming out." ☐



ONE PRESS
DOESN'T GIVE YOU
THE RUN-AROUND BLUES.

Unless you have a Solna Distributor, you're getting the run-around. Unlike other newspaper web presses, The Distributor is designed for easy operation from only one side. In fact, most everything is controlled from one panel right by the folder.

Take a good look at the quality, easy operation and profitability of an orange Solna Distributor. It will cure your run-around blues. Fast.

SMOKING IN THE WORKPLACE

More newspapers grapple with the smoking controversy by setting new employee policies. Rising health concerns spur the trend.

BY PATRICIA P. RENFROE

The surgeon general of the United States wants a smoke-free environment by the year 2000. The American Medical Association wants cigarette advertising stopped. A Japanese study described in the New England Journal of Medicine in September 1984 found that harmful effects of passive smoking may occur in proportion to an individual's exposure to smokers. Many non-smoking employees are demanding protection from smoke in the workplace—and in some cases, are suing their employers for not providing it. Most insurance companies are offering lower life and health insurance premiums to non-smokers. Some state and local governments have passed measures that require employers to accommodate non-smokers' health concerns in the workplace.

Smoking employees, meanwhile, seek to preserve their individual rights. And some courts have ruled that allowing people to smoke is not an act of discrimination against non-smokers.

Newspapers, like other businesses, are caught in these smoking/non-smoking cross-currents. Many are taking action to deal with the controversy.

In late 1984, for example, a survey by Human Resources Policy Corp. of Los Angeles found that 42.1 percent of the responding "paper/publishers" companies (including newspapers) had a formal smoking policy, compared with an average of 36 percent for all 445 firms studied.

Decisions to establish a company smoking policy are guided by law in nine states—California, Connecticut, Maine, Minnesota, Nebraska, New Jersey, Utah, Alaska and Hawaii. A number of cities and counties also have approved smoking restrictions, the toughest of which may be San Francisco's, observers say.

Under that ordinance, in effect since March 1984 [presstime, Dec. 1983, p. 21], employers are required to write a policy that allows non-smokers to object to smoking in the workplace. Once an objection is registered, an employer must try to find a solution. Should the non-smoker find the solution unacceptable, then smoking must be banned in the employee's work area. The ordinance led to a ban on smoking in the San Francisco Chronicle newsroom.

In Los Angeles, where employers with five or more employees have been directed to take reasonable steps to accommodate non-smokers desiring to work in a smoke-free environment, the Los Angeles Times preceded institution of its policy in 1985 with smoking-cessation classes. (These classes continue to be offered.)

Renfroe is ANPA manager/personnel relations.

"The values of our employees had shifted almost entirely toward having a non-smoking policy."

James G. Banman

When the ordinance took effect, the Times set aside two-thirds of the cafeteria for non-smokers and banned smoking in restrooms, lounges attached to cafeterias, elevators and medical stations. In addition, department heads were given the right to prohibit smoking in certain other work areas. Smoking is allowed in private, enclosed offices and designated places.

Herman L. Fields, the Times' human resources manager, says the policy is working well 10 months after implementation. "We have had only five minor complaints, which were easily resolved," Fields reports. Steps have been taken to accommodate everyone's interests, he adds, and in areas where space cannot be set aside for smokers, smoking breaks are allowed so long as the practice is not abused.

Wayne O. Buck, medical director of the Times, believes the policy will improve employees' health, as well as reduce health-care and absenteeism costs for the newspaper.

Buck plans to institute spirometer testing on the lungs of those smokers who take the smoking-cessation classes to demonstrate the program's effectiveness.

There appears to be little difference between policies for newspapers that are responding to government regulations, like the Times and the Chronicle, and those that have voluntarily taken steps to curtail smoking.

An example of the latter is The Herald of Everett, Wash., which adopted a smoking-control policy last April.

Following six months of study by a task force of 11 members—smokers and non-smokers—The Herald placed a ban on smoking in all office work areas, restrooms, conference rooms, hallways and portions of the lunchroom. In the production department, there are designated smoking and non-smoking zones, according to Kimberly Heltne-Newland, Herald personnel assistant.

The newspaper sponsored American Lung Association classes to aid in the stop-smoking process before and after the policy took effect. Newland says the overall program is viewed as successful and fair even by hard-core smokers.

On the East Coast, The Press Herald of Portland, Maine, adopted a smoking policy in September 1984—seven months before Maine's law was passed. The Press Herald banned smoking except in designated areas of the building.

Another New England daily, the Newport (R.I.) Daily News, banned all smoking and began providing payment to employees and their family members to attend cessation classes.

In Canada, newspapers are also altering the workplace environment to reflect non-smokers' health concerns. In Toronto, The Globe and Mail does not allow smoking in open work areas. The Brockville (Ontario) Recorder and Times has not only banned smoking but also begun to refuse advertising for tobacco products.

Other approaches. Some papers have taken more limited approaches to addressing the issue.

For example, the Gazette-Journal in Reno, Nev., not only paid half the $200 fee for employees to attend such classes, but also paid the balance for those employees who stopped smoking for six months. The Roanoke (Va.) Times & World-News simply refunded half the cost of smoking cessation classes.

The Pueblo (Colo.) Chieftain offered a reward to encourage employees to kick the habit—a turkey to each smoker who quit "cold turkey" for two days. Ten employees qualified.

At the Salina (Kan.) Journal, employees who smoked were offered a $500 bonus to stop for three months. This step was coupled with a decision by Publisher Fred Vandegrift to declare the Journal building off-limits for smoking.

Some newspapers are using special equipment, such as electronic air cleaners and smoke-eating ashtrays, in efforts to provide a cleaner air for employees [presstime, July 1982, p. 59]. However, no rave notices have been given to such equipment as an adequate solution.

At The Denver Post, about $100,000 was "poured into the various methods of air handling and purification, and the results were minimal at best," according to a report appearing in the September-October 1985 issue of the employee publication, Poster. Personnel Manager James G. Banman says a policy is in the developmental stages now and should be in place this spring.

If the methods used to curb tobacco smoke result in improved employee health, there is a financial gain for individuals and the organization.

In a 1984 survey of 254 large life insurance companies, 86 percent said they offered reduced policy premiums for non-smokers, according to the American Council of Life Insurance.

Also, out of 58 companies selling individual health care policies, 22 said they offered discounts to non-smokers.

Although experts say it is more difficult to adjust group rates in this fashion—because group policies typically cover employees' family members, for example—improved health of employees will be reflected in fewer claims and ultimately in decreased premiums.

Smoking at work may not be a problem at every newspaper today, but increasing employee concerns regarding health and fitness are likely to make it one in the future. As Denver's Banman says, "We were surprised to learn that the values of our employees had shifted almost entirely toward having a non-smoking policy."

However, unions may not always be supportive of outright bans, as demonstrated by discussion at last year's convention of The Newspaper Guild. Delegates, accepting the recommendations of its Health and Safety Committee, reaffirmed a preference for actions other than smoking bans to deal with the problem.

Newspapers without a smoking policy might want to consider these steps taken at various dailies in the United States and Canada:

- Determine what government regulations are in effect or might be adopted in the near future.
- Establish a policy-development committee, comprised of smokers, non-smokers and ex-smokers.
- Seek union consultation where necessary.
- Take time to implement the policy properly; explain how the policy works and why it was developed.
- Offer smoking-cessation classes prior to the policy's implementation and on a continuing basis.
- Make the smoking policy part of a general wellness program. ☐

THE BETTMANN ARCHIVES

"I know no way of judging the future but by the past."

Patrick Henry, 1775

History is a splendid teacher. Patrick Henry recognized that more than 200 years ago when he urged the founders of the new American government to learn from the mistakes of established nations and avoid repeating them.

Today, Congress must remember the lessons of the past. It should re-examine the mistake-ridden history of rail regulation and resist current pressures to reregulate America's freight railroads.

Before 1980, the continued existence of our national rail system was threatened. Debilitating regulatory measures, some dating back to the 1880's, prevented the railroads from functioning like other American businesses. The railroads' profits and share of freight traffic declined steadily because restrictive regulation thwarted efforts to compete in terms of prices and services.

In the 1970's more than 20 percent of our rail system was operating in bankruptcy; 43,000 miles of track were under speed restrictions; and the industry's return on investment sunk to a low of 1.2 percent.

Recognizing that America needs healthy railroads, Congress acted. In 1980, the Staggers Rail Act lifted some of the more crippling regulations.

The remedy proved effective. With new freedom to market services and make contracts, railroad business increased. New investments produced tremendous improvements in service, and market competition controlled prices much more effectively than regulation had.

The overwhelming majority of rail customers are pleased with regulatory reform and its results. However, a few are pressuring Congress to reregulate the railroads. History shows that this could jeopardize the future of the railroads and their customers. Don't let them do it. America needs a strong, healthy rail system.

Tabloids

BY MARGARET GENOVESE
presstime staff writer

In the sea of six-column-wide standardization that has swept over the newspaper business, tabloid dailies stand out as islands of individuality.

A 20th century phenomenon, tabloids have been in the minority among daily newspapers throughout their history. In the United States and Canada today, they number less than four dozen out of about 1,800 daily newspapers. But they count among their numbers several of the largest dailies, and in the weekly and free newspaper market, they are plentiful.

Although they are generally of one size, tabloids are not of one mind—or era. They range from the splashy New York Post to the staid Christian Science Monitor and from the 67-year-old Daily News of New York City to the four-year-old West Hawaii Today of Kailua-Kona.

Most industry experts agree there is little chance that the numbers of these half-size papers, whose pages measure about 11 inches by 14 inches, will grow dramatically among daily newspapers.

For one thing, they say, newspapers are loath to do anything to disrupt so radically their subscribers' reading habits.

The tabloid format also has inherent drawbacks. It cannot be divided into sections, and there is less advertising revenue potential per page and more wasted white space.

Daily Tabloid
Daily Tabloid
TABS TO NEWS BIZ:
DON'T SELL US SHORT

But daily newspapers continue to adopt the format in small numbers—a dozen within the past five years—because for almost every disadvantage to the format, there is an advantage. "It's a mixed blessing," says Vernon J. Mallinen, director of marketing services for the Rocky Mountain News of Denver.

Among the pluses cited by Mallinen and others are:

- Convenience for readers—an easy-to-handle package that works especially well when reading while on a bus, train or plane, or at a lunch counter.
- Page dominance with a smaller ad for advertisers.
- The ability to project a different—some say youthful—image, because a tabloid is so obviously different from the traditional standard, or "broadsheet," newspaper.

In other words, there may be competitive reasons to put out a tab.

"Having seen the third broadsheet paper in the city going downhill, we felt you had to offer a distinct and obvious alternative to what . . . was being offered," says J. Douglas Creighton, who with other employees of the dying Toronto Telegram back in 1971 started the now flourishing tabloid Toronto Sun.

There is "no question" that the decision to publish a tabloid is the "main reason" for the success of that newspaper, adds Creighton, president of Toronto Sun Publishing Corp.

Since then, his company started a tabloid daily in Edmonton, Alberta, and purchased and redesigned a daily tabloid in Calgary, Alberta, both competing with established broadsheet newspapers. In fact, in Canada generally the number of daily tabloids and their percentage of overall circulation is proportionately much greater than in the United States.

In smaller markets, some newspapers have adopted the tabloid format because it gives the appearance of a heftier news and advertising package.

"In order for us to try to fill a broadsheet newspaper, we would be one single-sheet, four-page broadsheet," says Thomas J. Lanctot, publisher of the 3,300-circulation Sunnyside (Wash.) Daily News. "This way we are an eight-page tab."

In addition, says William E. Harper, publisher of the Times-

Republic (evening circulation 3,888) of Watseka, Ill., "the readers feel like they are getting a little more for their money."

The "heft factor" is one of the big reasons that hundreds of non-dailies are tabs.

Broadsheet dailies also use the tabloid format in some situations, increasingly so in producing special sections and also for some of their total- or target-market coverage publications.

Thus, written in traditional "tabloidese," a headline to describe the tabloid phenomenon might be: TABS TO NEWS BIZ: DON'T SELL US SHORT!

BIG APPLE GIVES BIRTH TO SMALL PAPER

If tabloids are seen as unconventional today, consider how they were viewed in 1919 when the Chicago Tribune Co. announced what Editor & Publisher magazine called at the time "a new venture in American newspaperdom" — the Illustrated Daily News of New York City.

Similar in style and makeup to two highly successful London newspapers, the Daily Graphic and the Daily Mirror, the Illustrated Daily News promised to present the news of the world in pictures and short news stories. Its first edition, June 26, 1919, featured a beauty contest and a serial detective story. Within two years, it had a circulation of 400,000, eclipsing other New York dailies of the era.

In the early 1930s, another kind of tabloid appeared. Although about the same size as the picture tabloids, it more closely resembled a traditional broadsheet newspaper in terms of editorial content. Proponents of this new type of tabloid, to distinguish it from the other variety, came up with the name "compact."

The compact format was adopted during and after the Depression, primarily to achieve "more pages with less advertising," according to Edmund C. Arnold, veteran newspaper designer and professor emeritus at Virginia Commonwealth University. "People thought, and I think correctly, that eight tabloid pages was a more attractive package than four broadsheets."

By 1934, when the *Editor & Publisher Year Book* started tallying tabloids, 23 general-circulation dailies were identified as being "issued in tabloid or small format."

Over the years, their numbers have fluctuated but have never been high. Looking at the *Year Book* figures in five-year increments, the high point was in 1950 when 34 were listed.

"After World War II, we had a bunch of relatively young men coming back from the Army and wanting to start papers and finding it easier for volume and for production to go into a tabloid size," recalls Arnold.

More recently, the trend toward "tab" has been up, but just a tad.

Between 1980 and 1985, nine U.S. daily newspapers adopted tabloid format. Eight were former broadsheet dailies; the other was a tabloid that converted from weekly to daily frequency.

Paul M. Wolfe, publisher of the Tempe (Ariz.) Daily News, displays former tabloid format and current broadsheet size.

During the same five-year period, six tabloids either switched to broadsheet, converted to weekly publication or went out of business.

Last year, two tabloids that had adopted the format during the previous five-year period reverted to broadsheet. So the net increase is one since 1980.

Today, U.S. daily tabloids number 32, or less than 2 percent of the approximately 1,700 U.S. daily newspapers.

However, they account for a disproportionate share of total daily circulation — almost 8 percent of the 63 million total, because they include some of the nation's biggest newspapers.

Of the 25 largest U.S. dailies, six are tabloids: the Daily News of New York (the former Illustrated Daily News), second; the New York Post, sixth; the Chicago Sun-Times, 11th; Newsday of Long Island, N.Y., 12th; The Boston Herald, 21st; and the Rocky Mountain News, 22nd.

One thing that may influence the tabloid picture in the United States in the near future is that two of the largest — the Post and the Sun-Times — will have to be sold within the next two years by K. Rupert Murdoch to conform to federal newspaper-broadcast cross-ownership regulations.

Tabloids are more of a factor numerically in Canada than in the United States. The 15 Canadian daily tabs account for almost 14 percent of the 110 dailies in the country. Their total circulation, 1,052,219, is nearly 20 percent of the total.

Since 1980, three new tab dailies have arrived on the Canadian scene, one having converted from broadsheet size and two being new dailies altogether.

Moreover, tabloid format is vastly more prevalent among non-daily newspapers in both countries.

An official of the Canadian Community Newspaper Association estimates that at least 60 percent of the 640 paid- and free-circulation weekly newspapers belonging to that organization are tabloids.

In the United States, among the 7,300 mostly paid-circulation weeklies served by American Newspaper Representatives, 2,007 are tabloids. ANR is the advertising "rep" firm of the National Newspaper Association, which serves weeklies and some small dailies.

The format also is extremely common among free-circulation publications. Teri K. Strouse, membership director of the trade group representing free-circulation papers — the National Association of Advertising Publishers — estimates that almost 80 percent of its 900 member publications are tabloid size.

One factor in some free papers' decision to publish as a tabloid may be the U.S. Postal Service's "requester" rule that requires a free publication to have at least 24 pages to qualify for advantageous second-class postage rates and service.

STALKING CUSTOMERS, TABS SAY PROS OUTNUMBER CONS

Ask tabloid editors and publishers the most important advantage of the format and they will respond, in unison: "Convenience."

For big-city tabloid readers, the advantage of a half-size paper is so obvious it is a cliche. It is not as difficult to wrestle with on a bus or subway.

But the convenience of the tabloid extends beyond users of mass transit.

In Salida, Colo., readers like the tabloid format of The Mountain Mail (morning, 2,617) "because it fits better on the breakfast table," says Merle J. Baranczyk, editor and publisher.

"It's a good office newspaper," says Stuart R. Rose, editor of the Delaware County (Pa.) Daily Times (morning, 72,160). "You don't have to spread the damn thing all over your desk to read it."

Elizabeth S. Ellis, publisher of the Journal Inquirer (evening, 42,987) in Manchester, Conn., says her staff jokes that unlike the broadsheets with which it competes, the Journal Inquirer is the "only one you can read in the bathtub and not get the edges wet."

Along with the benefits — real and whimsical — are some drawbacks. One is the tendency to associate the tabloid format with a sensational style of journalism. In its early days, the Journal Inquirer was "often referred to as the *Enquirer*," says Ellis, a reference to the supermarket tabloid.

However, newspaper graphics designer Daryl R. Moen believes the format's "sensationalist" identity has gradually dissipated over the past several years. "I think that is gone now, probably more importantly, gone among publishers," says Moen, professor of journalism at the University of Missouri.

Historically, "the two words (sensationalist and tabloid) became synonymous because early tabloids had to concentrate on big black headlines — they were fighting each other on newsstands," notes Sam Ruinsky, director of community affairs for Newsday.

His paper, which is primarily home delivered, has been able to adopt a quieter tone, Ruinsky says. "You don't have to blare headlines because you have a captive audience in the home."

Designer Daryl R. Moen believes the format's "sensationalist" identity has gradually dissipated over the past several years.

One factor in The Christian Science Monitor's decision to go tabloid in 1975 was the recognition that "a number of rather distinguished publications were in that format," says Earl W. Foell, editor in chief. He cites Newsday, the Manchester Guardian Weekly and the New York Review of Books.

A decade later, marketing research director James S. McLeod-Warrick says the format is not an issue for Monitor readers. "For the folks who know what the Monitor is and appreciate it, I suppose if it came on the back of a cereal box they would still love it," he says.

Comments Harold DeKeyser, who was executive editor of the Tempe (Ariz.) News when it went from broadsheet to tabloid and back to broadsheet in the space of 22 months between 1983 and 1985: "Tabloid is not a state of mind, just a format."

DeKeyser and other tabloid editors and publishers agree that the biggest disadvantages to the tabloid format have more to do with production than perception.

A tabloid newspaper and a broadsheet newspaper can be printed on the same press. Essentially, the only difference is the way the printing plates are positioned on the plate cylinder. For a broadsheet, the image on the plates is positioned vertically; for a tabloid, sideways.

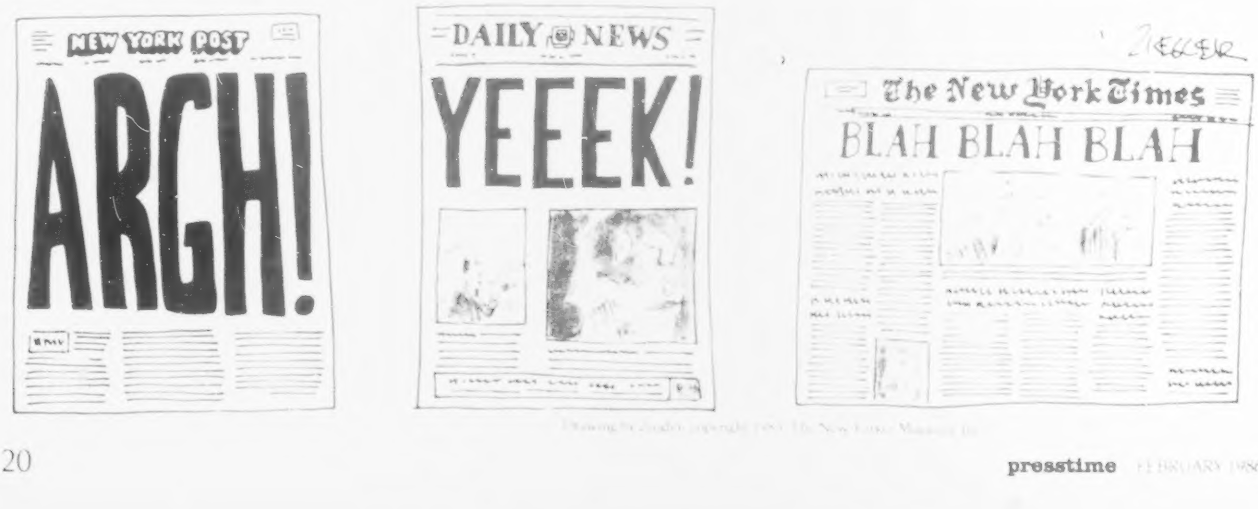
Unlike broadsheets, however, tabloids cannot be divided into different sections during the printing process. Some smaller tabloid newspapers with limited press page capacity create a second section using a second press run. Both "sections" are then quarter folded together.

But editors and publishers at big tabloids cite the inability to section as one of the main advantages of the format. Especially on Sundays, says Joe Robinowitz, editor of The Boston Herald, "people are used to pulling a paper apart."

To help readers share the paper, Robinowitz says, the Herald prints business and sports news on the middle pages of the Sunday edition. This makes it possible for readers to pull out these pages as a stand-alone section.

Newsday — which once used a dictionary-like thumb index to help readers find a second section in the thick paper — now follows a system similar to the Herald's for as many as three pullout sections a day. To differentiate sections, Newsday occasionally runs one upside down.

Not all tabloids consider the sectioning difficulty an



Drawing by Ziegler; copyright 1985, The New Yorker Magazine, Inc.

encumbrance. "We *used* to think that was a disadvantage," says William W. Fletcher, publisher of the Rocky Mountain News. He changed his mind several years ago when the publisher of the rival broadsheet, The Denver Post, began emphasizing the fact that with its separate sections, readers could simply turn to the part of the paper they wanted. "What was implicit in his comment was that you threw the rest away," says Fletcher. "Advertisers sensed that."

Readers "leaf through every page" of a tabloid, he adds. "That to an advertiser is advantageous."

Another disadvantage/advantage to the tabloid format relates to the relationship of the page size to advertising. Some publishers note that a broadsheet page has the potential of bringing in more advertising revenue simply because it contains about twice the space of a tabloid page.

Living in a broadsheet-dominated newspaper world, many tabloids accept full-page broadsheet ads and run them sideways.

Living in a broadsheet-dominated newspaper world, many tabloids accept full-page broadsheet ads and run them sideways. Others accommodate advertisers like grocery stores that want broadsheet-size ads by printing parts of the paper in the bigger format certain days of the week. The Wednesday food and Saturday home sections of the Rocky Mountain News, for example, are broadsheets.

At one newspaper, though, the practice of printing broadsheet sections within the basic tabloid newspaper got to be too much of a hassle. The Tempe News often would run several broadsheet sections in order to sell ads in combination with other Cox Enterprises-owned dailies in nearby Chandler and Mesa, Ariz. The upshot was a "really cockeyed looking paper," according to Managing Editor Lawn R. Griffiths. Having adopted the tab format in May 1983, it reverted to broadsheet last March.

But where tabloid's detractors see a cloud, its proponents see a silver lining. E. Mack Burris, publisher of the La Junta (Colo.) Tribune-Democrat, observes that the smaller tabloid page means smaller advertisers in a community such as his can dominate a page with a smaller ad.

Two of the small-circulation newspapers that turned tabloid since 1980 say they did it because of the format's popularity among local advertisers.

The Daily Standard (evening, 3,100) of Excelsior Springs, Mo., became a tabloid in 1983 because its co-owned shopper, a tabloid, was "dominating the market," according to Patrick J. Morgan.

Similarly, the Times-Republic of Watseka, Ill., became a tabloid in 1980 after buying a competing shopper. "Our advertisers . . . just said 'We like the tabloid format better,'" according to Publisher Harper.

From a broader perspective, major advertising agencies say a newspaper's size is a not a factor in their decisions on media buying. "We look at the inherent values of the paper," says Harry B. Glass, vice president, media manager for Bozell, Jacobs, Kenyon & Eckhardt Inc. "We don't distinguish between tabloid and regular-size newspapers. We look for circulation, audience numbers, audience quality and all the usual criteria."

A somewhat different view is expressed by A.R. (Bud) Shields, newspaper buying supervisor for the Campbell-Ewald agency. "If I had my druthers," he says, "I would rather have just one size" for all newspapers. Shields' complaint is that making up special ads for the relatively few tabloid newspapers creates a costly "production problem."

The U.S. newspaper industry's expanded Standard Advertising Unit system, which recommended a common page width for broadsheet newspapers in order to eliminate the production problems faced by multi-market advertisers, did not recommend a common size for tabloids.

The reason is that because tabloids go through a printing press sideways, their width is determined by the press's trim dimension or "cutoff," which cannot be adjusted. In order to conform to the SAU® system, therefore, some tabloids would have to make up their pages in one size, then photographically reduce them for printing.

As the expanded SAU system took effect in 1984, two tabloids—the Sun-Bulletin of Binghamton, N.Y., and the Northern Wyoming Daily News of Worland—switched to broadsheet format because they did not want to go through the reduction process.

Among the other tabloids, the SAU conformance record is mixed.

Some small-circulation tabs did not comply, figuring that their volume of nationally or regionally placed ads did not justify the expense of making the necessary changes.

Those conforming are taking different approaches. The Rocky Mountain News, for example, shrinks its pages 2 percent. On the other hand, the Philadelphia Daily News does not shrink its page but has reduced the center "gutter," or white space, between facing pages. This accommodation to the SAU system means that with larger editions, the fold on some pages toward the outside of the paper may be on the printed matter.

Another disadvantage of the tabloid format relates to that center gutter. Theoretically, tabloids get twice as many pages from the same amount of newsprint. But the more pages printed, the more gutters between those pages. Thus, tabloids overall have less space available for printed material. With newsprint selling at $535 a ton, such wasted space is no mean consideration.

Reader leans over for a sideways look at The Morning Call's Saturday tabloid in Allentown, Pa.

TABS TARGET READERS

When all the pros and cons of the tabloid format are weighed, sometimes a decision whether to go tabloid comes down to a newspaper's market and target audience.

For example, The Daily News, started in Halifax, Nova Scotia, in 1980, chose the tabloid format mainly to differentiate itself from the morning-evening broadsheet combination already in the market. "We wanted to obviously be distinctively different from that competition," says Publisher Lyndon Watkins. "They are broadsheet, so we stand out in the marketplace as a different product."

In fact, 20 of the 47 tabloid newspapers in the United States and Canada are published in markets with more than one daily newspaper. Only two are published in combination with a co-owned broadsheet—the Philadelphia Daily News (sister of The Philadelphia Inquirer) and The Province of Vancouver, British Columbia (sister of The Sun).

Established broadsheets also may change format to sharpen the distinction between themselves and a competitor. For example, the Colorado Springs Sun, established in the late 1940s by striking employees of the Colorado Springs Gazette-Telegraph, became a tabloid in 1983. "The more we grew," explains Sun Publisher Edmund O. Martin, "the more we looked like our competition."

The distinction gained through the format change apparently wasn't enough, however. In late January, Oklahoma Publishing Co. agreed to sell the Sun to the owner of the Gazette Telegraph, Freedom Newspapers Inc., which plans to close the tabloid.

Currently, the Los Angeles Herald Examiner is trying to gauge what kind of competitive advantage it might gain by going tabloid. The Hearst Corp.-owned daily competes against the dominant Los Angeles Times as well as the Daily News of Los Angeles.

Established broadsheets also may change format to sharpen the distinction between themselves and a competitor.

The tabloid option was studied several years ago but not taken, says General Manager John J. McCabe. "We are taking another look at it," he says. A decision on the newspaper's format and marketing strategy is expected as early as this month. Such a move would not be a precedent for Hearst, which in 1981 turned what was then called the Boston Herald American into a tabloid to try to boost circulation.

Targeting a specific audience is another possibility with the unusual tabloid format. At The Winnipeg Sun, which dawned in 1980 after the demise of one of the two broadsheet newspapers there, the target is youth.

"The older readership traditionally reads the broadsheet, and it is really a tough market to break into," says Editor Jim Ketcheson. Thus, the tabloid is going after a "fairly youthful" readership. "If there are new readers to be had, we want at least a 50-50 chance of getting them," he says.

The smaller format probably better suits a busy, younger person, as opposed to "somebody who is happy to pick the paper off his doorstep and sit and read it in his easy chair," Ketcheson says. The paper also takes a "fairly racy approach to the news," he notes.

For example, on a recent day, the front-page headline in the Sun was "Abducted Girl Likely Tortured." The competition led its front page with a story about President Reagan's ordering U.S. interests out of Libya; it did not even carry a story on the abduction.

Also motivated by a goal of reaching a clearly defined slice of the market, The Province of Vancouver switched to tabloid format in 1983.

It had become clear that the Vancouver metropolitan area could not support two mass appeal newspapers, says Gerald P. Haslam, publisher of The Province and the co-owned Sun. Therefore, one had to become a "target newspaper."

The Province decided to aim for people 18 to 34, women who work outside the home, singles and renters. The tabloid format was one part of the effort to attract these demographic groups.

EPA wants to ban asbestos use by '96

Mike Carey, Times Herald-Record

After readers protested, Middletown, N.Y., newspaper returned to tabloid size.

"I think that we are really talking about a newspaper that is in the fast-food business and not the smorgasboard business," says Haslam. "The tabloid lends itself to that kind of quick input of information, shorter stories, more pictures, more color—a more exciting feel, if you like—which tends to appeal to the kind of people we are after in terms of their lifestyles and their value systems."

Today, The Province is the fastest growing newspaper in Canada, boasts Haslam. (See profile, p. 34.) Its circulation has grown 20 percent—from about 135,000 just before the conversion to 167,638 as of last Sept. 30.

Similarly, when Call-Chronicle Newspapers of Allentown, Pa., were looking for a new youthful image to set the Saturday edition apart, the company chose a tabloid.

Since converting 10 years ago, advertising linage is "bursting at the seams," and the Saturday newspaper consistently sells an average of 2,000 more copies than the daily broadsheet edition, says Kathryn E. McAuley, director of marketing services. Becoming tabloid helped

SUN

POSTAL

The Toronto Sun attributes its success mainly to its format.

transform "what really was a throwaway day to a special day," she says.

One problem with publishing a once-a-week tab is that it fits sideways in the display areas of conventional vending boxes. "It's a bummer" in this regard, says McAuley.

TABS' FUTURE MAY BE FOUND IN SECTIONS

While the tab format may be effective in creating a separate identity or targeting a certain market, there is no evidence that any massive swing of newspapers from broadsheet to tabloid format is about to occur. But that doesn't mean readers won't be seeing more and more of the tab format. They will, and it will most likely be in the form of a section of a broadsheet paper. In fact, tabs may be giving new meaning to the tired newspaper term "sectional revolution."

The Milwaukee Journal will publish its first tabloid section March 4. Xtra is aimed at "baby boomers"—people between the ages of 18 and 35. "It is the most demographically conceived instrument we have ever done here," says George J. Lockwood, managing editor for features. "Everything in it is designed to appeal to this age group."

Lockwood points out that "the Journal is a traditional paper published in a conservative community, and it has a certain look and appeal. If you are going to put out a product and sell it as new and different, it had better be new and different."

"Simply the size change between the tabloid and the broadsheet creates an impact in the reader's mind," says Robert A. Barkin, former assistant managing editor and art director of The Washington Post, which produces five tabloid sections on a weekly basis. "It immediately sends a signal to the reader that something different is going on."

Barkin, now a design consultant, believes the tabloid-within-a-broadsheet will continue to gain popularity because it allows the "personality of the publication to come through.

"While it has a family resemblance, and it looks like it is part of a greater thing, it still maintains its own individuality, and that's a very desirable goal."

Many people in the newspaper business predict that broadsheets increasingly will use the tabloid format for special sections. But what is the future of the tabloid format for the entire daily newspaper package?

"I would not expect very much change one way or the other in the number of tabloids relative to the number of broadsheet papers" published in the United States, says Leo Bogart, executive vice president and general manager of the Newspaper Advertising Bureau. "I think the future of tabloids, from the standpoint of circulation volume, is very much tied up with the future of metropolitan dailies, because the bulk of tab circulation is represented by a relatively small number of very large tabloid newspapers," he adds.

Milwaukee Journal tabloid is "the most demographically conceived instrument we have ever done here."

George J. Lockwood

Newspaper design consultant Arnold also does not expect a sea change in the number of tabloid dailies in the near future, even though "sheer logic" argues in favor of tabloid format because it yields twice as many pages from a ton of newsprint.

Any dramatic shift to tabloid "is pretty far in the future," Arnold says. That prediction would change only if "one big operation" were to suddenly go tabloid. Newspapers are given to "copycatting," he notes.

They are also inclined to stick with the tried-and-true, which in most instances means broadsheet size—but can also mean tabloid.

In 1960, just before The Middletown (N.Y.) Daily Record was sold to Ottaway Newspapers Inc., it was changed from tabloid to broadsheet. Recalls James H. Ottaway Sr.: "People kept writing these letters saying 'We want (tabloid size) back.'" After a month and a half, Ottaway returned the newspaper, now The Times Herald-Record, to tabloid.

Today, says Ottaway, who has retired as chairman of the board of the group of 22 dailies, "We'd never change it, and we don't have the nerve to change any of our other newspapers."

James H. Ottaway Jr., president and chairman of the board, concurs. The group will not change formats, he says, both for fear of disturbing reader habit and, in the case of the Ottaway broadsheets, for fear that some of the full-page advertisers might buy less space in a tab.

At the same time, he adds, the group's new shopper publications and special sections are in tabloid form "to make them different from the regular newspaper and to make them easier for readers to save and use for a longer period of time. You might say we are schizophrenic on the subject."

Consequently, in the opinion of most industry observers, the greatest opportunity for the format lies in the 22 competitive U.S. markets where only broadsheets are now being published.

Even NAB's Bogart, while not forecasting any large movement to tabloids, acknowledges that second newspapers in competitive markets may elect to switch to tab format to target a different audience.

Newspaper designer Mario Garcia agrees. "There is a chance in many of the two-newspaper cities in the country, one of the newspapers will be a tabloid," he says. "I can see by the end of the century where you will probably have closer to 45 or 50 tabloids in the United States" compared with the 32 today.

Garcia, associate director of The Poynter Institute for Media Studies in St. Petersburg, recently designed a new daily newspaper in Brazil, Diario Catarinense, a tabloid that will compete with two established broadsheets. But in the United States, Garcia believes, "we have not explored tabloids as a feasible means of presenting information."

The general outlook is the same in Canada. John E. Foy, general manager of the Canadian Daily Newspaper Publishers Association, does not see any broadsheet newspapers in the country changing to tabloid.

Probably the most bullish opinion on the subject in either country comes from Charles A. Mouser, publisher of The Mouser Report, an advertising newsletter for newspapers. While some newspapers are using the format to try to appeal to younger readers, Mouser believes it will become more prevalent because the population, as a whole, is getting *older*. "To read a broadsheet paper, I've got to hurt the back of my neck, with bifocals on, to read the headline," he says. Mouser predicts that by 1995, 75 percent of all newspapers in the United States will be tabloids. ☐

Golly Ned! The Snappy Head Gets Read, They Said

If it's true that first impressions count most, then the front-page headline on a big-city tabloid may be the ultimate first impression in newspapering. And the chief practitioner of this art form in the opinion of many is the Daily News of New York.

The way James P. Willse sees it, writing a front-page headline for the Daily News is "a little like playing for the Yankees. It's just something that a lot of people have always wanted to do."

A native New Yorker, Willse got his turn at bat in October 1984 when he became the newspaper's managing editor. He shares responsibility for the contents of page one with Joe J. Kovach, deputy managing editor, a 21-year veteran of the Daily News.

For more than half a century, the tabloid's page-one headline has succinctly summed up the top news of the world, the nation and Gotham.

"It's probably the first thing that people mention when they talk about the Daily News," says Willse. "We have a reputation for lively, interesting page one heads." Willse rejects the notion that the heads are hyped to outsell the competition. "We put good headlines on good stories. We don't put good headlines on cheap stories. I think that is the difference."

One of three tabloids circulated in New York City, the Daily News competes on newsstands with the New York Post and, more recently, with Newsday of Long Island, as well as with The New York Times, a broadsheet. Sometimes, the Daily News will have a lead story that the competition doesn't have. But other times, it has to tell the same story in a different way. "In both cases," Willse says, "the headline has to do a lot of work in a fairly short space."

He and Kovach "like to stay flexible" in the format of the headline, Willse says. Some stories can be told in one word, others need three lines. "Our standard headline, if we have one, is two lines of 160-point type" in capital letters, he says.

"It still says 'New York's picture newspaper' on our masthead, so we pay a lot of attention to our page-one art," Willse adds. Generally, the front page of the Daily News has room for "one good picture and one good headline," he says, "the rest of it is kind of gravy."

Although on any given day either Willse or Kovach has primary responsibility for writing the lead headline, the two men often bounce ideas off each other and off other members of the staff. "One person writes it, but you try to get as much input into it as you can," says Kovach.

For example, Kovach remembers the day in late October 1975, when then-Managing Editor William J. Brink was having a hard time with a headline. "He kept writing different versions of it," says Kovach. "I kept saying that's not good enough for that kind of a story."

After grumbling about how hard Kovach was to please, Brink tried again and came up with "FORD TO CITY: DROP DEAD." Kovach says he told Brink: "*That* is a Daily News head."

That headline, undeniably one of the most memorable Daily News headlines in recent history, created a furor, Kovach notes. A lot of people complained that President Gerald R. Ford had never said those actual words in his speech vowing to veto legislation to provide federal aid to New York City, which at that time was near bankruptcy. The headline is credited with contributing to Ford's defeat in the 1976 presidential election.

On some days, say Kovach and Willse, the heads seem to write themselves.

For ease of writing, Willse picks the headline he wrote last summer about the release of the victims of the TWA airliner hijacking. It was one word: "FREE." Says Willse: "We ran that as big as we could get it."

So far, Willse's favorite headline has been "WE BAGGED THE BUMS," about the capture last October of the hijackers of the Achille Lauro ocean liner. "It's a pretty good example of a Daily News treatment of a story that everyone had," he says.

If there is no big national or international news to trumpet, the Daily News likes to keep its top local story on the front page. "We give priority to good local stories," says Kovach. That happened to be the case on the day when presstime spoke to the Willse-Kovach team. The head that Kovach was working on—and that ultimately ran—was "GOETZ GETS OFF," about the dismissal of charges against New York City subway vigilante Bernhard H. Goetz.

The Daily News pays attention to its inside headlines, too, which are written by its copy desk staff. A longstanding tradition calls for small monetary awards to be given to the writers of the best heads. Says Willse: "It's a headline writer's heaven here at the Daily News."

INNOVATIONS COME SLOWLY

COMICS

Most newspapers continue to weigh changes proposed by 21st Century project

BY MARCIA RUTH
presstime staff writer

One year was apparently not enough to revolutionize the funny pages, but there is still interest in the 21st Century Comics project.

Despite the fact that no papers have made the kind of wholesale changes suggested in February 1985 at the conclusion of the two-year-long project, the ad hoc group's leader, C.W. (Bill) Baker, vice president/news for Knight-Ridder Newspapers Inc., says, "I think the process is just about where I expected it to be.

"In the beginning, we all felt we were dealing with (an ocean liner) that would turn very slowly," he says. "It was composed of so many pieces that had their own interests, and it would be very difficult to get them to turn on a dime."

The 21st Century Comics project was composed of people from newspapers, syndicates, ad agencies and printing companies who studied ways to make comics more attractive to readers, particularly a younger generation hooked on the visual excitement of television. In February 1985, the group released a package with prototypes of graphically bold comics pages and a summary of the $300,000 project's research findings [presstime, March 1985, p. 48].

Since then, The Boston Herald has made the most dramatic design changes of any newspaper's comics section. However, executives there do not trace the innovations directly to the project but to winning points in a highly competitive local market.

"The truth of the matter is, I remember reading about (the project), but nobody registered on it," says Herald Editor Joe R. Robinowitz. The impetus for the change was the Herald's wresting 10 comics away from The Boston Globe. [See essay, p. 35.] Says Robinowitz: "I thought, 'Well, this is the time.'"

Since Sunday, Jan. 5, the Herald's major shift has been to replace the familiar rows of strips on the first comics page with a bold graphic of a single character, such as Dagwood Bumstead, surrounded by strips of various sizes. The section is used to wrap the entire Sunday Herald.

"For the present, the important thing was making it (the section) eye-catching at the point of purchase so people can see this is something new and different," Robinowitz says. Further design changes are possible, he says.

One of the 21st Century Comics prototypes intermingled short articles and comics on the same pages. And that notion has taken root in Oklahoma, where the Tulsa World since March 1985 has carried in its Sunday comics section what is essentially a translation of a news article into third-grade English.

Executive Editor Bob Haring says the feature, which is called The Big Story and is published in large type, is a "deliberate effort to present *news* in a form and place where kids will read it."

The column, written by an elementary school teacher from the Tulsa area, has been so successful that Haring is eager to "provide such a service on a syndicated basis, using national material," if there is interest.

Like Robinowitz at the Herald, Tulsa's Haring does not attribute the new idea directly to 21st Century. "It's something I've wanted to do for 15 years," he says.

But more sweeping innovations are under discussion at The Philadelphia Inquirer, which may become one of the first to consciously remake its comics section along lines proposed by 21st Century Comics.

"What's going on is a pause," says Ronald Patel, assistant managing editor/Sunday for the Inquirer, owing in part to interruptions caused by a strike that shut down the Philadelphia dailies from Sept. 7 to Oct. 23 last year.

This month, there will be a meeting—originally scheduled for last October—at which Patel says editors of the Knight-Ridder paper "will be sitting down with in-house artists and printers" to work toward adopting "a more engaging (comics) section." The Inquirer "will probably implement (the changes) as soon as possible after that meeting," he says.

Some observers close to the Sunday-comics scene are skeptical that major innovations will come quickly or easily.

Calling the impact of the 21st Century project "slight," Lee Salem, vice president and editorial director of Universal Press Syndicate, says, "My guess is it will take a while for syndicates and newspapers to tool up to respond to what they did."

"First people are crawling before they run," says Thomas J. Craddock, comics sales director of Metro Comics, which organized much of the publicity attendant to the project.

But Knight-Ridder's Baker remains undaunted by the seemingly slow response. "This industry is not unlike most industries in the human race. There are trends, and people follow leaders—and when someone has some success, there will be a tendency to unjam the log jam," he says. "That's how lifestyle sections were improved. That's how front pages were improved. They didn't change one Sunday morning across the country." □

ASSOCIATIONS

Newspapers are served by scores of organizations that cater to virtually every employee segment in the business— from personnel specialists and photographers to controllers and chess writers

BY GENE GIANCARLO

The newspaper business is served by a myriad of professional journalistic organizations that seem to cover the spectrum of newspapers' operations. There's an association for personnel people (NPRA), for editorial writers (NCEW), for circulation directors (ICMA), for promotion people (INPA), for cartoonists (NCS), for controllers (INFE), for advertising and marketing executives (INAME), even for newsroom hands who toil in sports, entertainment, religion or education.

Publishers who can identify most of the agglomeration of alphabetic designations for newspaper associations probably have a good knowledge of the extracurricular activities of their other staffers.

And that seems to be the important thing to remember about newspaper-related organizations: For the most part, they were conceived by and are managed by dedicated and zealous newspaper people who devote their time and energies—and for which their publishers, of course, provide financial resources.

Newspaper people tend to agree that association affiliation has helped companies perform more efficiently and has permitted participants to stretch perceptions and understanding of their duties. Almost all cite the importance and usefulness of meeting people from other newspapers and of exchanging information.

Howard H (Tim) Hays, editor and publisher of The Press-Enterprise in Riverside, Calif., feels "the friendships which develop at these meetings can be very useful for future consultation and future hiring. I'm not referring so much to the possibility of people you meet being hired," he adds, but "to their being useful evaluators of people who have worked for them. They're not as likely to limit their remarks to only what the law allows if they're friends; they'll signal somehow or other."

What are the costs to newspapers for dues and attendance at meetings? The consensus of publishers who responded to a presstime survey was that costs were slightly less than 1 percent of 1984 budgets. A typical example: The Seattle Times spent $169,000 for member participation in 20 national and 15 regional and state organizations. (See chart, p. 29.)

Among the associations, annual dues rates vary widely. The National Press Photographers, with a budget of $700,000, imposes dues of $55 on each of its 8,500 members. The Society of Professional Journalists, Sigma Delta Chi, has a $40 dues base for 24,000 regular members; its budget is $989,000. The American Society of Newspaper Editors has a two-tier dues system: $325 annually for its almost 800 active members and $50 for 125 retired members; annual budget: $607,500.

(It should be explained that dues is not always the only income. For instance, for years NPPR has sponsored its well-known "flying short courses"; these costs, covered largely by registration fees, are part of operating budgets.)

Many of the advertising and marketing organizations use a sliding scale for dues based on circulation.

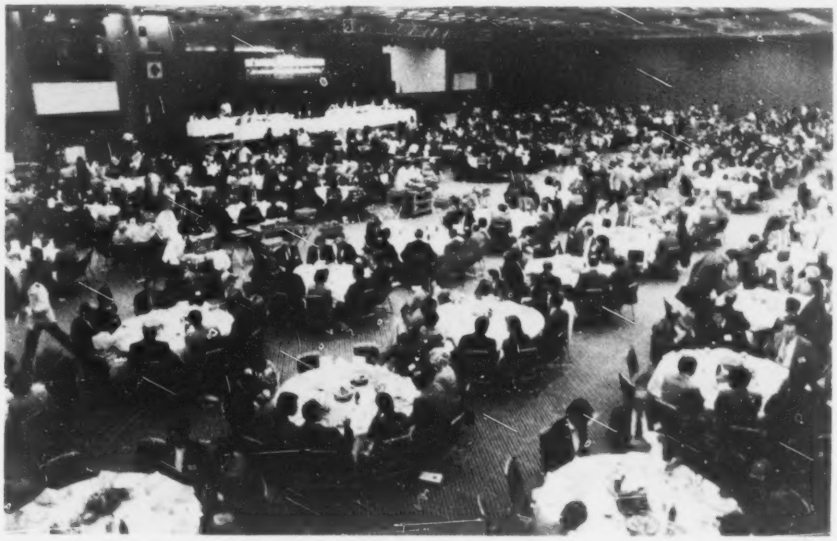
Proliferation. The presstime survey also reveals that the number of newspaper-related organizations has grown appreciably in recent years. To wit:

—In the last 10 years, 19 new groups were formed. From 1970-75, 12 were established. Eight associations appeared for the first time in the 1960s.

—Reflecting an increasing press concern during the last 15 years, seven organizations were established to defend freedom of information and the First Amendment.

How many organizations are there today? The 1985 Editor & Publisher Year Book lists 148 national, regional and state

Giancarlo is former executive director of the American Society of Newspaper Editors.



Large crowds attend annual conventions like ANPA's.

associations and clubs. The *Encyclopedia of Associations* shows 36 more organizations that also merit consideration.

This examination indicates there are 100 national and international newspaper-related organizations extant. (Before 1940, there were but 30 national groups, the oldest being the National Newspaper Association, which services weeklies and small dailies; it was founded in 1885. Two years later, ANPA was formed.)

Omitted for space reasons from **presstime**'s detailed listing that follows were regional, state and city groups, associations whose preponderance of membership seems to come from the electronic media, magazines, trade publications and public relations (such as the Aviation/Space Writers Association), and organizations that *serve* newspapers but whose membership does not include newspapers or their employees (such as the American Press Institute).

Applying those criteria, we were left with 74 associations in these categories:

- 6 trade
- 30 editorial
- 15 advertising, circulation, business, personnel
- 7 international
- 11 sports
- 5 women

Perhaps some of the choices—and omissions—may raise eyebrows.

(The exercise was not the easiest lesson in objectivity. To have included the Chess Journalists of America in the listing, however, *may* have been a somewhat perverse whim.)

Most of the information in the longer entries came from responses to the questionnaire. The shorter entries were pieced together by telephoning and from the *Encyclopedia of Associations*.

The first two categories are listed below and on the following four pages. **The remaining listings will be published in the March issue.** ☐

TRADE

American Newspaper Publishers Association, The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041; (703) 648-1000
Staff: 154. *Founded:* 1887. *Members:* 1,390. *Board dir.:* 22. *Current chair and pres.:* Richard J. V. Johnson, Houston Chronicle. *Contact:* Jerry W. Friedheim, exec. v.p.
Annual dues: Based on circulation and advertising rates. *Budget:* $12.1 million.
Membership requirements: Must publish at least once a week, and have a paid circulation of 70 percent or more.
Goals and purposes: To advance the cause of a free press, and to ensure that it has the economic strength essential to serve the American people.

Canadian Community Newspapers Association, Suite 705, 88 University Ave., Toronto, Ontario M5J 1T6; (416) 598-4277
Staff: 5. *Founded:* 1920. *Members:* 640 (603 newspapers, 21 Armed Forces Base papers, 16 sustaining). *Board dir.:* 17. *Current pres.:* Donald Venables, Hamiota (Manitoba) Echo; *pres.-elect:* Jean Baker-Pearce, Alliston (Ontario) Herald. *Contact:* Jim Dills, exec. dir.
Annual dues: $98 + $44 per 1,000 circulation to a maximum of $538. Armed Forces papers, $50; sustaining members, $200. *Budget:* $273,226.
Membership requirements: Must have membership in one of six affiliated provincial/regional associations.
Goals and purposes: Member services, education, representation, government relations.

Canadian Daily Newspaper Publishers Association, 321 Bloor St. East, Suite 214, Toronto, Ontario M4W 1E7; (416) 923-3567
Staff: 17. *Founded:* 1919. *Members:* 80. *Board dir.:* 16. *Current chair:* J. R. Belanger, Le Droit, Ottawa; *current chair-elect:* Tom Crowther, Daily Gleaner, Fredericton, New Brunswick. *Contact:* John E. Foy, pres.
Annual dues: Based on circulation. *Budget:* approx. $1 million.
Membership requirements: Must be a daily newspaper (at least five times a week).
Goals and purposes: To provide its members a service which is generated and implemented by CDNPA's officers, divisions, committees and permanent staff. Services include research, government relations, employee relations, credit data, newspaper in education, new technology. Also, encourages higher standards in journalism; contests legislation potentially harmful to newspapers.

National Newspaper Association, 1627 K St. N.W., Suite 400, Washington, D.C. 20006-1790; (202) 466-7200
Staff: 15. *Founded:* 1885. *Members:* 5,000. *Board dir.:* 18. *Current pres.:* James L. Pate, Madill (Okla.) Record; *pres.-elect:* Richard A. Natsinger, Eagle Newspapers, Hood River, Ore. *Contact:* W. Melvin Street, exec. v.p.
Annual dues: Based on circulation. *Budget:* $1.4 million.
Membership requirements: Must publish at least once a week as a standard broadsheet or tabloid, contain no more than 75 percent advertising and have been published for one year.
Goals and purposes: To represent newspaper publishers' newspapers before the Congress, courts, the Administration and regulatory agencies.

National Newspaper Publishers Association, 970 National Press Building, Washington, D.C. 20045; (202) 662-7324
Staff: 3. *Founded:* 1940. *Members:* 148. *Board dir.:* 15. *Current pres.:* Christopher H. Bennett, Seattle Medium; *pres.-elect:* William H. Lee, Sacramento Observer. *Contact:* Steve G. Davis, exec. dir.
Annual dues: Based on circulation, from $150 to $160. *Budget:* $150,000.
Membership requirements: At least one year of weekly/daily publication, some paid circulation. Must be recommended by a member paper and approved by the board.
Goals and purposes: To promote the interests of the black press by seeking unity and action in all matters relative to the profession of journalism and the business of publishing.

Suburban Newspapers of America, 111 E. Wacker Drive, Chicago, Ill. 60601; (312) 644-6610
Founded: 1971. *Members:* 200. *Staff:* 3. James E. Elsener, exec. dir. Publishing firms of community-oriented newspapers in suburban or urban areas and companies in related professions and industries.

EDITORIAL

American Association of Sunday & Features Editors, currently c/o Houston Chronicle, 801 Texas St., Houston, Texas 77002; (713) 220-7601
Staff: None. *Founded:* 1947. *Members:* about 150. *Current pres.:* Jack Rickman, Houston Chronicle; *pres.-elect:* Phyllis Singer, Newsday. *Contact:* Rickman.
Annual dues: $50.
Membership requirements: Must have primary responsibility for Sunday or week-

Gatherings provide forums for give-and-take involving members, as was the case for Executive Editor Benjamin C. Bradlee of The Washington Post at the ASNE convention.

end or feature package.
Goals and purposes: To work toward the continued improvement of Sunday newspapers and newspaper features sections.

American Society of Newspaper Editors, The Newspaper Center, Box 17004 Dulles Airport, Washington, D.C. 20041; (703) 620-6087.
Staff: 5. *Founded:* 1922. *Members:* 923 (773 active, 150 retired). *Board dir.:* 20. *Current pres.:* Robert P. Clark, Harte-Hanks Newspapers; *pres.-elect:* Michael Gartner, Worthington (Minn.) Daily Globe. *Contact:* Lee Stinnett, exec. dir.
Annual dues: $325, active; $50 retired. *Budget:* $607,500.
Membership requirements: Persons of suitable qualifications who are directing editors having immediate charge of editorial or news policies of daily newspapers, which shall have attained adequate journalistic standards.
Goals and purposes: To promote acquaintance among its members, to develop a stronger professional *esprit de corps*, to maintain the dignity and rights of the profession, to consider and perhaps establish ethical standards of professional conduct, to interchange ideas for the advancement of professional ideals and for the more effective application of professional labors and to work collectively for the solution of common problems.

The Associated Press Managing Editors Association, c/o The Associated Press, 50 Rockefeller Plaza, New York, N.Y. 10020; (212) 621-1552.
Staff: No permanent staff personnel. *Founded:* 1933. *Members:* 800. *Board dir.:* 24. *Current pres.:* James F. Daubel, Fremont (Ohio) News-Messenger; *pres.-elect:* Robert E. Rhodes, Corpus Christi (Texas) Caller and Times. *Contact:* Bruce Nathan, APME liaison exec.
Annual dues: None. *Budget:* None as such; funds derived from conventions.

Membership requirements: Key or chief news executives at newspapers that subscribe to the Associated Press wire service and who attend at least one convention every three years.
Goals and purposes: Through its 20+ continuing studies committees, APME strives to improve performance of its member newspapers and the Associated Press.

Association of American Editorial Cartoonists, 22 Mimosa Drive, Harrison, Ark. 72601; (501) 741-8747.
Founded: 1957. *Members:* 290. *Contact:* Robert Drebelbis, sec.-treas.
Membership requirements: Members are editorial cartoonists, active and retired, for newspapers and newspaper syndicates.
Goals and purposes: It promotes and encourages the art of editorial cartooning internationally.

Canadian Managing Editors Conference, Box 5020, Ottawa, Ontario K2C 3M4; (613) 829-9100.
Staff: 1 part-time. *Founded:* 1946. *Members:* No listing as such. *Current pres.:* Nelson Skuce, Ottawa Citizen; *pres.-elect:* Murray Burt, Winnipeg (Manitoba) Free Press.
Annual dues: None, dependent on conference financing.
Membership requirements: Must be a managing editor of a daily newspaper, wire service or magazine.
Goals and purposes: To improve the quality of Canadian newspapers.

Education Writers Association, P.O. Box 281, Woodstown, N.J. 08098; (609) 769-1313.
Staff: 2 part-time. *Founded:* 1947. *Members:* 442 (263 active, 174 associate, 5 honorary). *Board dir.:* 9; *Current pres.:* Michael Bowler, Baltimore Sun; *pres.-elect:* James Killackey, Daily Oklahoman, Oklahoma City. *Contact:* Charles Harrison, exec. dir.
Annual dues: $50. *Budget:* $73,150.
Membership requirements: Must spend most of working time writing about education.
Goals and purposes: To encourage better reporting about education.

International Society of Weekly Newspaper Editors, Dept. of Journalism, Northern Illinois University, DeKalb, Ill. 60115; (815) 753-1925.
Staff: 2. *Founded:* 1954. *Members:* Approx. 300. *Board dir.:* 3. *Current pres.:* Allan Seiler, Pike Press, Pittsfield, Ill.; *pres.-elect:* Robert Mossman, Bridgewater (Nova Scotia) Bulletin. *Contact:* Donald Brod, exec. sec.
Annual dues: $25. *Budget:* $10,000.
Membership requirements: Members must be community journalists interested in their news-editorial product.
Goals and purposes: To promote high standards in editorial writing and community news coverage.

Investigative Reporters & Editors, P.O. Box 838, Columbia, Mo. 65205; (314) 882-2042.
Staff: 3 part-time. *Founded:* 1975. *Members:* About 3,000. *Board dir.:* 12. *Current pres.:* Joe Rigert, Minneapolis Star and Tribune; *pres.-elect:* Mary Hargrove, Tulsa (Okla.) Tribune. *Contact:* Steve Weinberg, exec. dir.
Annual dues: $25 ($10 for student associates). *Budget:* Approx. $60,000.
Membership requirements: Working journalist or journalism educator.
Goals and purposes: To help print and broadcast reporters and editors uncover and use information more efficiently and in new ways.

Music Critics Association, 6201 Tuckerman Lane, Rockville, Md. 20852; (301) 530-9527.
Founded: 1957. *Members:* 254. *Contact:* Richard D. Freed, exec. dir.
Membership requirements: Music critics for newspapers, magazines and the broadcast media.
Goals and purposes: To improve standards and quality of music criticism in the U.S. and Canada and to foster public interest in music.

National Association of Black Journalists, 1 Herald Plaza, Miami, Fla. 33101, (305) 376-3934

Staff: None, currently seeking. *Founded:* 1975. *Members:* 1,200. *Current pres.:* Albert Fitzpatrick, Knight-Ridder Newspapers; *pres.-elect:* Tony Cox, Metromedia, Los Angeles. *Contact:* Fitzpatrick.

Annual dues: $35 ($25, associates; $10, students). *Budget:* Approx. $100,000.

Membership requirements: Persons employed in the production, dissemination and distribution of news by newspapers, magazines and radio and TV stations.

Goals and purposes: To assist in the recruitment and development of minorities throughout the industry; also, to move toward total coverage of the minority community. To work with high schools to identify potential journalists, to award scholarships to journalism programs that especially support minorities; to act as a national clearinghouse for job information.

National Association of Hispanic Journalists, National Press Building, Suite 634, Washington, D.C. 20045, (202) 783-6228

Staff: 3. *Founded:* 1984. *Members:* 385 (340 regular, 5 academic, 30 associate, 10 journalism college students). *Board dir.:* 16. *Current pres.:* Guillermo Martinez, Miami Herald; *pres.-elect:* Maria Elena Salinas, KMEX-TV, Los Angeles. *Contact:* Frank Newton, exec. dir.

Annual dues: $35, regular, academic and associate ($15, student members). *Budget:* $190,000.

Membership requirements: Full-time working journalist for "regular" membership; journalism educators are classified as "academic members" who can vote but not hold office; non-journalists hold "associate" membership, which is a nonvoting position.

Goals and purposes: To organize and provide mutual support for Hispanic journalists in both English- and Spanish-language news media; to encourage and support the study and practice of journalism and communications by Hispanics; to foster and promote fair treatment of Hispanics by the news media; to further employment and career development for Hispanics in the news media; and to foster a greater understanding of Hispanic media professionals' special cultural identity, interests and concerns.

National Association of Real Estate Editors, 26706 Butternut Ridge Road, North Olmstead, Ohio 44070, (216) 777-3668

Founded: 1929. *Members:* 350. *Contact:* Robert P. Brennan, exec. dir.

Membership requirements: Writers and editors of real estate, building and home news or editorial matter in newspapers and periodicals of general circulation.

Eight Newspapers' Involvement in Associations

National Association of Science Writers, P.O. Box 294, Greenlawn, N.Y. 11740, (516) 757-5664

Staff: 1. *Founded:* 1934. *Members:* 1,210. *Board dir.:* 13. *Current pres.:* Philip M. Boffey, New York Times; *pres.-elect:* Christine Russell, Washington Post. *Contact:* Diane McGurgan, admin. sec.

Annual dues: $45. *Budget:* $65,000.

Membership requirements: Active membership is restricted to those principally engaged for at least two years in the preparation and interpretation of science news through all media normally devoted to informing the public. Associate membership is restricted to those principally engaged for at least two years in the preparation of science information, but not eligible to be an active member; and to persons regularly engaged in the development or teaching of science writing courses in colleges or journalism schools.

Goals and purpose: To promote excellence in science writing. NASW offers an unparalleled opportunity to rub shoulders with like-minded colleagues and share ideas on important science issues.

National Cartoonists Society, 9 Ebony Court, Brooklyn, N.Y. 11229, (718) 743-6510

Staff: 2. *Founded:* 1946. *Members:* 500. *Board dir.:* 8. *Current pres.:* Frank Evers, New York Daily News; *pres.-elect:* Fred Lasswell, King Features Syndicate. *Contact:* Marge Duffy Devine, Scribe.

Annual dues: $75, regular; $50, associate and foreign.

Membership requirements: Must be a professional cartoonist.

Goals and purposes: To further the interests of cartooning and of those individuals who work in the profession.

National Conference of Editorial Writers, 6223 Executive Blvd., Rockville, Md. 20852, (301) 984-3015

Staff: 2. *Founded:* 1947. *Members:* 564. *Board dir.:* 15. *Current pres.:* Karli Jo Hunt, Home News, New Brunswick, N.J.; *pres.-elect:* Brian W. Dickinson, The Providence (R.I.) Journal-Bulletin.

Contact: Cora B. Everett, exec. sec.

Annual dues: $50, $75, $100, based on circulation; retired, $20; associate, $50; syndicated columnists, $100. *Budget:* Approx. $60,000.

Membership requirements: Membership is open to editorial writers on newspapers of general circulation, to teachers of journalism in schools of journalism and in journalism in-service training institutions, and to others in either field who play an active role in editorial page operations, in the U.S. and Canada.

Goals and purposes: Dedicated to stimulating the conscience and the quality of the editorial page.

National Entertainment Journalists Association, P.O. Box 24021, Nashville, Tenn. 37202, (615) 259-3790

Founded: 1979. *Members:* 100. *Contact:* Thomas Wilkerson, pres.

Membership requirements: Entertainment journalists and interested individuals united to promote and benefit those professionally associated with entertainment journalism, including print and broadcast journalism, photojournalists and publicists.

National Press Photographers Association, P.O. Box 1146, Durham, N.C. 27702, (919) 489-3700

Staff: 7. *Founded:* 1946. *Members:* 8,500. *Board dir.:* 29. *Current pres.:* Bill Sanders, Fort Lauderdale (Fla.) News & Sun-Sentinel; *pres.-elect:* Tom Strongman, Kansas City (Mo.) Star and Times. *Contact:* Charles H. Cooper, exec. dir.

Annual dues: $55 ($25, students). *Budget:* $700,000 plus.

Membership requirements: Must have a direct professional relationship with photojournalism, or be students enrolled in colleges or universities studying for this profession.

Goals and purposes: Dedicated to the educational advancement of the profession; it does not enter into labor/management situations.

Newspaper Farm Editors of America, 312 Valley View Drive, Huron, Ohio 44839; (419) 433-5412.

Staff: None. *Founded:* 1953. *Members:* 142. *Board/dir.:* 9. *Current pres.:* Ann Toner, Kansas City (Mo.) Star; *pres.-elect:* Ernie Wilkinson, Indianapolis Star. *Contact:* Audrey Mackiewicz, exec. sec.

Annual dues: $30. *Budget:* $4,500.

Membership requirements: Members must spend at least 50 percent of their time writing or editing agricultural stories.

Goals and purposes: To promote the professional status of newspaper farm editors, to encourage high standards of professional competence, to emphasize the importance of agricultural news, and to provide a meeting place for fellowship and professional improvement.

Newspaper Features Council, Ward Castle, Comly Ave., Rye Brook, N.Y. 10573; (914) 939-3919.

Staff: 1. *Founded:* 1955, as Newspaper Comics Council (name changed in 1985). *Members:* 125 (43 cartoonists, 43 columnists/writers, 31 editors/newspapers, 8 syndicates). *Board/dir.:* 26. *Current pres.:* Joseph F. D'Angelo, King Features Syndicate; *pres.-elect:* Robert I. Greenberg, Philadelphia Inquirer. *Contact:* Catherine Walker, exec. admin.

Annual dues: Cartoonists and columnists, $75; newspapers, $160; syndicates: $1,250.

Membership requirements: Newspaper syndicates, newspapers, editors, syndicated cartoonists and syndicated writers and/or cartoonists or writers whose work appears in a regularly published newspaper or in at least five newspapers.

Goals and purposes: NFC is a professional, non-profit organization. It is a forum that provides an opportunity for cartoonists, editorial cartoonists, columnists, writers, newspapers, editors and syndicates to get together and exchange views with regard to problems and developments in the newspaper feature business.

Newspaper Food Editors and Writers Association, currently c/o Jane Baker, Phoenix Gazette, 120 E. Van Buren, Phoenix, Ariz. 85001; (602) 271-8948.

Staff: None. *Founded:* 1974. *Members:* 200. *Board/dir.:* 14. *Current pres.:* Baker, Phoenix Gazette; *pres.-elect:* Dotty Griffith, Dallas Morning News. *Contact:* Baker.

Annual dues: $35.

Membership requirements: Those persons employed or contracted as reporters, writers or editors by daily newspapers (regularly published at least five times per week and supported by advertising and paid subscriptions), or wire services, who are responsible for or spend not less than 50 percent of their time on food news.

Goals and purposes: To encourage communication among journalists devoting a substantial portion of their working time to the furthering of the public's knowledge of food, to uphold and foster professional ethical standards for such persons, to increase their knowledge about food and to encourage and promote a greater understanding among fellow journalists and those who manage news dissemination organizations.

Newspaper Research Council, 1000 Carriers Building, Des Moines, Iowa 50309; (515) 276-7002.

Staff: 1. *Founded:* 1977. *Members:* 200. *Board/dir.:* 9. *Current pres.:* Gerald Silvers, Cincinnati Enquirer; *pres.-elect:* Eleanor F. McConnell, The Chicago Tribune. *Contact:* Glenn Roberts, exec. dir.

Annual dues: $125. *Budget:* $20,000.

Membership requirements: Membership is open to those who manage, conduct or use newspaper research on behalf of newspapers or representative firms.

Goals and purposes: To enhance ethical and professional standards and the efficiency of newspaper research and its marketing application.

Organization of News Ombudsmen, currently c/o Harry F. Themal, News-Journal Newspapers, P.O. Box 1111, Wilmington, Del. 19899; (302) 573-2000.

Staff: None. *Founded:* 1980. *Members:* 47. *Board/dir.:* 6. *Current pres.:* Themal; *pres.-elect:* Clair Balfour, Montreal Gazette. *Contact:* Themal.

Annual dues: $50. *Budget:* None beyond convention costs.

Membership requirements: Those working as media ombudsmen on newspapers and TV networks in U.S., Canada and Japan.

Goals and purposes: To establish and refine standards for the job of ombudsman or reader representative; to aid in establishment of ombudsman on newspapers and elsewhere in the media; to provide a forum for interchange of experiences and ideas.

Religion Newswriters Association, currently c/o Louis Moore, Houston Chronicle, P.O. Box 4260, Houston, Texas 77210; (713) 220-7171.

Staff: None. *Founded:* 1952. *Members:* 225. *Board/dir.:* 5. *Current pres.:* Moore; *pres.-elect:* Helen Parmley, Dallas Morning News. *Contact:* Moore.

Annual dues: $25 ($15, associates). *Budget:* About $7,000.

Membership requirements: Must be a reporter/editor of religion news for a secular newspaper, news magazine or wire service in the U.S. and Canada.

Goals and purposes: To further the cause of and quality of religion reporting in secular newspapers, news magazines and wire services.

Reporters Committee for Freedom of the Press, Suite 300, 800 18th St. N.W., Washington, D.C. 20036; (202) 466-6312.

Staff: 8. *Founded:* 1970. *Members:* None. *Board/dir.:* 30, steering committee. *Current pres.:* No officers. *Contact:* Jane Kirtley, exec. dir.

Annual dues: None. Funding is by donation.

Goals and purposes: Undertakes legal defense and research projects in all areas of media law, including libel. It is the only nonprofit legal defense and research organization in the country that provides round-the-clock, cost-free service to all the media.

The Society of Professional Journalists, Sigma Delta Chi, 53 W. Jackson Blvd., Suite 731, Chicago, Ill. 60604; (312) 649-0060.

Staff: 11. *Founded:* 1909. *Members:* Approx. 24,000. *Board/dir.:* 22. *Current pres.:* Robert Lewis, Newhouse News Service; *pres.-elect:* Robert H. Wills, Milwaukee Sentinel. *Contact:* Carol Beck, admin. ass't.

Annual dues: $40 ($10, student). *Budget:* $989,282.

Membership requirements: Must be a working journalist (newspaper, TV, wire services, radio, magazine, etc.) Once a member, always a member. Also, college journalism majors eligible to join.

Goals and purposes: To associate journalists of truth, talent and energy, to assist members in acquiring noblest principles of journalism, to foster high ethical code to advance standards of the press, to work to safeguard flow of information from all sources to the public; to attract talented young people to the profession; to raise the prestige of the journalist in the community and among the public at large.

Society of Newspaper Design, The Newspaper Center, P.O. Box 17290, Dulles Airport, Washington, D.C. 20041; (703) 620-1083.
Staff: 1. *Founded:* 1979. *Members:* 1,300. *Board/dir.:* 5. *Current pres.:* H. Philip Nesbitt, The Record, Hackensack, N.J.; *pres.-elect:* Margaret Balough, Austin (Texas) American Statesman. *Contact:* Pat Kelly, exec. sec.
Annual dues: $45 ($25, student). *Budget:* $160,000.
Membership requirements: Open to all with a working interest in newspaper design.
Goals and purposes: To encourage high standards of newspaper journalism through design; to serve as a forum and a professional source for all interested in newspaper design; to recognize excellence of professional performance; to work with other professional groups toward strengthening journalism design as a profession and newspaper publishing as a business.

Special Libraries Association (Newspaper Division), 1700-18th St. N.W., Washington, D.C. 20009; (202) 234-4700.
Staff: None. *Founded:* 1924. *Members:* approx. 500. *Current pres.:* Kathy Foley, Houston Post; *pres.-elect:* Diane Miller, Bloomington (Ind.) Pantagraph. *Contact:* Foley.
Annual dues: $75.
Membership requirements: People who work in news media libraries (including television and magazines).
Goals and purposes: To encourage and promote the utilization of knowledge through the goals, organization and dissemination of information to its membership; to develop the usefulness and efficiency of newspaper libraries.

Television Critics Association, c/o Pittsburgh Press, 34 Blvd. of Allies, Pittsburgh, Pa. 15230; (412) 263-1100.
Staff: None. *Founded:* 1978. *Members:* 107. *Board/dir.:* 7. *Current pres.:* Ann Hodges, Houston Chronicle; *pres.-elect:* R. Heldentels, Schenectady (N.Y.) Gazette. *Contact:* Barbara Holsopple, treas.
Annual dues: $25. *Budget:* $3,500.
Membership requirements: Professional journalists in print media who specialize in the regular coverage of television.
Goals and purposes: To maintain and improve the professional standards of television criticism, reporting and editing; to exchange information; to expand opportunities for complete and accurate coverage; to increase the public's understanding of television; to improve television as an important element in American life and culture; to encourage activity that adds to the value of television as a communications medium and to conduct activities which are exclusively charitable.

White House Correspondents Association, 1067 National Press Bldg., Washington, D.C. 20045; (202) 737-2934. Edgar A. Poe, treas.

White House News Photographers Association, P.O. Box 7110, Ben Franklin Station, Washington, D.C. 20044. Ken Baylock, pres. □

HANDS-ON
TECHNICAL TRAINING

ANPA "Hands-On" technical training seminars help newpaper people to:

- ***Discard outdated techniques***
- ***Master needed new skills***
- ***Prepare for innovation***

The schedule for 1986 includes:

- ***Color Scanner Techniques***
- ***Advanced Offset Press Operations***
- ***Process Camera Techniques***
- ***Management Introduction to Newspaper Technology***
- ***Quality Control***
- ***Direct Screen Color Separation***
- ***Special seminars available by request***

ANPA "HANDS-ON" Seminars benefit people at all levels of our industry. Newcomers learn the basics while veterans fine-tune their skills and master new techniques. Small classes and the "hands-on" technique developed in 20 years of ANPA technical seminars yield maximum retention of the materials presented. The seminars are taught by experienced newspaper professionals utilizing state-of-the-art newspaper equipment at The Newspaper Center in Reston, Virginia.

For a copy of our brochure, write to Arthur Boudreau, Manager/Technical Training, ANPA, The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041 or phone 703/648-1217.

Champion makes

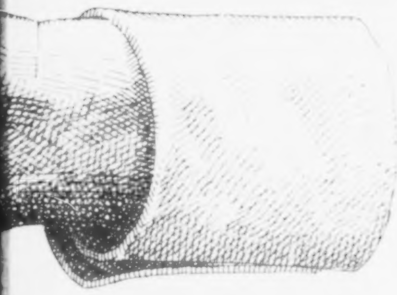
OPINION
PART VI

newsprint....
for publishers and
printers...



with Imagination

More than 500 daily newspapers and numerous printers throughout the south, midwest, and southwest depend on dependable newsprint made by Champion. Our two Texas newsprint mills make us one of the two largest U.S. producers. We also make paper for magazine publishers, printers, direct marketers, directory publishers, and label, envelope, and business forms converters. In fact, Champion makes more grades of paper for more kinds of customers than any other paper company. For more information, call or write Jock Bair, vice president-newsprint sales, Champion, 12201 Merit Drive, Dallas, TX 75251, (214) 233-8300.

Gerald P. Haslam

Mastermind of fast-growing, 'pesky little tabloid'

BY MARGARET GENOVESE
presstime staff writer

At Pacific Press Ltd. in Vancouver, British Columbia, they joke that members of Gerald P. Haslam's management team don't go to lunch until they've done research on where to eat.

On the basis of extensive market research, the 40-year-old publisher two years ago directed a radical transformation of The Province, Vancouver's morning newspaper. It went from a traditional broadsheet with predominantly upscale, male readership to what he calls a "pesky little tabloid," targeted at people between the ages of 18 and 34, particularly women.

Haslam has been rewarded with a 20-percent increase in the circulation of The Province—making it the fastest growing newspaper in Canada—along with a 24-percent increase in advertising linage.

"There were some doubters that the tabloid was the right thing to do, but with his [Haslam's] ideas and his enthusiasm, he has convinced most people," says The Province Editor Robert D. McMurray. "Certainly the results, in terms of circulation and advertising, have proven it was the right thing to do."

After additional research, this year Haslam is getting ready to "relaunch" Pacific Press' other Vancouver daily, The Sun, with a whole new design. He expects that to result in a 20-percent gain in *readership* of the evening Sun, although not in any substantial gain in circulation.

Haslam has a record of acting quickly. He became publisher of The Province in August 1982 and exactly a year later turned it into a tabloid. He added the title of Sun publisher in March 1985 and exactly a year later will bring out its new look.

"He's bright, he's quick, he's a thoughtful individual, and he's very energetic," says E. Paul Wilson, vice president of newspaper marketing for Southam Inc., which owns Pacific Press.

Not surprisingly, Haslam believes the newspaper business's greatest challenge is "to deliver products which meet the market needs of our advertisers."

His philosophy, he says, is to determine which demographics, psychographics and geographics advertisers want, and then to determine what must be done to achieve as close to 100-percent penetration of those groups as possible.

Haslam is convinced that without the tabloid format The Province would not have been as successful in meeting its target market goals as it has been. Although he believes more newspapers will adopt the smaller size, he sees the format more as a tool than the answer to a newspaper's circulation and advertising problems. The key, as he sees it, is for the newspaper to define what it wants as an audience and produce an editorial product that will attract those readers. "We are in the business of delivering an audience of readers to advertisers and information to readers," he says.

"It shouldn't be misunderstood that Gerry would run a newspaper for the sake of the advertisers," emphasizes Norm R. Weitzel, advertising director of Pacific Press. Haslam "demands a high quality news product. But he appreciates that it should be one that is in tune with the needs of the marketplace, not in tune with the needs of the guys down at the press club bar; that is the difference."

Haslam says he got his first lesson in marketing at his first news media job, as a call-in, talk-show host on a Winnipeg, Manitoba, radio station in 1969. "You've got to go on the air every day and make the phone ring," he explains.

He took the job in Winnipeg after being "politely turned down" by both newspapers in Vancouver, the city in which he wanted to live after serving two years in Ottawa as executive assistant to former Canadian Prime Minister John Diefenbaker. That post was Haslam's first job after graduating from Montreal's McGill University with a degree in political science and sociology.

During the same period he was on the radio in Winnipeg, Haslam appeared on a daily TV interview show and wrote a three-times-weekly column for the Winnipeg Tribune, a Southam newspaper. In 1972, he joined the newspaper full-time as a columnist and editorial writer, and four years later moved up to editor.

After a year in that slot, he left the paper to go to Vancouver as the vice president of corporate communications for McMillan Bloedel Ltd., the forest products company. He quickly realized, however, that he did not want to be in public relations—"I really was a newspaper guy."

Haslam returned to the Southam organization in 1979 to become director of videotex services. He worked on the development of Infomart, an electronic publishing company that Southam began in combination with Toronto Star Newspapers Ltd.

He also was a member of the Canadian Videotex Consultative Committee, a federal government panel organized by the minister of communications.

"He was probably the most influential member of the group," says David M. Carlisle, former Infomart president.

Haslam suggested that the government subsidize the initial terminals to get videotex off the ground, and this led to a $10-million federal government/industry incentive program. "It was his idea, and he implemented it very quickly," says Carlisle, now president of Network Videotex Systems Inc. of Toronto.

The incentive program spurred two of Infomart's major projects—Grassroots, an agricultural videotex service, and Teleguide, a public-access videotex service.

Haslam, a frequent discussion leader on electronic publishing and marketing at the American Press Institute in Reston, Va., unwinds by writing fiction. With two novels to his name, both unpublished, he is working on a third. His last one, about a corporate takeover, was "not deemed to be exciting enough," he says. But he declined a suggestion that he spice up the plot by having one character kill off another.

His other hobby, and the reason he was drawn to Vancouver, is sailing his Bristol Channel Cutter, an appropriately named vessel for a man who was born in England and who came to Canada at the age of 7. Vancouver's location makes it possible for Haslam to sail year-round, with Vancouver harbor only a 10-minute drive from the home where he lives with his wife, Pat, an educator. ☐

Comics issue is no laughing matter

BY WILLIAM B. KETTER

William B. Ketter

Everyone knows that newspapers raise Cain to protect the free flow of information against the notion of prior restraint. That's what our free press is all about, right?

Well, sort of. There are those little-publicized contradictions when even newspapers restrict the free flow of information because, it serves their commercial self-interest to do so.

One example is the duplicitous practice of newspapers' blocking their rivals from publishing syndicated comic strips, commentary columns and supplemental news services.

My newspaper, The Patriot Ledger, and other suburban papers are affected the most by this questionable gut-cutting. Lack of access to supplemental news reports and syndicated material inhibits our ability to provide readers the best balance of background information and entertainment features.

But sometimes the knife turns on a big-city daily. The Boston Globe recently lost half its daily comics, the cartoons of Herblock and the commentary of Rowland Evans and Robert Novak to the Boston Herald in what has become known as "the great Boston comic war" [presstime, Jan. 1986, p. 62].

Globe editors portrayed Rupert Murdoch as the villain. In the past three years, he acquired the Boston Herald and the rights to the contested features, and then ordered the switch when the Globe's contract expired Dec. 31.

The Globe challenged the termination notice in U.S. District Court and lost. Thus the Herald has done to the Globe what the Globe's been doing to us for years. Of course, the Herald is also doing it to us, so there's no free-flow-of-information victory here.

There is, however, a message—readers are the innocent victims of exclusionary newspaper business practices. Globe faithful are understandably unhappy about losing many of their favorite comic strips. How unhappy remains to be determined by the ABC auditors.

In my view, both the Globe and the Herald tarnished our industry's credibility with the public. They showed that the name of the competitive newspaper game is restricting information, and never mind that noble talk on the editorial pages about free press, free flow of ideas and the open marketplace.

After all, no metropolitan paper worth its salt would dare suggest that the First Amendment, antitrust laws, or even a sense of fairness might apply to the ideas of Andy Capp, Art Buchwald or Evans and Novak.

How sad. It would be much better for the public—and for artists and writers—if syndicated features and supplemental news services were available to all newspapers in the manner of AP, UPI and Reuters.

That way, the free market and creative editing would play larger roles in determining content. I also think many papers would become more distinctive by developing their own talent instead of paying a king's ransom to exclude competitors from getting access to syndicated features.

Syndicates, you see, price their comics and other features according to size and market conditions. The bigger you are, the more you pay. And if you want to keep something away from a rival, then you pay a lot more.

Smaller papers get hurt by this business-is-business cooperation between the nation's metropolitan newspapers and the syndicates. We won't pay for exclusivity—and, in my newspaper's case, we don't want it anyway.

We have, you see, this old-fashioned notion that all newspapers should have equal access to nationally syndicated features no matter the size of the paper's pocketbook.

And, in fact, we practice what we preach. Syndicate salesmen have suggested from time to time that we exclude our suburban competitors. In 1978, for instance, we declined to black out a new daily in our primary circulation area. We relied on everyday quality, not exclusionary business practices, to win the battle for readers and advertisers. The rival paper closed down within two years.

So pardon my smile over the great Boston comic war. I have trouble sympathizing with the Globe's plight. I'm also skeptical of Murdoch's statement that he offered to sell some of his comic strips to both the Globe and the Herald but the Globe insisted on all or nothing. If Murdoch meant what he said, he would share his features with The Patriot Ledger. We've offered to buy them, but Murdoch's not selling.

Yes, I'm angry about this practice. And why not? Many of our readers buy only The Patriot Ledger. It doesn't seem right that another newspaper can prevent them from having access to supplemental news reports from Washington, the Middle East or elsewhere. The same goes for the antics of Dennis the Menace and the thoughts of Garry Trudeau.

Fortunately, no one could block us from joining the AP three years ago. That's because in 1945, the U.S. Supreme Court held that the AP, as a basic news service, must be made available to all newspapers.

We only wish the AP decision had applied to supplemental news services and the syndicates. Surely, the spirit of the court's ruling should be embraced by our industry. "Freedom to publish," the court said, "means freedom for all, and not for some. Freedom to publish is guaranteed by the Constitution, but freedom to combine to keep others from publishing is not."

Readers, by the way, are the real losers in all of this. We can't offer and they can't enjoy many popular features.

Readers such as Mary Lakari of Sharon, Mass. "I would like to offer a suggestion—better comic selection," she wrote us recently. "Any chance of getting Garfield?"

Not at present, Mary. But there are at least two federal lawsuits pending that might eventually help. So would a stronger belief in the principles of the free flow of information by more newspaper publishers and syndicates. ☐

Ketter is editor of The Patriot Ledger of Quincy, Mass., an 89,153-circulation, suburban Boston daily.

Viewtron alters market goals

At a time when Viewtron, a pioneering electronic information service, has more subscribers than ever and reaches across the United States, the videotex service operated by Knight-Ridder Newspapers Inc. has sharply narrowed its sights.

Viewtron, which got its first paying subscriber 27 months ago, originally had taken aim on a broad consumer market much as newspapers have.

"This thing is looking less and less like an electronic newspaper," said Reid Ashe, chief executive officer of Viewdata Corp. of America, the subsidiary that runs Viewtron. "I think we've learned there is not a mass market for this kind of service."

Ashe called Viewtron "a bold and courageous undertaking that didn't work out" as expected. While that is disappointing, Viewtron can become "a pretty good little business," he said.

The service seems to be moving in that direction. On Jan. 13, it reported having more than 15,000 subscribers, five times the number of about a year ago.

To achieve that growth, Viewtron made some major changes. It expanded beyond its initial South Florida market, offered a broader range of services, and eliminated monthly or minimum subscriber fees. Users now pay only for the amount of time they hook up to Viewtron via local telephone call to a telecommunications packet-switching network or long-distance telephone line.

Another major change in Viewtron's marketing strategy was to de-emphasize use of the dedicated AT&T Sceptre terminals once required to receive the service. Today, most people getting Viewtron use various kinds of personal computers equipped with special software that Viewdata provides inexpensively or sometimes gives away.

Ashe said Viewtron has become "primarily a service for the computer hobbyist" and people with special interests such as financial news. It is "not so much a publishing medium as a communications medium," he said.

To accommodate customers, Viewtron is letting subscribers electronically talk to one another through services like electronic memos and a version of a conference call that uses personal computers instead of telephones.

Viewtron's heaviest concentration of users remains in South Florida, with the next-highest in Pittsburgh, Ashe said. On Dec. 1, Viewdata and one of its partners, Scripps Howard, which owns The Pittsburgh Press, began offering a package of Viewtron and local news [presstime, Nov. 1985, p. 46].

On Jan. 1, Viewtron completed the national rollout it started three months earlier by becoming available in New England to personal computer owners. The service's entry into that region had to be delayed until Viewdata dissolved its partnership with Affiliated Publications Inc., Ashe said. Affiliated, which publishes The Boston Globe, had unsuccessfully sought assurances in 1985 that Viewtron would remain in business through this year.

After spending heavily to start Viewtron, Knight-Ridder put between $15 million and $16 million in the service in 1984 and a little more than $13 million in 1985.

The investment will be less this year, Ashe said. And with subscriber rolls growing and costs decreasing, Viewtron is "getting close to breaking even," he said.

—*Barbara J. Friedman*

ANPA reaffirms 'Diversity Principle'

Amid an intensifying debate over what rules should apply to telephone companies, the ANPA Board of Directors has re-emphasized its position that the phone companies' role in information transfer should be limited to transmission.

The ANPA Board issued the following statement on telecommunications policy at its Jan. 20-22 meeting in Key Largo, Fla.:

"ANPA first issued a Statement of Principle on telecommunications public policy matters in February 1981. That statement was reaffirmed in January 1982 [presstime, Feb. 1982, p. 12].

"After careful review of public policy and market developments during the past four years, ANPA once again reaffirms its support for the 'Diversity Principle.' That principle states that telephone companies that control transmission facilities ought to be barred from acquiring any interest in or control over the information content flowing over their facilities.

"Despite pleas to remove restrictions now in place against the Bell Operating Companies, there is no apparent justification for doing so in the area of electronic information services. In fact, the diversity of electronic information sources available to the American people could be significantly reduced as a result of BOC entry into the field.

"ANPA urges public policymakers and the BOCs to concentrate on enhancing the *transmission* capabilities of the local phone companies, and leave to free competition among others the development of information services provided over those facilities.

"ANPA expresses no view on other restrictions on the BOCs and whether or not some ought to be lifted. Information diversity and a robust marketplace of ideas are simply too important to risk monopolization or anti-competitive conduct, and these restrictions must remain firmly in place."

Need for separate subsidiaries emphasized

The Federal Communications Commission should continue to require that telephone companies use separate subsidiaries to offer more than basic telephone service, ANPA said Jan. 21 in comments filed with the commission.

The comments are part of a rule-making, called "Computer III," that could substantially affect regulation of telephone companies [presstime, Dec. 1985, p. 41].

Support for the separate-subsidiary requirement stems from ANPA's position that control of transmission conduits and information moving through them must remain separate. [See Statement of Principle, this page.] Otherwise, telephone companies would have more incentive to discourage competition in electronic information services, with the effect that the public would have fewer sources of information, the Association said.

"Structural separation still provides the most effective means of ensuring vigorous competition in markets providing information sources," ANPA added.

WHAT'S BLACK AND WHITE AND RED ALL OVER?

A newspaper without Mutual Insurance.

A newspaper can end up in red ink due to a number of financial calamities: libel suits, invasion of privacy suits, strikes, and catastrophic events that are simply unique to the newspaper industry. Without proper coverage, any one of these can force a newspaper to close.

The Mutual Insurance Company of Hamilton, Bermuda, has been protecting the newspaper industry from financial loss for over twenty-five years. Founded by an Act of the Parliament of Bermuda, effective March 30, 1961, Mutual provides ANPA-member newspapers with libel and strike insurance, policies for special needs, and seminars on the prevention of libel and privacy suits.

Mutual Insurance Company's experience and total commitment to serving the unique insurance needs of the newspaper industry are unsurpassed; that's why more than 700 daily newspapers in the U.S. and Canada turn to Mutual for the protection they need. They know that Mutual keeps newspapers in the black and white, and out of the red.

COURTS

Results of Iowa libel project to be released at symposium

The ANPA/American Bar Association Task Force will sponsor a libel symposium March 21 in New York City.

To be held at the Marriott Marquis, the daylong event is titled: "A National Symposium on Libel: Is Litigation the Best Way for Our Society to Resolve Disputes Over Claims of Libel?"

The symposium will feature a presentation of the final report of the Iowa Libel Research Project by project team members Randall P. Bezanson, Gilbert Cranberg and John Soloski, all of the University of Iowa.

Other speakers will include Task Force Co-chairman Katharine P. Darrow, general counsel of The New York Times; James K. Batten, president of Knight-Ridder Newspapers Inc.; Louis D. Boccardi, president and general manager of the Associated Press; William R. Burleigh, vice president and general editorial manager of Scripps Howard; Charles W. Nutt, executive editor of The Courier-News of Bridgewater, N.J., and New York Times columnist Anthony Lewis.

The $100 registration fee covers continental breakfast, lunch and symposium materials. For more information, contact Deborah Weixl at the ABA, 750 North Lake Shore Drive, Chicago, Ill. 60611; (312) 988-6126.

COURT BRIEFS

- An **antitrust suit** against The Lawrence (Kan.) Daily Journal-World was dropped Dec. 31 by the plaintiff, Telegraphics Inc.

  Telegraphics, publisher of a shopper, had filed the suit in 1984, charging the Journal-World with anti-competitive conduct in connection with the daily's total-market-coverage program [presstime, March 1984, p. 31].

  Journal-World lawyer Phil M. Cartmell said the newspaper "made no financial payment or commitment to the plaintiff."

- The 3rd U.S. Circuit Court of Appeals Dec. 30 upheld the constitutionality of Pennsylvania's **shield law** that allows reporters to protect their confidential sources.

- The Indiana Court of Appeals Dec. 16 upheld a trial court decision that the state's newspaper sales and use tax exemption applies to **advertising supplements** printed for insertion and delivery in newspapers. The state is seeking a rehearing.

- A survey by the American Society of Newspaper Editors found that although half of the libel suits filed against daily newspapers during the past three years were considered by editors to be of the nuisance variety, **countersuits** were seldom filed.

  The 229 editors responding to the poll reported 506 libel actions, 253 of which they categorized as nuisance suits. Yet only 13 countersuits were reported, most of which were pending at the time of the poll.

- In a recent development relating to libel countersuits, Kanawha County (W.Va.) Circuit Judge Herman G. Canady denied a motion by The Charleston Gazette to **recover legal fees** from a lawyer whose client unsuccessfully sued for libel [presstime, Aug. 1984, p. 31]. The Gazette is considering an appeal to the state Supreme Court of Appeals, a lawyer for the paper said.

- Putnam County (Tenn.) Criminal Court Judge Leon Burns Jr. put Charles Denning, executive editor of the daily Herald-Citizen of Cookeville, on a two-year **pretrial diversion** after Denning admitted taking 38 copies of The Dispatch, a thrice-weekly competing newspaper, from a newsrack.

  Denning had been indicted on two counts of petty larceny in the case [presstime, Dec. 1985, p. 39].

  In applying for diversion, which is an alternative to a trial, Denning said he thought taking extra copies was an "accepted or professional courtesy" between competing newspapers.

- The Pennsylvania Newspaper Publishers Association, in conjunction with the Pennsylvania Society of Newspaper Editors, has produced a 90-minute **videotape of a mock libel trial**. The half-inch, VHS format tape, which comes with a written transcript, may be rented for $65 or purchased for $100 by contacting John Skillan at PNPA, 2717 N. Front St., Harrisburg, Pa. 17110; (717) 234-4067.

REGULATIONS

Compliance checks urged for EPA rules on storage tanks

Newspapers with underground storage tanks on their property should make sure they comply with requirements of a new U.S. Environmental Protection Agency regulation, according to Richard W. Neergaard, ANPA manager/environmental services.

The EPA rule requires storage-tank owners to notify the proper state agencies by May 8 if the tanks ever stored petroleum or substances defined as hazardous under the federal Comprehensive Environmental Response, Compensation and Liability Act.

At newspapers, underground tanks are most often used to store fuel for fleet vehicles, Neergaard said.

The regulation, a copy of the notification form and a list of the agencies designated to receive notifications appeared in the Federal Register Nov. 8, 1985. Copies are available from the ANPA environmental services staff at The Newspaper Center, Reston, Va.

Agencies disagree on need to study VDT safety

The National Institute for Occupational Safety and Health is appealing a rejection by the Office of Management and Budget of a proposed study to determine whether there is a connection between video display terminals and birth abnormalities.

NIOSH had announced plans for such a study in late 1982 [presstime, Jan. 1983, p. 14].

David J. Eisen, director of research and information for The Newspaper Guild, said the union has sent a letter to NIOSH Director J. Donald Millar in Atlanta supporting the appeal.

OMB disapproved the study under the Paperwork Reduction Act.

Polygraph order sought

The Reporters Committee for Freedom of the Press Jan. 8 asked President Reagan to make public a national security directive he signed Nov. 1 related to polygraph tests of government workers with access to classified information.

Better access urged in Japan for correspondents there

The Japan Newspaper Publishers and Editors Association has urged Japanese journalists to give foreign correspondents greater access to news sources, particularly formal press briefings.

At issue are some exclusionary practices of "Press Clubs," the major organizations through which Japanese journalists work. The matter has been a point of controversy in Japan for many years.

Under the "clubs" system, only reporters who are members are allowed access to official sources for coverage of a government official, government agency, private company or even a baseball team.

In practice, this excludes nearly all foreigners—as well as many journalists from smaller Japanese dailies, weeklies or monthly publications—from obtaining timely, first-hand information from official sources.

Contrary to U.S. custom, where coverage of events such as press conferences is arranged through news sources, in Japan coverage is controlled by several hundred such clubs, some of which date from the late 1800s.

The policy statement adopted by the publishers and editors association (also known as Nihon Shinbun Kyokai, or NSK) came as a "direct result" of a protest last April by two organizations—the Foreign Correspondents' Club of Japan and the Foreign Press in Japan.

Urging the changes, NSK cited the "growing importance of Japan in the international society" and the need to "cooperate with foreign correspondents in news gathering activities so that information about Japan will be widely and accurately disseminated."

The new policy was announced in December. By late January, the association's representative in the United States, Hisao Komatsubara, reported that no press clubs had changed their rules as a result of the policy statement, but that several had made inquiries about it.

There are currently 370 foreign correspondents assigned to Japan.

It was a dangerous year for journalists

Violence against journalists increased markedly in 1985.

According to Freedom House of New York City, an independent group monitoring freedom around the world, 31 journalists were killed while working in 11 countries—15 of them in the Philippines. This contrasts with 21 killed in 1984.

The number of abducted journalists nearly tripled (13 versus five the previous year); victims of beatings and other forms of harassment more than doubled (76 versus 31); and detentions increased by nearly 50 percent (109 versus 72) [presstime, Feb. 1985, p. 32].

Among U.S. journalists around the world, the 1985 toll was one dead and two missing.

In only one category of actions against individual journalists—government expulsions—was a decrease noted (nine in 1985, compared with 22 the previous year).

There was also a decrease in the incidence of formal acts of censorship. This coupled with the growing violence against journalists raised the issue of "self-censorship," Freedom House said.

"Investigative reporting is notably diminished in a climate of violent attacks on the news media," the organization observed. "As a consequence, the flow of information to the public is impeded."

Meanwhile, the London-based International Press Institute characterized 1985 as a year dominated by "terrorism and the media's coverage of it."

In introductory remarks to its annual country-by-country report on press freedom, IPI commented that efforts to cut off "the oxygen of publicity" from acts of terrorism or revolution have precisely the opposite effect: "Experience has shown that silence builds up mystery and proves the best breeding ground for violent action."

In their generally bleak assessments of violence against individual journalists, the groups did note several victories on the procedural front last year.

- A landmark decision against licensing of journalists by the Inter-American Court of Human Rights
- Creation of a "hotline" for endangered journalists by the International Committee of the Red Cross
- A lessening of rhetorical support in United Nations forums, particularly UNESCO, for implementing a "new world information order."

Inter-American court gets another issue: 'right of reply'

Just two months after delivering what was hailed as a stunning free-press victory against licensing of journalists, the Inter-American Court of Human Rights conducted a hearing in January on another significant journalistic issue.

The new question before the court involves the application of the "right of reply" provision in the American Convention on Human Rights to its 19 Latin-American signators.

This controversial concept means guaranteeing individuals or governments a right of reply whenever they feel a news account misrepresented their points of view. Western press groups have maintained that this could increase government control over the press.

"This idea has a long history—and none of it is good," said Dana Bullen, executive director of the World Press Freedom Committee. "It's good practice to give all sides of a story, but no one should mandate or legislate what should be carried in newspapers."

According to Charles Moyer, secretary of the court, a decision "very well might come out" in May.

The request for what is called an "advisory opinion" came from the Costa Rican government, which also originated the request in the licensing matter.

The U.S. Supreme Court addressed a "right of reply" question in the 1974 case *Tornillo v. Miami Herald*. The court unanimously ruled as unconstitutional a Florida state statute requiring newspapers to give political candidates free space for reply when the newspaper "in its columns assails the personal character" of a candidate.

Publisher exceeds limit on ownership

Conservative publisher Robert Hersant defied French law by purchasing another newspaper, Le Progres of Lyon, in January.

The law prohibits individual ownership of more than 15 percent of nationally distributed newspaper circulation or 15 percent of the circulation of France's provincial press [presstime, June 1984, p. 43].

Hersant already owns 38 percent of the circulation of the national press, including Le Figaro, and 20 percent of the country's regional circulation.

Questions abound as governors change route for USPS

BY TONDA F. RUSH

For each of the 11 floors of the U.S. Postal Service headquarters building in Washington, D.C., there must have been at least one rumor floated in early January about the future of Postmaster General Paul Carlin's tenure. They concurred in only one prediction: short.

So it was no surprise to postal-watchers to arrive at the January open session of the USPS Board of Governors meeting to find that the predictions had come true. What was surprising was that not only was Carlin absent, but a stranger sat in his chair next to Board Chairman John McKean.

If the governors had intended to convey a message of swift, decisive control over the course of USPS in 1986, they couldn't have done better by erecting a guillotine in the hall.

Why Carlin was asked to leave so abruptly has been subject to numerous interpretations. McKean, in a press conference called during the open meeting, attributed the decision to "long-term economic planning" and hinted that he expects the interregnum of Albert V. Casey to produce budget surpluses sufficient to free USPS finally of any taxpayer support whatever, which it continues to receive for unfunded pensions left over from the days before reorganization and for subsidies of preferred mailers. The grapevine had it that Carlin, who had brought to the job a reputation for tough-minded personnel management earned during postal reorganization, simply had not rolled enough heads quickly enough to suit the governors' desire to reduce levels of bureaucracy.

Some observers have speculated that a feud over ZIP+4 versus optical character readers for sorting addresses had contributed pressure toward Carlin's removal. Others suggested Carlin had done what the governors wanted, which was to allow them to run USPS, and when they saw what that produced, they didn't like it. McKean's official reasons were fiscally based.

Whatever the reasons, the outcome was the appointment of Casey, who retired last March as chief executive officer of a rejuvenated American Airlines, and was, from 1963 to 1974, president of The Times Mirror Co. He resigned from the Times Mirror Board of Directors and from other private sector involvement to accept the USPS position, it was reported.

Casey was questioned closely about his intentions. How long did he plan to stay? Was he there to perform surgery on USPS and then turn the convalescence of the patient over to a successor? Casey, responding to questions during the press conference with quips and short answers, said:

"The primary goal of any chief executive is to arrange for his successor.

If I'm good, [I'll stay] six months. If I'm not, nine months."

It was later confirmed that Casey's plans definitely call for him to depart USPS by September, and the governors even now are searching for a more permanent successor.

But this "interim" postmaster general is not your typical "lame duck." He is charged with resolving the challenges that did in Carlin and, further, resolving them in short order.

Casey will learn that as head of the $30 billion, multi-layered quasi-government agency, the movement of 140 billion pieces of mail a year has become a job not only of fighting rain and snow and sleet and dark of night, but also of dealing with:

- A labor force of 750,000 that is widely seen as paid more than private sector counterparts.
- A changed transportation system complicated by air deregulation.
- A bevy of postal competitors, including newspapers.
- A rising chorus of policy-makers, including some on the board of governors, who would like to see pieces of USPS—and maybe the whole thing—farmed out to the highest bidder.

Casey may look over his shoulder to find not only Federal Express gaining on him [after having to help out USPS during the last Christmas rush] and United Parcel Service, which is vigorously battling a new USPS effort to reclaim the cream of the parcel business, but also some within the newspaper business who wonder whether the Postal Service is a fair husband of its mail monopoly [presstime, Jan. 1986, p. 20]. The belief within the Postal Service that bulk business mail is its primary growth market puts it at log-

Associated Press

McKean (right) introduces Postmaster General Casey at press conference.

Rush is an ANPA assistant general counsel whose specialties include postal matters.

gerheads with newspapers and forces a confrontation with ANPA's belief that the first-class mail monopoly provides a financial cushion for USPS to hold down advertising mail prices.

How Casey plans to meet these challenges remains to be seen. McKean, after explaining that Casey would see little day-to-day interference from his board, was nevertheless reluctant to allow Casey to dig himself in very deeply at the initial press conference. During one round of questions about competition with newspapers, Casey had only a breath of a second to respond before McKean cut him off.

"Postmaster General Carlin thought the Postal Service was in competition with newspapers for advertising," a reporter commented. "Do you agree?"

"Certainly newspapers are only one form of competition," Casey began. But McKean interrupted: "That question incorrectly states Mr. Carlin's position." McKean urged the interrogator to direct his questions to the board rather than to pursue the absent Carlin. So the reporter did.

"The board's position is that all classes of mail should be properly costed," McKean said, "and that's the only way to respond to newspaper publishers' comments with regard to third-class mail." On that ambiguous note, the subject hung.

With six to nine months to satisfy a restless board of governors that the American public is seeing a return on its postal investment, Casey will be a busy man. He appears unconcerned about the job before him. Asked why he took it, he replied: "I was unemployed."

He will be a popular person, as measured Washington-style by invitations and telephone calls. One of those early invitations likely will be to Capitol Hill where members of the House Post Office and Civil Service Committee will try to learn more about his plans for the Postal Service. That committee has already tried once since reorganization to reassert direct control over postal rates.

Casey's challenge will be to blunt any repeat of that action while imposing his set of tough, corporate principles on the unwieldy USPS giant. And Congress—which still harbors several sacred cows such as six-day delivery—may prove less receptive to Casey's approach than is the current crop of postal governors.

Advo wins 2nd-class TMC case

The Postal Rate Commission Jan. 24 sided with Advo-System Inc. in its complaint against daily newspapers' practice of mailing total-market-coverage publications via second-class mail.

The commission agreed with the direct-mail firm that newspapers should have a separate mail permit for "plus," or second-class TMC, issues. It recommended that the governors of the U.S. Postal Service implement such a rule.

Newspapers engaging in the second-class TMC practice currently do so under the same permit used to mail all other issues. ANPA Assistant General Counsel Tonda F. Rush said another permit would impose such a heavy "administrative burden" on publishers that they likely would stop second-class TMC delivery.

The Association expressed disappointment over the decision. ANPA Executive Vice President Jerry W. Friedheim said, "It is a bad precedent to allow the USPS to make a separate set of rules for a single issue of a newspaper to suit the competitors of daily newspapers."

Another free paper loses rates battle

Another free newspaper, The Weekly of St. Louis, has lost its court challenge of rules prohibiting it from using low, in-county, second-class postal rates.

It joins two other free-newspaper companies that so far have been unsuccessful in attempts to overturn what they claim are unconstitutional U.S. Postal Service rules. One of those papers has asked for U.S. Supreme Court review. A fourth company has yet to receive a ruling on its federal court case [**presstime**, Jan. 1986, p. 27].

U.S. District Judge William L. Hungate granted a Postal Service motion to dismiss The Weekly case, saying his court lacks jurisdiction. He did not address First Amendment arguments of the newspaper.

The Weekly was owned by Times Publications when it filed suit in early 1985, but one of its attorneys said the company's assets have since been sold. The Weekly continues to be published but by another company.

The possibility of further action in the case was uncertain at press time.

ICC again exempts boxcar joint rates

The Interstate Commerce Commission has decided once again to exempt from regulation boxcar joint rates—those implemented by two or more railroads.

In other developments regarding the ICC, the commission recently opened a proceeding on penalty rates, and congressional hearings are scheduled this month on the Reagan administration's plan to abolish the agency.

Regarding boxcar rates, the ICC elected to retain its authority on an after-the-fact basis to hear complaints filed by railroads against alleged monopolistic rail pricing by other railroads.

A federal appeals court last August vacated that part of the ICC's January 1984 decision to exempt boxcar freight rates from regulation only as the decision applied to joint rates. The court remanded the proceeding to the ICC [**presstime**, Nov. 1984, p. 55].

On the matter of penalty rates, the ICC will determine whether such rates assessed by railroads against shippers or receivers for undue retention of freight cars should be partially or totally exempted from regulation.

ANPA's Newsprint and Transportation Department is studying the impact on newspapers.

And in Congress, hearings will address a draft budget compiled by the Office of Management and Budget calling for the elimination of the ICC by 1987 and the transfer of some of its functions to the departments of Transportation and Justice.

The commission was created in 1887 to regulate railroad rate and operating practices.

Conrail offer extended

Norfolk Southern Corp. has extended through March 31 its purchase offer for Conrail.

Senate consideration of the Conrail sale could be completed this month. The schedule for review by the House is uncertain [**presstime**, Nov. 1985, p. 62].

Contract status

Labor contracts with 11 railroad non-operating unions are still to be negotiated [**presstime**, Jan. 1986, p. 39]. All of the unions are in mediation except the Railroad Yardmasters of America.

Six states now tax some form of advertising, but the number taxing newsprint and ink declines

A new ANPA survey of taxes affecting newspapers shows only slight changes from a similar survey conducted in 1981.

Three states tax newspaper run-of-paper advertising, the same number as in the Association's earlier study [presstime, Dec. 1981, p. 16].

However, there have been changes. In Arizona, a tax on advertising was repealed in 1982 and was phased out as of Jan. 1 of this year. West Virginia has been added to the list of states that tax ROP advertising. The other states on that list are Hawaii and New Mexico.

The previous study did not chart taxes on preprinted advertising inserts. The new study shows that three states tax inserts, although ROP advertising is exempt. Those states are Arkansas, Connecticut and Wisconsin. Courts in Kansas and Indiana recently upheld decisions not to tax preprints.

The same 12 states found in 1981 to tax some aspect of circulation continue to levy such taxes, according to the latest study.

Since the 1981 survey, two states have shed newsprint and ink taxes. They are Iowa and Minnesota. The U.S. Supreme Court in 1983 struck down the Minnesota taxes as discriminatory [presstime, Aug. 1983, p. 42].

In 1984, a state court ruled that Iowa's taxes were unconstitutional [presstime, Oct. 1985, p. 46].

The most recent survey was conducted by Kevin Grant, ANPA state relations coordinator.

Grant noted that state legislatures convened in 41 states in January, with three more scheduled to begin by mid-April.

In a number of them, he reported, tax measures may be considered.

- In New Mexico, the State Taxation and Revenue Department has recommended to the Legislative Tax Study Committee that the gross receipts tax exemption on newspaper sales be eliminated.
- In Maine, a bill to remove the tax exemption for newspaper sales is pending before a committee.
- In Florida, a bill has been introduced to discontinue existing sales tax exemptions, including those affecting newspapers.

In addition to the chart reprinted below, Grant has compiled a more comprehensive state-by-state report of taxes affecting newspapers. That report includes the type of taxes, tax rates and details of their application.

He also has prepared a report on tax legislation introduced in state legislatures during 1985 and on tax-related actions taken during the year by state administrative agencies and the courts. Copies of both reports may be obtained by contacting the ANPA Government Affairs Department at The Newspaper Center, Reston, Va. ☐

[1] State imposes no sales or use tax, but some localities impose such taxes that are applicable to sale of newspapers and advertising.

[2] Preprint advertising only is subject to state sales tax.

[3] Los Angeles City Council imposes a business license tax based on gross receipts from advertising and circulation revenues.

[4] Tax applies only to mail subscriptions.

[5] State Department of Taxation issued a June 1, 1985, to July 1, 1986, advertising sales tax regulation; it contains a specific exemption from the sales tax for advertising production that is included in a newspaper's space charges.

[6] Tax applies only to street sales.

[7] Subject to gross receipts tax; "carrier delivered" newspapers exempt.

Study shows reporters are now more careful in use of confidential sources

BY GUIDO H. STEMPEL III

The U.S. Supreme Court's 1972 *Branzburg* decision made use of confidential sources risky. The Janet Cooke case raised questions about whether the practice is ethical. The 1985 credibility study by the American Society of Newspaper Editors indicated a majority of the public disapproves of the use of confidential sources.

Has all this made any difference in the use of confidential sources? A Florida study indicates it definitely has. One hundred reporters—10 each at the 10 largest dailies in the state—were asked in a 1974 mail survey about their use of confidential sources. Ten years later, the survey was repeated. In each case, 48 reporters replied. They were not, of course, the same 48 reporters, but the two groups were similar demographically.

While 33 percent of the reporters in the 1974 study said they were using confidential sources at least once a week, only 12 percent in the 1984 study said they were using them that often. And while 56 percent of the 1974 respondents said they would be "seriously hampered" if they could not use such sources, only 23 percent of the 1984 respondents said so.

While consulting with the editor before using a confidential source is apparently now more common, only a third of the reporters in the 1984 survey said they *always* consult with an editor before using a confidential source. The study, by Byron St. Dizier of the communication studies faculty at the University of Alabama-Birmingham, appeared in the Summer 1985 Newspaper Research Journal.

• • •

Ever since the Reardon Report in 1968, journalists and members of the legal profession have been talking about free press-fair trial almost every time they get together.

Now a University of Wisconsin study suggests the issue may not be as critical as the unending dialogue suggests.

Robert E. Drechsel surveyed trial court judges in Minnesota and in an unidentified New England state about their perceptions of press-bench problems. Two-thirds of the Minnesota judges and 78 percent of the judges from the New England state replied.

The responding judges do not see interference with a fair trial as their biggest problem with the press. It in fact was outranked by four other concerns. Most often mentioned was inaccurate or incomplete reporting, cited by 43 percent. Next came biased reporting and sensationalism, each mentioned by 14 percent, and then lack of knowledge of the judicial system, mentioned by 13 percent. Only 3 percent of the judges said interference with a fair trial was the main problem.

The study was reported in the Summer 1985 Journalism Quarterly.

• • •

There have been a number of studies in recent years suggesting that television colors the viewers' perspective on crime. A study in the Summer 1985 Journalism Quarterly compares the views of crime of those who depend primarily on newspapers for news with those who depend primarily on television.

Newspaper readers were more likely to consider poverty a main cause of crime, while television news viewers were more likely to cite flaws in the court system as the major cause. Television viewers were less likely to consider societal ills a cause.

Perhaps the most important finding was that those who read a newspaper once a week or less were more likely to be afraid they would become a victim of crime than were respondents who read a newspaper twice a week or more. More frequent newspaper readers thus seem to have a more realistic view of that risk.

The study was made by two Howard University faculty members—Carolyn A. Stroman of the Urban Studies Department and Richard Seltzer of the Political Science Department.

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

We Provide the "How To" After the Report

We don't leave you stranded. When you buy an MOR study you also get full consulting services that tell you how to present your best case to advertisers, how to land new accounts, enhance the old and increase profitability.

Analysis of tough strategic problems is our business.

Editors assess differences in 'credibility' surveys

After a series of studies showing the public questions the credibility of the press, many were surprised that a broad study released by The Times Mirror Co. in January began with the line: "There is no credibility crisis for the nation's news media."

Just nine months earlier, a study commissioned by the American Society of Newspaper Editors had this opening phrase: "Three-fourths of all adults have some problem with the credibility of the media" [presstime, May 1985, p. 46].

While there were many similarities in the conclusions drawn by the two studies, this apparent contradiction was rooted in different definitions of "credibility."

- The Gallup Organization, which conducted the research for Times Mirror, defined "credibility" in advance as "believability."
- ASNE's polling firm, MORI Research, allowed its definition to take shape as the study progressed. "We used a people's definition of credibility to see which things clustered in people's minds rather than trying to impose our own definition," said MORI President Kristin McGrath.

Both studies found public dissatisfaction centered on what Gallup termed press behavioral "performance"—if reporters are considered rude or intrusive or uncaring—rather than on the actual quality of their work.

"If you read beyond the first paragraph, I see no conflict whatever with ASNE research," said David Lawrence Jr., chairman of ASNE's Credibility Committee and publisher and chairman of the Detroit Free Press.

"What concerns me is people are going to be diverted by sentences such as 'There is no credibility crisis for the nation's news media because [in the Times Mirror study] 'credibility' is defined as 'believability,'" he said.

"My concern is more than 'Do people believe what they read?'" Lawrence added. He said his concern includes: "Are we arrogant? Are we accurate and fair? Are we independent? How well understood are we? All of those [questions], in my opinion, play an enormous role in a broader definition of credibility."

Also commenting on the Times Mirror study was ASNE President Robert P. Clark, vice president-news for Harte-Hanks Newspapers. "I don't want to put it down, but it kind of disturbs me that this national study says we don't have a problem when I think we do," he said.

Rather than dwelling on behavioral "performance" issues, the Times Mirror study focused on another aspect of credibility: "independence." It noted that "only 57 percent of the American people believe the press is pretty independent" and "53 percent say the press is often influenced by the powerful," including such institutions as the federal government, big business, advertisers and special-interest groups.

"In the public mind, all these *external* pressures on the press are far more important than internal problems in explaining bad practices," Michael Jay Robinson, director of the Media Analysis Project at George Washington University, said at a Washington, D.C., press conference Jan. 15.

While some people in the media questioned the need for additional studies on "credibility," however it is defined, others welcomed the new or corroborative information provided.

"I think what we need is more sharing of information between and among a lot of organizations" rather than "a singular study that answers all questions for all time," said Everette E. Dennis, director of the Gannett Center for Media Studies at Columbia University.

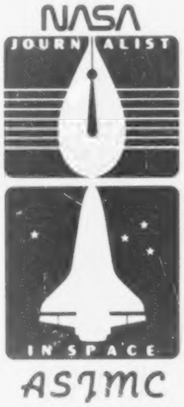
Particularly useful in the Times Mirror study, said Dennis, is its highlighting of what he calls the "noise numbers" issue. "The gross numbers are not as important as what people are saying and what influential people are saying," said Dennis, who has made a study of institutional attitudes toward the press a "major project for the year" at the Gannett Center.

In November, the center released a survey of 50 years of research in the field, as well as several new studies, all part of a two-year study of public trust in the mass media.

Although the Times Mirror study concluded that 70 percent of the public was supportive of the press, Gallup President Andrew Kohut noted: "Critics are much stronger in their criticism than supporters are in their support. This may help explain why members of the press perceive much less support in the public than actually exists. They attract mostly silent and passive supporters and very vocal and active critics."

Marcia Ruth

Selection begins for space shuttle journalist



A panel of working journalists and journalism educators this month begins sifting through the 1,700 applications received from individuals who would like to be the first journalist in space.

About two-thirds of the applications were received after the Jan. 15 deadline, but they had been postmarked on or prior to that date and therefore qualified for consideration, according to the Journalist-in-Space project's public affairs coordinator, Jack Bass.

The Association of Schools of Journalism and Mass Communication is administering the initial selection process [presstime, Nov. 1985, p. 56]. In the first phase, eight journalists will be chosen from each of five U.S. regions. These 40 nominees then will attend a five-day orientation-evaluation beginning March 31 in Washington, D.C., after which five finalists will be picked for consideration by a National Aeronautics and Space Administration committee.

The timetable calls for the journalist/astronaut and his or her backup to be announced on April 17, with training at NASA's Johnson Space Center in Texas to begin in May. The space shuttle flight with a journalist aboard will be this fall. ☐

NIE Week March 3-7

Once again, newspapers are gearing up for Newspaper in Education Week.

In preparation for the fourth annual observance, March 3-7, ANPA Foundation is mailing all ANPA member newspapers a series of four camera-ready advertisements and a reproducible poster to use in promoting the event.

The materials feature cartoons by Jim Davis, who draws the "Garfield" cartoon strip.

NIE Week is sponsored by ANPA Foundation and the International Reading Association. ☐

El Paso daily makes literacy paramount, wants to share program with others

The El Paso Herald-Post has embarked on a multi-faceted literacy campaign that its editor believes may be the most comprehensive community-wide effort ever made in the literacy area.

Jay Ambrose also hopes his newspaper's program can serve as a model for the newspaper business.

"We think illiteracy is an extraordinarily devastating problem for our society and that children today aren't learning to read as well as they should," he said.

Ambrose got the idea for the campaign after hearing a speech last summer by Stephen D. Krashen, professor of linguistics at the University of Southern California. "He just simply said there is nothing more important in the intellectual development of a child than reading."

Excited by the remarks, Ambrose went back to the newspaper (evening circulation 31,358) and wrote a column suggesting a "Year of the Printed Word."

Evidently, he struck a nerve. The response to his suggestion was "more enthusiastic than anything I have encountered in 20 years in the newspaper business," he said. "Lots of people had ideas."

Originally planning to focus on helping children to read, he enlarged the scope of the effort to include adult illiteracy after learning that El Paso Community College was going to launch an anti-illiteracy program.

Sandra P. Tate, coordinator of the college's Literacy Education Action program, calls the Herald-Post campaign "absolutely marvelous."

"In essence, what the newspaper has been able to do is raise the consciousness level in the community," she said. This has made the school's task of finding volunteer tutors easier.

Tate praised the newspaper for its "very steady" efforts on the issue. Not a week, hardly even a day, goes by when something on the subject does not appear in the Herald-Post, she said. Ambrose confirmed: "We have something on the issue every day."

A daily cartoon developed by a local college educator advises parents how to teach their pre-school children to read.

Once a week, the newspaper's "News You Can Use" column features tips from another local educator on how parents can improve their children's reading skills. That column also occasionally contains an item on word usage aimed at adult readers.

In addition, the Herald-Post's education reporter writes a weekly literacy column. Ambrose believes it may be the only such column run on a regular basis.

The newspaper also has carried a series on the problem of adult illiteracy in El Paso County, which borders on Mexico. Among other things, it cited U.S. Census data suggesting that 29 percent of the 25-and-over population—106,115 people—are functionally illiterate.

In the course of the campaign, the newspaper has linked up with local TV stations in "rather surprising ways," Ambrose said. For example, it worked with one station on preparing the illiteracy series, "the idea being this is a big social problem in the city, and why not put aside competitiveness on at least this one thing?"

Television is key to the success of an anti-illiteracy program, he added. "When you are talking about reaching illiterates, you are not going to reach them through newspapers, for obvious reasons."

Ambrose initially thought the campaign could be done without adding to the newspaper's budget. He has since determined that the program, which started last September and will run through the rest of this year, will cost $40,000. Half of that amount pays for a staff person dedicated to the program. The rest is going to various activities.

The other activities the Scripps Howard daily is spearheading include:

- Sponsoring a contest aimed at having every child in the city read at least 100 books by the end of the school year. Youngsters enter the contest by filling out coupons that appear in the newspaper. Prizes—in the form of books—will be awarded several categories.
- Distributing free books. "If you make the right connections, there are literally millions of books out there to be had," Ambrose said. Book publishers get a tax write-off if they give away their merchandise instead of keeping them in inventory, he explained. About 100,000 books published in New York City—some for children, others for adults—will be given away in El Paso under the guidance of a community committee. "Our intention is to get these books primarily to disadvantaged children," Ambrose said. "Our slogan is 'A book in every home.'"
- Sponsoring a "readathon" and a reading day. It held both in 1985 and plans to improve upon them this year.
- Establishing an El Paso Authors Hall of Fame.
- Planning a day-long conference for parents on what they can do to encourage their children to read.
- Encouraging every local business and school to schedule a 10-minute reading break at least weekly.

The newspaper also is organizing a Business Consortium for Literacy. "What I want to do is institutionalize some of the programs we are doing this year," Ambrose said.

To further his goal of serving as a model program, Ambrose plans to compile a booklet on the Herald-Post's program and send a copy to every newspaper in the nation.

"We're not there yet, but I think by the time we are finished we will have discovered how to do this pretty effectively," he said. "We can then share it with others."

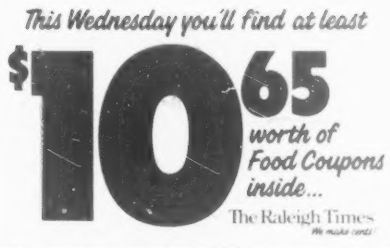
Community volunteer reads to children in Herald-Post's "Reading Day in the Park" program last fall.

Same-day coupon promotion test yields little additional redemption

The Newspaper Advertising Bureau has found in a three-market experiment that "same-day promotion" of newspaper coupons does not substantially affect coupon redemption, newspaper circulation or product sales.

This finding is contrary to fears expressed by some advertisers with regard to promoting the monetary value of coupons on the day they are offered. Those fears include making it difficult to anticipate the extent of redemption and inviting "misredemption"—misuse—of coupons.



This Wednesday you'll find at least
$10.65
worth of Food Coupons inside...
The Raleigh Times
We make cents!

Newsrack placards touted possible savings.

At issue is a longstanding conflict between newspaper and advertiser members of the Audit Bureau of Circulations over rule C 1.14, which for 30 years has prohibited same-day promotion of coupons in the paper worth more than half the purchase price of the newspaper itself [presstime, Aug. 1985, p. 42].

With the evidence of this relatively small survey in hand—three markets served by the Harris-Teeter grocery chain—NAB has asked the ABC Board of Directors to allow expansion of the test to a multi-state area and a variety of stores.

The September test involved newspaper promotion of the coupons in Charlotte and Raleigh, N.C., and no promotion at the third site, Charleston, S.C.

"The whole reason for the test was [that] ad agencies were saying this would totally disrupt the marketplace," said Uldis Grava, NAB vice president and director of marketing services. But instead of feared increases of "threefold, fourfold or fivefold," the test shows small increments in circulation, redemption and purchasing.

"We have made the point that we don't have an increase of that [feared] size," said Grava. "But the only test that makes sense is to make the whole marketplace decide, so let's take a three- or four-state region so we can judge for ourselves."

ABC President and Managing Director David Keil indicated this might be an issue on which his organization's advertiser and ad agency members could be receptive to the position long held by newspapers.

"Heavy coupon advertisers really want to look at the research and the findings and have a chance to digest them," said Keil.

A full report of the three-market test will be presented to the ABC board at its meeting March 5. ☐

Newspapers not affected by Sears shift

Sears Roebuck & Co., long one of newspapers' largest advertisers, has announced an increase in its magazine budget for 1986.

But newspaper publishers need not worry. The incremental funds for magazines will be drained from broadcasting, not newspapers, according to the nation's third leading national advertiser in 1984, the last year for which figures are available.

"Newspaper advertising is the single largest element of our advertising budget, as it has been all along, and it will continue to be," said Kathleen Gucfa, Sears assistant director of national news.

In 1984, about $500 million of Sears' total advertising expenditures of approximately $750 million went to newspapers. Of this total, about 85 percent was in preprints, with the rest going for run-of-paper advertising. ☐

A primer on the Advertising Council

BY CRAIG C. STANDEN

When the War Advertising Council was founded in 1942 with the objective of putting American advertising to work helping win World War II, the Newspaper Advertising Bureau was one of the six original members.

Although the war ended, the idea of public service by the advertising industry did not. The War Advertising Council became the Advertising Council, and one of the finest ideas ever to come out of American business came into existence.

Forty years later, the Advertising Council and its advertising campaigns in the public interest play an important role in American life—and a *vital* role for many worthy organizations and causes. In 1984, working with a budget of less than $1.2 million contributed by business, the Ad Council generated more than $804 million worth of advertising space and time, contributed free by the media, for 30 public service campaigns.

America's newspapers have always played a major role in the Ad Council's activities, with 83,110 council ads being run free in newspapers in 1984. Eight newspaper advertising executives are members of the council's board of directors, and one of them, Vance Stickell of the Los Angeles Times, is vice chairman. Yet despite this heavy involvement, many newspaper advertising and business people know very little about what the Ad Council is or how it works.

Every year, the council receives more than 400 requests for advertising campaign support. Its staff measures each request and sponsoring organization against a number of criteria: Is it non-commercial, non-denominational and non-political? Is it national in scope and applicable to all Americans? Is it of significant national importance? Does it lend itself to effective advertising? Can advertising help solve the problems posed by the request? These tests are applied rigorously; most requests fall short.

Once a request is accepted by the council's board of directors, it is assigned to a volunteer advertising agency and a volunteer campaign coordinator—usually a corporate advertising or marketing execu-

---

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

tive—who oversees the agency's work and keeps things moving. When the agency's proposed ad campaign has been approved by the coordinator, the client organization and a council representative, the ads are then produced and distributed to the media.

Volunteer agencies really work hard on their Ad Council accounts. They consider them as showcases for the agency's creative talent, and because of the heavy media exposure most council campaigns receive, they put their best creative and account people to work on them. Some of the most memorable ad campaigns of the last 40 years have been produced by the council.

Six "clients" have been involved with the council for 25 years or more. The oldest, Forest Fire Prevention, was one of the original War Advertising Council clients in 1942. Smokey the Bear and his payoff line, "Only you can prevent forest fires," are among the best-known of all advertising ideas. Other long-time "clients" are the Red Cross (since 1945), the United Way (1946), Religion in American Life (1949), Aid to Higher Education ("Give to the college of your choice," 1957), and the Peace Corps (since its birth in 1961).

More recently, the council has been responsible for such memorable campaigns as "A mind is a terrible thing to waste," for the United Negro College Fund (since 1972), McGruff the Crime Dog and "Take a bite out of Crime," (1978), "Drinking and driving can kill a friendship," for the National Highway Traffic Safety Administration (1983), and "Keep the torch lit," for the Statue of Liberty's centennial (1983). One of the newest campaigns, and one which draws applause when it is presented to business audiences, was launched last year by a new non-profit organization, Citizens Against Government Waste. The current ads are headlined, "If the government were a business, it would be out of business."

Ad Council campaigns don't just do good, they also get results. To cite just three examples:

- Since 1942, the acreage destroyed by forest fires has been reduced by an impressive 80 percent, even though more than twice as many Americans are using our forests, and far more intensively, than they were in 1942.
- Council ads, the only advertising used by the Peace Corps since it was founded, have helped recruit more than 120,000 volunteers to serve in 91 countries.
- The United Negro College Fund raised $290.2 million between 1972 and 1984, in large part because of the Ad Council's messages and the generous contributions of space and time by the media.

The NAB is proud to be a part of the Advertising Council, and all of us in the newspaper business can be proud of our contributions to its work.

If you'd like to know more about the council's current campaigns—or have repro proofs of newspaper ads for any or all of them—call Tim Fowler of the council at (212) 758-0400. And if you're interested in making a contribution to the council's support, as so many newspapers already do, call Jean Dean at the same number. ☐

From Sale To Linage Analysis.

CJ/ADVERTISING™ integrates all steps of the advertising process — order entry and rating, sales rep reporting, contract management billing, aging and receivables handling, ad statistics and reporting.

It shows performance by territory or account. Because it's online, managers can easily see where they made money, what products did best and how much preprints impacted sales. They can compare current figures to previous forecasts and check them against actual year-to-date figures. Online information and up-to-the-minute reports are available by revenue, linage, SAUs or whatever type of units you want to use.

When CJ/AD TRACKING,™ CJ/LAYOUT™ and CJ/CLASSIFIED™ are brought online, comprehensive control of the full advertising and production cycle begins. These three systems are tightly coupled to CJ/ADVERTISING — a unique design option which allows all of them to share the most current up-to-date information.

USA Today wants Fas-Fax to report national newspapers' bulk sales

Gannett Co.'s USA Today, which heavily promotes bulk—or as it calls them, "blue chip"—sales, wants them listed in the Audit Bureau of Circulations' widely used publication, Fas-Fax.

The newspaper has asked ABC to change its reporting in the semi-annual Fas-Fax so paid circulation for a national newspaper would appear in two categories: general circulation and bulk. Currently, bulk sales—copies purchased at a discount by, for example, hotels and airlines that give them to customers—are excluded from Fas-Fax.

Fas-Fax is "sort of what everybody uses as the bible in circulation," USA Today President Lee J. Guittar said.

USA Today adds bulk sales and general paid circulation to come up with the figure it uses in setting advertising rates. By counting bulk sales, it recently reported circulation of 1.35 million compared with 1.17 million as published in the most recent Fas-Fax.

The proposal to include bulk sales in Fas-Fax is part of Gannett's campaign to gain recognition for bulk sales as legitimate paid circulation. Gannett sent its proposal to ABC "some months" ago, Guittar said, and the company is waiting to see what the audit bureau will do.

David Keil, ABC's president and managing director, said he could not comment on a member's request other than to say it was being considered.

However, he said his staff is looking into ways general and bulk circulation might be counted together for a national newspaper.

Should that occur, the question then would be whether USA Today would qualify as a national newspaper by ABC standards. Currently there are no specific criteria for that designation. However, Keil said the ABC board has asked the bureau staff to outline a definition of what constitutes a national newspaper. Keil, as managing director, has been responsible for judging whether a newspaper should be classified as national.

Treatment of bulk sales is only one source of Gannett's unhappiness with the audit bureau. Another stems from the ABC board's policy against bureau involvement in audience or readership research. Complaints about auditing methods led in recent months to the withdrawal from ABC of 15 newspapers, all but one of them owned by Gannett [presstime, Jan. 1986, p. 41].

This elicited two statements of support for ABC that were issued Jan. 6—one from 51 executives of newspaper companies and the other from The Times Mirror Co.

The signers of the former statement included executives of the Chicago Tribune, The Washington Post, the Houston Chronicle, Scripps Howard, Cox Enterprises, Dow Jones & Co., A.H. Belo Corp., Multimedia Newspapers, Donrey Media Group and Lee Enterprises.

"Although we may disagree with some of the ABC rules, it is our intention to work toward resolving these problems within the established framework," they said. "It is our firm conviction that publishers and advertisers need a strong independent guarantee of standardized circulation data."

Vincent E. Spezzano, publisher of the Times-Union and Democrat and Chronicle of Rochester, N.Y., which pulled out of ABC, said that statement, far from indicating support, showed "this group wants changes within ABC."

In another matter, the ANPA/Newspaper Advertising Bureau—ABC Liaison Committee Dec. 31 offered several suggestions on how ABC might revise its bylaws to avoid excessive legal costs arising from lawsuits over circulation audits. The ideas include an additional level of appeal within ABC and provisions for the bureau's legal fees to be borne by publishers judged to have been at fault. ☐

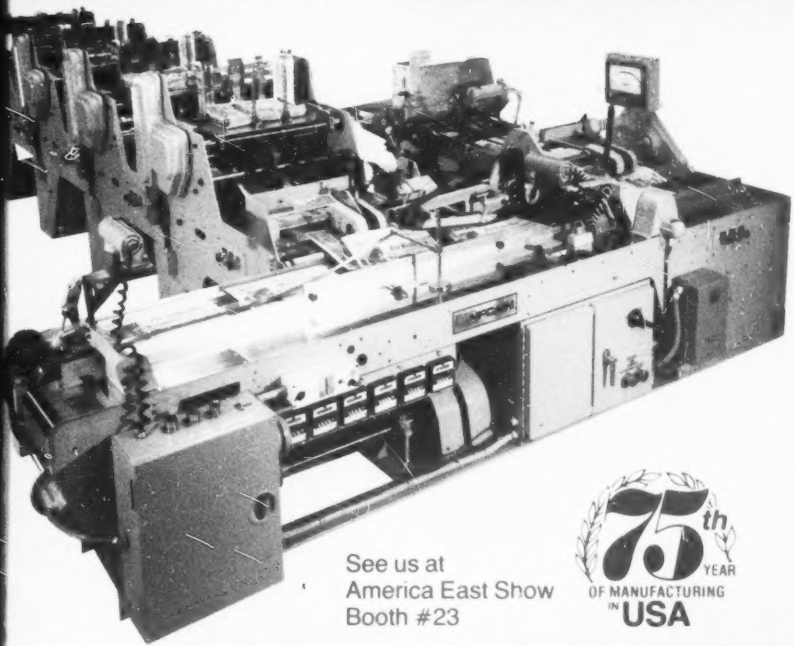
"The McCain 660 turned out to be a dependable investment... not an expense."

Gregory Cushman, President
Loren Dyer, Operations Manager
THE BULLETIN
Bend, Oregon



"The McCain 660 inserting machine has done everything we expected and more. It has turned out to be an investment...not an expense. It's dependable, in averaging more than 12,500 papers per hour, with either single or multi inserts. I would recommend the serious consideration of the McCain 660 for anyone planning to purchase a stuffing system."

McCain users across the country are quick to praise the 660's performance and dependabiity. It incorporates any number of in-line insert stations, so that all stuffs are gathered in a single pile. The gathered stuffs are then inserted into the body of the paper in one smooth, continuous operation. Difference in size and thickness of stuffs is, therefore, not a problem. There's a 660 system available to fit every stuffing need. Write or call for details. McCain Manufacturing Corp., 6200 W. 60th Street, Chicago, IL 60638, 1 312 586-6200.

NEWSPAPER STUFFER

Conference plans move P.D.Q.

"Interface '86—People, Developments and Quality" will be the theme of the 58th Annual ANPA Operations Management Conference & Exposition June 21-25 in Atlanta. A sub-theme is formed by the abbreviation for "People, Developments and Quality"—P.D.Q., which in common parlance stands for "pretty damn quick."

The expanded Georgia World Congress Center (foreground) is close to Atlanta's hotel and office towers.

Planning for the event is "about 80-percent" complete, according to OMC&E Arrangements Committee Chairman Joseph M. Ungaro, president and general manager of Westchester Rockland (N.Y.) Newspapers Inc.

In a report to the ANPA Technical Committee Jan. 15, Ungaro said more than 230 exhibitors have signed up for 267,000 square feet of exhibit space for the five-day Exposition.

If the latter figure holds, it would make the Atlanta event the biggest ever in terms of display space. Last year's show in New Orleans set the current record of 265,000 square feet.

Both the Exposition and the Conference sessions will take place in the Georgia World Congress Center. An expansion project there has been completed since the ANPA trade show was last held in the building in 1984.

More than 10,000 people are expected to attend this year's event, according to ANPA Director/Technical Services Peter P. Romano, who serves as conference director.

Ungaro said his committee believes the Atlanta meeting "is going to be very informative, with a lot of the latest developments in key areas like pagination, flexo, mailroom options, quality control and color."

He added: "It's going to be worth attending for the broad update," not only by production managers but also by personnel from other newspaper departments.

ANPA has reserved 6,050 rooms in nine Atlanta hotels. The newly opened Marriott Marquis and the nearby Atlanta Hilton will be co-headquarters hotels. Other official Conference hotels are Hyatt Regency, Ibis, Holiday Inn-Downtown, Marriott-Downtown, Omni International, Ritz-Carlton and Westin Peachtree Plaza.

Special hotel rates are available for Conference goers. Housing forms and advance information on the Conference & Exhibition will be mailed to member newspapers and others in March.

Free shuttle-bus service will be provided from all Conference hotels to the World Congress Center, where registration will take place.

Registration should be expedited this year because of two innovations. The first is preregistration, which has never been available before. The other is a computerized registration system that will generate Conference badges and other materials.

Registration fee will be $35, according to Ungaro, an increase of $5 from last year.

For the second year, presstime will sponsor a two-mile "fun run" for people registered for the Conference & Exposition and their families. It will be staged Sunday morning, June 22.

The tentative program for the three days of sessions follows.

Monday, June 23

Ungaro will chair the opening General Session on "People and Management." David E. Easterly, publisher of The Atlanta Journal and The Atlanta Constitution, will give the welcoming address.

Alvah H. Chapman Jr., who will be nominated at the Association's April Convention in San Francisco to serve a one-year term as chairman and president, also will address the session. Chapman is chairman and chief executive officer of Knight-Ridder Newspapers Inc.

Subsequent speakers will discuss "Effective Management for the Eighties," "Hiring Your Next Production Managers" and "Team Building—What Kind of Management Is Needed for the Total Electronic Newspaper."

Five concurrent workshops will follow on these topics: "Managing Telecommunications (It's More Than Just Phones)," "Facing Building Expansion," "Management Asks the Tough Questions About Flexo," "PCs—Panacea or Pandemonium," and "Health and Wellness in the Workplace."

Tuesday, June 24

Larry D. Strutton, executive vice president, operations for the Los Angeles Times, will chair the General Session on "People and Quality." Speakers will address "Quality and Success: Why Is Quality in All Aspects of Our Operations an Important Issue Today?," "Quality Is Revenue," "Quality Control: How Do You Set Up a Quality Control Department?" and "Commercial Printers Do It All the Time and Better."

Four concurrent workshops will follow on "Pre-press Quality: From Newsroom to Negative," "Color Separation and Graphics: What Equipment is Available, How to Pick What's Best for You, Operator Training Programs," "Print Quality," and "Quality in the Mailroom."

Wednesday, June 25

The General Session on "Pagination" will be chaired by Norman P. Dusseault, vice president and general manager of the Times Publishing Co. of St. Petersburg.

The session will begin with a panel discussion on "Pagination: Where Do We Stand?" Then speakers will talk about "Justification: Can You Make Pagination Pay?" and "Ad Markup Systems: What's Available and Where Do They Fit Into the Total Picture?"

Four concurrent workshops will address the topics "Typesetters: Buy Now or Wait?," "Ad Makeup Systems—A Candid Look," "Getting Your Sunday Paper Out the Door and Delivered," and "Automatic Newsprint Handling."

ANPA panel backs plan to substitute red pigment; problems cited with low-rub inks

The ANPA Technical Committee has approved a recommendation by the National Association of Printing Ink Manufacturers that a pigment known as "Permanent Red 2B" be used to make some AD-LITHO™ and AdPro® inks that previously contained "Red Lake C."

At its Jan. 14-15 meeting at The Newspaper Center in Reston, Va., the committee also was alerted to problems some offset newspapers are having with low-rub-off ink made from "treated" oil.

Both the pigment substitution and the move to treated oil in the formulation of news inks were prompted by the federal Occupational Safety and Health Administration's "hazard communication" standard that took effect Nov. 25. It requires that hazardous chemicals in the workplace be labeled and that workers be trained in their safe use.

In the case of Red Lake C, tests by the National Toxicology Program found that large doses of the pigment caused spleen cancer in male laboratory rats [presstime, Dec. 1985, p. 36].

Because of that situation, Permanent Red 2B will be used to formulate inks for the 1986 ANPA ROP color ink book, which advertisers and newspapers will use as a guide to getting desired color in run-of-paper advertisements.

On the matter of low-rub inks made with treated oil, several executives of offset newspapers complained at the meeting that they are having problems with them. Some said they had stopped using the inks altogether.

In late January, the director of Gannett Co.'s production operations said he would recommend to Gannett management that Gannett newspapers return to standard, treated-oil inks.

"We are having too many problems at the sites with regard to runability" of the low-rub inks, said Donn L. Wheeler, who surveyed Gannett production sites. According to Wheeler, all offset sites had gone to low-rub, as well as some letterpress locations.

The chief complaint, he said, was ink buildup on pipe rollers and blankets.

Excessive buildup can lead to wrinkling of the newsprint web and other problems.

Gene McDavid, chairman of the committee's Newspaper Ink Study and Research Task Force, told presstime he believes the problems arose when the ink companies changed to inks formulated with treated oil—a move encouraged by the newspaper business because untreated oil would have required a cancer-hazard warning label under the hazard communication standard.

"The change of the oils caused some of the low-rub formulations to change their operating characteristics," said McDavid, vice president and general manager of the Houston Chronicle. The Chronicle has stopped using low-rub ink on its one offset press, he said.

Spokesmen for major ink manufacturers contacted by presstime said they are aware of customer problems with their inks and are working to solve them.

The ink companies confirmed that a major complaint involves ink buildup on rollers and other press parts. But two of the manufacturers said the change in oils is not causing the buildup problem.

According to David D. Chan, regional manager-east for Flint Ink Corp., users of low-rub ink formulated with the previously marketed untreated oil also complained about buildup.

Chan said it is not oil but resin—the ingredient that yields the low-rub characteristic—that causes the buildup. Where newspapers using standard ink might clean their pipe rollers every two or three days, newspapers using low-rub ink may need to clean them after each day's press run, he said. "If they want low-rub, they are going to have to give a little extra maintenance," he added.

Andrew J. McDonnell, market manager, newspapers, for J.M. Huber Corp., agreed with Chan's assessment. McDonnell said newspapers may be linking the buildup problem to the new oil because the big move toward low-rub ink coincided with the change in oils.

One ink manufacturer, however, is not so sure there is not a connection between the new oil and the ink buildup problem. "My feeling is, it probably has a relationship," said Herbert L. Edelman, vice president, operations, for U.S. Printing Ink. However, he added, there no longer is any low-rub ink being made with the untreated oil to serve as a reference point.

The manufacturers said that despite the problems, many newspapers are successfully using low-rub inks.

ANPA will offer its technical facilities to ink firms for testing, said George Cashau, ANPA director/technical research.

In other committee business:

- McDavid reported that ANPA has purchased a color computer, which will assist in analyzing colors for the new color ink book.
- Bill R. Gulledge, chairman of the committee's Computer Task Force and vice president of information services of Harte-Hanks Communications Inc., said one of his panel's top priorities for 1986 will be the development of a standard computer protocol for transmitting advertising information from ad agencies to newspapers.
- Michael Stern, chairman of the Environmental Task Force, said 1984 data on newspapers' accident and safety records would be distributed by the end of January and 1985 information will be solicited in February. Stern, production manager of Syracuse (N.Y.) Newspapers Inc., also said that a description of a model "wellness" program for employees will be available this spring.

—Margaret Genovese

Charles R. Blevins of Gannett Co. reports to Technical Committee.

N.Y. Times reaps big savings through energy program

The New York Times is saving about $400,000 per year at its Carlstadt, N.J., printing plant through an energy management system and recovery of heat generated from the incineration of plant wastes.

"While our return on investment is in the range of 30 percent," said Joseph Petzko, director of operations, "there are important [environmental] benefits as well. We are cutting our consumption of natural gas, oil and electricity, as well as reducing landfill requirements."

Petzko said the energy-management and heat-recovery measures have reduced annual natural gas consumption by about 258,000 therms and eliminated the need for about one million kilowatt hours of electricity.

The increased energy efficiency came after the Times in 1981 commissioned Lockwood Greene Engineers Inc. to audit energy use at the plant, which prints about half the newspaper's daily circulation and produces and serves as distribution center for the Sunday editions.

The Lockwood Greene report outlined many possible operating changes, with the energy-management system and incinerator with waste-heat recovery the only ones that required significant capital. Both were installed in 1983 after the Times evaluated the recommendations and authorized the design.

With the savings realized, the new equipment virtually has paid for itself, Petzko said.

Manufactured by Johnson Controls, the so-called "multiplex" energy-management system consists of remote units that monitor and control operating equipment through exchange of information with a computer at a central station. Use of remote units adjacent to the plant's equipment reduces wiring costs, and additional remote units can be added easily as more equipment is installed or brought under the system's control.

The central station has the computer, operator's screen and a keyboard, which is situated in the administrative office to permit changes to energy-management strategies as desired.

The system uses two printers to record information generated on the screen; one printer is near the control unit and the second is in the operating engineer's maintenance shop to permit quick action in emergencies.

System hardware is designed to implement six control strategies:

- Limiting electrical use to predetermined levels or below.
- Cycling electrical equipment on and off for short periods.
- Shutting off unneeded electrical equipment.
- Turning equipment on at optimum times.
- Resetting temperatures automatically on air conditioning units in the offices.
- Monitoring temperatures, such as in electrical transformer rooms, to detect potential malfunctions.

The Lockwood Greene analysis contains several scenarios for burning wastes generated at the Carlstadt plant. Management decided to sell marketable wastes but to burn those that would be costly to dispose of in a landfill.

The incinerator selected can burn as much as 800 pounds of waste paper per hour in a continuous operation, with a scheduled monthly shutdown for maintenance. Waste paper is placed into a hopper and fed continuously into the incinerator. Waste ink is stored in a tank and later burned.

Waste entering the incinerator is burned in the primary chamber at 1,000 degrees Fahrenheit in a starved-air environment. Hot gases and unburned particles then are transferred to a secondary chamber, where the introduction of more air pushes the temperature of the gases to 1,500 degrees and ignites previously unburned particles. Auxiliary natural gas burners are fired only on start-up to create the necessary temperature or when temperatures fall too low to burn all of the waste.

Gene Maggio, The New York Times

Waste paper is collected for burning.

Exhaust gases from the incinerator pass through a heat-recovery boiler before being discharged into the atmosphere at about 400 degrees. The recovered energy is used to heat and cool the plant's pressroom and to generate domestic hot water.

Ash, which represents about 5 percent of the bulk material, is collected automatically and hauled to a landfill.

A major reason for the Times energy-management and heat-recovery program was the shrinking size of the New Jersey meadowlands landfill used by the Carlstadt plant. It went from 3,700 acres of available landfill in 1974 to less than 200 acres a decade later. The Carlstadt plant responded with technology that will satisfy its needs while contributing to the national goal of energy conservation.

Editor's note: The preceding was submitted in response to ANPA Technical Committee requests for innovative ideas. Send submissions to Alan Tepper, Technical Services Department, at The Newspaper Center in Reston, Va.

TECHNOLOGY NOTES

- Flint Ink Corp. recently **broke ground on a $12-million research facility**.

The 75,000-square-foot center near Ann Arbor, Mich., will be completed in October.

- Management of Newspaper Electronics Corp. has **purchased a majority ownership** in that maker and marketer of front-end systems for smaller newspapers.

NEC said the leveraged buyout will not affect its U.S. business activities.

- Rockwell International Corp. **purchased Allen-Bradley Co.**, a large manufacturer of industrial controls and automated manufacturing equipment with headquarters in Milwaukee.

A spokesman for the Graphic Systems Division of Rockwell said the line of Goss newspaper products should benefit from the acquisition.

Home-made core unwinder a success

The News Journal of Mansfield, Ohio, (evening, circulation 32,700) has built its own newsprint core unwinder using mostly spare parts found around the facility.

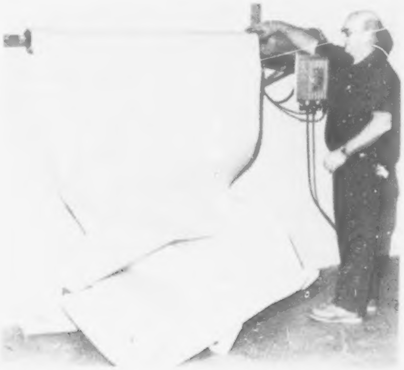
"The machine has been in service for (a year) now with no apparent problems," according to Production Manager Brian T. Dunn. "It has saved the newspaper at least 50 percent in man hours necessary to remove the paper from the cores."

Although commercially made core unwinders are available, Dunn said, their price often is too steep for smaller newspapers.

The News Journal's "electric paper unroller" was the brainchild of Howard F. Miller, the paper's mechanic. He got the idea while filling in for the person who regularly unwinds spent cores.

"I figured there had to be an easier, faster way of doing it," Miller said.

The cylindrical device is made of three metal shafts, a spring, a locking screw, a core holding cushion, an electric motor, a speed controller and wall-mounted brackets.



Miller demonstrates his invention.

Most of the parts—such as copper tubing, casings and an old variable-speed electric motor—were found around the building, Miller said. He crafted most of the other parts, including the shafts, at home on his lathe.

It took Miller two months, working in his spare time, to perfect the device, he added.

The machine can unwind a three-inch spent core in about 30 seconds, Miller said, "so we can unroll 25 to 30 cores an hour."

Dunn said the total cost of the device was about $200, or at least half the price of comparable devices offered on the market.

"It was a very inexpensive way to solve our core unwinding problem," he said. "This is geared to smaller newspapers. All the others on the market were of a heavy duty nature."

Miller said the device is so simply designed that other newspapers could "probably build it, if they had somebody who is mechanically inclined."

23 firms continue gifts to ANPA

ANPA's technical and research activities benefit from continuing donations of supplies from 23 manufacturers of various products, according to Director Technical Services Peter P. Romano.

He said a new gift from Du Pont Co. of $10,000 worth of graphic products brings to about $60,000 the value of annual donations to the Association, which include the approximately $30,000 in newsprint given each year by paper companies [presstime, Jan. 1986, p. 54].

Ongoing donors are:

Plates and plate chemicals—Anocoil Plate Division, Western Lithotech, 3M Printing Products Division, American Hoechst Corporation, NAPP Systems (USA) Inc., Hercules Inc.

Film and photographic supplies—Du Pont, Chemco Photoproducts Co., Eastman Kodak Co.

Press blankets, press rollers, paste-up supplies—New England Newspaper Supply Co., Midwest Publishers Supply Co., Reeves Brothers Inc.—Graphic Arts Division, Diamond Graphic Service Corp.

Press solvents, press chemicals, etc.—Anchor/LithKemko, Roberts & Porter Inc., Rycoline Products Inc., Graphic Arts Technical and Consulting Services.

Press supplies—Kendall Co., Jomac.

Inks and fountain solutions—Flint Ink Corp., U.S. Printing Ink Corp., General Printing Ink Co., J. M. Huber Corp.

Survey reminder

Deadline for returning questionnaires in the ANPA Annual Capital Expenditures Survey is Feb. 14. The survey is designed to determine member newspapers' expenditures for plant expansions, modernization and new equipment during calendar year 1985, and estimated expenditures this year.

For information, contact the ANPA Technical Services Department at The Newspaper Center, Reston, Va.

TECHNOLOGY CALENDAR

- **The Digital Image**, a conference sponsored by the National Composition Association, will be Feb. 27-28 at the Key Bridge Marriott in Arlington, Va.

- **Graph Expo West**, the biennial graphic arts show, will be March 1-4 at the Los Angeles Convention Center.

- The **Collier-Jackson Users Group** will meet March 1-4 at The Lincoln Hotel in Tampa.

- The Southern Newspaper Publishers Association will hold its **1986 Production Conference** March 9-11 at the Radisson Hotel in Orlando, Fla.

- The sixth annual **Seybold Seminars** on electronic publishing systems will be March 9-14 at the Beverly Hilton Hotel in Los Angeles.

- ANPA's **Pressroom Options III** symposium will be March 18-19 at the Hyatt Regency O'Hare near Chicago.

- The **Atex Commercial Users Group** will meet March 23-26 at the Westin Hotel in Washington, D.C.

- The **Newspaper Hardware Users Group** will meet March 27-28 at the Astro Arena Complex in Houston.

- The **Metro Users Group** will meet April 6-9 at the Lincoln Hotel in Dallas.

- **DRUPA '86**, the international graphic arts show, will be May 2-15 in Dusseldorf, West Germany.

Newspapers act against drugs

Four recent events have intensified the growing concern over possible drug abuse at newspapers and how such situations should be handled.

- At the Nashville Banner, a sportswriter and the chief photographer were dismissed for using "controlled substances" while on assignment.
- At The Kansas City Star and The Kansas City Times, a plan—later withdrawn—to use trained dogs to search for drugs set off a furor in the newspapers' newsroom and prompted a detailed explanation from the chiefs of Capital Cities/ABC Inc., owner of the dailies.
- At the Fort Worth Star-Telegram, three employees were discharged for drug-connected reasons.
- At The Rocky Mountain News in Denver, an undercover investigation into suspected drug use and trafficking at the paper was launched by the company but scuttled after reporters from the paper discovered the plan.

As an indication of the problem, some newspapers are now giving pre-employment physical examinations that include a drug-screening test [presstime, Nov. 1985, p. 58].

Nashville Banner Publisher Irby C. Simpkins Jr. said at a Jan. 19 press conference that the two former employees had admitted using "controlled substances," which he did not identify, and also admitted being present in situations where such substances were being used while on assignment covering sporting events.

Simpkins said their conduct was "improper and in violation of company policy." The Banner, he said, "will not tolerate or condone employees using or being under the influence of controlled substances while working or otherwise representing" the newspaper.

The publisher said the company has an employee assistance program and is not "insensitive" to employee problems. He said both of the dismissed employees were offered an opportunity to receive counseling and to "address the problems" created by their conduct so that they could maintain their employment. "Each declined the company's offer," he said.

The sportswriter had worked for the Banner since 1978 and the photographer since 1981.

"We do not believe that this is an isolated problem only at the Nashville Banner," Simpkins said. "Rather, it is reflective of the larger problem that faces our society as a whole, not just in the sports or media world. The media repeatedly carry stories concerning these problems. . . . If we in the media hold others up to public scrutiny, it is important that we impose similar standards upon ourselves."

Simpkins urged more attention to the problem and said the press should not rest "until the whole story of the impact of controlled substances is told."

At Capital Cities/ABC in New York City, Board Chairman Thomas S. Murphy and President Daniel B. Burke signed the Jan. 13 joint memo to employees in which they explained the company's position, noting that its policy "has recently become the source of some confusion and concern."

The company's "strict" policy with regard to employee drug use during working hours "is not new—nor is it complicated," they said. "It was created in 1984 by a representative group of employees in response to several bad incidents, one of which involved an employee fatality."

The executives said that any employee with a drug or alcohol problem is encouraged to get professional help anonymously at company expense. "We are committed to helping those employees," they said. "Likewise, we have made it clear that we absolutely cannot, and will not, tolerate drug trafficking, drug use or drug possession in the workplace."

> *"It is reflective of the larger problem that faces our society as a whole. . . ."*

Murphy and Burke noted that "mechanisms" are available for employees to get help, "and our emphasis is on encouraging employees with a problem to acknowledge the problem and use those mechanisms."

They said it is the company's responsibility to try to ensure that the workplaces and company vehicles are free of illegal substances. "The methods by which this will be done will be appropriate to the particular situations at our different locations," they said. "The procedures, which will be selected by managers and employees working together, can range from education and observation to active investigation that is within the law and always maintains respect for the rights of the individual."

Capital Cities/ABC said that no testing program exists in the company and that no searches of company premises have taken place. Questions were referred to Kekst and Co., a New York City public relations firm.

In Kansas City Jan. 13, James H. Hale, publisher of the two dailies, dropped the plan to use dogs trained to detect drugs after complaints from newsroom personnel.

A lawyer with a firm that has been involved in many newspaper cases suggested recently that "sniffer" dogs can be effective in drug searches without violating employee rights, and some newspapers have search policies that have caused no dissent from employees or unions [presstime, Sept. 1985, p. 53].

Hale said he received "no negative response from people in the community" to his announced plan to sweep for drugs. He noted the company has 1,600 employees, yet "the only people who complained were reporters and editors."

The publisher said he never intended to open desks and lockers.

"Here," he said, "if we found people on drugs while working, we would try to rehabilitate them." He said there were no plans "at the moment" to test for drugs during pre-employment physical examinations.

At another newspaper owned by Capital Cities/ABC, the Fort Worth Star-Telegram, three employees have been fired in the last eight months for use or possession of drugs. The company declined to say in which department the employees worked.

The Rocky Mountain News incident occurred last summer but has not been widely reported. The undercover investigation of drug use and trafficking at the newspaper was shut down after the operation was disclosed in the newspaper. Reporters from the Scripps Howard daily were investigating allegations that a Denver police sergeant who had a private consulting firm on the side had improperly used the police laboratory and other facilities. The reporters found their newspaper was a client of the sergeant's firm.

Violent incidents marred year of relatively few strikes

There were five newspaper strikes in the United States in 1985, but for the first year since 1972, no Canadian papers were struck. By comparison, there were three U.S. and two Canadian strikes in 1984 [presstime, Feb. 1985, p. 49].

The five strikes last year were in New Jersey (two), Pennsylvania (two) and Illinois. No U.S. paper west of the Mississippi River or in the South has been struck since 1981.

For the first time since a 1980 Teamsters strike against the Trenton (N.J.) Times, the beginning of a labor dispute was marked by serious violence again at a New Jersey newspaper.

Trucks leased by The News Tribune of Woodbridge, N.J., were damaged Dec. 30 as about 200 pickets gathered at the newspaper. The violence diminished with a county court's issuance of a temporary restraining order, but sporadic instances of broken windshields and slashed tires continued. The dispute involved 13 newspaper drivers employed by a private distributing company. They were represented by the Newspaper and Mail Deliverers' Union of New York and Vicinity.

The News Tribune was purchased Dec. 27 by Macromedia Publishing Co. of Hackensack, N.J., and picket lines went up at the newspaper that day after the new owners selected a new, non-union distributor. The 13 drivers claimed they were "locked out" by the newspaper.

The U.S. District Court in Newark ruled Jan. 14 that the new owner of the newspaper did not have to recognize the old delivery contract, but picketing continued in late January. The News Tribune has maintained publication and distribution throughout the labor dispute.

Similar violence, but on a larger scale, broke out the morning of Jan. 4, 1986, at the Chicago Tribune, site of another 1985 strike. The violence occurred during a gathering of about 10,000 union members and union sympathizers.

Delivery trucks were damaged by thrown rocks and bricks. Police arrested 37 people. Ten people were treated for minor injuries at the scene, and several others were treated at area hospitals.

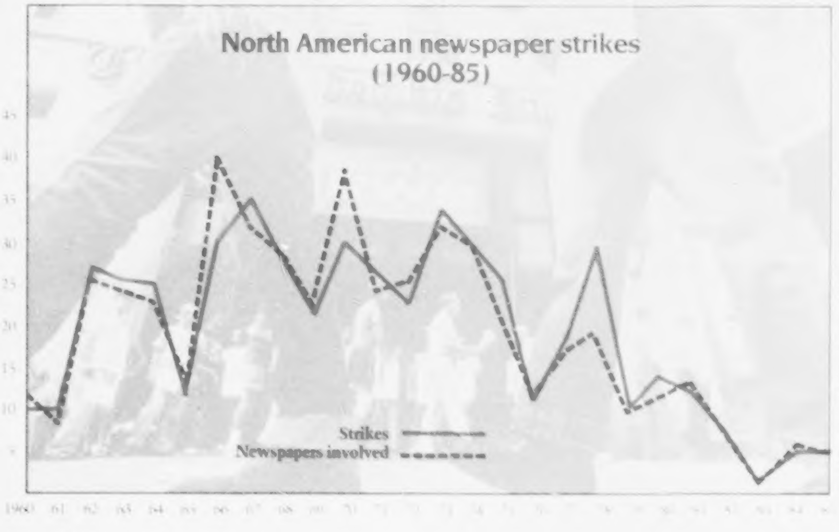
As in Woodbridge, a county court judge issued a temporary restraining order barring the three striking unions in Chicago from blocking entrances and exits.

The Chicago Tribune has continued publication and distribution since the July 18 walkout by about 1,000 printers, pressmen and mailers.

A 46-day strike against The Philadelphia Inquirer and Philadelphia Daily News by the Council of Newspaper Unions ended Oct. 22. The newspapers did not publish during the strike.

There also was a one-day strike by the Teamsters in Philadelphia April 14 that interrupted delivery of the Inquirer.

The fifth strike was called by the International Typographical Union against The Press of Atlantic City. The newspaper continued to publish and distribute, and the three-day strike ended Feb. 24.



North American newspaper strikes (1960-85)

NLRB judge issues divided opinion in bargaining case

An administrative law judge of the National Labor Relations Board has recommended that Landmark Communications Inc. of Norfolk, Va., be ordered to bargain with Local 219 of The Newspaper Guild. At the same time, he recommended that charges of certain alleged unfair labor practices committed by the company be dismissed.

The Guild represents editorial employees of The Virginian-Pilot and The Ledger-Star in Norfolk. The employees selected the union as their bargaining agent by a 105-88 vote in a Dec. 23, 1983, NLRB-conducted election.

During 1984, the parties met on nine occasions to negotiate a single contract covering editorial employees at the two papers. Based on charges filed with the NLRB by the union, a complaint was issued against the company alleging, among other things, that the company had violated the Taft-Hartley Act by failing to furnish information requested by the union, by insisting to an impasse on unilateral control of wages and by questioning employees concerning their union activities and sentiments.

Judge Donald R. Holley said he was "unwilling" to find that the company violated the act by going to an impasse on proposals giving it sole control of setting wages.

"In sum," he said, "I conclude that the record reveals that both the company and the Guild bargained hard on the subject of wages during their negotiations. The Guild strenuously sought to cause the company to agree to a schedule of minimums, and the company strenuously sought to cause the Guild to agree its merit-pay system should be used to determine the wages of employees during the term of any agreement reached."

The judge also found, however, that the company violated the act by polling employees to ascertain their union sentiments, by refusing to furnish information concerning persons that the company contended were supervisors and by refusing to bargain over the issuance of company parking lot stickers.

Although the latter issue "is a close one," Holley said that parking benefits are a form of wages subject to bargaining.

Neither the company nor the union filed exceptions to Holley's decision.

Labor/management cooperation urged at conference

Cooperation between management and unions, based on trust and equity, "is essential" if the United States is to succeed economically, U.S. Department of Labor official Stephen I. Schlossberg told the seventh annual ANPA Labor and Personnel Relations Conference.

His theme fit well with many of the other messages presented at the Jan. 6-8 conference in San Diego where subjects explored included cooperative efforts in the newspaper industry such as "quality circles," job-sharing, joint union-management committees and training programs.

Stephen I. Schlossberg

Rick McCarthy, San Diego Union-Tribune

"Enlightened capitalism is the wave of the future," said Schlossberg, who is deputy undersecretary of labor for labor-management relations and cooperative programs.

While it will be difficult to break the adversative pattern of the past, he said, there are experiments going on today, such as sharing of information and joint problem-solving, that could change the future. "Unions were organized for a voice in the system," noted Schlossberg, a former general counsel of the United Auto Workers union.

A program for improving workers' health was explained by William L. Coors, chairman and chief executive officer of Adolph Coors Co. in Golden, Colo. He described the self-insured health, or "wellness," program at his company where employees are helped to maintain their health through a stress management center. Coors was followed by a workers' compensation panel that discussed claims arising from tangible and intangible causes.

More than 100 newspaper executives attended this year's conference. Next year it will be Jan. 11-13 in Boca Raton, Fla. ☐

Court denies arbitration stay

A dispute between the Chicago Tribune and paper handlers at the newspaper apparently will go to arbitration following an unsuccessful effort by the newspaper to get a stay of an arbitration order.

The 7th U.S. Circuit Court of Appeals denied the Tribune's request to stay pending appeal of a federal district judge's order requiring arbitration of the dispute with Local 2 of the Graphic Communications International Union, which represents the paper handlers.

The union's grievance concerns the company's decision to bypass the union's hiring hall, or "callroom," in hiring workers. The company's control of hiring is a key issue in the current strike against the Tribune by two other unions representing mailers and pressmen. (See story, p. 55).

"Arbitration is supposed to be swift," the court said. "It will not be swift if orders to arbitrate are routinely stayed pending appeals from those orders."

The court added that "the only harm that an order to arbitrate does is to make the party against whom the order is issued litigate a dispute in a forum not of his choosing."

(Graphic Communications Union v. Chicago Tribune Co., USCA7 No. 85-2383) ☐

Settlement reached in 'comparable worth' case

Washington state and the American Federation of State, County and Municipal Employees have reached a tentative settlement of the union's so-called "comparable worth" lawsuit.

Under the agreement, the union will withdraw its petition for a rehearing by the 9th U.S. Circuit Court of Appeals, which last September overturned a district court ruling that upheld the union's claim against the state for pay increases for certain state employees [presstime, Oct. 1985, p. 52].

In return, the state agreed to a plan to provide pay raises totaling $480 million over the next seven years to state employees in female-dominated job classifications. The settlement does not provide for back pay.

In its 1985 session, the Washington legislature set aside $41.4 million for pay adjustments effective April 1, 1986, in an effort to settle the lawsuit. The agreement is subject to approval by the legislature and by U.S. District Judge Jack E. Tanner, who had ruled in 1983 that the state discriminated in compensation on the basis of sex when it paid less for predominantly female jobs than for predominantly male jobs requiring equivalent or lesser skills.

The state Senate ratified the agreement Jan. 21, and it is pending in the House. ☐

ANPA Director/Technical Research George Cashau (right) explains press control panel to officials of The Newspaper Guild during a tour of The Newspaper Center. From left are Richard J. Ramsey, executive secretary of the union's contract committee, ANPA Executive Vice President Jerry W. Friedheim, J. William Blatz, director of Guild field operations, Guild President Charles A. Perlik Jr. and David J. Eisen, Guild director of research and information.

Arbitrator upholds dismissal for work-release violation

An arbitrator has sustained the dismissal of a Baltimore Sun paper handler who had received a jail sentence and was participating in a work-release program.

The arbitration is believed to be the first in the newspaper business where a urine test for drug use was involved (presstime, Nov. 1985, p. 58).

By agreement between company and union attorneys the case was expedited. It was heard Dec. 7, 1985, and Arbitrator Joseph M. Sharnoff gave his decision the following day in a conference telephone call.

The grievant had received a 90-day jail sentence for driving without a valid license. The company subsequently agreed to let him work under the program, which required that he return to Baltimore County's work release facility after completing his shift. He was discharged after he failed to report for work Sept. 14, 1985.

Arbitrator Sharnoff found that when the grievant returned to the facility Sept. 13, the officer in charge noted alcohol on his breath. A urine specimen was taken, and the urinalysis showed traces of both alcohol and marijuana.

The obligation to remain drug- and alcohol-free is one of the conditions of the work-release program. The grievant was taken out of the program and transferred to a detention center after the results of the urinalysis were obtained.

Sharnoff noted that the grievant had participated in a company-paid chemical addiction rehabilitation program in lieu of being discharged in 1984 for reporting to work in an "unfit" condition.

The arbitrator said he could not agree with the position of the grievant's union, Local 31 of the Graphic Communications International Union, that his incarceration and subsequent loss of work-release privileges made his absence "involuntary" and therefore excusable.

Comment period extended on reporter exemption

The U.S. Labor Department's Wage and Hour Division has extended to March 22 the comment period on the question of whether newspaper reporters should be recognized as "professional" employees exempt from coverage under the Fair Labor Standards Act. The division had set Jan. 21 as the deadline for receiving comments.

Meanwhile, trial began Jan. 22 in U.S. District Court in Concord, N.H., on the Concord Monitor's contention that its reporters are professional employees (presstime, Jan. 1986, p. 59).

Psychiatrists will act on reinstatement of discharged printer

The San Jose (Calif.) Mercury News has been directed by an arbitrator to reinstate a discharged printer on the condition that psychiatrists certify he is in "an emotional condition appropriate to his return to work."

The printer was discharged July 29, 1985, following an incident in which he pointed an X-acto knife toward the abdomen of a supervisor. The supervisor backed up, left the composition room and reported the incident to management.

The grievant had been employed at the newspaper since 1969 and had a lifetime job guarantee subject to discharge for cause. He had been fired in 1983 for "neglect of duty" but was reinstated the next year at the request of Bay Area Typographical Union No. 21, which submitted a letter to the company from a psychiatrist stating that he had recovered from a past mental illness.

Arbitrator Gerald D. Marcus noted that although the grievant "presents a problem to the employer," the only disciplinary action taken against him since his reinstatement was a warning notice for negligent work.

The arbiter noted that in the incident that triggered the discharge, the grievant did not actually move toward the supervisor, and that immediately thereafter, he returned to work. It was not surprising that the grievant had a knife in his hand because it was his regular working tool and he had been using it, the arbiter added.

Marcus described the grievant as "a loner" whose "erratic" behavior was disturbing to his fellow employees.

The arbitrator said he was "hardly qualified" to express an opinion concerning whether the grievant required psychiatric care. However, he said, because of the possibility that the grievant did not fully understand the significance of his conduct, his discharge could not be sustained.

At the same time, Marcus directed that before he is reinstated, the printer should be examined by a psychiatrist of his choice and by one selected by the newspaper. Both psychiatrists must certify that the grievant is able to return to work and, if so, under what conditions, such as a period of psychiatric care.

Marcus also ordered the company to make contributions to the union's welfare fund to cover the grievant's medical expenses.

Additional arbitration awards

Baltimore Sun, ITU: Joseph M. Sharnoff converted to a one-day disciplinary suspension the three-day suspension of a printer for excessive absenteeism.

Cincinnati Post, Guild: Joseph Krislov upheld the union by ruling that a Feb. 27, 1984, grievance concerning positions exempt from contract coverage is arbitrable.

Manchester (N.H.) Union Leader, Guild: Alexander Macmillan sustained the two-day suspension of a reporter for insubordination.

New York Times, Guild: Milton Friedman upheld the company by ruling that the status of a free-lance photographer did not change to that of an employee because of an increase in his volume of work.

San Jose (Calif.) Mercury News, Guild: Adolph M. Koven converted to a written reprimand the one-day suspension of a reporter for not pursuing a story adequately.

San Jose Mercury News, Guild: Gerald R. McKay ruled that the company did not violate the labor agreement by assigning an employee to perform bargaining unit work on the copy desk as part of a management training program.

Washington Post, ITU: Arnold Ordman ruled that the company wrongfully barred a mailer from returning to work after a doctor certified he had recovered from an on-the-job injury; however, he denied the union's request for back pay.

Washington Post, ITU: Frederick U. Reel reinstated with back pay a mailroom helper who had been fired for leaving work early.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Record set in 1985 for newsprint use

Newsprint consumption by all U.S. users and by U.S. daily newspapers was at record levels in 1985 according to preliminary figures compiled by the ANPA Newsprint and Transportation Department.

All users consumed 11,596,000 metric tons, an increase of 1.4 percent from the previous record of 11,431,000 tons set in 1984.

Consumption by U.S. dailies was up 2.7 percent from the previous year's record total: 8,762,084 metric tons versus 8,531,857.

Despite the record U.S. consumption, there were declines in North American production and shipments, reflecting, in part, a surge in use of newsprint imported from abroad.

Canadian production for 1985 totaled 8,990,691 metric tons, a decrease of 0.3 percent from 1984. Shipments from Canadian mills totaled 8,991,651 tons, also a decline of 0.3 percent.

Last year's production by U.S. mills was 4,923,138 metric tons, down 2 percent. Shipments from U.S. mills totaled 4,926,816, down 2.7 percent.

Canada's newsprint operating rate for 1985 was [illegible] percent and in the United States it was [illegible] percent.

Speeches

Katharine Graham

Eugene C. Dorsey

Dan K. Thomasson

James V. Risser

Single copies of the following speeches are available from the ANPA Public Affairs Department at
The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Terrorism and the Media
Katharine Graham, chairman, The Washington Post Co. The English-Speaking Union of the Commonwealth's Churchill Lecture, London, Dec. 6

The Importance of Having Minority Journalists in the Newsroom
Gene Roberts, executive editor, The Philadelphia Inquirer. American Society of Newspaper Editors Regional Minorities Conference and Job Fair, Philadelphia, Dec. 13

In Defense of Advocacy and Activism in American Journalism
Jay T. Harris, executive editor, Philadelphia Daily News. Society of Professional Journalists, Sigma Delta Chi, annual convention, Phoenix, Nov. 15

Public Attitudes Toward the Press—A Summary
Gallup Organization study commissioned by The Times Mirror Co., Los Angeles. Released in New York City, Jan. 14

ANPA Telecommunications Round Up: March 1985-October 1985
Kathleen Criner, ANPA director/telecommunications affairs, and Jane Wilson, ANPA assistant director/telecommunications affairs, Reston, Va. ANPA Telecommunications Committee meeting, Washington, D.C., Oct. 8

The Gannett Foundation and the Gannett Center for Media Studies—What They Are All About
Eugene C. Dorsey, president, Gannett Foundation, Rochester, N.Y. Gannett Center for Media Studies symposium, New York City, Nov. 21

From the ANPA Newsprint Committee meeting, Pointe Claire, Quebec, Nov. 6:

The Newsprint Industry Today and Future Investment Directions
Brian F. Topp, financial analyst, Midland Doherty, Toronto

Us and Them: An Investment Analyst's Views
John M. Duncanson, financial analyst, McLeod Young Weir, Ltd., Toronto

From the Scripps Howard Foundation Roy W. Howard Seminar
on Public Affairs Reporting, Bloomington, Ind., Sept. 11:

Journalists' Assignments Should Be to Report What Is Important
Dan K. Thomasson, editor, Scripps Howard News Service, Washington, D.C.

A Discussion of the Press and Public Affairs Reporting
James V. Risser, director, John S. Knight Fellowships and professor of communication, Stanford University, Stanford, Calif.

Record number of dailies sold in 1985

BUSINESS ROUND-UP

Last year, a record 62 U.S. dailies changed hands in completed or still-in-process sales. That tops by one the 61 sold in 1979.

"The dollars [offered] started to squeeze sellers out of the woodwork," said Barry A. Kaplan, a media analyst at Bear Stearns & Co. in New York City.

But the rush to buy newspapers was just part of a more general stampede to acquire communications properties, particularly television stations. The year saw "an incredible sellers' market chasing media properties in general," Kaplan said.

Some of the biggest sales—like the Evening News Association of Detroit and the Des Moines Register and Tribune Co. to Gannett Co.—were "put into play by some external force," said media analyst John S. Reidy of Drexel Burnham Lambert.

Initial unsuccessful bids from potential acquisitors essentially put those companies on the market. Once the bidding began, shareholders of the privately held companies realized how much they could get for their stock, Reidy noted.

1985's fast sales pace was set early in the year when owners of 16 newspapers sold or agreed to sell the properties during the first quarter [presstime, April 1985, p. 10].

And the first quarter of 1986 is also producing interesting activity on the acquisition front.

Most notable was the announcement Jan. 9 that the Courier-Journal & Louisville Times Co. is for sale.

The sale will encompass The Courier-Journal (morning, circulation 170,699), The Louisville Times (evening, 128,572), WHAS television and radio, and Standard Gravure Corp., a commercial printing firm. Discord within the owning family led Barry Bingham Sr. to put the company on the market.

In other developments:

- The Colorado Springs Sun may be headed for extinction. Freedom Newspapers Inc., which owns the rival Colorado Springs Gazette Telegraph (combined circulation 104,511), disclosed Jan. 22 it is buying certain assets of the Sun (morning, 45,301) and will close the tabloid if the transaction is approved by the Justice Department.

The Oklahoma Publishing Co., owner of the Sun, has agreed to sell the production equipment, library, subscription lists and the paper's name for $30 million.

Edward L. Gaylord, president of Oklahoma Publishing, said Jan. 24 "there will certainly be no closing of the paper until we hear from the government," and "that could take months."

- The St. Louis Globe-Democrat, which suspended publication Dec. 6, was purchased after seeking protection from creditors under bankruptcy laws in September [presstime, Dec. 1985, p. 51]. A court trustee Jan. 16 accepted a $500,000 check from two local businessmen who bought the newspaper and announced it would restart publication Jan. 27.

The new owners, John B. Prentis and William E. Franke, have said they are prepared to invest more than $4 million in the daily.

- The Federal Communications Commission Jan. 13 cleared the way for Gannett's acquisition of the Evening News Association [presstime, Jan. 1986, p. 62].
- A last-minute attempt to save the Columbus (Ohio) Citizen-Journal failed, and that newspaper ceased publication Dec. 31. Ohio business consultant Nyles V. Reinfeld, head of a company that had agreed to purchase the 117,902-circulation morning paper from Scripps Howard, was unable to raise enough money to continue it as an independent operation after a joint operating agreement with The Columbus Dispatch expired Dec. 31.
- Two of the men who participated in the opening but unsuccessful bid for the Register and Tribune Co. bought their first newspaper Dec. 27. Michael G. Gartner and Gary A. Gerlach, former top executives at the Des Moines company, bought the Worthington (Minn.) Daily Globe for an undisclosed amount. It is a six-days-a-week, 16,000-circulation morning paper. ☐

DAILY GLOBE
WORTHINGTON, MINNESOTA
MONDAY, JULY 22, 1985
Almost there
First steel strike in 25
company

James L. Vance, Paul D. Gruchow, and Owen Van Essen of Worthington, Minnesota, have sold

The Worthington Daily Globe

To Midwest Newspapers, Incorporated

This represents the first newspaper acquisition by Midwest Newspapers, recently created by Michael G. Gartner and Gary G. Gerlach, formerly executives with the Des Moines Register and Tribune Co.

We are proud to have served as the broker for the sellers in this transaction

Ranks of U.S. dailies declined by 10 last year

There was a net loss of 10 paid-circulation daily newspapers in the United States last year, compared with a net loss of 11 in 1984. Thus, at year-end, there were approximately 1678 U.S. dailies.

There was no change in the total of 113 Canadian dailies last year, compared with a decrease of two in 1984.

Eight new U.S. dailies were started in 1985. However, 18 others stopped daily publication. Of those 18, seven suspended publication, seven were lost through mergers, and four converted to weekly publication, according to information available to ANPA. (One of the suspended dailies has resumed publication, and another plans to resume shortly.)

Information obtained after publication of last year's report [presstime, Feb. 1985, p. 51] shows that the New Lexington (Ohio) Perry County Today, which was on the 1984 list as a new daily, suspended later that year.

New dailies started in 1985 were:

- Mountain Home (Ark.) Baxter Bulletin (April 1)
- Gainesville (Ga.) Tribune (July 2)
- Eunice (La.) News (N/A)
- Fallon (Nev.) Lahontan Valley News (Jan. 7)
- Marion (N.C.) McDowell News (Oct. 1)
- Woodward (Okla.) News (March)
- Berwick (Pa.) News (April)
- Hilton Head Island (S.C.) Island Packet (Sept. 30)

Suspending were:

- South Gate (Calif.) News-Signal (September)
- St. Louis Globe-Democrat (Dec. 6)
- New York City Tribune (Aug. 26)
- Charlotte (N.C.) News (Nov. 1)
- Winston-Salem (N.C.) Sentinel (March 29)
- Columbus (Ohio) Citizen-Journal (Dec. 31)
- Berwick (Pa.) News (August)

Merging were:

- Pensacola (Fla.) News (with Pensacola Journal—June 3)
- St. Paul (Minn.) Pioneer Press and Dispatch (to all-day publication—Jan. 1)
- Biloxi (Miss.) Sun and Herald (to all-day publication—Oct. 1)
- Binghamton (N.Y.) Press (with Binghamton Sun-Bulletin—Sept. 30)
- Woodward (Okla.) News (with Woodward Press—Oct. 26)
- Johnson City (Tenn.) Press-Chronicle (evening edition merged with morning edition—Sept. 30)
- Bristol (Va.) Herald Courier and Virginia-Tennessean (to all-day publication—March)

Converting to weekly were:

- Burbank (Calif.) Review (April 1)
- Fullerton (Calif.) News-Tribune (Jan. 1)
- Mount Vernon (Ind.) Democrat (May 1)
- Grafton (W.Va.) Mountain Statesman (Aug. 1)

UPI readies reorganization plan

United Press International in late January was preparing to submit to U.S. Bankruptcy Court Judge George F. Bason a "plan of reorganization" that could lead to completion of the wire service's sale and take it out of Chapter 11 bankruptcy in a matter of months.

The plan, which will become a public document once submitted to the court, will be the subject of a public hearing. Then Bason will decide if the plan is worthy of submission to creditors who in turn would have 30 days to decide whether to accept or reject its terms.

UPI officials said the plan must be approved by a majority of the creditors; that majority must account for at least 75 percent of the company's debt.

Meanwhile, efforts of Financial News Network to block the purchase of UPI by Mexican publisher Mario Vázquez-Raña and Houston businessman Joe Russo have been abandoned in favor of a damage suit filed in U.S. District Court against the buyer, UPI and the Wire Service Guild [presstime, Jan. 1986, p. 63]. A cable television programming company that specializes in business and financial news, FNN seeks about $975 million in damages. FNN, which has withdrawn a motion in Bankruptcy Court to submit another bid, claims in its new lawsuit that the defendants conspired to determine the outcome of bidding for UPI.

Other, related lawsuits also are pending, including one in which Vázquez-Raña charges FNN with trying to interfere illegally with the sale.

Buying co-op ends first year in good shape

A purchasing cooperative for independent newspapers and privately owned groups completed its first full year of operation—1985—with more members and orders.

Publishers Associated to Gain Economy, or PAGE, is now making purchases for 71 dailies and seven non-dailies with total circulation of 1.2 million.

Members range in circulation from 6,000 to 130,000, the largest being the Asbury Park (N.J.) Press. According to H. Charles Berky, general manager of the co-op, the average circulation of members is about 30,000. The preponderance of membership is in the Northeast and Midwest.

PAGE, which signed its first supply contract in mid-1984, was organized to enable members to pool their orders and get discounts and rebates otherwise unavailable [presstime, May 1983, p. 65].

Purchasing volume has increased each month, reaching $1.3 million last November, the most recent tabulation available, Berky said.

The cooperative has bought newsprint, ink, press plates and other graphic arts supplies. This year, it expects to purchase $15-million worth of newsprint, Berky said. It also is negotiating a contract for circulation supplies and is exploring ways to make equipment purchases. PAGE will basically expand into "anything that makes sense to its members," he added.

With offices in King of Prussia, Pa., the non-profit cooperative charges members a fee of 1 to 2 percent of each purchase, Berky said. If an operating surplus exists at the end of PAGE's fiscal year, it is divided among members in proportion to their purchases.

Tully resigns after admitting falsities

A new publisher of The Arizona Republic and The Phoenix Gazette to replace Darrow (Duke) Tully had not been named by late January.

Tully resigned Dec. 26, after Maricopa County Attorney Tom Collins told a press conference that he had found no evidence of Tully's claimed service in the U.S. Air Force. Tully subsequently issued a statement admitting that he had never served in the military and resigned as publisher "in the interest of preserving the integrity" of the newspapers.

Richard Nixon to address Convention AP lunch

Former President Richard M. Nixon has been added to the list of headliners who will speak during the 100th Annual ANPA Convention in San Francisco April 21-23.

Nixon will address the annual Associated Press lunch on the Convention's opening day.

Richard M. Nixon

In other additions to the program for the Convention week (presstime, Jan. 1986, p. 67), United Press International is organizing a panel discussion on terrorism to be presented at a General Session on Tuesday, April 22. Helen Thomas, UPI White House correspondent, will be among the participants. UPI also plans to be host for a reception April 20, the eve of the Convention.

Also, the ANPA Convention Arrangements Committee has announced that a new pre-Convention event, "Expert Centers," will make its debut on the weekend before the Convention formally begins. ANPA staff and other experts will be available April 19 and 20 from noon to 6 p.m. for informal consultation on a variety of subjects. Currently, centers are planned on labor and personnel issues, technical operations, legal, postal and government affairs, advertising and marketing, and insurance.

The "Expert Centers" will be set up in the Fairmont Hotel's Gold Room, where Convention registration also will take place those days from noon to 9 p.m.

Registration information was mailed to Association members in January. Forms should be returned to ANPA by March 15.

Anticipated Program in Brief

	Monday April 21	Tuesday April 22	Wednesday April 23
6:30	presstime Fun Run		
7:30	Eye Opener	Continental Stand-up Breakfast	Eye Opener
8:00	ANPA Keynote Breakfast	ANPA Annual Business Meeting	General Session Breakfast
		General Session	Break
10:00	Break	Break	General Session
	Associated Press Annual Meeting	General Session (NAB)	
		NAB Annual Business Meeting	
12:00	Associated Press Reception	Reception	Reception
12:30	Associated Press Lunch	ANPA Lunch	ANPA Lunch
1:00	Four Clinic Sessions	Four Clinic Sessions	General Session
5:00 7:00	Times-Mirror Reception	King Features Reception	Convention Adjourns

ANPA Executive Vice President Jerry W. Friedheim (left) consults with University of Minnesota Professor Emeritus Edwin Emery, who is writing a 100-year history of the Association. Emery is author of the original history of ANPA published in 1950 and a 75th anniversary edition in 1962.

Attorney Rush promoted by ANPA

Tonda F. Rush has been promoted to ANPA assistant general counsel.

Rush joined ANPA in October 1983 as government affairs counsel. She has worked on postal matters and on First Amendment and other issues.

Tonda F. Rush

Previously, she was director of the Freedom of Information Service Center in Washington, D.C., a joint project of the Reporters Committee for Freedom of the Press and the Society of Professional Journalists, Sigma Delta Chi.

Rush received her law degree in 1979 from the University of Kansas, where she also received a bachelor's degree in journalism in 1973.

Her promotion means ANPA now has two assistant general counsel. The other is Claudia M. James.

over-set

Pentagon papers

The Department of Defense is spending about $119.3 million a year on newspaper and magazine subscriptions, according to a report issued by the DOD inspector general.

Most of the publications were for military libraries, but more than one-third went to the offices of senior officers and for other non-library use. The 50-page audit report concluded that the amount spent was excessive.

But will it say 'no comment'?

The press announcement may be about to go the way of space shuttle chatter, instant polls on television and sports scores. Yes, the 900-number press release is at hand.

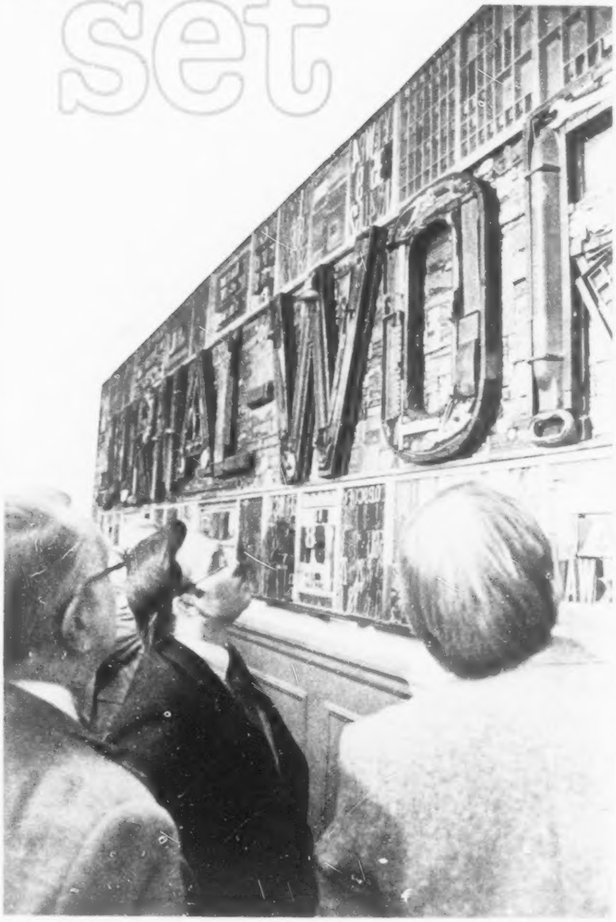
The "900" service allows someone calling a number with that area code to listen—but not talk—to a prerecorded message or an ongoing event.

So far, about half a dozen 900-number press announcements have been aired, and AT&T spokesmen say they are confident press-announcement use will expand as more organizations and individuals become aware of its potential.

Hookups to standard telephone lines cost $250; callers are charged 50 cents for the first minute and 35 cents for each minute thereafter. Calling 1-900-555-1212 yields a listing of "900" numbers open to the public on a given day.

Calls cannot be made to "900" service numbers with credit cards or operator assistance or from coin telephones, hotels and some business phones.

Since the service began in 1981, about seven million people have called "900" numbers for various information.



Mural captivates Lawrence Mayor Mike Amyx (center) and two businessmen from the area.

What is 23-feet long, 5½-feet high, and made of relics from the back shop?

The Lawrence (Kan.) Daily Journal-World has a new display in its lobby that will warm the hearts of anyone who was ever associated with the hot-metal era of newspapering.

It's a one-of-a-kind artistic "assemblage" of old newspaper type and printing equipment. The pieces, which fill 18 old type cases in the 5½-by-23-foot collage, are momentos of days before the Journal-World shifted to cold type in 1974.

Many of the components were arranged across the panel to spell the words "Journal-World."

Creator of the one-ton-plus piece is Robert Schneeberg, a Hallmark greeting card company artist internationally known for his murals. One of his other artworks is a mural that hangs in the conference room of Universal Press Syndicate. The Journal-World project took him eight weeks at his Hallmark studio workshop in Kansas City, Mo.

For many Journal-World staff members, the end product turned out to be much more than a collection of obsolete oddities. "Unless you've been around awhile," said one longtime employee, "you can't begin to imagine how many memories there are for a lot of us in that big type box on the wall."

Large type scores points with seniors

If your newspaper is looking a little gray lately, it may be time to listen to "Gray Power"—and enlarge the type.

Particularly if you are located in Pinellas County, Fla., where 29 percent of the population is over 65.

The Evening Independent (circulation 35,731) has been using 10-point body type—compared with an industry norm of 9-point—for five years. Its much larger sister paper, the St. Petersburg Times (morning, 257,105), will switch to 10 this year.

It's a case of responding to readers who rate small type second only to ink rub-off as their pet peeve, says Michael Foley, Times assistant managing editor.

According to a 1982 study conducted by the Newspaper Advertising Bureau, nearly one-third of the elderly people surveyed reported difficulty reading newspaper type.

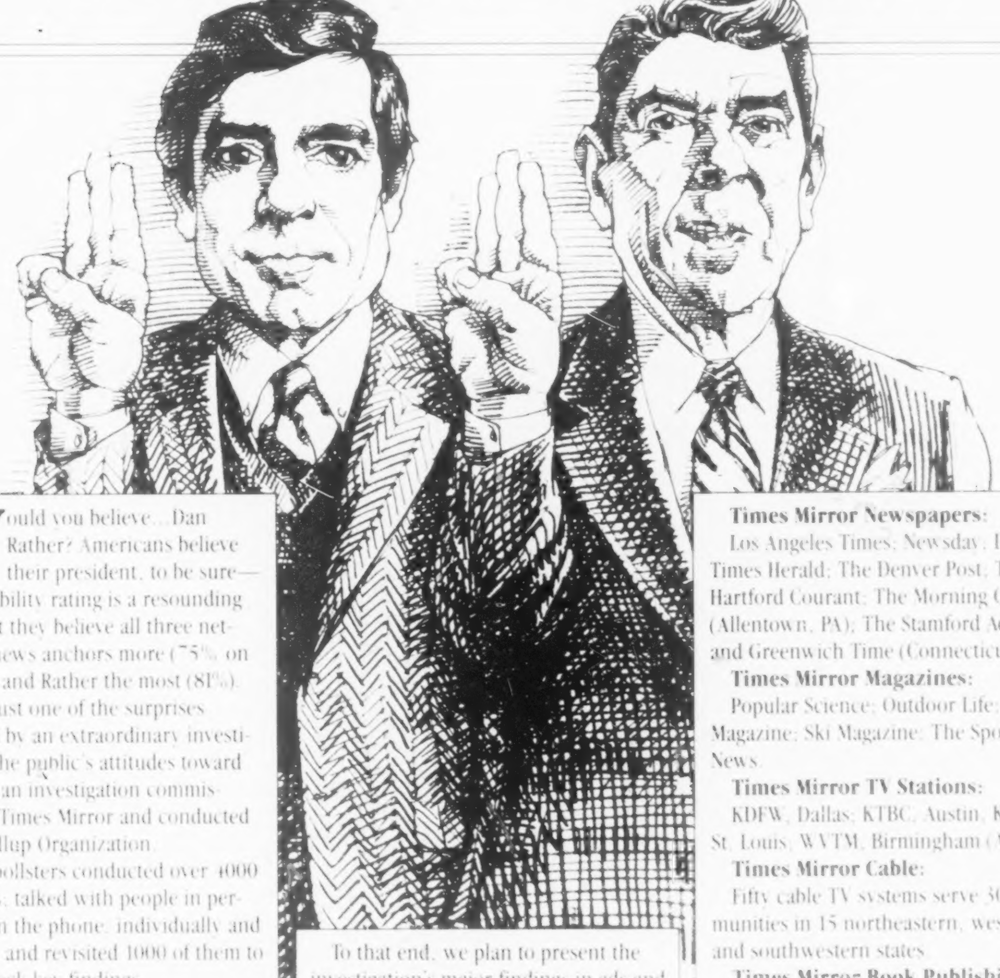
One paper, The New York Times, provides a large-type weekly synopsis of the news. Printed in 16-point type, it has a circulation of about 10,000.

An ironic twist to a byline

Some people probably did a double take when reading The New York Times' front-page story reporting on the shakeup at the U.S. Postal Service with Albert V. Casey replacing Paul N. Carlin as postmaster general. The line of succession to that job can be traced back to Benjamin Franklin, of course. And as fate would have it, the byline over the story was that of Ben A. Franklin, general assignment reporter in the Washington bureau.

"The People & The Press," Ad #1 in a series

Who's more believable?



Would you believe... Dan Rather? Americans believe their president, to be sure—his believability rating is a resounding 67%—but they believe all three network TV news anchors more (75% on average)... and Rather the most (81%).

This is just one of the surprises uncovered by an extraordinary investigation of the public's attitudes toward the press, an investigation commissioned by Times Mirror and conducted by The Gallup Organization.

Gallup pollsters conducted over 4000 interviews; talked with people in person and on the phone, individually and in groups; and revisited 1000 of them to double check key findings.

Nothing like it had ever been done before.

So why did we do it?

First, because as one of America's largest newspaper based media companies, we need to know exactly how the public views the press... and no prior study has dug deep enough to tell us.

We also saw in the study a way to stimulate a dialogue between the public and the press that would strengthen that essential relationship.

To that end, we plan to present the investigation's major findings in ads and public meetings, and to invite and respond to your comments.

We also plan to repeat the study regularly so we can track attitudes over time.

Who we are

We publish newspapers, magazines and books and operate TV stations and cable systems (see list below), so we have a special interest in the dialogue we aim to stimulate with you.

Simply put, it will help us serve our readers and viewers better.

Times Mirror Newspapers:

Los Angeles Times; Newsday; Dallas Times Herald; The Denver Post; The Hartford Courant; The Morning Call (Allentown, PA); The Stamford Advocate and Greenwich Time (Connecticut).

Times Mirror Magazines:

Popular Science; Outdoor Life; Golf Magazine; Ski Magazine; The Sporting News.

Times Mirror TV Stations:

KDFW, Dallas; KTBC, Austin; KTVI, St. Louis; WVTM, Birmingham (AL).

Times Mirror Cable:

Fifty cable TV systems serve 300 communities in 15 northeastern, western and southwestern states.

Times Mirror Book Publishing:

Matthew Bender & Co., law books; C.V. Mosby and Year Book Medical Publishers, medical books; Harry N. Abrams, art books. Mirror Systems, computer software; Learning International, training programs.

If you'd like to know more about us, contact Donald Kellermann, Vice President, Public Affairs, Times Mirror, Times Mirror Square, Los Angeles, CA 90053, (213) 972-3847.

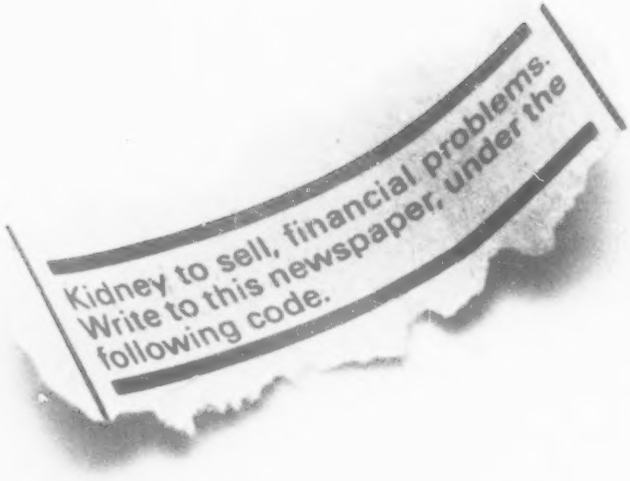
President
Gannett Co., Inc.



Kidney to sell, financial problems. Write to this newspaper, under the following code.

WE DISCOVERED A KIDNEY DISEASE TRANSPLANTS WON'T CURE.

When two Pittsburgh Press reporters began investigating organ transplants, they found a pattern of greed and corruption that spread from Pittsburgh and other U.S. cities all the way around the world.

They found that poor people in foreign countries were willing to sell a healthy kidney for cash—or to pay off a gambling debt. They found doctors willing to bend hospital policy so that the richest, not the sickest, patients got kidney transplants. And in the middle they found brokers, people bartering kidneys for profit.

Their series, "The Challenge of a Miracle: Selling the Gift," drew worldwide public attention. The ensuing controversy helped prompt reforms of the international transplant system that continue today.

Such impact is no accident. For more than a century, Scripps Howard papers have broken stories that have led to improvements in their communities and across the nation. We've uncovered scandals, exposed problems, led the fight for responsive government, care for the needy and concern for quality of life.

And in Pittsburgh, this kind of aggressive reporting may have helped rescue a medical miracle.

Introducing The Mycro-Comp™ 550 From Mycro-Tek.

Our new Mycro-Comp 550 is a newspaper publishing system specifically designed for weeklies and small dailies — and the limited budgets they have to work with.

A Real Front-End System.

The Mycro-Comp 550 is a totally integrated system — with a PC price tag. For only $136 a week, you can have four terminals, a network controller, typesetter interface that works with the new LaserSetter, width tables, and a spare parts kit. You also receive three days of system training and four days on on-site consultation.

A System That Grows With You.

The Mycro-Comp 550 is completely upgradeable so your system can grow as your needs grow. Because Mycro-Tek designs, manufactures, services and supports everything we sell, you have added assurance your system will never become an orphan.

A System You Can Trust.

Perhaps the 550's biggest plus is that it's a Mycro-Tek product. For 10 years, Mycro-Tek has developed hardware and software for the newspaper industry. So you deal with one source — for everything — all the time.

If you'd like to know how we can put the Mycro-Comp 550 System to work for your publication — or only $136* a week — call us today.

INDEX VOLUME 8, NUMBER 3 MARCH 1986

Special Report *Reflecting the general labor picture nationwide, the role of unions at U.S. newspapers has diminished. To strengthen their positions, some unions have been seeking to merge. One scenario has a single big union being formed. But many newspaper labor experts believe that even such a newspaper mega-union won't stop the decline. Improved newspaper personnel relations are given some of the credit for unions' weakening influence. While newspaper labor leaders concede membership is down, they deny any loss of power.* 22

Saturday's paper *Considered a "stepchild" of the newspaper business, the Saturday edition is often overlooked. But some say it's full of potential.* 5

Climbing Fuji *Japan's Fuji is challenging Kodak in the color news film arena, but the "yellow box" is fighting back.* 10

Another shuttle tragedy *Concord (N.H.) Monitor editor found much to condemn in the actions of the out-of-town media after the Challenger explosion.* 12

Print practitioners *Some regional telephone companies are moving aggressively in publishing. Newspapers are eyeing the ventures warily.* 16

Untangling the telephones *To avoid crossed wires later, newspapers should conduct a needs assessment before changing their phone systems.* 20

Press clubs II *The second part of a two-part series on newspaper associations features 38 organizations serving various segments of the business.* 32

Profile: Sal Micciche *A veteran reporter, The Boston Globe's newsroom lawyer is first and foremost a newsman.* 38

Essay: Showing stories to sources *Journalism professor George P. Kennedy says "readbacks" are one answer to newspapers' credibility problem.* 40

Salary push pays off *Surveys of journalism schools and recent grads find starting salaries, minority hiring and enrollments on the rise.* 48

Closing the gap *The Wichita Eagle-Beacon has instituted a program to equalize charges for national and retail advertising.* 52

Tons of speculation *The recent weakening of the U.S. and Canadian dollars has prompted differing predictions about the fate of newsprint prices.* 60

CHAIRMAN'S CORNER

Newspaper execs shouldn't miss ANPA's two big annual meetings

I hope you are making plans for you and several of your associates to participate this year in ANPA's two most important meetings of the year: our Convention in San Francisco and our Operations Management Conference & Exposition in Atlanta. You have the Convention registration forms in hand already; the OMCE forms will be sent shortly.

You'll find some things being done a little differently at the two meetings. Our dedicated planning committees always are reaching for ways to streamline things to fit your time demands and for ways to target both the discussions and the exhibits to fit your current personal and professional needs. Joe Barletta for the Convention and Joe Ungaro for the OMCE have done their planning well!

At next months' Convention, we'll have our normal complement of public figures as key speakers. Richard Nixon (who was at our Conventions in 1953 and 1958 as Vice President) will address the AP Monday lunch in what should be a fascinating retrospective of how world and national affairs have changed during these last 30 years. Gov. Mario Cuomo, at the Tuesday ANPA lunch, is more likely to tell us what he wants our nation to do in coming years. And President Reagan has been invited to address the Wednesday ANPA lunch.

Our other Convention sessions, clinics and workshops will offer you all sorts of updates on literacy, the Audit Bureau of Circulations, terrorism, advertising, marketing, management, aging, the Pacific nations, telecommunications, readers, excellence, wellness, budgeting, circulation personnel, newsprint—and a mock libel trial. So it will be a working Convention; and when we finish each day, we'll be ready for the special hospitality events planned by our California hosts! (To make time for these special events, the traditional, Tuesday dinner-dance has been suspended for at least this year.)

One of the Convention innovations will come on Saturday and Sunday as you arrive. "Expert Centers" will be located near the registration area; there you'll find an opportunity for one-on-one talk with newspaper, ANPA and Newspaper Advertising Bureau experts on all sorts of newspapering challenges like insurance, postal, regulations, ad sales, technical operations, equipment, labor relations, minority opportunity and many more. I urge you to take advantage of this experiment in information sharing and problem solving.

Then in June we'll move on to the Operations Management Conference & Exposition. You'll find that many of your same associates who benefited from the Convention will find the OMCE useful, too; your operations and production people especially will. The Conference focus will be on people, on new developments and on quality in all departments. That's PDQ: people, developments and quality! The more than 230 exhibitors for the five-day Exposition are expected to set a record for space devoted to providing you with hands-on, up-close experiences with new and evolving technologies.

Again, there will be more topics than you can imagine: hiring production managers, team building, managing telecommunications, flexo printing, PCs, productivity, health, quality control, color separation, graphics, print quality, pagination, typesetters, ad makeup, distribution, newsprint handling and more.

There's just no way a newspaper enthusiast can stay up to date without participating in these two meetings. And there's no way a participant can go home without learning, solving, deciding or beginning something useful! See you there.

'STEPCHILD OF THE INDUSTRY'

Often neglected and misunderstood, but full of potential

SATURDAY NEWSPAPERS

BY MARGARET GENOVESE
presstime staff writer

In the mid-1970s, the promotion manager of a Houston department store told a national gathering of newspaper marketing executives that he could foresee the day when the Saturday newspaper would overtake the Sunday edition as an advertising vehicle. Lee M. Dubow's logic was that Saturday is the biggest shopping day of the week, bar none.

Today, Dubow admits that the rise of Saturday newspaper has not come about as fast as he thought. But he believes the Saturday paper is becoming stronger and still has a lot of untapped potential.

"It might not beat the Sunday paper for a few years, but it is going to be much larger, carry a lot more advertising," says Dubow, who is now vice president of Belk Stores, a North Carolina-based retailer that owns 350 department stores in the Southeast.

To entice advertisers and readers to their Saturday editions, newspapers are trying a variety of strategies. Some have revamped the edition into a "Weekend" package. Others are giving discounts to Saturday advertisers or, to boost Saturday circulation, forcing Sunday subscribers to take the Saturday newspaper, too.

A few advertisers have seen the light on their own.

For instance, the nation's largest furniture retailer, Levitz Furniture Co., prefers Saturday newspapers over any other day, according to Robert E. Gorden, vice president/national advertising and sales promotion manager. Because furniture buying is a "joint family decision," Saturday is the 96-store chain's biggest sales-volume day, followed by Sunday, Gorden says, and a Saturday ad will "pull" customers both days.

Despite such activity, however, Saturday papers continue to be viewed by most observers as the most neglected as well as the least understood aspect of U.S. newspapering. "They have become, for the most part but not invariably, a stepchild of the industry," says newspaper analyst John Morton.

Morton notes that a clear distinction must be drawn between Saturday papers in the United States and those in Canada, where Saturday editions historically have been strong—often being the only paper published on the weekend. The Lynch, Jones & Ryan analyst says the difference may be traced to laws that prohibit Sunday store openings in Canada.

Similar "blue laws" have been less prevalent and have been falling steadily in the United States. Today, only 13 states still have them, and in several of them localities have the option to permit Sunday sales.

Saturday morning confusion. Many people in the business regard the Saturday paper as a distinctive product—different from the weekday editions, different from the Sunday paper. But industry groups like ANPA and the Audit Bureau of Circulations have not isolated Saturday editions for record-keeping purposes, and statistics about them are hard to come by.

Most readership surveys, including the syndicated Simmons-Scarborough Newspaper Ratings Study, track weekday and Sunday readership but not that for Saturday.

"The position of the Saturday paper is probably the most unclear of all that we studied in the newspaper business," says Albert E. Gollin, vice president, associate director of research for the Newspaper Advertising Bureau. "We know a lot about behavior of readers with regard to the daily papers. We know something about the Sunday papers, but not nearly enough. We know least of all about the position that the Saturday paper has in the life of its readers or readers generally."

Says Gollin: "If we knew more precisely how the Saturday paper fits into people's lives, then we could promote the paper more effectively as a vehicle to local advertisers."

Robert C. Momsen, president of the International Newspaper Advertising and Marketing Executives, agrees. "Perhaps we need to do more research with our readers in terms of [their] Saturday habits, Saturday reading, to demonstrate to our customers what Saturday affords them in terms of a marketing opportunity," says Momsen, vice president marketing for the St. Paul Pioneer Press and Dispatch.

Momsen says most of newspapers' largest and best advertisers want at least a three-day reach for their ads, and consequently they like to advertise in the Sunday paper and again at mid-week.

Saturdays generally have been relegated to promotion of one-day sales and a few

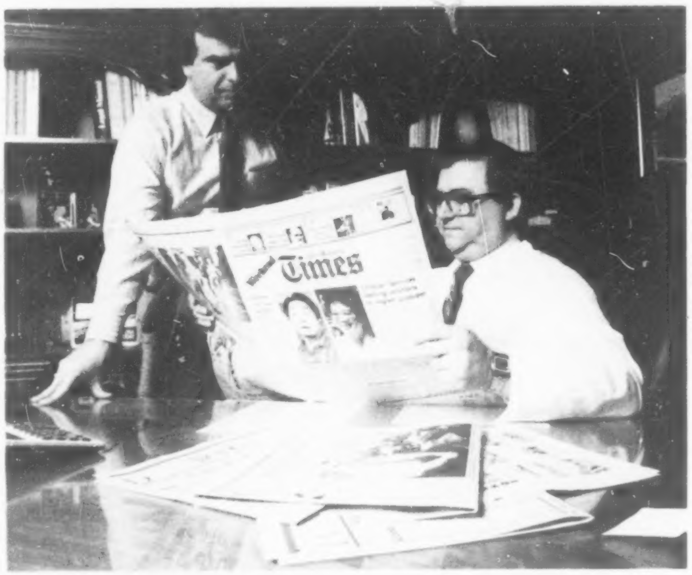
"We know a lot about behavior of readers with regard to the daily papers. We know something about the Sunday papers, but not nearly enough. We know least of all about the position that the Saturday paper has."

categories of advertising, like automotive and real estate, he adds.

Momsen and others attribute Saturday's problems in attracting a broader range of advertising to several factors. One is that circulation tends to fall off on Saturdays compared with weekdays because—especially in large metropolitan markets—there are fewer single-copy sales. Another is that even where Saturday circulation is comparable to that of weekdays, it cannot compare with Sunday circulation. A third is that advertisers perceive Saturday, unlike Sunday, as a day in which newspaper reading competes with other activities.

The "weekend" route. The Saturday paper is a "tough nut to crack," says Alexander Ungerleider, promotion manager of the New Haven (Conn.) Register.

The challenge is to find advertisers willing to shift to Saturday without hurting editions published on other days, particularly Sunday, or to find features that could be added to the Saturday product that could attract additional advertising.



Holtz (standing) and Executive Editor George Freeman critique The Marietta Times' Sunday-style Saturday edition.

Frustration over the problem of what to do about the Saturday paper led an interdepartmental committee at the Register to conclude after one study that another study was needed.

Newspaper consultant Michael Burgoon, head of the Department of Communication at the University of Arizona in Tucson, is one who thinks that in some cases Sunday newspapers should be raided to beef up the Saturday edition. "They are saving too damn much, especially in features, rather than running a solid product every morning or every afternoon," he comments.

But analyst Morton says newspapers tend to be reluctant to tamper with a successful product—even to try to prop up a less successful one.

Some newspapers have converted the Saturday edition into a "weekender."

A few papers taking that step also have Sunday editions. The Atlanta Journal and Constitution, for example, merged their Saturday editions into a morning paper called Weekend that highlights leisure activities. Advertising of such things as restaurants increased, but not at the expense of the Sunday paper, says Robert G. Rudasill, research manager.

About 10 newspapers going to a "weekend" format on Saturdays are ones that do not publish on Sundays. But these innovators represent a tiny fraction of dailies with a Saturday-but-not-Sunday publication schedule. According to Morton, at the end of 1984 (the latest figures available), there were 1,534 U.S. cities where dailies were published; of these cities, 768 had Sunday papers, leaving a potential pool of more than 750 markets for Saturday "weekend" papers.

Advertising Manager Wayne A. Lawton of the Bangor (Maine) Daily News says he is "surprised, frankly," that more newspapers without Sunday editions haven't adopted the concept. "I think Saturday is a good day to come out with a weekend paper because it has two days' life around the house," he notes.

Another newspaper that has gone to a Sunday-style Saturday edition is The Marietta (Ohio) Times, a six-days-a-week Gannett Co. paper across the Ohio River from West Virginia. A readership study in January 1985 found that the Saturday edition was fairly well read, but that readers were dissatisfied with it. "It just didn't have any real body to it," explains Publisher Richard L. Holtz.

Although the Times' market was being penetrated on Sunday by a newspaper published in nearby Parkersburg, W.Va., the study showed that the community didn't necessarily want a Sunday newspaper; it wanted more and different content in the Saturday paper.

Moreover, while advertisers had been clamoring for something resembling a Sunday paper for marketing purposes, some said they would not increase their advertising if one were established but instead would take advertising dollars from other days and shift them to Sunday.

Taking all that and more into consideration, the Times last September launched a new Saturday paper, Times Weekend. It looks a lot like a Sunday paper, down to the multiple sections, color comics, national magazine supplement and coupon inserts, but it did not require the newspaper to go to the expense of publishing a seventh day.

The pumped-up Saturday paper has attracted 44 percent more advertising, according to Holtz.

Other strategies. Newspapers elsewhere have employed a variety of other strategies in an effort to bolster the Saturday paper. They include:

- **Going tabloid** on Saturdays, as The Morning Call of Allentown, Pa., did [presstime, Feb. 1985, p. 18].
- **Giving advertising discounts**. At The Odessa (Texas) American, any advertiser that runs a run-of-paper ad during the week can rerun it Saturday at half price. "It's built our Saturday paper into a pretty nice little package," says General Manager Raymond M. Cole.

Gannett is looking into the possibility of circulation-based discounts on Saturday. In terms of circulation, says Rosalie Hooke, vice president/advertising for Gannett's Newspaper Division, "What you usually find is Sunday is the biggest, food day is next, Saturday stinks" and the other days are in the middle. "Why not premium price your strong days and discount your weak ones?"

Any decision to implement such a scheme would be made by individual Gannett newspapers, Hooke emphasizes.

- **Adding features**, such as a TV book or a national magazine supplement. At the News & Record in Greensboro, N.C., for instance, where Saturday circulation is 119,060, compared with 111,440 weekdays and 124,541 Sundays, President and

Why is Kim Breese in newspaper pagination?

"Consistently better quality and more flexibility are the main reasons why The Wall Street Journal is now using pagination," says Frank C. "Kim" Breese III, president of the Operating Systems Group of Dow Jones & Company, Inc.

The Wall Street Journal has the world's most advanced computer-to-plate pagination system, jointly developed by Dow Jones and Information International, in daily operation in its Orlando, Florida, production plant.

"The system we have in place today already has given us an improved publication," says Breese, "and in the years ahead, pagination is going to enable us to grow, to be more efficient and to provide more benefits for our readers and advertisers."

Find out why Information International systems have some of the most technologically advanced features on the market.

World-Wide

Publisher Robert D. Benson says 3,000 to 4,000 of the excess Saturday circulation is attributable to TV Week. "People who do not read newspapers often buy our Saturday paper for the weekly TV schedules," says Benson. "Some of them buy more than one copy in order to have a TV Week for each of their receivers."

USA Weekend has also emerged as a popular feature for Saturday editions in 98 cities. While USA Weekend allows the supplement to be distributed on Friday, Saturday or Sunday, the other national magazine supplement, Parade, may be carried only in Sunday papers.

• **"Forcing"** a Saturday-Sunday subscription. In Abilene, Texas, the Reporter-News, a seven-days-a-week newspaper, sells about 1,500 more copies on Saturday than its morning and evening editions combined on Monday through Friday (41,492 on Saturday compared to 39,992 average on weekdays and 37,722 Sundays). It wasn't always that way. In fact, six months ago, the Saturday paper sold about 5,300 fewer copies.

Frank Puckett Jr., general manager, attributes the growth to the decision last year to stop offering Sunday-only home-delivered subscriptions, but rather to require a Saturday-Sunday combination purchase by former Sunday-only subscribers (presstime, Jan. 1985, p. 40).

> *"We did a number of different things to try to make it appealing" but "advertisers did not use it."*

• **Switching to morning publication.** One of the papers to go to morning distribution last year was the Tucson Citizen, an evening paper weekdays that is a partner in a joint operating arrangement with the Arizona Daily Star, which prints mornings and Sunday.

"The advertisers have been overwhelmingly in favor of it," says Publisher Gerald Garcia. "They seem to feel they are getting better results."

Every market is different, of course. And not every Saturday newspaper can be turned into a winner.

After 98 years of publishing on Saturday, The Daily Democrat of Fort Madison, Iowa, last year ceased its Saturday edition.

"We did a number of different things to try to make it appealing on Saturday," says Publisher David A. Lewis. The Saturday paper switched from evening to morning publication, carried color comics and a feature tabloid, and tried various advertising promotions. "The bottom line was the advertisers did not use it," he says.

But in other areas, publishers remain committed to Saturday. "Saturday doesn't have the advertising lure, and as a result it is looked upon as a stepchild," notes George J. Lister, president and publisher of The Daily Register in Shrewsbury, N.J., which added a Saturday edition last year. "But, in my view, whether it's this market or most markets, people like a Saturday morning paper."

He adds: "If you look at it from the standpoint of the newspaper franchise in the community, it is crucial." □

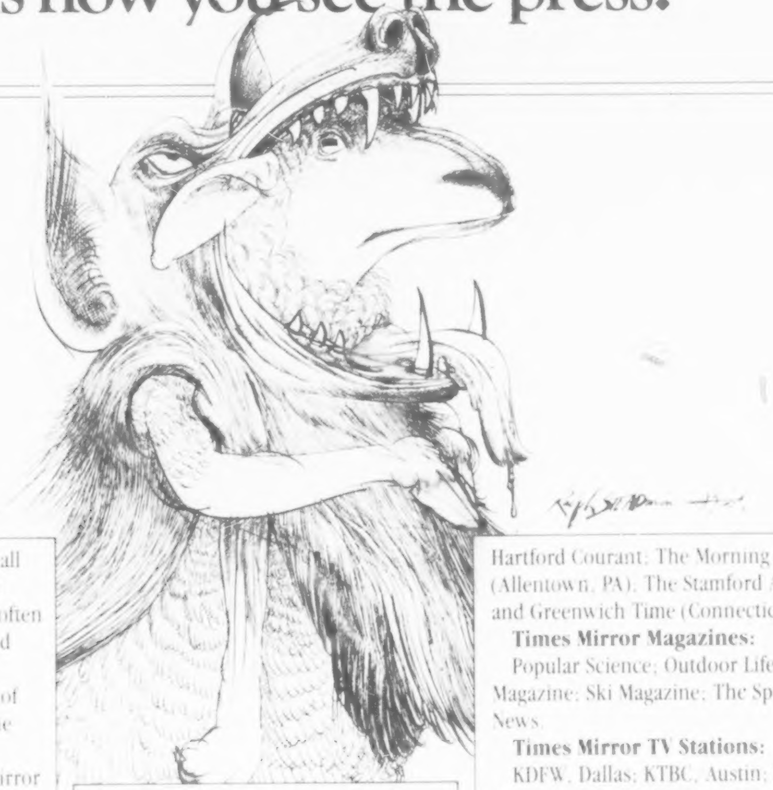
"The People & The Press," Ad #3 in a series

Is this how you see the press?



If so, you're not alone. 53% of all Americans think the press is a sheep in wolf's clothing... too often influenced by powerful interests and institutions.

This is one of the major findings of an extraordinary investigation of the public's attitudes toward the press.

It was commissioned by Times Mirror and carried out by The Gallup Organization. Gallup pollsters conducted over 4000 interviews; talked with people individually and in groups; and revisited 1000 of them to double check key findings.

Nothing like it had ever been done before.

Why we did it

First, because as one of America's largest newspaper-based media companies, we have to know *exactly* how the public views the press... and prior studies haven't dug deep enough to tell us.

Second, because it enables us to engage you in a dialogue that promises to strengthen the absolutely vital relationship between the public and the press.

To that end, we plan to present our investigation's major findings in ads and public meetings, and to repeat it regularly.

So we can stay in touch, and stay connected.

So tell us what you think

Do you think the press is a sheep in wolf's clothing? We'd like to know. Write our Chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

Who we are

We own the media listed below. In terms of sales, we rank 139th among Fortune magazine's 500 largest U.S. industrial companies. In terms of net income, we're 79th.

Times Mirror Newspapers:

Los Angeles Times; Newsday; Dallas Times Herald; The Denver Post; The Hartford Courant; The Morning Call (Allentown, PA); The Stamford Advocate and Greenwich Time (Connecticut).

Times Mirror Magazines:

Popular Science; Outdoor Life; Golf Magazine; Ski Magazine; The Sporting News.

Times Mirror TV Stations:

KDFW, Dallas; KTBC, Austin; KTVI, St. Louis; WVTM, Birmingham (AL).

Times Mirror Cable:

Fifty cable TV systems serve 300 communities in 15 northeastern, western and southwestern states.

Times Mirror Book Publishing:

Matthew Bender & Co., law books; C.V. Mosby and Year Book Medical Publishers, medical books; Harry N. Abrams, art books; Mirror Systems, computer software; Learning International, training programs.

If you'd like to know more about us, contact Donald Kellermann, Vice President, Public Affairs, Times Mirror, Times Mirror Square, Los Angeles, CA 90053, (213) 972-3946.

He's also the man to contact if you'd like a summary of our investigation's findings.

Times Mirror

We're interested in what you think.

Color Film

Photogs Favor Fuji When Shooting Slides

BY ALAN TEPPER

Films from Eastman Kodak Co., long the standard for color news photography at newspapers, are facing a serious challenge. Products from Japan's Fuji Photo Film Co. Ltd. are replacing the "little yellow boxes" in the camera bags of many newspaper photographers.

Although Kodak black-and-white films remain overwhelmingly dominant in the newspaper market, since the 1984 Olympics there has been a growing trend among color photographers to favor the green-boxed Fuji. In fact, experts say there now are few, if any, newspapers that do not use Fuji for most of their color-slide shooting.

For its part, Kodak is preparing to counterpunch. The company this month will begin distributing an improved, "warmer" slide film with which it hopes to win back photographers who have left the fold.

Fuji, founded in 1934 and first marketed in the United States in the 1950s, two years ago began an aggressive promotional campaign for an improved line of color negative and transparency (slide) films. Fuji's effort—which even included a West Coast-based, Fuji-green blimp—coincided with a rapid increase in the demand for color by daily newspapers. Many news photographers were inspired to experiment with the Fuji products. Many liked what they saw and changed from Kodak Ektachrome to Fujichrome.

However, the switch did not come easily. "For quality and dependability, it's hard to go away from the little yellow box," says Charles H. Cooper, executive director of the National Press Photographers Association and former photo department manager of the Durham (N.C.) Morning Herald and The Durham Sun. "Over the years they are the ones that everything else has been measured against," says Cooper, whose comments are echoed by photojournalists across the country.

"The yellow box was an institution in the industry," says Paul T. Whyte, USA Today assistant photo director. "People were really reluctant to try the green box."

But, as frequently is the case with innovations in photography, news photographers tested the new film after learning that others had tried it and liked it.

"We switched to Fujichrome about a year ago," reports Whyte. "We felt the quality of the color was better and the colors were truer."

Richard A. Curtis, USA Today managing editor/graphics and photography, maintains that Fuji films have better "stability"; that is, their ability to produce quality pictures does not deteriorate as fast under adverse environmental conditions. Stability is an important factor for newspaper photographers who, by the nature of their calling, are rough on equipment and film. Camera bags often go from blazing-hot car trunks to air-conditioned rooms and then back to the car trunks.

Photographers cite other reasons for moving to Fujichrome.

At the Messenger-Inquirer in Owensboro, Ky., the switch was made about a year ago. "The main reason was that, especially in shadow areas, the Ektachrome was blue," says David Cooper, director of photography. "The Fujichrome colors were warmer, and we felt the skin tones were more pleasing.

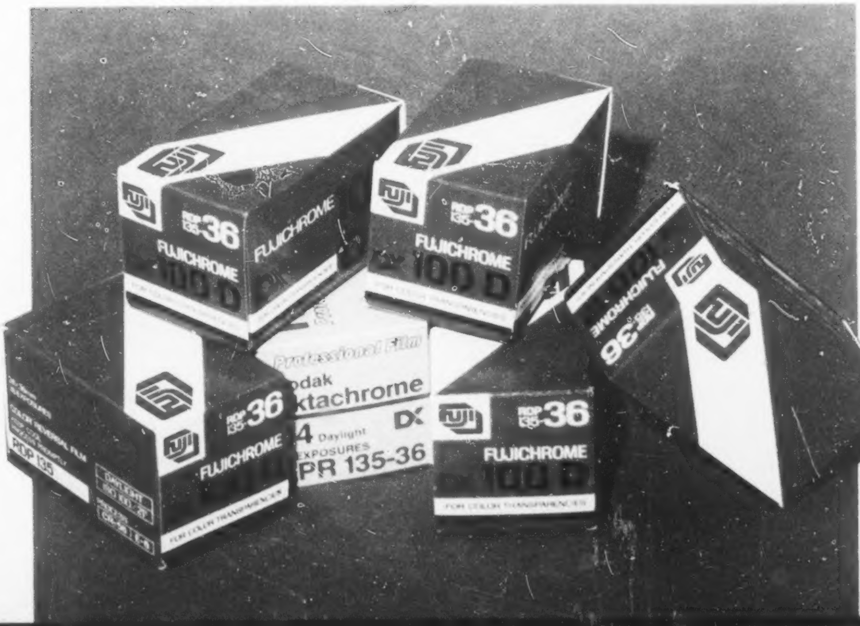
Kodak's Ektachrome products long have been known for their characteristic "cold" rendition of colors—that is, their emphasis on blue tones. Many magazine and newspaper photographers working on long-term projects use Kodachrome slide films because of their sharpness and "warmer" color rendition. They tend to emphasize red hues.

Daily deadlines preclude use of Kodachrome for most newspaper assignments because it requires special developing techniques and equipment generally available only through Kodak processing facilities and a few specialty labs. Fujichrome, photographers say, offers color rendition and sharpness close to that of Kodachrome. But like Ektachrome, the Fuji product can be processed quickly in newspapers' own darkrooms.

Color tone is not the only reason Fuji slide film has gained popularity.

"We feel there is also more contrast with Fuji and less grain," says Jack Belich, photo editor of the St. Petersburg Times.

Ron Mann, director of photography for The Orange County (Calif.) Register, is another Fuji fan. The Register's photo staff, using the then-relatively-unheralded Fuji film, won a Pulitzer Prize in 1984 for coverage of the Los Angeles Olympics.



Alan Tepper

Tepper is publications specialist in the ANPA Technical Services Department and a former photographer at The Wilkes-Barre (Pa.) Times Leader and at Printing Impressions magazine.

"We were one of the first newspapers to switch over," says Mann. "We tested everything available before the Olympics, and we felt the Fuji films were far superior."

Not only does the film offer better stability and color reproduction, Mann says, but it also "pushes" better, meaning it can better be over-developed to increase its light-sensitivity rating (speed).

Kodak's new film coming onto the market this month was developed in "response to the needs of photojournalists," says David D. Holtz, corporate communications coordinator. Kodak is "not saying it's a response to Fuji, by any means," he adds.

Holtz says Kodak has no official response to Fujichrome's increased popularity. However, Holtz acknowledges that the Fuji product has won the favor of many photojournalists.

According to Holtz, the new Kodak Professional Ektachrome (EPV 135-36) will render warmer tones and will have a lesser blue cast compared with normal Ektachrome. He says it also will provide greater stability and, unlike most other professional films, it need not be refrigerated.

The new product is being sold in a package of 50 rolls called a "Press-Pac."

Kodak says it also has improved the color rendition of its original Ektachrome Professional 64, but this film still will require refrigeration.

Fuji also is making inroads in another relatively new practice of many news photographers—shooting color negative film from which both color and black-and-white prints can be made.

Kodak film remains a popular choice for this job. United Press International, in fact, now shoots Kodacolor exclusively on all assignments. But many news organizations that use color negatives use a mix of films, depending on the circumstances.

Some photographers say the mix consists of Kodacolor for most shooting and Fujicolor in special low-light conditions such as gymnasium sports. In the latter case, Newsday Photo Editor Mike Killelea says ASA 1600 Fujicolor shot at ASA 1000 yields better pictures than ASA 1000 Kodacolor.

The Associated Press uses Fujicolor, Kodacolor and film from another Japanese company, Konica, in its testing of the process at three bureaus.

"The films we use are selected on an assignment-by-assignment basis," says Harold G. Buell, AP assistant general manager for newsphotos. "We try to match the lighting at the location with the ideal film for that situation."

A Grain of Advice For Good Reproduction

Regardless of what brand of color slide film news photographers use, the quality of the published photograph can depend heavily on the film's speed—its ISO (formerly ASA) rating.

John C. Harrington, ANPA photographer/color specialist, says he has noticed that some photographers often shoot color film that is faster than really needed. Consequently, the quality of reproduction suffers.

The problem is the coarse grain in fast film; it shows up in the processed image and then in color separations. Harrington explains that films up to ISO 200 yield fairly minimal grain. Films faster than that result in more grain and poorer photos, at least from a technical standpoint.

But Harrington acknowledges there are trade-offs.

"You have to weigh whether it's more important to have the best-quality reproduction or to be able to photograph something like a football game at the high school that you otherwise wouldn't be able to get," he says.

Charles H. Cooper, executive director of the National Press Photographers Association and former photo department manager of the Durham, N.C., dailies, says he has noticed a tendency on the part of some photographers to stay with higher-speed films. But pressure for higher-quality reproduction throughout the industry is curbing that practice, he says.

Jack Belich, photo editor of the St. Petersburg Times, says the film-speed issue involves a learning process. "When Kodak introduced (ISO) 400 film . . . we thought it was the answer to all our problems," he says. Like Kodak's black-and-white Tri-X, the news industry standard that produces acceptable grain despite relatively high speed, it allowed better exposures under marginal lighting conditions.

However, Times photographers "quickly learned you can't use 400 film for everything," Belich explains. "You certainly can't use it like you use your Tri-X film."

One newspaper currently in such a learning phase is The Record of Hackensack, N.J. Chief Photographer Robert Brush says the paper is conducting tests to determine, among other things, just how much more grain results from shooting ISO 400 color.

A Grieving Concord Repelled By Media Misbehavior

BY MIKE PRIDE

Not 10 minutes after I first saw the explosion of the space shuttle Challenger on television, a man called me up and said he was from one of the major news magazines. He asked if we had color shots of the Concord High School students reacting to the explosion.

I told him I wasn't sure. If you do, he said, we'll give you $1,000 just to hold the film for us. I mumbled something and hung up on him. Many such calls and a week of chaos later, I was left with new insights into the mass media and how they interact with American society.

As the entire civilized world must know by now, teacher-astronaut Christa McAuliffe was from Concord, N.H., my hometown. When she died, the media came to Concord in droves. Reporters, photographers and television crews caused hard feelings among residents, and while the many were condemned for the actions of the few, there was much to condemn.

Concord is a self-confident town that has learned from over-exposure during New Hampshire presidential primary campaigns to cope with the media. Yet for days after the shuttle tragedy, the talk in bars and restaurants was of what vultures the media were, what heartless invaders of privacy.

Our responsibility at the Monitor differed from that of the visiting media. We saw ourselves as holding up to the community a mirror of itself. We hoped that by showing people how their neighbors were coping, we could convey a sense of shared grief.

We had covered the McAuliffe story extensively for months. Until the explosion, it was one of the happiest stories a local news staff could imagine.

Pride is editor of the Concord (N.H.) Monitor. He joined the paper as managing editor in January 1978 and was named editor in June 1983. He was a Nieman Fellow at Harvard University last year.

The day of the explosion, we held up our press run for that afternoon's paper. (See story, p. 50.) We quickly turned to Wednesday's paper.

At the outset of a planning session with editors and reporters, I made a speech. Its point was that as we were grieving, our city was grieving, and it was important to respect people's grief. People have a natural aversion to the press at times like these, I said. Be courteous. If people don't want to talk, respect that. If they do, don't ask them how they feel. Ask them if they knew Crista, how they remembered her, whether they were watching when the shuttle exploded.

Our Wednesday paper had 17 staff bylined stories on the shuttle tragedy. These included two reports from Cape Canaveral, by Bob Hohler, who knew McAuliffe better than any other reporter, and Ralph Jimenez. We had color pictures of the explosion by Michele McDonald, a former staff photographer whom we had hired to cover the launch.

> *"I just want . . . a kid who will talk. . . . I've got a lot of blank space to fill, and I don't have a lot of time."*

Instantaneous invasion. Beginning Tuesday afternoon, within a few hours after the explosion, members of the media poured in from all over the country — and beyond.

John Fensterwald, the managing editor, and I decided to be as accommodating as possible. This ranged from giving directions to allowing visiting journalists to use desks and phones in the newsroom. We also decided that he and I would bear the brunt of the invasion, freeing our staff to work on the story.

My guess is that at least 100 journalists stopped in between Tuesday night and Friday night. Scores more called. I did perhaps 25 interviews for television, radio and newspapers. We gave anyone who wanted basic information the advance sections and profiles we had done on McAuliffe and her mission.

Sometime Tuesday night, Jimmy Breslin slouched into our newsroom. He was wearing a rumpled trenchcoat and looked lost. His reputation had preceded him and, as is his wont, he put in plain language what many people have come to expect of visiting reporters.

"I just want to get a kid who will talk, a scene, and then I'll get out," he said. Our reporter asked if he worried that he was sticking his nose where it didn't belong. "I don't care," he said. "I've got a lot of blank space to fill, and I don't have any time."

The media besieged Concord's schools—particularly the high school, where McAuliffe had taught—and churches.

Last December, the Concord police shot an armed 16-year-old boy at the high school, and Charles Foley, the principal, learned from dealing with the media during that crisis. "I regretted some of the things that happened after that incident," he said. "I regretted it because it upset the kids."

In TV footage after the shuttle explosion, Foley was often seen running interference to keep journalists away from his teachers and students. Foley himself was open and helpful with the press, but he made the school off limits.

Several photographers, reporters and TV people were in the high school when the shuttle blew up. When it dawned on Foley that the jubilation had turned to despair, he asked the media to leave, and they did.

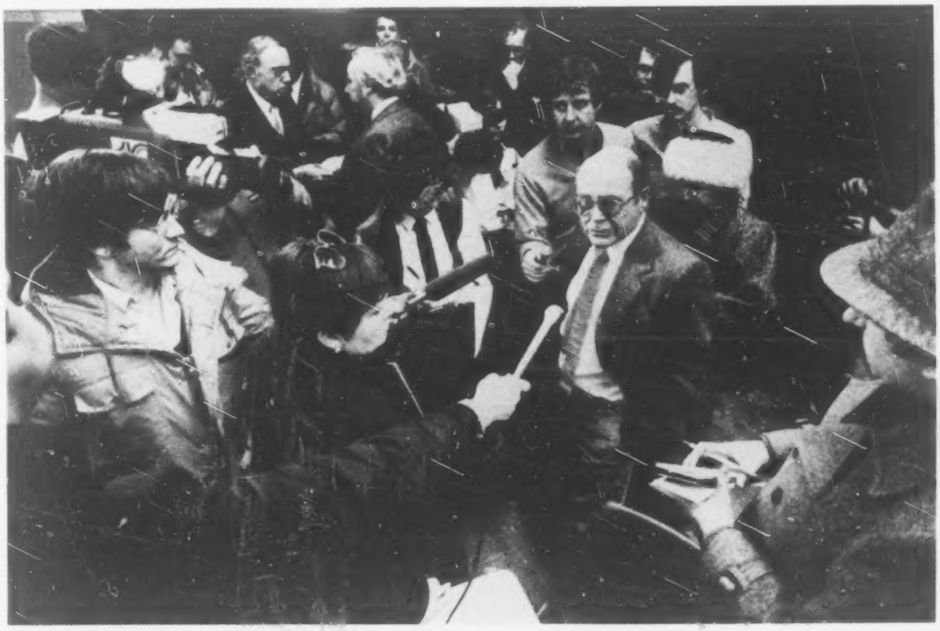
Neither Foley nor Mark Beauvais, the city's school superintendent, criticized the media's presence in Concord. "We had a responsibility to share with the world what was going on," said Beauvais.

Beauvais praised the media's performance in general. He said this was the first time he sensed no adversarial pursuit by the people who interviewed him. Nearly all were sensitive, most shared his grief.

The negative incidents Beauvais attributed to a small minority. Like any other occupation, he said, the media have "95 percent who are really great and 5 percent who are squirrels. I'm talking about the 5 percent you're not proud of."

Beauvais accompanied Scott McAuliffe's third-grade class back from Cape Canaveral, where they had watched the launch. They dodged the media all the way, and they had more dodging to do once they arrived in Concord.

This "torrential attack by strangers," as Beauvais described it, yielded few results for the journalists—a couple of distant stills, a few quotes from parents.



Caro Lachman, Concord Monitor

Concord High Principal Foley shielded students and staff from the onslaught of journalists.

The 17 third graders and their chaperones returned to their school at about 11 p.m. the night of the explosion. The adults issued a statement asking to be "spared any intrusions" as they tried to comfort the children. Even with police help, some had to run a media gauntlet to get to their cars. Beauvais said he saw one photographer who had to be physically removed after he leaned into a car to try to shoot.

Beauvais said afterward: "We are not geared for all these people invading our privacy." Like Foley, he saw his job as shielding the students and teachers from the media, and in ensuing days he timed the release of certain information to keep the media away from students.

An unholy experience. The other beleaguered institutions in Concord were the churches.

McAuliffe's church, St. Peter's Roman Catholic, scheduled a memorial service the night of the explosion. The word did not get out in the community and few mourners showed up. For the media, however, St. Peter's was the place to be.

As described by Joe Starita of The Miami Herald and others, reporters, photographers and television camera people commandeered the first 10 pews. They shot back at the few mourners. TV cameras moved down the aisles filming weeping people. A reporter tried to question a praying mourner.

In an interview with a Monitor reporter, Starita called the scene at the church "the greatest possible abuse of private grief by the national media I've ever seen. They just took over the church and trashed it in a way you'd expect to find at a boxing match."

Tom Haley, the Monitor's president, went to the church that night to pay his respects. To him, there is a difficult balance between the media's responsibility to respect the feelings of the people whose grief they are conveying and "the competition among folks to get the best story, the tear, the grief encapsulated."

The mourner in me felt abused by media in the church, but the editor in me had to run the picture.

Haley saw the scrapping for position among still photographers and TV camera people as a big part of the problem. Some photographers went right up to grieving people and fired away, some stood in pews and blocked the mourners' view of the pulpit. Haley saw one reporter slide into a pew with an elderly couple and try to interview them while the priest was saying the eulogy.

The night left Haley feeling "at a low point in terms of being associated with [journalism]."

The next night, St. John's Roman Catholic Church, the one my wife and I attend, held a memorial Mass. I had been working 31 of the previous 35 hours, but I needed solace more than I needed rest.

The choir and the priests had assembled a moving Mass. The priests had also decided to let the media in, although they were restricted to the balconies to the sides of the altar and the area beneath the balconies. My wife and I sat beneath a balcony.

It was hard to estimate, but I would guess there were 50 cameras in the church. The night before at St. Peter's, Haley guessed there were about 15 television cameras and 80 media people in all.

Before the Mass at St. John's began, the Rev. Dan Messier, a young priest, descended from the sanctuary to comfort a young boy in the front pew. It was as though a single duck had flown into a blind occupied by 50 hunters. Rapid-fire clicks and flashes zeroed in on the scene as the boy buried his head in Messier's shoulder.

During the Mass, camera crews and photographers clomped up and down the stairs. Someone dropped a piece of equipment at one critical moment. Someone muttered a too-loud "Aw shit!" at another. During the benediction, a radio person lost control of his tape recorder, and it blurted out a high-pitched garble.

I had gone to St. John's to confront my own feelings about what had happened, and I left without having done so. The media were the reason. The priests could have kept the media out or allowed only a pool in. I wish they had, even though I see the other side of the issue.

Messier saw both sides too. He talked to his congregation about it the next Sunday. The media had behaved badly, he said, but since the pictures of that Mass and an earlier service for children appeared on television, he had had calls from everywhere. The whole country felt a bond with the grieving people of Concord.

I also had to separate my personal feelings from my professional feelings. We used a photograph of Messier hugging the child. I'm not sure it was worth a thousand clicks of the shutter, but it told a touching story. The mourner in me felt abused by the media in the church, but the editor in me had to run the picture.

Seeking exclusives. While Monitor staffers helped visiting journalists, we did not share everything with them. As the days went by, our staff developed several exclusives or near-exclusives. Knowing the right people was only a part of the reason; patience was another.

For example, Monitor reporters waited until a day after Scott McAuliffe's class returned and got the story about the children's reaction to the explosion from the chaperones and parents of the students.

While the pack was at the St. John's Mass, our staffers were practically the only journalists at Concord High School for a candlelight vigil. We had told no one about it at the request of the people who told us. Later, a Newsweek photographer said he and others would really have liked to have known about the event. If they had, I suspect the mourners wouldn't have needed candles.

A lawyer in the same firm as Steve McAuliffe, Christa's husband, called us on deadline Thursday with McAuliffe's first statement since the explosion. The next day Beauvais, the school superintendent, called us on deadline with the text of President Reagan's letter to the students and faculty of Concord High.

Perhaps I am making too much of it, but I felt—hoped—at the time that the cooperation we were getting stemmed at least in part from the community's ability to see that Monitor people had not abused people's privacy.

In fairness, neither had many of the reporters who came to town. I heard from several of McAuliffe's neighbors that the reporters—print and television—who had spoken with them were polite and respectful. Some even said that it had been a relief to talk to someone and that the reporters were sympathetic. I saw many of the Concord stories in the metropolitan papers, and nearly all of them captured the town's grief and spelled most of the names right, to boot.

Since one of these stories was quite like another, however, I wondered why so many papers had sent people to Concord. Was it merely professional ego, the belief that a staff-bylined story from Concord conveyed something to readers about their paper's commitment? At Cape Canaveral, reporters were investigating and trying to report to the country what happened to the shuttle. In a situation like that, the more reporters the better. But in Concord, the story was grief, and that required no investigation.

One other factor disturbed me a lot that week. If I had it to do over again, I would be more discriminating in whom we allowed to use our newsroom. Among the many people to whom we threw open our doors were several agents and entrepreneurs who saw the shuttle tragedy as nothing more than a financial opportunity.

Most of the mercenary activity centered on our photo lab. By the time I realized how much wheeling and dealing was going on there, it was too late to cast out the money changers. Our photographers, past and present, had wonderful pictures of Christa McAuliffe. I do not blame them for wanting the world to see their pictures. I just wish I had made them sell the pictures somewhere else.

Big money was being offered for words, too. At a private memorial service on Monday, Steve McAuliffe read a poignant remembrance of his wife. We didn't get it, and as of this writing, no one else has either. That morning a fellow from the Star, a supermarket tabloid, called to offer me money if I could get the Star exclusive rights to McAuliffe's eulogy.

Because I knew I might want to write about it afterward, I asked the fellow how much the Star would be willing to pay. From a few hundred dollars, he said, up to much, much more if I could guarantee him an exclusive. I wound up being sorry I had asked. He called several times the next day or two and treated me as though we were buddies—in this thing together.

In a way I suppose we were.

CLASSIFIED
...meeting the challenge

Building on the successes of past classified management teams, today's classified executive is meeting many challenges. From producing more to managing more efficiently. From keeping abreast and seeking new applications of production equipment to improving the training of staffers. From getting closer to accounts large and small, to accounting more accurately for all departmental activities.

Innovation has helped CAMs meet these challenges. And the CAM sales idea has been another CAM's solution. A problem in Poughkeepsie is solved in Sacramento. A sales solution in Bradenton finds its way to Alberta. Innovation and communication, the hallmarks of the classified industry, account for CAMs being able to meet these tough challenges.

"CLASSIFIED ... meeting the challenge" is the theme The MacDonald Classified Service has adopted for 1986. MacDonald's role with this promotion will be to assist the communication of innovation. The focus will be on finding solutions, particularly in the area of sales development. The idea is to capture the mood of "challenge" and spread the good news. The accent will be on successes, on classified's ability to make things happen!

Born of Electronics, Baby Bells Find Print a Happy Medium

BY BARBARA J. FRIEDMAN
presstime staff writer

When the Bell monopoly split 26 months ago into AT&T and seven regional holding companies, the regionals got the local telephone business along with the local yellow and white pages. Since then, some of the so-called Baby Bells have used that experience in publishing and advertising as a springboard to other endeavors, including new kinds of directories and a magazine.

Some newspaper executives regard the regionals' activity as significant competition for advertising dollars—present and future.

The most agressive regional in the publishing of new directories, Southwestern Bell Corp., is producing The Silver Pages in 41 cities and expects to be in 49 others by year's end. The publications, named for the color of their cover and for their audience composed of people 60 and older, are filled with articles, lists of services, and advertising offering discounts.

Regionals vary greatly in diversification, but most share a strong interest in print publishing.

J.B. Ellis, Southwestern's vice president for strategic planning, describes the commitment to publishing this new kind of directory as an effort to build upon the company's strengths. "We've been the in sale of advertising for 60 or 70 years," he says. "If you want to expand, you look and see where you're the strongest."

Pacific Telesis Group, another regional, is forging ahead with other types of directories. Aimed at groups like interior designers and architects, they contain business-to-business advertising.

Two other regionals—Ameritech and NYNEX Corp.—are part of a group planning a quarterly magazine that will rely entirely on advertising revenue.

In addition to the activities of the Bell regionals, at least two telephone companies owned by regionals are earning money by putting ad flyers inside envelopes containing monthly telephone bills.

While the regionals vary greatly in the breadth of their diversification, most share a strong interest in print publishing. All the regionals but USWest have requested and gotten legal and regulatory approval to enter new aspects of the print media business, including, in some cases, paper and newsprint production. The requests generally leave the door open for entry into any part of the business except publication of general-interest daily newspapers.

And AT&T itself has branched off in various directions, including an alliance with Chemical Bank, Bank of America and Time Inc. to form an electronic financial service called Covidea. The New York Times has agreed to provide material for an information service called Pulse that Covidea will offer beginning this spring [presstime Dec. 1985, p. 42].

Newspaper reaction. Against this background, the newspaper business—largely through ANPA—and others are campaigning against dropping the rules that perpetually bar the regionals from providing electronic information services, and bar AT&T at least until 1989 from electronic publishing over its own lines.

But for all the commotion over electronic publishing, it may be in the field of print where most of the early competitive skirmishes are fought.

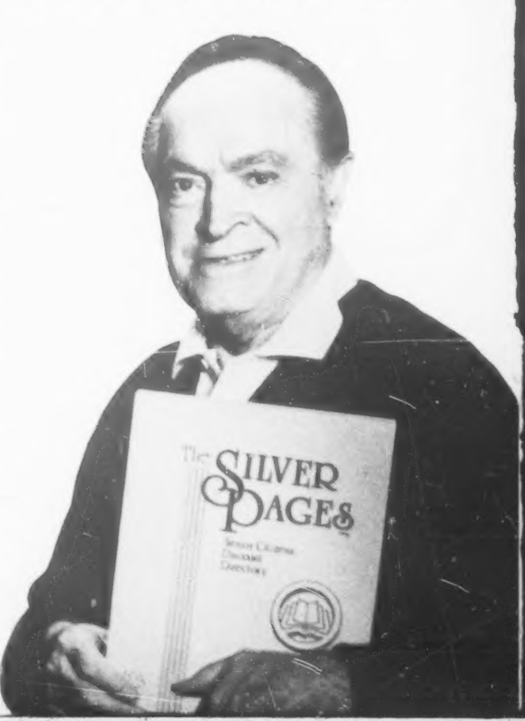
Enterprises like The Silver Pages have led some newspaper executives and ANPA staff members to say regionals appear to be nibbling at the edges of existing newspaper advertising.

The vice chairman of the ANPA Telecommunications Committee is among those who eye these ventures warily. While noting that such ventures constitute "legitimate, healthy competition," Newsday Publisher Robert M. Johnson says, "Any time there are print media dollars being removed from the marketplace, we should be concerned."

Moreover, he says, regionals' expansion in the business of print advertising should not be looked at "in isolation." Viewed in concert with the regionals' push for deregulation, the printing-publishing endeavors appear to be a possible prelude to electronic advertising, Johnson says.

Robert D. Ross, another member of the Telecommunications Committee, also says regionals seem to be getting ready to digest bits of the advertising pie. However, Ross, vice president of new ventures for Lee Enterprises Inc. in Davenport, Iowa, adds that this activity will not bother him "as long as they're not using the benefits of their monopolistic position".

At this point, the number of newspaper people who are alarmed about potential or actual nibbles appears to be small. That may be because the regionals are not expected to emerge as *major* competitors (like television stations) in the advertising marketplace, or because the regionals' publishing and advertising ventures have not been heavily publicized, says Phillip J.



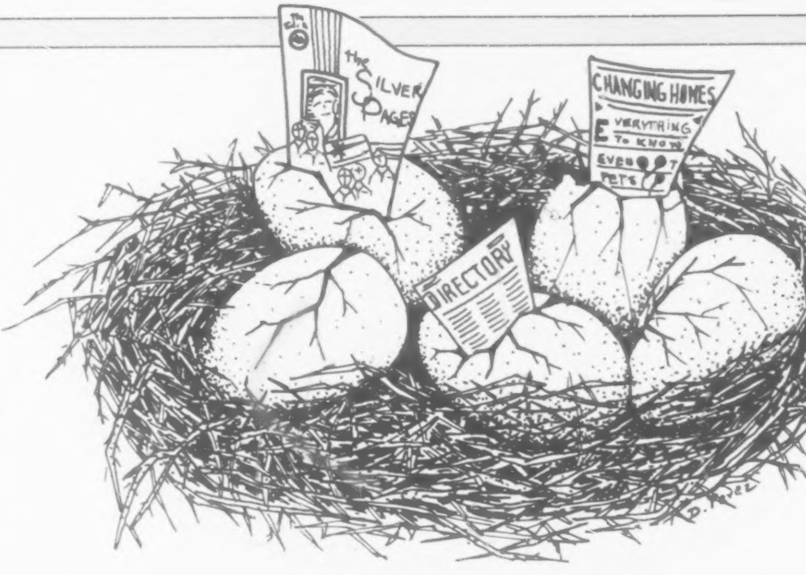
Bob Hope promotes seniors' Silver Pages.

Meek, president and publisher of the Fort Worth Star-Telegram.

Meek, who is also senior vice president of Capital Cities/ABC Inc. and president of its Publishing Division, says until a clear threat emerges, many newspapers "tend not to be overly concerned."

Yet as Lawrence B. Sackett, vice president/telecommunications of Gannett Co., observes, "The advertising pool out there is relatively static," so anyone removing dollars is taking them "away from somebody else."

By the same token, some newspaper firms have turned out to be competitors for telephone companies. They've gone into the business of publishing rival Yellow Pages [presstime, May 1984, p. 10].



Regulatory fights. As the regionals and AT&T seek to diversify, they often bump against limits imposed by the Federal Communications Commission and the consent decree that has shaped the monopoly's breakup and its aftermath.

Regionals say they need more freedom to compete in a fast-changing market and to offer new services. Others like ANPA say competition can develop in certain areas only by preserving bans imposed by U.S. District Judge Harold H. Greene, who presided over the breakup.

The fight over how far and where the regionals and AT&T can diversify is intensifying, and it is being waged in Congress, at the FCC, the Justice Department and in Greene's court.

By summer, the FCC is expected to conclude a proceeding on "Computer III," a major rule-making designed to revamp the FCC's approach to telecommunications carriers. The major issue is whether to end the requirement that regulated telephone companies offer enhanced services—essentially, any service beyond the local telephone business—through separate subsidiaries.

To the delight of the regionals and of AT&T, the FCC has proposed doing away with the separate-subsidiary requirement. Those companies maintain that the requirement is no longer needed to ensure competition.

On the other hand, ANPA contends the requirement is still needed because the regionals and AT&T continue to control most of the telephone network that relays electronic information, and thus the potential for anti-competitive abuses exists.

Gannett's Sackett says that should the separate-subsidiary requirement be removed, users of the telephone network (like newspapers) will face the issue of how to obtain "non-discriminatory" equal access.

Without equal access to the telephone network, competitors of the regionals would be at a disadvantage in the business of offering new electronic information services, says Sackett, who is another member of the Association's Telecommunications Committee.

While the FCC leans toward deregulation, momentum in that direction got a setback when Judge Greene ruled in January that the regionals must continue to seek line-of-business waivers from the consent decree if they want to expand beyond providing telephone service and publishing various forms of directories [presstime, July 1985, p. 14].

[Waiver requests currently before Greene include one from Bell Atlantic Corp., which wants to offer direct-marketing and telemarketing services, and one from Southwestern Bell, which wants to enter the advertising business in ways ANPA believes are not permitted now.]

However, bills have been introduced in Congress that could substantially reduce the restraints the regionals face. The bills would remove the ban on regionals' involvement in information services. Pressure to remove the ban also is coming from some parts of the executive branch, including the National Telecommunications and Information Administration.

W. Terry Maguire, vice president/general counsel of ANPA, says the legislation has as much as a 50-50 chance of passing this year.

Ellis of Southwestern Bell says of the regional's lobbying on the issue: "Our business is at stake, and, like the ANPA, we're active on Capitol Hill in looking out for our shareholders' interests."

Advertising advances. While the fight in Washington centers on issues like providing electronic information services and the need for separate subsidiaries, the regionals have been busy elsewhere.

If all goes according to plan, a magazine called Changing Homes will distribute its first issue this summer to people who have recently moved. They will receive the magazine every three months for one year. A packet of information sent to potential advertisers says the magazine initially will reach 6.2 million homes in 25 cities. A telephone, gas or electric utility will distribute the magazine in each city.

The magazine's prototype featured full-color ads and contained guides to local museums, sports and entertainment; maps; and articles about buying and fixing up a home.

"Like the ANPA, we're active on Capitol Hill in looking out for our shareholders' interests."

The venture was made possible because Ameritech and NYNEX sought and received waivers permitting them to enter the print media business. In keeping with the waivers' terms, the two regionals participate in this field through unregulated subsidiaries.

Changing Homes gives businesses a chance to reach a target audience—people who have moved. So does The Silver Pages—people in their 60s and older.

In the Denver edition of The Silver Pages, automobile dealer Ralph Schomp (Oldsmobile, Honda and BMW) uses a half-page display ad to push a 10-percent discount on service. Bob Bundy (AMC Jeep Renault) goes a little further and offers a 15-percent discount.

None of this worries Carlos W. Boettger, advertising director of the Rocky

Mountain News of Denver, who was unfamiliar with The Silver Pages that was first published last year. He reports that the two car dealers remain heavy advertisers in the News.

The Silver Pages may not appear to represent much of a threat because advertisers and consumers generally use annual directories and newspapers differently. Nonetheless, directories compete for advertising, and some of their owners are showing signs of increased aggressiveness, says Christine D. Urban, president of Urban & Associates Inc. of Sharon, Mass., a marketing research firm used primarily by newspapers.

Before the breakup of the Bell system, telephone companies treated directories as a service for callers, Urban says. Now directory publishing is considered a business that needs to win customers and make a profit. To that end, regionals are building on telephone company strengths such as an established sales advertising network, a subscriber base and a reputation in directory publishing, she says.

Not only is Southwestern Bell reaching beyond its original territory with The Silver Pages, but its publishing subsidiary announced plans in February to begin putting Yellow Pages directories in areas served by other regionals—the New York City, Washington, D.C., and Baltimore metropolitan areas.

Similarly, NYNEX last September began publishing a Yellow Pages directory for Spanish-speaking people in New Jersey, which is Bell Atlantic turf.

Also in February, BellSouth Corp. announced it would buy L.M. Berry and Co., one of the largest independent advertising sales agents in the United States for Yellow Pages directories. Berry, with advertising sales of about $780 million, has in its most recent venture begun marketing an electronic shopping service.

On the West Coast, meanwhile, Pactel Publishing is hoping that its involvement in specialty directories will be just a first step in print publishing. "We're going after the business information market," says Ross Brown, chief executive officer of Pactel Publishing, an unregulated subsidiary of Pacific Telesis.

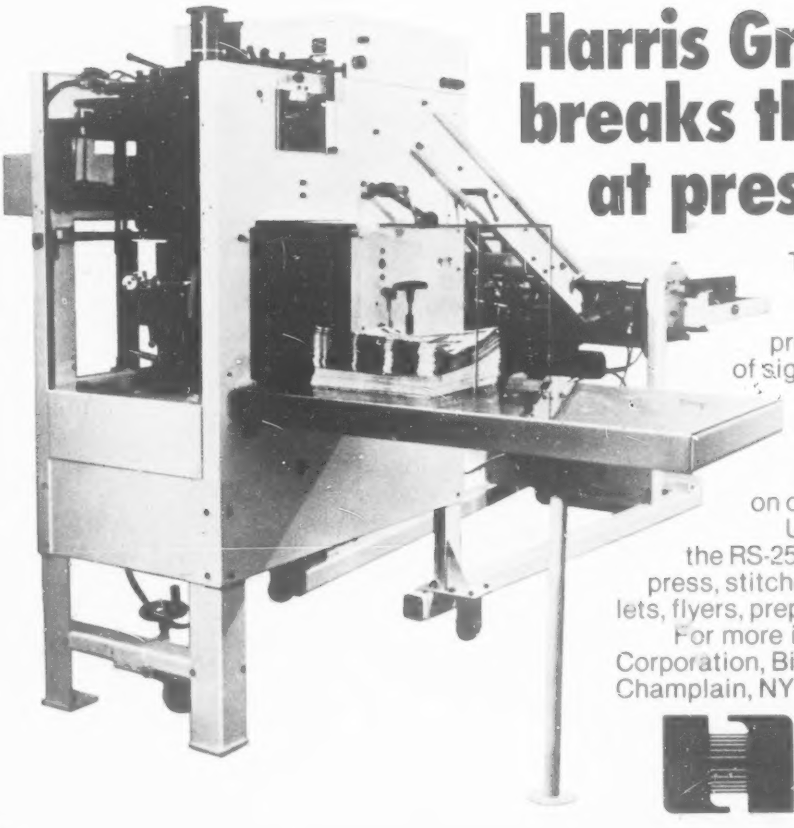
If the company "does a nice job" in compiling directories for specific groups like architects, then those groups will look to Pactel for more information, Brown says. The next move, made possible by a print media waiver, might be to publish a newsletter or magazine, he adds.

The subsidiary's newest directory, for interior designers, went into the mail this month to 66,000 readers. It has separate editions geared to different geographical regions.

As regionals find new ways to earn money, at least two of their local telephone operating companies—Mountain Bell and Southern Bell—are getting some extra cash by putting other companies' inserts into telephone customers' bills.

David Rogers, Southern Bell's assistant staff manager for customer information, says the first inserts went in the company's bills last November. Advertising customers can target an area as broad as Southern Bell's multi-state service area or one as small as a specific ZIP code. The cost ranges from a base of $35 per 1,000 for general distribution to an extra $10 to $15 per 1,000 for mailings to more specific target areas.

Rogers says that Southern Bell's earnings from inserts are "relatively small right now, but we see it as an area where there is an awful lot of potential."



Harris Graphics RS-25 breaks the bottleneck at press delivery.

The RS-25 works directly inline with most standard press deliveries to produce counted, compressed, and compensated stacks of signatures, 4 to 96 pages, at rates up to 70,000 cycles per hour.

It significantly reduces manning requirements and improves stack quality so follow-on operations are more efficient.

Used inline with slitter/trimmers, the RS-25 produces stacks of glued-on-press, stitched-on-press, or unbound booklets, flyers, preprints, and other material.

For more information, write Harris Graphics Corporation, Bindery Systems Division, Champlain, NY 12919.

The Conference: An up-to-the-minute exchange of ideas and information featuring speakers and panelists expert in all aspects of newspaper operations.

The Exposition: A showcase for the latest developments in newspaper technology, equipment and supplies.

Good Phone Service Starts With a Needs Assessment

BY DEBORAH S. WALKER

One of the most important tasks in ensuring an adequate internal telecommunications system for any newspaper company is performing a needs assessment. In its most basic form, this is the process of looking at the current situation, examining alternatives to the status quo, and deciding whether to act on one of those alternatives.

Why go to all the time and bother?

Quite simply, because it is the best way to avert crisis. A little extra effort now can save a lot of toil and trouble later.

You should perform a needs assessment:

- If you plan on making any expenditures on telecommunications equipment beyond the scope of, say, a new "beeper" for the circulation department's dispatch driver.
- If your newspaper is about to enter into a major reorganization or expansion.
- If you are having problems that may be communications-related.
- If you have never done one before, so that you will be in a position to anticipate future needs rather than merely react to change.

Who should be responsible for conducting such an assessment? Let's put it this way: If you are the person who takes the brunt of criticism when the phone system crashes, you probably are the one.

> *It is the best way to avert crisis. A little extra effort now can save a lot of toil and trouble later.*

To illustrate the needs-assessment process, consider this hypothetical case:

The Leetown News Harbinger is a 65,000-circulation daily located in the suburbs of a major metropolitan area. Leetown is in a high-tech corridor considered virtually "recession-proof." County figures show the growth rate to be steady at 6 percent per year, and the Harbinger has enjoyed circulation increases that closely follow that trend.

When Jim Adams came to the Harbinger as business manager, it was apparent that employees were dissatisfied with the telecommunications operations, particularly the telephone system itself, despite recent installation of a new PBX switchboard with ample growth capacity. Users repeatedly complained about the switchboard's being jammed, about calls piling up and about difficulty in placing calls. Most people wanted to go back to the old Centrex system—with multi-button phone sets and direct lines. Before making any major decisions Jim started a needs assessment.

His first step was to talk to workers at all levels in every department. He wanted to learn not only their phone problems, but also the specific tasks of each department and their relationship to other departments. He also took time to study people performing their jobs. He noted the pressure points and looked for opportunities where better telecommunications might improve efficiency, increase productivity, boost morale and otherwise help operations.

Jim identified three main problems.

First, the advertising department was losing business because calls were backing up during busy hours. The automatic call distributor, or ACD, system func-

Walker is telecommunications systems specialist in ANPA's Telecommunications Department.

Overflow calls wound up in the accounting department, hampering activities there. The advertising manager wanted to increase staff to accommodate the work flow, but he couldn't do that without purchasing another ACD system. Jim noted that if advertising could find a way to smooth busy-hour traffic out over the entire work day, the overflow to accounting could be eliminated without the addition of personnel or equipment.

Second, editorial employees spent a great deal of time playing "telephone tag" partly because of switchboard backups. Reporters and editors also were aggravated by delays in placing long-distance calls. Jim found that many newsroom problems stemmed from the switchboard operator's losing calls while taking messages for people who could not be located. He also noticed that outgoing calls seemed to bog down when there was heavy activity at the state capital.

Third, in the circulation department there were excessive time lags between receipt of customer complaints and problem resolution.

Dispatchers in the field who had been contacted by "beeper" to call in for messages claimed difficulties getting through to the customer-service number. Customer-service employees said they responded to all calls as quickly as possible. Jim discovered that dispatchers had no priority status over customers when calling customer service.

Needless to say, Jim noted that morale could be lifted considerably in every department with better telecommunications traffic flow.

Ascertain costs. Next Jim analyzed phone bills for the preceding nine months to develop and project expenditures.

He discovered:

- The newspaper had installed an FX line—providing unlimited calling to a distant city for a flat, monthly fee—to the state capital and two Band 0 (intrastate) WATS lines. One of the intrastate lines showed no usage three and four months previously and erratic usage since. Traffic on regular long-distance telephone lines was excessive.
- Several classified advertising agents were staying on the phone too long, according to automatic-call-distributor records. There were repeated instances of certain classified ad stations being taken out of service for extended periods, including busy hours. There were more calls by the ad takers than would be expected on an ACD system.
- Bills for local service indicated the presence of three private lines that were not reflected on inventory records or on PBX-generated call records.
- PBX "configuration sheets" revealed that components of the phone system were not configured properly to handle the flow in all departments. As a result, there was a traffic overload during selected peak periods. The switching equipment could not operate fast enough.
- Replacement of Centrex service with the PBX had reduced equipment costs by 20 percent.

After studying the records, Jim examined the more qualitative aspects of the situation in order to evaluate the resources at hand and compare the costs of action versus the costs of inaction.

> *It appeared that considerable gains could be achieved with relatively little expenditure of money and effort.*

He found the staff generally to be a willing but unguided force in regard to internal telecommunications, the existing telephone equipment, which seemed adequate in theory to meet or exceed the operating parameters established for it, to be in need of considerable improvement, and the local economy providing few constraints on cash-flow projections.

All in all, it appeared that considerable gains could be achieved with relatively little expenditure of money and effort. On the other hand, if Jim let the situation continue, a major revolt was in the offing.

The next step was to assimilate his findings with the newspaper's short- and long-range objectives. He requested, and was granted, access to senior-level strategic planning sessions. From those meetings, Jim determined that the most immediate short-term goal of the newspaper was to increase service-level satisfaction for both advertisers and subscribers. Over the long run, the newspaper hoped to prevent any upstart competition attracted by the area's economic expansion and dissatisfied customers.

Also, growth projections indicated that a move to new facilities would be necessary in about five years and that the newspaper preferred to finance expansion with internally generated funds rather than taking on high debt.

Course of action. Jim finally was ready to explore specific solutions to the internal telecommunications problems. He developed a list of projects that met the needs of the newspaper most fully and provided the best return on investment.

Jim decided to:

1. Purchase a "voice mail" system which, among other things, serves as an automatic answering machine that could be used by individuals when they are not in the office. The system, which performs as if it is integrated into the PBX switch, would cost approximately $5 per user per month. In return, the system would eliminate inefficiency and lost calls at the switchboard, reduce telephone tag substantially, stabilize the traffic flow and alleviate busy-hour crises, and redirect circulation dispatchers' calls from a busy customer service to a private "mailbox". He preferred this option to reinstallation of the Centrex system because replacement of the PBX with Centrex would eliminate the tax benefits of system ownership, represent a loss of capital, eliminate the 20-percent cost savings of the PBX vs. Centrex, and it would not benefit system users. Furthermore, long-range objectives favored depreciation of current equipment to coincide with the expected move to new facilities.

2. Reconfigure the PBX for both internal and long-distance service. By better balancing the traffic flow within the phone system, Jim could improve call-processing rates system-wide. Proper traffic engineering would result in a 25-percent or better reduction in long-distance costs. The money saved could be put toward payment of the voice mail system.

3. Retrain all of the system users.

Retraining the classified-advertising supervisor to use the management reports also would enable him or her to identify problem personnel who close their work stations at inappropriate times and make too many out-going calls.

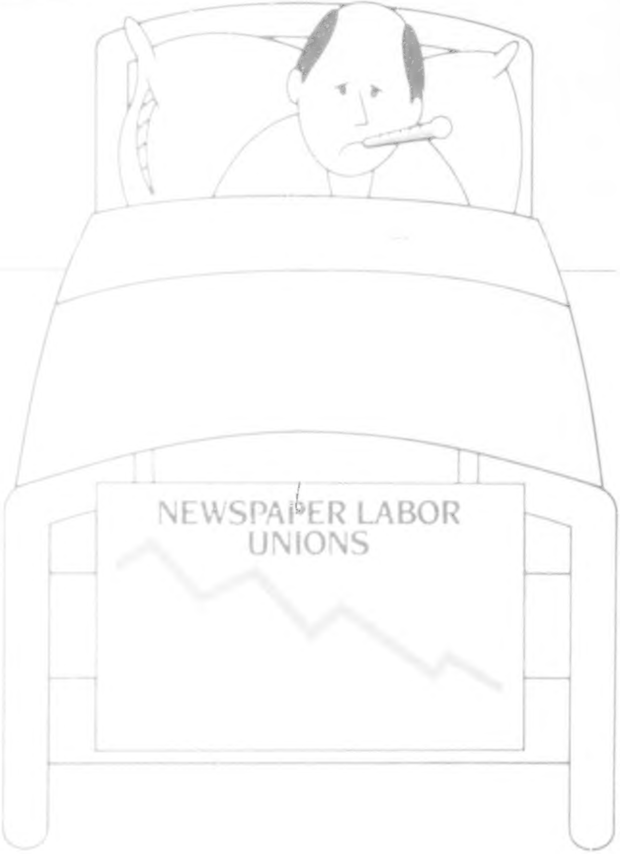
4. Establish a direct ad-copy entry system mainly for classifieds, in which advertisers could send ad copy from a personal computer to the newspaper's mainframe computer. This could be implemented at little cost, utilizing existing but currently unused private lines connected to the mainframe computer.

Thus ends the needs assessment. Jim's problems are far from solved however. He now must find and buy necessary additional equipment. **The "procurement process" will be the subject of an article in the April issue of presstime.** □

THE STATE OF THE UNIONS

Organized labor, though still a strong force in the newspaper business, is losing members and influence

BY CLARK NEWSOM
presstime labor writer



Wayne Vincent

For many reasons—economical, political, social and technological—organized labor continues to lose influence in the United States. Its declining role in the newspaper business is reflective of that national trend. To stop the erosion, newspaper unions are looking to each other for help. In a word: merger. But uniting disparate groups, each with its own strong traditions, has proved to be difficult. The past three years have seen one such merger effort succeed and three fail.

"If the internal stumbling blocks can be overcome, such as who is going to lead, one big [newspaper] union may emerge," says Paul J. Lizundia, secretary-manager of the Pacific Northwest Newspaper Association in Portland, Ore., which assists member newspapers in their labor and personnel relations.

Yet even if the "one big union" emerges from all the current turmoil, many newspaper labor specialists say they don't expect organized labor in the industry to exert a stronger influence five years hence. "I don't see anything on the horizon that will lessen the weakening of the unions," says Keith R. Fuller, director of employee relations for McClatchy Newspapers of Sacramento.

Meanwhile, the three principal newspaper unions are struggling to maintain the status quo. One of them, the International Typographical Union, which primarily represents printers and mailroom workers, has not been able to do that. Especially hard hit by new technology, the ITU has seen its ranks erode steadily since the mid-1960s. Membership now stands at about 43,000 active members—26,000 of them at U.S. and Canadian newspapers.

The Graphic Communications International Union, the principal bargaining agent for pressroom employees, grew through merger to its present position: the largest blue-collar union in the newspaper industry, with 27,500 of its 200,000 members employed there, most of them in pressrooms. But the GCIU has had little recent success in organizing new members at newspapers.

The Newspaper Guild, mainly representing white-collar workers and currently deriving all but 5,000 of its 32,500 members from U.S. and Canadian newspapers, has had no appreciable gain in membership in recent years, despite the addition of more than 10,000 editorial staffers at U.S. dailies since 1978 [presstime, Dec. 1985, p. 14].

The gigantic International Brotherhood of Teamsters is a wild card being watched by both publishers and other unions. Its strength at present is felt at newspapers in only a relatively few large cities where it represents delivery drivers. About 8,000 newspaper employees are in the 1.9-million-member union.

At the end of last year, when total U.S. newspaper employment stood at a record 453,600, an estimated 19.2 percent were represented by unions, compared with 21.4 percent in 1979. The percentage of union members in the entire workforce is even lower. Estimates range from 18 percent, as compiled by the U.S. Labor Department's Bureau of Labor Statistics, to 15 percent, as computed by Professor Herbert R. Northrup, director of the Industrial Research Unit at the Wharton School of the University of Pennsylvania. (See charts, pp. 24 and 30.)

One of the anomalies of the labor scene is that in Canada the situation is reversed—union representation has grown to 40 percent of the total workforce, although there has been no significant increase in membership in newspaper unions. The overall picture in Canada is brighter, some believe, because of a pro-labor attitude among the public and lawmakers there.

Whatever the cause, it hasn't rubbed off on the United States recently. For U.S. newspaper unions, stopping the slide is the priority. Thus, the current dusting off of the "one big union" prediction.

Similar predictions a quarter of a century ago were "premature," says Professor Gary N. Chaison of the Graduate School of Management at Clark University in Worcester, Mass., and a student of union mergers. Now "the time is ripe" for consolidation into one printing industry union, and "eventually we'll come to that," he says.

Looking at the historical context, Chaison notes that where various crafts broke from an all-encompassing ITU around the turn of the century to form separate unions, "they're coming together again."

Since the merger of the American Federation of Labor and the Congress of Industrial Organizations in 1955, the number of AFL-CIO affiliates has declined from 135 to 95, primarily through the process of merger.

Why the weakening influence? The consensus of more than 20 newspaper executives interviewed by **presstime** over the past two months is that the influence of organized labor in the newspaper business is significantly weaker today than it was five years ago [**presstime**, Aug. 1980, p. 4]. This has come about not only because of internal union problems, but also because newspapers are "managing in a positive fashion," says Fuller of Sacramento, who is chairman of ANPA's Human Resources Committee.

He and other newspaper managers say the companies are paying more attention to the needs of their employees. "Management is getting better in acting [on important concerns] rather than reacting to unions," says James M. Schurz, senior vice president in charge of newspapers for Schurz Communications in South Bend, Ind. Publishers are "treating employees better and involving them more" in the total process of putting out a newspaper, he says. "The payoff is that the work environment is better." (See story, p. 28.)

Unions also have demonstrated a change in attitude that improves the labor-management climate. Victor H. Hanson III, general manager of The Birmingham News, says unions are "more reasonable" today than they were a decade ago. "The unions seem to have more willingness to understand the company's problems," he says.

For example, 25 years ago, the stereotypers' union insisted that four journeyman members were needed to run a new automated plate-casting machine and shaver installed at The Oregonian in Portland. The manufacturer had given the publisher assurances that it could be operated by one man. The dispute over manning became a major issue in an unsuccessful strike by the union.

One reason for the change, according to ANPA Manager/Labor Relations Charles D. Cole, is that unions "see increased productivity is necessary." In many cases, he says, pressmen and mailers units have recognized there was excessive manning, and for a price—such as a guarantee of a week's work for a limited number of substitutes—they have agreed to reduced manning.

Cole adds that many driver units have "reluctantly" conceded that they did not need helpers on some of their routes. "Unions are more attuned to the economic realities of publishing newspapers," he says. "Most of them realize that competition from other media and declining advertising linage in several sections of the country, principally the Midwest, call for adjustments."

As an example of those "adjustments," Cole cites a January 1986 analysis by the ANPA Human Resources Department of press-manning provisions in 316 GCIU labor agreements at newspapers. It shows that manning is determined by management in 36.4 percent of the agreements. Five years ago, only 10.3 percent gave management that latitude.

Unions also are less inclined to strike nowadays. In the 1980s, there have been an average 7.8 newspaper strikes a year in Canada and the United States, compared with an average 23.4 in the 1970s and 22.3 in the 1960s.

For their part, leaders of the newspaper unions deny that labor has lost much of its clout. If "weakening influence" is interpreted as meaning "less people," that may be true, says GCIU President James J. Norton, but he adds, "I don't believe the influence of the unions is weaker at newspapers."

"I do believe that if we are to face up to the responsibility of representing our members, we must do this within one union," Norton says.

Unions are weaker because of internal problems and newspapers' "positive" management.

Source: AFL—CIO

Mainly because its members have been least affected by technological change, the GCIU is perceived by most of the newspaper executives interviewed to be, as a whole, the strongest union in the business.

But at those relatively few newspapers where distribution depends upon union drivers, that union is perceived to be the strongest. And this generally means the Teamsters. Of the 60 labor contracts on file at ANPA covering drivers, 47 of them are Teamsters agreements.

The strength of the delivery unions was made clear during two strikes last year. The Chicago Tribune was able to continue publication as Teamsters drivers honored their labor agreement. But The Philadelphia Inquirer and Philadelphia Daily News were shut down largely because the Teamsters' contract had expired and the drivers refused to work.

Nevertheless, it is possible for a large metropolitan newspaper to deliver copies even when its drivers are on strike. For example, The Toronto Star published and distributed during a four-day Guild strike in 1983 by hiring temporary replacements for its Guild-represented drivers. A smaller paper, The News Tribune of Woodbridge, N.J., was able to deliver its papers through an outside distributor during a labor dispute that began in late 1985.

Labor specialists cite two important factors in delivering during a strike—a police department and a judicial system that will enforce the laws impartially.

Groping toward one union. Against this background of a changing work environment and shrinking union rolls, the leaders of the three principal newspaper unions all desire to merge their organizations. But since July 1983—when the Graphic Arts International Union merged with the International Printing and Graphic Communications Union to form the GCIU—their labors have borne no fruit. Nonetheless, the effort has been constant.

- August 1983—Teamsters President Jackie Presser, speaking at the ITU convention, offered to make the ITU a "national division" of his union. Later in the same convention, delegates voted against a proposal to merge with the Guild, ending a six-year effort to join those two unions.
- November 1983—In the ITU's presidential election, Robert S. McMichen, who favored merger with the GCIU, defeated incumbent Joe Bingel, who supported affiliation with the Teamsters.
- March 1984—Merger talks between the ITU and GCIU were ended, and the ITU and Teamsters began discussions.
- August 1984—The U.S. Labor Department certified a rerun election for the top five ITU offices, in which McMichen again defeated Bingel and anti-Teamsters-merger forces emerged with a 3-to-2 edge on the executive council.
- September 1984—The ITU convention gave McMichen 90 days to reach a merger agreement with the GCIU, but a proposed merger document was subsequently rejected by the GCIU's general board.
- August 1985—In a referendum, the ITU membership rejected a proposed merger with the Teamsters.
- September 1985—GCIU President Kenneth J. Brown, who had led the unsuccessful effort to merge his union with the ITU, retired unexpectedly. Brown was succeeded by Norton, who also favors merger among unions serving the newspaper industry.
- January 1986—Merger talks between the GCIU and the ITU resumed.

"The ITU membership recognizes more than ever that it needs to be affiliated with another union in order to stop the continued erosion of its bargaining strength," says H.J. (Jack) Kracke, executive director of the Publishers' Association of New York City, which represents the Daily News and The New York Times in negotiations with unions. "If a merger with the GCIU doesn't take place soon, the Teamsters may very well be back in the picture."

Professor Chaison cites the following benefits of union mergers: lower costs in providing service to members in the legal and research areas, elimination of jurisdictional disputes, improved lobbying, protection against raids by other unions, and improved organizing.

But there also may be disadvantages from organized labor's

Differences of opinion do not mean "we will differ on our ultimate goal" of an ITU-GCIU *merger.*

Robert S. McMichen

viewpoint. One is that "merger can become a substitute for organizing," Chaison says. "And there is no evidence that mergers provide for more effective strikes."

The latest round of merger discussions between the GCIU and the ITU began Jan. 23-24 in Washington, D.C. They continued in the background of the AFL-CIO Executive Council's annual winter meeting Feb. 17-21 in Bal Harbour, Fla.

"I am optimistic about bringing about a merger, and I think the rank-and-file of both organizations are in agreement with that concept," says Norton. He adds, however, that any merger "must be good for the industry" and "financially sound."

Norton also notes that any new merger cannot be allowed to "disrupt" the two-union consolidation three years ago that formed the GCIU. He notes that conditions were attached to that merger that carry into 1992.

Following the GCIU-ITU discussions in January, Norton and ITU President McMichen said the two outstanding issues to resolve were ITU dues in a merged union and the future of the ITU's Union Printers Home in Colorado Springs, which houses about 140 elderly members. The first merger agreement between the two unions, negotiated in early 1985 and subsequently rejected by the GCIU board, guaranteed the financial future of the home through deeding the ITU office complex—then appraised at about $5 million—to the Union Printers Home Corp.

But even as merger talks with the GCIU resume, there is lingering bitterness in the ITU hierarchy over the failed attempt to become part of the Teamsters union.

McMichen sought to patch over that bitterness when he wrote in a recent issue of the Typographical Journal: "Just as differences of opinion and strategy have always existed among the members of the ITU Executive Council and most likely always will, even among the closest of allies, that does not mean we will differ on our ultimate goal or that our goal will not be reached."

Standing by and watching carefully as the GCIU and ITU negotiate is The Newspaper Guild. "We still think that the interests of employees would be best served by one big union" in the newspaper business, says Guild President Charles A. Perlik Jr. "We hope the ITU-GCIU talks are conclusive." If that happens, Perlik says his union would pursue efforts to link the Guild and the union resulting from the merger.

Professor Chaison believes the one union would first have a divisional structure for certain crafts to minimize the potential problem of less attention being given to particular groups. A centralized structure would come later.

Roy W. Anderson, ANPA vice president/human resources, observes that the long-term goal of one big union "still requires successful newspapers for survival. In newspapers where the management-labor relationship exists, anything less than total commitment to this result" gives competing media "a great advantage."

The merger of the GCIU and ITU, if accomplished, "would combine the last elements of the traditional newspaper craft unions and create a broader industrial union," Anderson points out. "The strength of this new union would be primarily in efforts to organize non-union employees. The need for multiple leadership at the international and local levels would be eliminated, and those resources could be used for building a larger union."

Targets for organizing. As the international unions pursue merger, their locals are being urged to follow the guiding dictum of unionism: Organize the unorganized.

The GCIU, ITU and Guild have only a small number of paid organizers to cover the United States and Canada: 12, six and two, respectively. The task hasn't been an easy one, and the results reflect that.

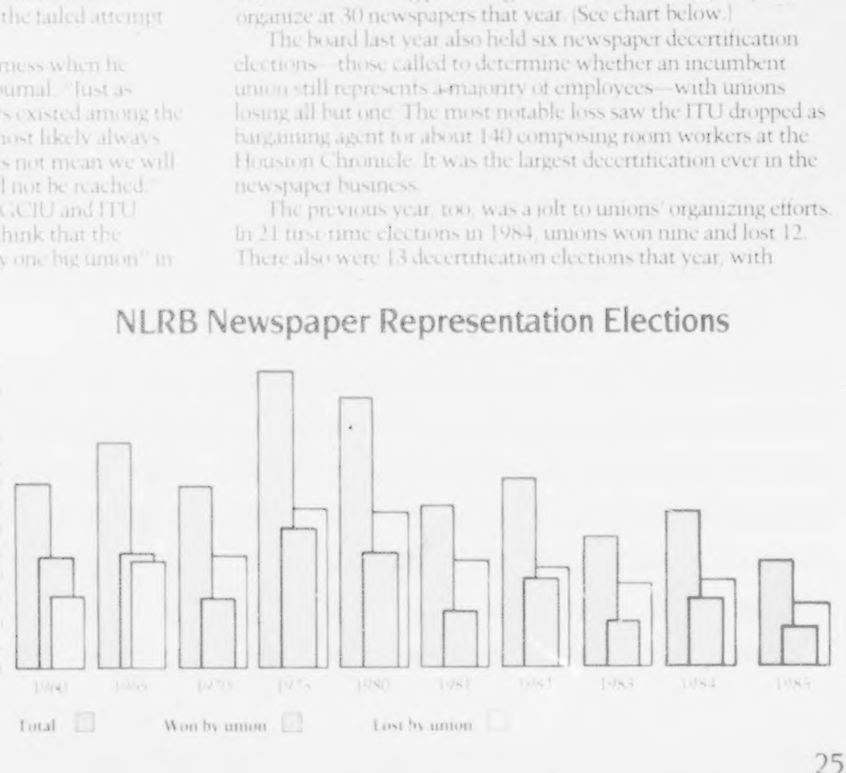
For the past 10 years, the number of representational elections conducted by the National Labor Relations Board has been dropping in industry generally and in the newspaper business in particular. At the same time, organized newspaper employees have been voting in greater numbers to decertify unions as their bargaining representatives.

Last year union organizational attempts at newspapers led to only 17 NLRB representation elections, and the unions lost nine of them. A decade ago there were 64 such elections at newspapers, and while the unions' winning percentage was about the same, they did organize at 30 newspapers that year. (See chart below.)

The board last year also held six newspaper decertification elections—those called to determine whether an incumbent union still represents a majority of employees—with unions losing all but one. The most notable loss saw the ITU dropped as bargaining agent for about 140 composing room workers at the Houston Chronicle. It was the largest decertification ever in the newspaper business.

The previous year, too, was a jolt to unions' organizing efforts. In 21 first-time elections in 1984, unions won nine and lost 12. There also were 13 decertification elections that year, with

NLRB Newspaper Representation Elections



Unions Get a Taste of Their Own Medicine

Publishers aren't the only ones who negotiate with unions. The leaders of international unions do too.

About 70 employees of the International Typographical Union are represented by three locals of the independent International Federation of Staff and Office Employees' Union. New agreements were reached recently with the two locals representing the clerical and headquarters staff in Colorado Springs. The agreements guarantee severance pay for any ITU employees whose job may be eliminated in a merger with another union. But negotiations with the local representing field personnel—international representatives and organizers—were at an impasse in late February.

The Graphic Communications International Union, with headquarters in Washington, D.C., employs about 80 people. Half are represented by a local of the Office and Professional Employees International Union. International representatives and organizers are represented by the Independent Union of Graphic Industry International Personnel.

The Newspaper Guild, also based in Washington, has about 30 employees. The clerical staff is represented by the OPEIU. The administrative staff and international representatives are represented by the Federation of Guild Representatives.

Even the AFL-CIO sometimes has labor troubles. Its headquarters building in Washington was virtually shut down for two days in January when more than 200 rank-and-file employees observed picket lines set up by a small group of workers represented by the Guild in the Food and Allied Service Trades Department.

---

unions losing all but three. However, in three of the decertifications the employees selected another union to represent them.

In industry as a whole, the NLRB reports that preliminary figures for the fiscal year ended Sept. 30, 1984 (the latest year for which figures are available), show 3,561 elections were conducted, with unions prevailing in 46.2 percent. This compares with 3,492 in fiscal 1983, when unions won 47.7 percent. The NLRB also reports that the percentage of union wins in decertification elections dropped from 25.2 percent in 1983 to 23.5 percent in fiscal 1984. There were 874 decertification elections in 1984 and 922 in 1983.

Again, 10 years ago the picture was considerably brighter for the unions. In 1975, unions won 49.6 percent of the 8,061 representational elections in all of industry and 26.6 percent of the 516 decertification elections.

Scanning the organization picture, newspaper labor-relations specialists observe that the Teamsters union has not emerged as the organizing threat portrayed in Presser's address to the 1983 ITU convention. Last year, it was involved in four newspaper elections and lost three of them. It recently filed a petition with the NLRB to represent about 80 part-time mailroom employees at the Wichita (Kan.) Eagle-Beacon.

The Teamsters union is, however, particularly strong in Ohio, where it represents mailers and composing room workers at The Plain Dealer in Cleveland and mailers at The Columbus Dispatch, all of whom were represented by the ITU prior to NLRB decertification elections in 1984.

Despite the recent weak results of organizing efforts at newspapers, management and labor leaders agree there are targets available at newspaper plants, particularly in the mailroom and delivery functions. "Any department where there are a lot of people doing similar jobs" is most susceptible to being organized, observes Hanson of Birmingham.

With fewer than 10 percent of the newsrooms at U.S. and Canadian daily newspapers organized, "We've never lacked for organizing opportunities," comments the Guild's Perlik.

Asked which union has the best chance to make inroads organizing newspaper employees, Schurz says "the union itself is not as important as the organizer." Some unions that are strong in a particular community, such as the International Brotherhood of Electrical Workers, may have a better chance than the traditional newspaper unions, he notes.

One such non-newspaper union—the Communications Workers of America—last year organized advertising, bookkeeping, editorial and dispatch employees at The Post-Crescent in Appleton, Wis. Although The Post-Crescent is the only newspaper in the United States or Canada where the CWA enjoys bargaining rights, some observers believe the union eventually will play a significant role in newspaper labor relations [presstime, Jan. 1983, p. 34]. Currently, the CWA is directing its energies toward new contract talks with AT&T and the regional Bell companies.

Shifting union goals. While the newspaper unions continue to proclaim organizing as their primary goal, they increasingly are

C. David Rambo

Michael P. McNally (left), secretary-treasurer of the Graphic Communications International Union, meets with office manager Charles C. Price (center) and chief accountant Stephen E. Miles.

placing greater emphasis on other concerns. For the two major production unions, job security has risen to the top of the list; for the Guild, it is salaries.

The ITU has "made it clear" that job security is its main concern, notes Sacramento's Fuller.

At the same time, observers note, publishers are seeking more "flexibility" in their labor agreements—that is, the ability to transfer workers based on staffing requirements.

As those antithetical goals are put forward at the bargaining table, the ITU is demonstrating "more resistance" to publishers' demands for flexibility, says David J. Winkworth, manager of the Publishers Bureau of New Jersey, which handles labor relations for newspaper clients.

At the Guild, Perlik ~~says~~ it is time to halt the long period of "concession" bargaining. Perlik also notes a prediction he made at the 1983 ANPA Convention—the first $50,000-a-year top minimum for reporters in a labor agreement—may come to pass in 1987 in New York City.

Another Guild goal—salary parity between advertising salespeople and reporters—has come under fire by some newspaper executives. William M. Clemens, general manager of The Pueblo (Colo.) Chieftain, says, "Parity is paralysis. It's a sickness that needs to be doctored."

"The Guild has saddled newspapers with restrictive practices in setting salaries for salespeople like the top minimum for reporters," Clemens says. "We're competing with electronic media," and "salespeople on guaranteed salary don't have the incentive to produce." Salespeople at his newspaper, which has a Guild contract, are paid on a salary/commission basis. "Too many professional labor people are still thinking '1960s,' " he adds.

Ray Maly is another newspaper executive who believes "it's important to break away from everyone receiving the same wages. Employees should be paid on performance. This goes for both union and non-union people." Maly, vice president/operations for The Columbian of Vancouver, Wash., adds: "We've always had a good working relationship with our unions, but we won't let them run our business."

The GCIU's Norton says one of his goals is "to re-establish a line of communications with the various employers, from the newspaper publishers' association to the associations representing box manufacturers," packaging companies and other container businesses. He notes that publishers' needs vary from city to city, and communication "away from the heat of the bargaining table may give us the opportunity to educate both sides [as] to each other's needs."

Norton, who was elected president Nov. 12, 1985, says the theme of his administration is a quote from John F. Kennedy: "Problems when discussed become situations, and situations can be adjusted."

But at the Chicago Tribune, where about 1,000 printers, mailers and pressmen have been replaced since the strike by the GCIU and ITU began last summer, the vice president and director of employee relations says "economic reality" often has been absent from newspaper labor negotiations.

George D. Veon adds that even when major technological changes were being made in the 1960s and 1970s, newspapers

Joining Forces In Earlier Era

Newspapers sometimes must take drastic action to keep publishing during a labor strike. One of the boldest undertakings occurred Sept. 19, 1923, when 10 morning newspapers in New York produced a combined edition. Still publishing today are The New York Times, the Daily News, The Journal of Commerce, Il Progresso Italo-Americano and New-Yorker Staats-Zeitung, now a weekly called Staats-Zeitung und Herold.

tended to negotiate on the basis of tradition. "For example, when teletypesetter equipment was introduced, economic reality said you could hire skilled typists who could do the work faster and better than journeymen Linotype operators at about half the cost. Instead of doing that, as an industry for the most part, we accepted the union thought-process that such employees had to be classified as journeymen.

"We followed the same path of least resistance as photocomposition or cold type came on the scene. The people who did that work were declared journeymen, although few of us really believe that economic reality really requires that we pay people $20,000-30,000 a year to paste pieces of paper on other pieces of paper. Most other industries would have said, 'Hey, that's a new job, let's evaluate it and pay whatever it's worth.'"

In today's competitive business environment, "We are going to have to rethink our position," Veon says. "We need to find new ways to compete and to control costs. In the manufacture of our products, we are restricted, primarily by time. We can't decide to have all or part of the product manufactured off-shore, like an auto company or a clothing company."

The next five years. Unless one strong union emerges from the current disarray among newspaper unions, both labor and management officials believe organized labor's position in the newspaper business will continue to deteriorate.

"I don't think the ITU will have many contracts in 50,000-circulation-and-under newspapers," says Clemens of The Pueblo Chieftain.

Stephen Rogers, president of Syracuse Newspapers Inc., notes that as pagination and other sophisticated computer equipment is introduced at more and more newspapers, professional employees will be needed to perform additional tasks previously handled by composing room workers and other-pre-press personnel.

Another veteran participant in labor relations makes the same point: "Due to changes in production methods, the unions will have fewer members," says Winkworth of New Jersey. "A lot of the work will be done by non-union people."

Looking toward the future, a 27-member AFL-CIO Committee on the Evolution of Work, which included then-President Brown of the GCIU, issued a report last year noting that union membership in the United States had declined in absolute numbers as well as in percentage terms during the 1980s.

But while the percentage of organized workers in the United States dropped from 30 percent to 20 percent between 1963 and 1983, the report noted, organized labor in Canada was enjoying a boom—sprinting from 30 percent to 40 percent of the workforce.

The report attributed the different Canadian experience to more liberal labor laws there. In Ontario, for example, a union is granted automatic certification as bargaining representative of a group of employees by filing cards with the labor board signed by 55 percent of the workers authorizing the union to represent them.

Reducing Employees' Desire for Unions

BY MARK INGHAM

"We want to be responsive to your needs consistent with sound management and the fair treatment of all employees. We do not feel you will find it necessary to pay someone to speak for you to get fair treatment at KPC."

This is how Knight Publishing Co. of Charlotte addresses the issue of organized labor in its employee handbook. While many newspapers may be concerned with dealing with unions, more and more papers are adopting that kind of philosophy, which tends to make unions unnecessary in the eyes of employees. The Charlotte Observer, for example, has no unions.

The philosophy is manifested in many ways, including attitude surveys, grievance procedures, in-house communications, training programs and management style.

Patricia P. Renfroe, ANPA manager/personnel relations, cites results from a 1978 study by The Journal of Applied Psychology as evidence of the need for improved communications between management and employees and for modern personnel practices overall. In the study, 34,000 employees in various industries were asked to rank, in order, the top three job morale factors. They turned out to be:

- Full appreciation of work being done
- Feeling "in" on things
- Sympathetic help on personal problems.

At the same time, the supervisors of these employees predicted that the top three choices would be wages, job security and promotion.

Many newspapers improve communications by conducting employee attitude surveys [presstime, May 1985, p. 22]. At The Orlando Sentinel, for example, when the results of its biennial survey are released, managers must develop a plan to address specific matters that have been brought to light. "We pay a lot of attention to it," says Gerri Cordle, vice president and director of employee relations.

At Harte-Hanks Communications Inc., where unions represent less than 1.5 percent of all employees, such surveys are conducted by each of the group's newspapers at least once every 18 months, according to H. Rad Eanes III, vice president, human resources, of the San Antonio-based company.

Experts say employee attitude surveys are an excellent means of giving employees a voice in the organization, but it is preferred that they be conducted by an outside agency to guarantee the respondent's anonymity. It is also essential that the employees see the results acknowledged.

Ingham is ANPA personnel relations associate.

"There is a stronger voice from the left," says C.J.H. (Chris) Davies, director of industrial relations for The Toronto Star. He also notes "a lot of English and Scottish labor influence in the English-speaking part of the country."

As to the steadily declining union membership in the United States, Deputy Undersecretary of Labor Stephen I. Schlossberg says that U.S. labor laws permit companies to defeat unionism "by delay," in contrast to Canada, Australia and other countries where employers "can't stall" a union representation election.

"Sometimes it takes three years to get an election" after a representation petition is filed in the United States, he notes. The U.S. culture "is somewhat anti-union," adds Schlossberg, a former general counsel of the United Auto Workers union.

As organized labor sees it, anti-union sentiment is manifested in the decisions handed down by the five-member NLRB since Reagan appointees assumed majority status in 1983. The AFL-CIO Lawyers Co-ordinating Committee reports that there have been 30 cases since 1983 in which the board

Personnel Director Sharon K. Nesselroad says that at the Greensboro (N.C.) News & Record, employees can view the results of the attitude survey and can submit collective or individual comments about the data. Managers are held responsible for setting priorities and developing action plans based on the survey results.

While employee attitude surveys are helpful in determining composite employee opinions, personnel specialists say it is also a good idea to have a procedure for a more individualized approach—a grievance procedure, for instance.

Several personnel managers say that the kind of grievance procedure commonly available to employees at newspapers with union contracts can be even more effective in a union-free environment [**presstime**, Dec. 1981, p. 42]. That's because non-union employees represent themselves rather than rely on a third party. Or, if they prefer, the employees can ask the personnel manager to assist in the grievance procedure.

"I am an employee advocate," says John F. Bowyer, personnel manager at The Charleston (W.Va.) Gazette and Charleston Daily Mail. "I try to represent the best interests of the employees to management, and vice-versa."

With such an open-door policy, employees know that they have direct access to senior management and will be given every opportunity for a fair hearing, Bowyer says.

For many employees, more important than the fair hearing is the sense that they will not be treated capriciously by a supervisor. With grievance systems in place and operating, employees know that management is committed to fair and equitable operating procedures, personnel specialists say. "There is a concerted effort to see that there is fairness," says Greensboro's Nesselroad, "and the employees know it."

To keep employees informed of activities within the organization, a large number of newspapers produce employee newsletters [**presstime**, Jan. 1984, p. 30]. It's one way of addressing the desire of employees to feel "in" on things.

However, a newsletter is only one-way communication. This type of "communication is very important," says Orlando's Cordle, "but I put the emphasis on listening."

The Sentinel holds question-and-answer sessions once every two weeks that are attended by seven members of the top-management staff—including the publisher, general manager, vice presidents and directors—and 35 to 40 employees. In these sessions, employees pre-submit questions to be answered by the applicable senior manager. "They are tough questions with frank answers," says Cordle. The sessions are recorded and printed in the employee newsletter.

Another means of facilitating in-house communication is the "brown bag" lunch, used to disseminate information on a particular topic. Special memos and company bulletin boards also can be helpful.

Some newspapers have training and development programs to keep their employees up-to-date on technological skills and management policies. Upgrading the skills of supervisors is an important factor in developing a union-free environment, says H. Michael Tyson, vice president of finance and administration at the Houston Chronicle. "Supervisors need to concentrate more on managing and less on treating people like contract laborers," he explains.

Such management development programs are also a way of communicating to the supervisors the company's philosophy about many things, including unions. "Making unions unnecessary depends on what vision you have for the people—what you want to build," says Harte-Hanks' Eanes. "We work from a philsophy of common goals with our employees, whether they are represented by a union or not," he says.

Newspapers like The Charlotte Observer have trainers who work exclusively with supervisors to communicate, among other things, the company's philosophy that managers should treat people the way they would like to be treated. "It was important enough to be written down in the Bible a couple of thousand years ago, and it still works for us today," says President and Publisher Rolfe Neill.

Progressive personnel policies can lead to situations where employees in a bargaining unit re-evaluate the need to continue paying dues to their union.

At the Houston Chronicle, where employees voted last year to decertify the union in the composing room, Tyson says, "We created an atmosphere of trust and allowed our employees an opportunity to get ahead based on merit."

In Greensboro, mailers and platemakers remain part of a bargaining unit at the News & Record, but they signed an agreement more than two years ago to continue working without a contract. "All we want is a chance to manage union employees the way we are managing employees without a contract," says Conrad M. Hall, executive vice president of Landmark Communications Inc., the parent company.

Says Orlando's Cordle, "I don't believe that the unions will go after a company that is well-managed."

reversed earlier precedents favoring unions.

The current NLRB asserts that its interpretations of the nation's primary labor law—the Taft-Hartley Act of 1947—are more equitable than the pro-labor rulings made by the board during the Carter administration [presstime, Dec. 1984, p. 54].

However one views today's NLRB, this much is clear: As administrations come and go, the NLRB's treatment of labor issues fluctuates. Thus the 1988 presidential election will once again affect the course of the labor movement in the United States.

Union Membership as Percentage of U.S. Workforce*

Alberto Pacheco

ANPA's Cole notes that other laws designed to protect workers, such as the Age Discrimination in Employment Act, the Occupational Safety and Health Act and the Civil Rights Act of 1964 that created the Equal Employment Opportunity Commission, have contributed to employees' lessening interest in paying dues to unions. In other words, the federal government is handling some workplace concerns that otherwise might fall to organized labor.

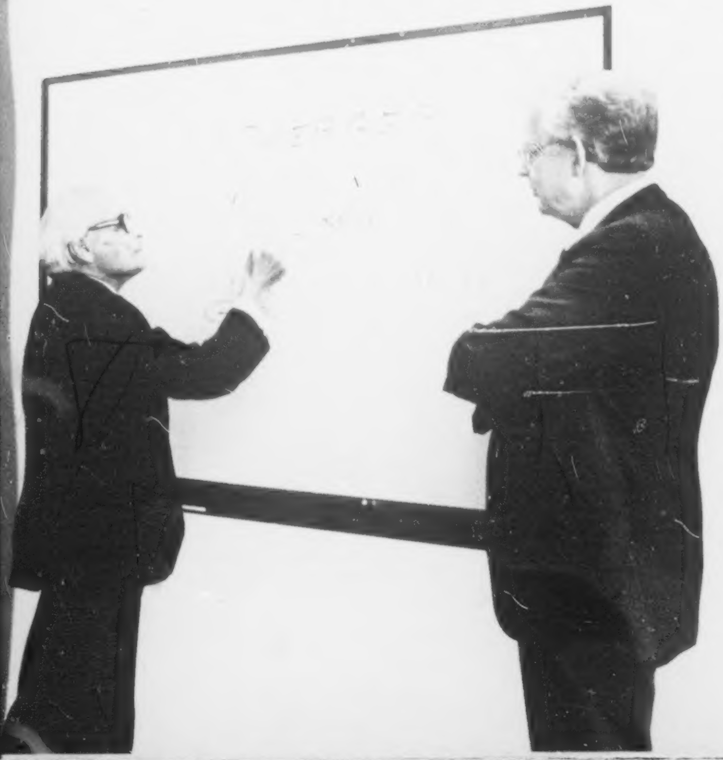
Responding to the reduction in union membership, the AFL-CIO's 30th convention last October adopted a recommendation of the Evolution of Work Committee to create a new category of associate membership for individuals who are not part of organized bargaining units. They will be offered certain services and benefits. One advantage the labor federation foresees is establishing a reservoir of workers who might become inclined to seek full-fledged union status.

Murray Seeger, AFL-CIO director of information, says the federation is negotiating with insurance carriers about test-marketing various forms of life insurance and medical benefits for associate and other members. Negotiations also are under way with credit card sponsors to offer cards with either no annual fees or low carrying charges, and to provide other financial services.

Seeger says some test-marketing may start in April. Individual unions will furnish the names of 75,000 current members who will be surveyed to determine which benefits are the most attractive. A second survey of 200,000 members will be made on items that receive a good response. "If all signs are still positive, we'll go into a mass marketing program," Seeger says. "Think of it as the federation being the wholesaler and the individual unions the retailers."

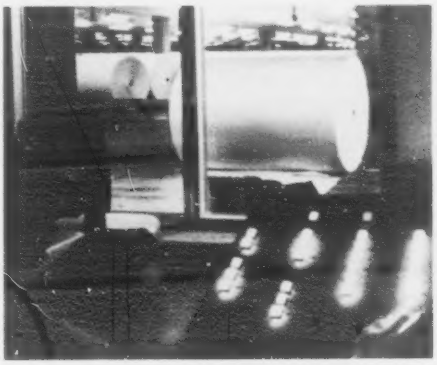
Fresh initiatives such as the associate membership program are cited by some experts as evidence that unions may yet regain some of the power they have lost in recent years.

Schlossberg, who is deputy undersecretary of labor for labor-management relations and cooperative programs, admits that organized labor "is in some trouble today" but says "the pendulum is bound to swing." Collective bargaining "is a manifestation of freedom," he says, and "a strong labor movement is essential to a free society." ☐

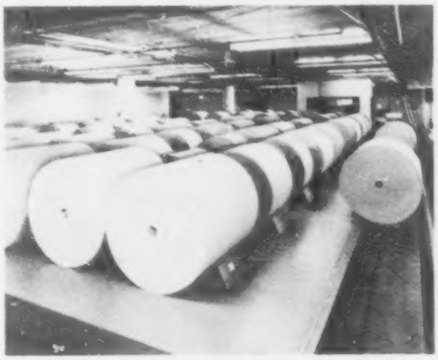


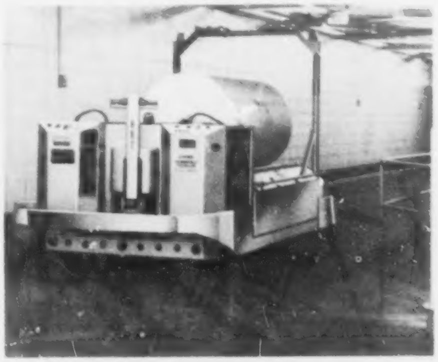
As merger talks between the two unions begin, GCIU President-emeritus Sol Fishko (left) and ITU Vice President Billy J. Austin chart the way the hierarchy might look after consolidation.

An Automatic Approach To Newsprint Roll Handling.



With today's trend towards automation, Webb automatic newsprint roll handling systems are fast becoming a key area for trimming production costs in the newspaper industry. From wrapped roll storage to the reel stands, time and efficiency are critical when handling the necessary tonnage of paper rolls to meet daily production schedules. Webb newsprint roll handling systems feature state-of-the-art equipment and controls ranging from simple gull wing conveyors to sophisticated AGVS (automatic guided vehicle systems). With basic information from the customer, Webb can custom-design a cost efficient, automatic system including preliminary concepts, rough pricing, and project scheduling. Innovative experience has earned Jervis B. Webb an unparalleled, worldwide reputation of quality and reliability in newsprint roll handling.





For more information on paper and newsprint roll handling systems call our Material Handling Hotline: 313/553-1220.

ASSOCIATIONS: Part II

The second half of presstime's listing of newspaper-related associations

BY GENE GIANCARLO

There is nary a newspaper department whose employees do not have available a professional or trade association they may join.

The following summary of 38 organizations covers the categories of advertising, circulation, business and personnel, international, sports and women. It completes presstime's accounting of 75 national and international groups.

Most information in the longer entries came from responses to a presstime questionnaire. The shorter entries were pieced together by telephoning and from the *Encyclopedia of Associations*.

The February issue listed six trade and 30 editorial associations [pp. 26-31]. This final installment lists 15 organizations in the fields of advertising, circulation, business or personnel; eight in the international category; 11 for sports journalists; and five for women journalists. ☐

Giancarlo is former executive director of the American Society of Newspaper Editors. This is the second half of his compilation of associations whose members include newspapers or their employees, or organizations representing newspapers.

ADVERTISING, CIRCULATION, BUSINESS, PERSONNEL

Advertising Media Credit Executives Association International Inc., 3803 S. Beverly Hills Drive, Toledo, Ohio 43614; (419) 245-6024

Staff: 2. *Founded:* 1953. *Members:* 340. *Board/dir.:* 12. *Current pres.:* Ralph J. Sattler, San Francisco Newspaper Agency; *pres-elect.:* Ms. Jerry Hughes, Los Angeles Times. *Contact:* Alfred Kearns, The Toledo Blade, exec. sec.-treas.

Annual dues: $75. *Budget:* $100,000-plus.

Membership requirements: Open to credit executives of any firm or corporation engaged in the publication of newspapers and magazines, the operation of radio and television stations, and like media approved by the board of directors.

Goals and purposes: To improve the comprehension, understanding and techniques in credit management by the exchange of ideas, methods and procedures. To encourage study in advanced educational courses in related subjects. To elevate the efficiency and capacity of its members and to seek recognition for their profession.

Association of Newspaper Classified Advertising Managers, P.O. Box 223, Danville, Ill. 61834; (217) 442-2057

Staff: 2 full-time, 1 part-time. *Founded:* 1920. *Members:* 701 (597 U.S./Canadian, 64 overseas, 40 associates). *Board/dir.:* 16. *Current pres.:* Herbert G. Barger, Houston Chronicle; *pres.-elect:* Lee C. Bollinger, Santa Rosa (Calif.) Press-Democrat. *Contact:* Frank B. Harris, gen. mgr.

Annual dues: $85-$475, based on circulation. *Budget:* $189,370.

Membership requirements: Proprietor (individual or corporate) of a qualified newspaper, service enterprise or education institution serving the newspaper classified industry.

Goals and purposes: To further the interests of advertising in general and classified advertising in particular; to acquire and disseminate through the interchange of ideas, a clearer understanding of classified advertising; to maintain advertising standards of practice; to promote the education of the members; to further the interests of the members; to monitor legislation affecting the newspaper industry.

Association of Paid Circulation Publications, P.O. Box 33641, Washington, D.C. 20033; (202) 296-8487

Founded: 1964. *Members:* 23. Jacquelyn L. Jackson, exec. dir.

Business publications, magazines and newspapers qualifying for second-class postal rates.

Audit Bureau of Circulations, 900 N. Meacham Road, Schaumburg, Ill. 60195; (312) 885-0910

Staff: 200. *Founded:* 1914. *Members:* 5,100. *Board/dir.:* 33. *Chairman:* David K. Braun, General Foods Corp.; *vice chair.:* Michael D. Drexler, Doyle Dane Bernbach Inc. *Contact:* David Keil, pres. and managing dir.

Annual dues: Varies by category, size, etc.

Membership requirements: Any individual, firm or corporation which advertises, which conducts an advertising agency, which requires circulation information or other ABC data, or which publishes a publication eligible for membership.

Goals and purposes: To issue standardized statements of circulation data or other data reported by a member; to verify the figures shown in these statements and to disseminate data for the benefit of advertisers, advertising agencies and others interested in facts in the advertising and publishing industry.

Canadian Advertising & Sales Association, Suite 221, Royal Connaught Hotel, Hamilton, Ontario, Canada L8N 1A8; (416) 528-1376

Staff: 1. *Founded:* 1946. *Members:* Approx. 2,000, plus corporate memberships. *Board/dir.:* 14. *Current pres.:* L. Magnifico, Winnipeg (Manitoba) Free Press; *pres.-elect:* N. Ferrier, Calgary (Alberta) Herald. *Contact:* G. F. Rihbany, exec. sec. and treas.

Annual dues: $13; $300 for a corporate membership. *Budget:* $30,000.

Membership requirements: Must be a member of an accredited advertising and/or sales club.

Goals and purposes: To act as an umbrella for the member clubs and a coordinating body for the distribution of material, etc. pertinent to the advertising and sales fields; also make submissions to the government regarding legislation.

Canadian Circulation Managers Association, P.O. Box 200, Owen Sound, Ontario, Canada N4K 5P2; (416) 376-2250

Staff: None. *Founded:* 1933. *Members:* 130 (110 regular, 20 associates). *Board/dir.:* 12. *Current pres.:* Vic Lorenzo, Calgary (Alberta) Herald; *pres.-elect:* Barrie Woodley, London (Ontario) Free Press. *Contact:* M.E. Fearnall, sec.-treas.

Annual dues: $50.

Membership requirements: Must be a daily newspaper circulation executive.

Goals and purposes: The mutual enlightenment of members and the furtherance of circulation departments.

International Circulation Managers Association, The Newspaper Center, Box 17420 Dulles Airport, Washington, D.C. 20041; (703) 620-9555

Staff: 4 full-time, 2 part-time. *Founded:* 1899. *Members:* 1,500. *Board/dir.:* 23. *Current pres.:* Russell Barcroft, Santa Barbara (Calif.) News-Press; *pres.-elect:* Richard Lakus, Worcester (Mass.) Telegram & Gazette. *Contact:* Joseph B. Forsee, gen. mgr.

Annual dues: Based on circulation (from $50 to $350); $65 after the first regular membership, regardless of circulation; associate memberships, $95. *Budget:* $550,000.

Membership requirements: Individuals in charge of daily newspaper circulation department or principal division thereof; same for weekly newspapers, circulation service/supply organizations, faculty of accredited journalism schools and overseas memberships.

Goals and purposes: As an organization of newspaper executives in marketing the newspaper to the consumer, ICMA's purpose is to share information and provide service to its members.

International Newspaper Advertising and Marketing Executives, The Newspaper Center, P.O. Box 17210 Dulles Airport, Washington, D.C. 20041; (703) 648-1168

Staff: 10. *Founded:* 1911. *Members:* 1,200 firms; 3,600 individuals (1,000 newspapers, 15 associations, 12 ad rep. firms, 80 educators, 100 auxiliary). *Board/dir.:* 23. *Current pres.:* Robert C. Momsen, St. Paul Pioneer Press Dispatch; *pres.-elect:* Alan H. Dant, The Plain Dealer, Cleveland. *Contact:* Sidney W. Bordelon, gen. mgr.

Annual dues: From $70 to $910. *Budget:* $750,000.

The International Circulation Managers Association plays a major role in events such as the December 1984 single-copy sales symposium in Dallas.

Membership requirements: Must work for a daily newspaper (minimum publication: five times weekly) and subscribe to ABC paid requirements.

Goals and purposes: To further the understanding and use of advertising in daily newspapers; to provide means of contact between its members represented by newspaper advertising and marketing executives, business and general managers, publishers, and other representatives of daily newspapers; also, to increase newspapers' efficiency.

International Newspaper Financial Executives, The Newspaper Center, P.O. Box 17573 Dulles Airport, Washington, D.C. 20041; (703) 620-6580

Staff: 5. *Founded:* 1947. *Members:* 1,100. *Board/dir.:* 22. *Current pres.:* Joseph D. Cantrell, Sentinel Communications Co., Orlando, Fla.; *pres.-elect:* H. Graham Woodlief, Richmond (Va.) Newspapers Inc. *Contact:* Robert J. Kasabian, exec. dir.

Annual dues: Active membership based on circulation, from $130 to $260; associates, $260; academics, $60; retired, $30. *Budget:* $500,000.

Membership requirements: Active membership confined to controllers, chief accountants, auditors, business managers, treasurers, company secretaries, general managers, publishers and related executives of newspaper publishing companies.

Goals and purposes: To provide an instrument by which the technical interests of newspaper controllers and finance officers may be advanced; to assemble facts and information of value to management, controllers, finance officers and accountants in the newspaper field; to study special programs of interest to newspaper publishing; to recommend accounting procedures and terminology for newspapers.

International Newspaper Promotion Association, The Newspaper Center, P.O. Box 17422 Dulles Airport, Washington, D.C. 20041; (703) 620-9560

Staff: 4 full-time, 2 part-time. *Founded:* 1930. *Members:* 1,350. *Board/dir.:* 18, plus executive director. *Current pres.:* Scott C. Schurz, Herald-Times Inc., Bloomington, Ind.; *pres.-elect:* Caroline John, Atlanta Journal and Constitution. *Contact:* Paula L. Markiewicz, exec. dir.

Annual dues: Based on circulation, from $150 to $380; associates, from $130 to $380; affiliates, from $130 to $380.

Membership requirements: No restrictions.

Goals and purposes: To provide professional leadership and assistance in the effective marketing of the total newspaper.

National Association of Advertising Publishers, 111 E. Wacker Drive, Suite 600, Chicago, Ill. 60601; (312) 644-6610

Staff: 6 full-time, 3 part-time. *Founded:* 1950. *Members:* 250 publishers, representing 800 free newspapers. *Board/dir.:* 20. *Current pres.:* Terry Burge, The Leader, Houston, Texas; *pres.-elect:* Jack Rynerson, Bradenton (Fla.) Shopping Guides. *Contact:* Pam O'Brien, admin. ass't. *Annual dues:* $350 base, plus $6 per

Members compare notes at a Newspaper Purchasing Management Association meeting.

thousand circulation; associate members, $400.

Membership requirements: Must be a free-distribution paper; can carry editorial matter or be 100-percent shopping guide.

Goals and purposes: Provides leadership for the industry and community and establishes an atmosphere of fellowship among its members. Programs and services provided by NAAP are specifically tailored to increase industry knowledge, boost job performance, and create a positive image individually for members and collectively for the industry.

Newspaper Advertising Bureau, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 921-5080

Staff: 137. *Founded:* 1913. *Members:* 938. *Board/dir.:* 52. *Current chairman:* W. Thomas Johnson, Los Angeles Times; *chairman-elect:* Frank A. Daniels Jr., News & Observer and Raleigh (N.C.) Times. *Contact:* James Dunaway, vice pres. and dir./info.

Annual dues: Percentage of advertising revenues; overseas members, $450. *Budget:* $13.5 million.

Membership requirements: Daily newspaper or related organization.

Goals and purposes: To help advertisers use newspapers most effectively. The bureau works closely with advertisers and their agencies to develop information, creative ideas and media plans which apply the capabilities of daily newspaper advertising to specific corporate marketing objectives. The bureau is consistently engaged in studying the newspaper audience, its reading habits and advertising performance. It seeks to stimulate the imaginative and creative use of newspapers' advertising space by bringing unusual and exceptional newspaper advertising to the attention of the whole advertising profession.

Newspaper Advertising Co-op Network, 501 W. Algonquin Road, Arlington Heights, Ill. 60005; (312) 593-8360

Staff: 3. *Founded:* 1972. *Members:* 160 newspapers, 15 associates. *Board/dir.:* 20. *Current pres.:* Russell Duff, Arizona Republic, Phoenix; *pres.-elect:* James K. LeFevre, Washington Post. *Contact:* F. C. Rebedeau, exec. dir.

Annual dues: $250 ($187.50, associates). *Budget:* $35,000-$45,000.

Membership requirements: Co-op advertising managers of newspapers that are at least 50-percent paid circulation and 20-percent editorial content.

Goals and purposes: To improve the professional skills of member newspaper co-op department managers; to promote awareness of newspaper co-op advertising effectiveness.

CENTURY PLA
IAPA SIP

Then UN Ambassador Jeanne Kirkpatrick addressed the Inter American Press Association's 1984 General Assembly.

Newspaper Personnel Relations Association, The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041; (703) 648-1069

Staff: 1 (part-time). *Founded:* 1949. *Members:* 500. *Board/dir.:* 13. *Current pres.:* Sara M. Brown, Los Angeles Times; *pres.-elect:* Alvin Miller, The Record, Hackensack, N.J. *Contact:* Patricia P. Renfroe, exec. dir.

Annual dues: $150. ($50 for each additional member from the same newspaper). *Budget:* $100,000-plus.

Membership requirements: Any individual who is employed as part of the management of a newspaper of general circulation, a trade association or related service organizations.

Goals and purposes: To advance the knowledge and skills of newspaper personnel executives in order to help them make meaningful contributions to the goals and operations of their newspapers. This is accomplished primarily by disseminating information, conducting workshops, seminars and conferences, and providing a resources network.

Newspaper Purchasing Management Association, currently c/o Bill Oat, Hartford Courant, 285 Broad St., Hartford, Conn. 06115; (203) 241-6362

Staff: None. *Founded:* 1958. *Members:* 151. *Board/dir.:* 12. *Current pres.:* Oat; *pres.-elect:* Bob Comer, Dayton Newspapers Inc. *Contact:* Oat.

Annual dues: $75 ($65 for associates). *Budget:* $18,970.

Membership requirements: Newspaper employees whose primary responsibility is the performance of purchasing duties; or, if an individual has multiple duties, one of them includes procurement.

Goals and purposes: To promote study, development and application of improved purchasing methods, practices and techniques in the newspaper publishing industry; to foster and promote interchange of ideas and cooperation among members; to collect and disseminate information of interest and benefit to the membership; to encourage and cooperate in the institution of ethical standards in buying and selling.

INTERNATIONAL

Committee to Protect Journalists, 36 West 44th St., Suite 911, New York, N.Y. 10036; (212) 944-7216
Staff: 3. *Founded:* 1981. *Board/dir.:* 25. *Current honorary chairman:* Walter Cronkite; *current chairman:* David Marash, WRC-TV, Washington, D.C.
Contact: Barbara Koeppel, exec. dir.
Annual dues: $20 ($10 for journalism students). *Budget:* $200,000.
Membership requirements: Working U.S. journalist, journalism educator or student.
Goals and purposes: To support and protect journalists around the world who have been subject to human and professional rights violations. The committee is concerned about the growing efforts of governments to limit the ability of foreign correspondents and local journalists.

International Federation of Newspaper Publishers, 6 rue du Faubourg Poissonniere, 75010 Paris; tele.: 4523-38-88
Staff: 6. *Founded:* 1948. *Members:* 26 member associations (including ANPA) in 25 countries. *Current pres.:* Gordon Linacre, United Newspapers and Yorkshire Post Newspapers Ltd., Leeds, England.
Contact: Maribel Bahia, dir.
Annual dues: Based on average net paid newspaper circulation of each member country. *Budget:* 3.4 million French francs (approx. $471,000 U.S. at mid-February exchange rates).
Membership requirements: Open to national, free-enterprise newspaper publishers' organizations which hold to the principles set forth below.
Goals and purposes: To safeguard the editorial and economic interest of newspapers on the international level.

Inter American Press Association, 2911 N.W. 39th St., Miami, Fla. 33142; (305) 634-2465
Staff: 5. *Founded:* 1942. *Members:* 1,380. *Board/dir.:* 60. *Current pres.:* Edward H. Harte, Corpus Christi (Texas) Caller and Times; *pres.-elect:* Alejandro Miro Quesada, El Comercio, Lima, Peru. *Contact:* Bill Williamson, exec. dir.
Annual dues: Based on circulation; active members, from $100 to $1,000; corporate members, from $1,100 to $2,500; individual associate members, $1,000; corporate associate members, $2,500; journalism school teachers, $50; syndicated columnists: $100. *Budget:* $700,000.
Membership requirements: Must believe in IAPA principles; must publish at least six times a year, during at least one year.
Goals and purposes: To defend freedom of expression in the Americas; to promote and maintain the dignity, rights and responsibilities of the profession of journalism and to foster a wider knowledge and greater interchange among the peoples of the Americas.

International Press Institute, Kilke House, 1 Malet St., London, WCIE 7JA; tele: 01-636 0703/4
Staff: 9. *Founded:* 1951. *Members:* Approx. 2,000. *Board/dir.:* 24. *Current chairman:* Richard H. Leonard, Milwaukee Journal; *chairman nominee:* Juan Luis Cebrian, El Pais, Madrid. *Contact:* Peter Galliner, dir.
Annual dues: 650 Swiss francs ($335 U.S. at mid-February exchange rates). *Budget:* $436,271 (1984).
Membership requirements: Open to those who direct editorial and news policies at newspapers, weekly and monthly journals, news agencies, or radio and television stations and who are dedicated to the principles of freedom of the press. Associate memberships are available to nonexecutives such as journalism educators and news commentators.
Goals and purposes: To safeguard freedom of the press, to promote the free exchange of news and to improve the practices of journalism.

Overseas Press Club of America, 52 E. 41st St., New York, N.Y. 10017; (212) 679-9650. Anita Diamant, pres. *Founded:* 1939. *Members:* 1,500. *Staff:* 2.

United Nations Correspondents Association, Room 482, United Nations Bldg., New York, N.Y. 10017; (212) 754-7154. Ted Morello, pres. *Founded:* 1948. *Members:* 250.

World Press Freedom Committee, The Newspaper Center, P.O. Box 17407, Washington, D.C. 20041; (202) 648-1000
Staff: One full-time, two part-time. *Founded:* 1976. *Members:* 32 organizations on five continents. *Board/dir.:* 37. *Current chairman:* Harold W. Andersen, Omaha World-Herald. *Contact:* Dana Bullen, exec. dir.
Annual dues: None (funds provided by contributions by news media and media foundations). *Budget:* Approx. $250,000.
Membership requirements: Journalism organizations and news media are members. Only criterion for membership is interest in helping to support world free freedom.
Goals and purposes: To support press freedom on the international scene; to help news media and journalism schools in developing countries; and to make WPFC a strong global voice against those who advocate a state-controlled media, those who seek to deny truth in news and those who abuse newsmen.

SPORTS

American Auto Racing Writers and Broadcasters Association, 922 N. Pass Ave., Burbank, Calif. 91505; (818) 842-7005. Dusty Brandel, dir. *Founded:* 1955. *Members:* 500.

Associated Press Sports Editors, P.O. Box 1129, Auburn, Ala. 36830; (205) 826-4607
Staff: 1. *Founded:* 1974. *Members:* 421. *Exec. comm:* 14. *Current pres.:* Herb Stutz, Los Angeles Times; *pres.-elect:* Charles Cooper, San Francisco Examiner. *Contact:* Jack Simms, sec.-treas.
Annual dues: $100 (but $25 for second member or additional members of staff (assistants). *Budget:* "Don't have one."
Membership requirements: Open to all newspaper administrative sports department executives, their supervisors and their assistants.
Goals and purposes: To improve professional standards of newspaper sports departments, to discuss and attempt to resolve problems of newspaper sports departments and other newspaper departments and newspaper management, and to recognize professional excellence among the membership.

Baseball Writers Association of America, 36 Brookfield Road, Fort Salonga, N.Y. 11768; (516) 757-0562
Staff: None. *Founded:* 1908. *Members:* 800-plus active, 400 retired. *Board/dir.:* 4. *Current pres.:* Tracy Bingolsby, Kansas City (Mo.) Star; *pres.-elect:* Gerry Fraley, Atlanta Journal and Constitution. *Contact:* Jack Lang, sec.-treas.
Annual dues: $25. *Budget:* None.
Membership requirements: Must be as-

One goal of the Baseball Writers Association of America is to promote good pressbox facilities, such as those of the San Diego Padres.

signed to cover major league baseball and must be on the staff of a daily newspaper in a major league city.
Goals and purposes: To provide proper working facilities in major league pressboxes for writers covering games and to police pressboxes so that only qualified persons are admitted.

Chess Journalists of America, P.O. Box 70, Western Springs, Ill. 60558; (312) 246-6665. Helen Warren, pres. *Founded:* 1972. *Members:* 200.

Football Writers Association of America, Box 1022, Edmond, Okla. 73083; (405) 341-4731
Staff: 1. *Founded:* 1941. *Members:* 750. *Board/dir.:* 21. *Current pres.:* Jack Gallagher, Houston Post; *pres.-elect:* Dan Foster, Greenville (S.C.) News. *Contact:* Volney Meece, exec. dir.
Annual dues: $10. *Budget:* Under $10,000.
Membership requirements: Must cover college, professional or high school football for newspapers or magazines; included are those in allied fields such as college sports information directors.
Goals and purposes: Originally formed to improve working conditions in pressboxes; still keep watch on that, awarding certificates for excellence and "raps" for bad service and facilities. Also picks All-America team, Outland Trophy winner, coach of the year and national championship team.

National Sportscasters & Sportswriters Association, P.O. Drawer 559, Salisbury, N.C. 28144; (704) 633-4275
Staff: 1. *Founded:* 1958. *Members:* 1,000. *Board/dir.:* 15 local, 25 national. *Current pres.:* Will Grimsley, Associated Press; *pres.-elect:* John Brooks, Sportscast Productions. *Contact:* Barbara Lockert, prog. coord.
Annual dues: $20.
Membership requirements: Be a sportscaster or writer—or connected in any way with sports.

Outdoor Writers Association of America, 2017 Cato Ave., Suite 101, State College, Pa. 16801; (814) 234-1011. George Harrison, pres.

Professional Basketball Writers Association of America, c/o Dallas Morning News, Communications Center, Dallas, Texas 75265; (214) 745-8444
Founded: 1971. *Members:* 175. *Contact:* Ray Frager, sec.-treas.
Membership requirements: Sports editors, assistant sports editors, columnists and reporters who cover professional basketball.
Goals and purposes: To provide the proper climate for the coverage of professional basketball and maintain qualitative standards of journalism and cooperation among members.

Professional Football Writers of America, 4758 Marque Drive, New Orleans, La. 70127; (504) 242-4054
Staff: None. *Founded:* 1963. *Board/dir.:* 8. *Current pres.:* Vito Stellino, Baltimore Sun; *pres.-elect.:* Glenn Shelley, Atlanta Journal and Constitution. *Contact:* Frank A. Wilson, sec.-treas.
Annual dues: $10.
Membership requirements: Must be employed by a newspaper, magazine, etc., on a regular basis and cover professional football.
Goals and purposes: To encourage the highest standards, both professionally and ethically, in reporting professional football; to secure the improvement of facilities for reporting pro football games; to ensure proper policing of pressboxes and admission of accredited newsmen only; to work closely with league officials to solve problems that arise, both on an individual club and league basis.

Professional Hockey Writers Association, 2717 Nottingham Way, Trenton, N.J. 08619; (609) 587-2039
Founded: 1967. *Members:* 340. *Contact:* Don Wilno, sec.-treas.
Membership requirements: Writers who cover teams of the National Hockey League.
Goals and purposes: Encourages high standards among professional hockey writers; seeks to assure writers adequate facilities in arenas; promotes good working relations between writers and corporate management.

U.S. Basketball Writers Association, c/o Missouri Valley Conference, 200 N. Broadway, Suite, 1905, St. Louis, Mo. 63102; (314) 421-0339
Founded: 1956. *Members:* 811. *Contact:* Joe Mitch, exec. dir.
Membership requirements: Persons who write about collegiate and professional players for newspapers, magazines and other media.
Goals and purposes: Seeks to promote basketball and to cooperate with the National Association of Basketball Coaches and other organizations; also, to work to improve pressbox facilities and services.

WOMEN

American News Women's Club, 1607 22nd St. N.W., Washington, D.C. 20008; (202) 332-6770. Marj Skinker, pres. *Founded:* 1932. *Members:* 450.

Some Press Organizations Have a 'Group' Problem

Some state and regional press associations are having to scramble to meet new challenges presented by the trend toward newspaper group ownership.

Raymond C. Jones, executive director of the Pennsylvania Newspaper Publishers Association, says dealing with the growth of groups is "the issue of the '80s for state press associations."

Raymond C. Jones

Historically, he explains, newspaper publishers' principal "line of loyalty" was to other publishers in their state through the statewide association that represents them.

With growth of the groups, publishers' loyalty is now focused on the parent company, not on the state association. "It's an inevitable, justifiable syndrome," Jones says, "but it [the group] certainly introduces a very significant competition for [publishers'] time and attention."

The primary concern is decline in association participation—principally reflected in attendance at association meetings and training programs. Jones and other association managers interviewed by **presstime** said the problem is particularly acute among executives of certain groups, but the managers declined to identify them.

Another problem related to the surge in group ownership is the declining membership in some associations, according to Executive Director Reg Ivory of the Inland Daily Press Association. Inland itself had a loss of membership in each of the years between 1981 and 1984, but it grew last year with some concerted recruitment effort, he said.

Ivory, who is the current president of Newspaper Association Managers, the organization of press association executives, says he believes that "if you took all the 50 states, the majority [of press associations] would be experiencing a loss of both" participation and membership because of expansion of group ownership.

Ivory and other association leaders say the principal way to tackle these problems is to offer services that the parent companies do not have.

That's already being done in a number of states.

The Ohio Newspaper Association, for example, is making more of its seminars "state specific," says ONA Executive Director Kenneth L. Drum. He explains that "some of the groups have their own trainers or training facilities, and that cuts down on the potential audience" for workshops of a more general nature.

Last September, ONA held a workshop on legal issues pertaining to employee relations in Ohio. Now the association is developing two other state-oriented workshops, one on libel law in Ohio and the other on the state's unemployment and workers' compensation laws.

Similarly, the Kansas Press Association recently conducted a seminar on personal property taxes that was state-oriented. "Obviously, a national chain is not going to have that kind of specific service," says David L. Furnas, KPA executive director.

"We find that if our association provides the services that are needed on a statewide basis by those [group] newspapers, that those newspapers will participate," Furnas adds. "There is no reason for us to provide services that their group is providing them, so we find other niches."

The Arkansas Press Association is taking the same tack by assembling a new handbook on that state's media laws. "The chains are not going to put together something like that," observes C. Dennis Schick, APA executive director.

Another association manager says the changes in ownership patterns along with other changes in the newspaper business are forcing press associations to become more attentive to their members, period. "The press associations have got to ask the question of their members, 'What is it you want us to do for you?' rather than saying, 'This is what we are going to do for you, take it or leave it,'" comments David L. Bennett, executive director of the Illinois Press Association.

An example of a state association doing just that is Pennsylvania's, which recently conducted a survey to determine how much members value current services and what additional services they desire. The survey resulted in a new five-year plan for PNPA.

"The purpose of the plan and the membership survey was to try to show, in terms that no one could argue with, how dramatic the changes of outlook have been in a very short time and therefore how necessary it is for us to take a fresh look at our services," says Executive Director Jones.

PNPA's existing programs were "shaped over the last 25 years by the slowly evolving needs of independent newspapers," says Jones, who notes that "the menu of priorities is frequently very different" for group publishers versus independent publishers.

The new five-year plan was developed in recognition of the fact that "the old days are gone and that we are serving a new set of masters that have a new set of needs," Jones says.

One indication of change is the makeup of the PNPA Board of Directors. Until very recently, Jones says, there were virtually no directors from group newspapers. Today, three of the organization's four officers are from groups. *—Margaret Genovese*

Sal Micciche

A *newsroom attorney with special credentials*

One day in 1976, Boston Globe Editor Thomas Winship sent reporter Curtis Wilkie to do a story on security for President Gerald Ford's visit to the area. Wilkie got a good lesson on the topic: He forgot his press credentials and was arrested.

But help was soon to arrive.

Salvatore J. Micciche, the Globe's newsroom counsel and longtime reporter, performed a double rescue.

Salvatore J. Micciche

As Winship explains it, Micciche not only got Wilkie out of jail, he also wrote a Page One story on the incident minutes from deadline. "He got the guy out of jail with one hand and wrote a story about it with the other," says Winship, now retired.

That's not surprising after listening to what associates say about this "classic Boston Globe newspaperman," as one put it, known to all as "Sal."

For one thing, he is an unusual brand of newspaper lawyer. Unlike most media attorneys, Micciche is a veteran newsman. For more than 35 years, he has dealt with his share of recalcitrant public officials, sealed records and the myriad other obstacles confronting the press.

Moreover, he is believed to be one of the few, if not the only, newspaper lawyers whose office is in the newsroom. "Because I'm here, I may get a question on how to proceed" to get documents, he says. He might not be consulted as freely otherwise.

"He has the confidence of the staff so much that many of the people walk in [for advice] *before* they write something," Winship says.

The payoff is better journalism and fewer lawsuits, he believes. When Micciche first assumed his role as counsel in 1975, the Globe had about 25 pending suits. "Now it's down to about 10," and the paper gets only one or two suits filed against it a year, notes Winship, who remains a director of the newspaper.

Micciche "was a reporter for so long and had such extraordinary credibility as a reporter, they [reporters and editors] look up to him," says Globe Executive Editor John S. Driscoll. "He's kind of a father image to them."

Indeed, the 58-year-old newsman-attorney has covered everything from general assignments to the White House. In fact, he has never had any other kind of job; even when he served in the Army he was a reporter. "I never had a desire to do anything else," he says.

Micciche started in the business at age 12 as an office boy for his hometown paper, the now-defunct Everett (Mass.) News Gazette. He says he "just gradually got into writing" by preparing items from his high school and covering the police.

He graduated from Boston University in 1950 with a journalism degree and was drafted to serve in the Korean War. Although he was trained as an Army "fire directions specialist," Micciche wound up working in Tokyo and Korea as a reporter for Pacific Stars and Stripes.

He is believed to be one of the few, if not the only, newspaper lawyers whose office is in the newsroom.

After a two-year stint, he signed on as a reporter at the Portsmouth (N.H.) Herald, where he learned to get close to his sources—one time too close, says retired Herald Editor Ray Brighton. Brighton says the young Micciche and another reporter once covered a boarding-house fire in which a man died. "They were stumbling around the building and fell over the corpse," Brighton recalls.

In 1955, Micciche joined the Globe as general-assignment reporter. From 1956 through 1969, he covered the Massachusetts Legislature. During that time, he decided "there was more to learn" about the legislative process than could be picked up in a "review of bills without knowing how they'd affect people's lives later on." So in 1964 he enrolled in Suffolk University's night law school program. He graduated in 1968 and passed the bar exam the same year—at age 40.

After a year as an editorial writer, he was sent to the Globe's Washington Bureau where he covered the Supreme Court, Congress and the White House. Micciche says he wrote about "the legal side of Watergate" when the issues became "a clear test of constitutional law."

Back to Boston in April 1975, Micciche became assistant to the editor and liaison with the law firm that handled the Globe's libel, First Amendment and other editorial matters. His newsroom counsel duties expanded as did his administrative responsibilities. While getting more involved in legal tangles, he moved through the posts of managing editor for administration, ombudsman and, in June 1985, to his present position of assistant to the executive editor.

Micciche has witnessed many changes in journalism during his career, and he says the most important of them is a change in attitudes toward ethics. Thirty years ago, because of tremendous competition, "ethics" was "simply a word to be applied to others," he says. "The story was the thing, and there wasn't too much concern over how you got it. . . . I think that's pretty much changed."

Micciche and his wife, Theresa, have three children: son Charles, a Jesuit who will be ordained next year, and daughters Marlene, a bank branch manager, and Marcia, a stock brokerage sales assistant.

The family periodically visits their second home on Cape Cod, where Micciche engages in one of his favorite pastimes—landscaping. But he seeks no refuge from newsroom pressures.

"It has always been fun," he says. "It gives me a sense of doing something I felt was important." ☐

100TH ANNUAL CONVENTION

WHERE INFORMED NEWSPAPER PEOPLE MEET!!

April 21-23, Fairmont Hotel, San Francisco

Don't miss this highlight of the year as ANPA approaches a century of championing the cause of a strong, free press.

Join your peers in a carefully planned, informative program that will include useful "nuts and bolts" clinics—updates, ideas, innovations you can take back home with you and put to use at your newspaper.

And enjoy a program of prominent speakers on national and international events—New York Gov. Mario Cuomo, former President Richard M. Nixon and others.

Complete and return your Convention registration form to ANPA by March 15. If you need additional forms, call Priscilla Shingleton (703-648-1031) or Leesa Thompson (703-648-1097).

Act now!

ANPA

. . . ENTERING ITS ONE-HUNDREDTH YEAR OF EFFECTIVE SERVICE TO NEWSPAPERS

(See Convention program update p. 71)

What? Show the Story To a Source — in Advance?

BY GEORGE P. KENNEDY

For four months, Kathryn Kranhold spent most of her working hours in the Missouri state capitol, digging through financial records and interviewing legislators and their staffs. Kranhold, a reporter for the Columbia Missourian, was doing just what any good reporter would do in pursuit of a story on how well public servants look after their own welfare.

Then, just as any good editor would do, Missourian City Editor Virginia Young sat down with Kranhold to work over each piece in the five-part series word by word, figure by figure.

Finally, as no other editor would on any other daily newspaper in the United States, Young ordered Kranhold to take her stories and show them to the very people about whom she had written. Kranhold's first reaction, she recalls, was what any reporter's would be: "I absolutely did not want to do it; I hated it." But she did it.

Missourian reporters have been showing or reading their stories to sources before publication since 1975. This accuracy-checking policy, I submit, just might be part of the solution to the credibility problem that confronts and confounds American newspapers.

The policy is this: Except in those cases in which time pressures prevent it, all stories are accuracy-checked before publication with the sources who provided the information. The checking is done after the stories are edited at the assigning desk. The reporter who wrote the story (or, if that reporter is gone for the day, another) either reads or shows the pertinent portions of the story to the source.

When the policy began 11 years ago, it was unique, and only one other U.S. paper—the weekly Oologah Lake (Okla.) Leader—is known to have begun "readbacks" since then. Of course, the Missourian is unique.

Kennedy is associate dean and associate professor in the University of Missouri's School of Journalism. He is also a member of the presstime *Advisory Committee.*

The teaching newspaper of the University of Missouri School of Journalism, the Missourian is staffed by as many as 200 students who are learning the craft by working as reporters, photographers and copy editors under the direction of professional journalists who are also faculty members. The Missourian is a daily, commercial paper. It serves the city of Columbia in fierce competition with a privately owned daily. The opportunities for learning are enormous; so are the opportunities for error.

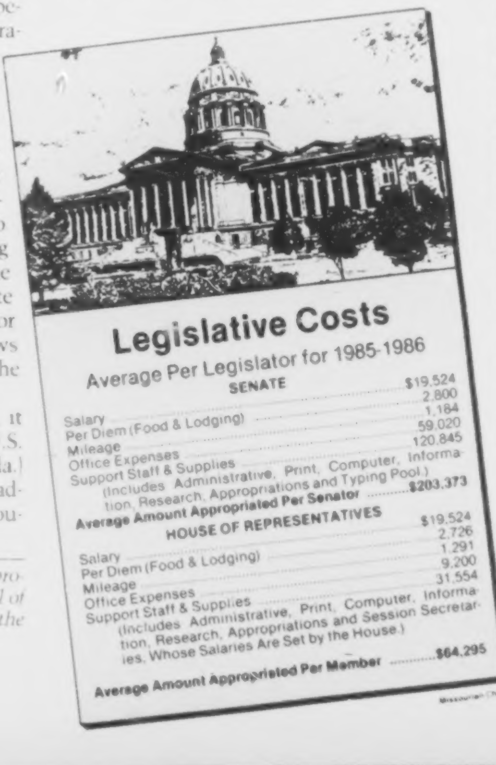
Daryl Moen realized in his first year as Missourian managing editor that the opportunities for error had to be reduced before the flood of mistakes eroded the paper's credibility and its value as a teaching tool. He came up with the idea of accuracy checking, he says, out of desperation.

George P. Kennedy

Four benefits. In his Feb. 7, 1975, memo outlining the new policy, he wrote, "Our goal is to eliminate every error of fact." He never really expected accuracy checking to meet such a goal, and it hasn't. But almost a decade of experience has shown that accuracy checking does work. It works in at least four ways that would benefit any newspaper:

First, accuracy checking permits the correction of mistakes before they get into the paper. This includes mistakes of omission or of context, which are likely to go undetected even by the diligent fact-checking performed by some magazines. Every editor knows, and the recent spate of credibility studies confirms, that the two criticisms most often advanced by newspapers' doubters are errors of fact and lack of balance or fairness. Accuracy checking attacks both problems. In Kranhold's reporting, for example, she had found a document showing that a state senator had spent $300 in public funds buying some silver trays that he used as gifts. When she showed him the story, he explained what the record had not—that the trays had been purchased on behalf of the entire Missouri Senate and presented to retiring colleagues. The mistake she avoided is the kind that many journalists excuse but that many non-journalists probably see as evidence of carelessness or bias.

Second, accuracy checks often turn up additional information. For example, Kranhold wrote that more than $170,000 worth of furniture and equipment had



Legislative Costs

Average Per Legislator for 1985-1986

SENATE

Salary	$19,524
Per Diem (Food & Lodging)	2,800
Mileage	1,184
Office Expenses	59,020
Support Staff & Supplies (Includes Administrative, Print, Computer, Information, Research, Appropriations and Typing Pool.)	120,845
Average Amount Appropriated Per Senator	**$203,373**

HOUSE OF REPRESENTATIVES

Salary	$19,524
Per Diem (Food & Lodging)	2,726
Mileage	1,291
Office Expenses	9,200
Support Staff & Supplies (Includes Administrative, Print, Computer, Information, Research, Appropriations and Session Secretaries, Whose Salaries Are Set by the House.)	31,554
Average Amount Appropriated Per Member	**$64,295**

Missourian Chart

Accuracy checks yielded some additional information for Missourian series—and some legislative pressure.

been lost or stolen from the state Senate during the past two years. Shown that story, the Senate's administrators scurried about and within 24 hours claimed to have found $13,218 worth of furniture in the state Capitol's storage room, thus demonstrating precisely the incompetence that was the theme of the story.

Third, accuracy-checking encourages reporters to be accurate and fair by guaranteeing that their stories will be critiqued by the people who are the most knowledgeable about the subject matter. Like Kranhold, few reporters will voluntarily seek out criticism of their stories, even from colleagues or editors, and certainly not from the people whose reputations and careers those stories affect. Accuracy checking counters that reluctance.

Fourth, the bonus benefit: Accuracy checking is great for public relations and source relations. To a public dubious about whether journalists get things right, an accuracy-checking policy is likely to look better than a dozen pious pronouncements on the First Amendment. And to a source who has personal knowledge, as many do, that journalists often get things wrong, accuracy checking can be the tool that pries open closed doors or closed lips.

Skepticism alleviated. I believe in accuracy checking with the zeal of the convert. When Moen first broached his idea, I was the Missourian's city editor. I was skeptical, even hostile. Today, when I suggest it as at least a partial solution to some of what troubles the press, I can expect to hear, in tones ranging from incredulity to outrage, the same questions I once raised.

Won't sources try to edit the stories? Won't they try to change or, worse yet, deny quotes? Aren't you opening the paper to pre-publication pressures of all sorts?

Sure, sometimes they do try to edit the stories. Not as often as one might think, or as I had expected, but sometimes. We just don't let them—unless, of course, what they want to edit is wrong or unfair. One senator irately insisted to Kranhold that he had not hired his administrative assistant's relatives, as her story said. "I rechecked, and he had lied to me," she says. The paragraph stayed in.

Sometimes sources do try to change or deny quotes. Sometimes they should. I recently returned from six months as a Fulbright lecturer in New Zealand, a country whose sharp-toothed defamation laws force newspapers to be far more cautious than we must be. I was interviewed in a half-dozen New Zealand papers, and in every story I discovered at least one misquote or distortion. New Zealander's don't do accuracy checks. In a long story in one of the country's best papers, I was misquoted as misquoting someone else.

The possibility that a source will deny a crucial quote is the best reason you can provide many reporters for taking full and accurate notes. Better yet, we tell our reporters, tape record key interviews whenever possible. Not even the best handwritten notes will capture extended quotes exactly. If you want to demonstrate that—to yourself or to a skeptical reporter—just have the reporter take notes and try to reproduce a short monologue. Then play back a tape for comparison.

The greatest concern I hear from reporters, both our students and professionals, is that accuracy checking permits sources to bring pre-publication pressure to bear on the paper. It does. But there will be pressure with or without accuracy checking if you are practicing good journalism. Editors and publishers get paid to resist improper pressures. In our case, so do deans and university chancellors.

Kathryn Kranhold's series generated some pressure. Although the Missourian is owned by a non-profit corporation that is separate from the university, the School of Journalism, like the university itself, is dependent on the state legislature for its funding. As the accuracy checking proceeded, a few legislators threatened to penalize the school for the paper's daring. High university officials got calls from legislators. One Senate leader, who has been friendly to the university, called a journalism faculty member to question the political wisdom of the stories.

As any editor would do with his or her publisher, Dean James Atwater alerted the university chancellor and president to the project. Neither asked to see the stories, nor did either suggest caution.

The series started on Sunday, Jan. 26, and ran for five days, through the second week of the legislative session. On Monday, Capitol reporters and legislators alike were scrambling for copies of the Missourian. They found some astonishing revelations and some outrageous tidbits, but so far nobody has found anything wrong or unfair.

All this is not to claim that accuracy checking is a panacea. The Missourian still publishes too many mistakes, most of them having occurred in stories that for some reason were not accuracy checked. Those reasons range from reporter negligence to the pressure of deadlines.

Nor would accuracy checking have prevented Janet Cooke from creating her fictional heroin addict. A reporter who would lie about a story would lie about an accuracy check. An accuracy-checking policy would, however, deprive a liar of any plausible excuse, such as having misunderstood or having been misled by a source.

What accuracy checking does is to provide a mechanism for catching many errors before it is too late. After publication is too late. ☐

HARE & FORD

Newspaper and Broadcast Media Brokers

Successful negotiations and closings of over $200,000,000 in media property sales since 1980. Well-known and respected professionals in the print and broadcast industries. Total media expertise in the following areas:

LEGISLATION

Plan would cut ad deductions

A proposal to disallow 20 percent of business tax deductions for advertising expenses is among a list of "possible alternatives" formulated by the Treasury Department to the House-passed tax revision bill.

The alternatives provide a range of options for complying with President Reagan's objections to the House bill. Although he supported passage of the tax overhaul bill in the House last December [presstime, Jan. 1986, p. 35], Reagan said he would veto it unless certain changes were made.

The Treasury document notes that tax revisions sought by Reagan would decrease tax revenues by $169.5 billion over five years. It lists various revenue-raising options.

According to a Treasury spokesman, not all of the items on the list have the endorsement of the Reagan administration. He declined comment on whether the administration backs the one on advertising expenses.

The 26-page list of alternatives was made public Feb. 13 after it was provided to the Senate Finance Committee.

A spokesman for the Finance Committee called the document "merely a menu of what the members can consider and from which they can choose" as they begin drafting their own tax revision bill. That process is expected to begin in mid-March.

The advertising expenses proposal is under a category of "Miscellaneous Revenue Raisers." Treasury estimated it would raise $20.6 billion over five years.

ANPA staff is monitoring the proposal. "Right now, the advertising deduction limit doesn't look like something the Senate is going to do, but it merits watching," said Martin Casey, ANPA manager/government and international affairs. ☐

Congress passes 'smokeless' ad warning bill

Under legislation passed by both houses of Congress in February, print ads for chewing tobacco and snuff would have to include health warning labels. The requirement would take effect one year after the bill's signing into law.

The bill reached the White House Feb. 19. Congressional sources expected President Reagan to sign the bill, and he has until March 3 to do so.

The bill also would ban ads in the electronic media for these "smokeless tobacco" products six months after the date of enactment. About $20 million is spent annually to advertise smokeless tobacco products on television, radio and cable television, according to Broadcasting magazine.

The legislation was prompted by concern over the apparently growing popularity of smokeless tobacco, particularly among teenagers and younger children. Annual sales of smokeless tobacco in the United States are close to $1 billion, according to a report by a panel of the National Institutes of Health. The panel estimated that at least 10 million Americans used the products in 1985 and three million of these users were under the age of 21.

The three warning labels, which the bill says must be in all-capital letters, are: "Warning: This Product May Cause Mouth Cancer," Warning: This Product May Cause Gum Disease And Tooth Loss," and "Warning: This Product Is Not A Safe Alternative to Cigarettes." The word "Warning" would appear within an arrow pointing to a circle containing the specific words of caution.

The labels, which would rotate every four months, must appear "in a conspicuous and prominent location in the advertisement and in conspicuous and legible type in contrast with all other printed material in the advertisement," according to the bill.

The labels must also appear on smokeless tobacco packages.

The bill represented a compromise between health interests and manufacturers. The manufacturers agreed to it when it appeared states would enact their own, possibly conflicting, labeling requirements.

ANPA had expressed First Amendment concerns about the legislation when it was before congressional committees [presstime, Nov. 1985, p. 43]. ☐

House endorses uniform poll closing

The House has passed legislation to set a uniform closing time for polls in presidential elections.

The bill, HR 3525, seeks to make it more difficult for the news media to project the winner while polls are still open in some states. Objections were raised in the 1980 and 1984 presidential elections to projections made while voting was continuing.

However, the bill does not affect the news media's use of "exit polls" on which early projections of election winners are usually based. Last year, the major TV networks agreed not to project the winner of a state in presidential elections until the polls there were closed.

Under the bill passed Jan. 29 by 204 to 171, polls would close at 9 p.m. in the Eastern time zone, 8 p.m. in the Central zone and 7 p.m. in the Mountain zone. It would extend Daylight Savings Time in the Pacific zone for up to two weeks in presidential election years so that polls there also would close at 7 p.m. local time. Alaska and Hawaii are exempt from the bill.

In the Senate, a companion measure, S 2080, was introduced Feb. 19 by Sen. Donald W. Riegle Jr. (D-Mich.). ☐

Libel law hearing

The House Subcommittee on Civil and Constitutional Rights was scheduled to hold a hearing Feb. 26 on the current state of libel law.

Scheduled to testify at the hearing, the first of several to be conducted on the subject, were journalists, scientists and a former public official—all of whom have been affected by libel laws. The hearings could be a prelude to libel legislation. ☐

REGULATIONS

VDTs cleared after study in Sweden

Following press reports that new Swedish research had shown radiation from video display terminals caused birth defects in mice, the National Swedish Board of Occupational Safety and Health issued a statement Feb. 13 concluding that "adverse pregnancy outcome effects due to VDT work have not been demonstrated."

The Swedish board pointed out that there are "considerable difficulties in applying the results of animal studies to humans."

The study of mice suggested that electromagnetic fields similar to those from VDTs could cause fetal malformations. The Swedish board said a subsequent analysis "does not suggest any damaging effect on fetuses."

The study was released as the board was preparing for a world conference on VDTs and health it will sponsor in Stockholm in May. Last December, scientists at a World Health Organization conference in Geneva concluded that radiation from VDTs does not endanger the health of pregnant women.

Reacting to the Swedish research, Renee S. Ross, executive director of the Center for Office Technology in Washington, D.C., observed that despite press reports to the contrary: "The Swedish scientists themselves are quick to point out that the electromagnetic fields used are not from video display terminals, and the subjects of the research differ from humans in significant ways."

She said there have been other recent studies "of far greater relevance and importance with regard to VDTs and human reproduction." She cited "scientific epidemiological studies in Sweden, Finland and Canada of large populations of women using VDTs."

"Such broad-based studies that look for the subtle, marginal, effects on large populations are the scientists' best tools for determining whether VDTs affect human reproduction," Ross said. "The results of these studies are clear. There is no evidence of any impact on human reproduction from the use of VDTs."

COT serves as an information clearinghouse on health-related VDT issues [presstime, July 1985, p. 55]. □

Newspapers cautioned on ink-waste disposal

Mexican authorities in February shut down a plant that may have been illegally recycling waste ink from several Southern California newspapers and other firms for use in making asphalt.

The Tijuana plant had been receiving waste ink from a licensed U.S. hauler that contracted with newspapers and printing companies to remove their ink.

California Assemblyman Steve Peace [D-Chula Vista] accused the U.S. companies of unknowingly violating state and federal laws by sending hazardous waste to another country.

Michael G. Manfro, safety and environmental affairs manager for the Los Angeles Times, which is not one of the newspapers involved said the incident illustrates the importance of newspapers knowing where their waste ink is going. Also, he said, newspapers should check on the type of insurance carried by haulers and operators of disposal sites.

"Most of the time, waste ink is not a hazardous waste," said Richard W. Neergaard, ANPA manager/environmental services. But to ensure that it is not hazardous, it should not be mixed with other pressroom wastes [presstime, Oct. 1985, p. 33]. □

REGULATORY NOTES

- In a **settlement with the U.S. Environmental Protection Agency**, Magruder Color Co. Inc. of Elizabeth, N.J., and a subsidiary agreed to pay civil penalties of $70,000 and to test and properly dispose of more than 900,000 pounds of pigment and ink recalled because of suspected contamination with polychlorinated biphenyls, or PCBs.

EPA estimated that the testing and disposal will cost between $600,000 and $1 million. Materials tested for PCBs and found safe may be returned to customers.

The agency originally sought a fine of $475,500 after charging Magruder and Indol Color Co. with 148 counts of unlawfully manufacturing, processing, distributing, labeling and disposing of PCBs [presstime, Sept. 1984, p. 33]. The charges grew out of the discovery of PCB-contaminated yellow ink at the San Jose Mercury News.

- ANPA Manager/Environmental Services Richard W. Neergaard reminded newspapers of new federal rules on **electrical transformers with PCBs**.

According to Neergaard, at least one newspaper is being investigated in connection with the regulations issued last July [presstime, Sept. 1985, p. 35].

COURTS

COURT BRIEFS

- The California Supreme Court has agreed to review a libel case in which a **$4.5-million judgment** against The Hearst Corp., the San Francisco Examiner and two reporters was upheld on appeal.

ANPA and the American Society of Newspaper Editors joined in a friend-of-the court brief urging the state high court to accept the case. They noted that the damage award is 10 times larger than any previously affirmed by an appellate court.

The case dates from 1976 when two San Francisco police officers and a former deputy district attorney there sued over articles published in the Examiner. Calling it "a textbook case of libel," the California Court of Appeal Oct. 23, 1985, upheld the judgment of the San Francisco County Superior Court [presstime, Nov. 1980, p. 5].

- Circuit Judge Marianne O. Battani of Wayne County, Mich., Feb. 14 **overturned a jury verdict** and $266,840 libel award against the Detroit Free Press. Robert E. Penn, executive assistant to the director of the Michigan Employment Security Commission, had sued over an article published in 1979.

- A reporter for the Alexandria [La.] Daily Town Talk spent almost **24 hours in jail** for refusing to reveal the source of a story reporting on the confession of a murder suspect.

Judge Richard E. Lee of the 9th Judicial District ordered Michael J. Burns to jail Feb. 14 for contempt of court. On Feb. 15, the state's 3rd Circuit Court of Appeal stayed the sentence pending appeal.

Electronic mail can be a good way for reporters to stay in touch

BY WILLIAM VAN KIRK

The editorial department of the Chicago Tribune has used electronic mail to solve the longstanding problem of two-way communication with its correspondents. The telecommunications system also benefits domestic reporters.

Through a special tie-in between ITT's Dialcom electronic-mail and database service and a Hendrix Edit 5 front-end system, Tribune editors can send electronic mail and telex messages around the world from the same terminals they use to edit stories.

Correspondents in Hong Kong, Jerusalem, London, Mexico City, Tokyo and Toronto use the electronic mail system daily to send stories to Chicago and to receive assignments and other information from their editors. They can sign onto the system from a personal computer or portable terminal by typing in a special code after placing a local phone call to a "packet-switching" network like Tymnet, Telenet or Uninet that is linked to computers worldwide via satellite, microwave, cable and land lines.

Additionally, correspondents can send mail messages or telexes to each other from their portable terminals.

Besides the messaging capability, the system provides correspondents with access to AP, UPI and other news services—a great help to those working on breaking stories. Reporters also can call up airline schedules, the Dow Jones News/Retrieval Service, electronic clips from the Tribune's library and information from other reference libraries.

Because of legal and technical restrictions, correspondents in Moscow, Peking and Nairobi cannot use the electronic mail system. However, they do have two-way communication with the Edit 5 system through Dialcom's interface with the worldwide telex network.

Van Kirk is editor/systems and office support of the Chicago Tribune.

During normal operations, the system works on a "store and forward" principle, which means that a message can be sent and stored in Dialcom's computer in New Jersey until it is called up by the intended recipient.

But for more than a week following last September's Mexico City earthquake, when there was no telephone service between Chicago and Mexico, the system was used conversationally.

Tribune Washington, D.C., correspondent Bill Neikirk connects to ITT Dialcom system using a portable computer.

Paul F. Gero, Chicago Tribune

The reporters in Mexico and their editors in Chicago signed into Dialcom simultaneously at a prearranged time. By using this interactive messaging service dubbed "chat," it was possible to have two-way conversations at computer keyboards, during which coverage and travel plans were established.

The electronic mail system proved so successful for international use generally that the Tribune decided to make it available to the national reporters and editors as well.

The system enables them to receive messages or background information in their electronic mailbox. Once this information is stored in the Dialcom computer, it can be retrieved from just about any telephone in the United States.

Also, editors can work at home during off hours by having a story sent from the Edit 5 system into their electronic mailbox. They can edit the story and then send it back to the Tribune without making a special trip to the office.

In addition to efficiency, the system offers cost savings. There is virtually no cost involved in setting it up, and operational costs are lower than the long-distance telephone bills of the recent past. ☐

Joplin audiotex gets users, advertisers

Ottaway Newspapers Inc. has begun an audiotex service in Joplin, Mo., that gets all its revenue from advertisers.

Called INFOLINE, the service is an experiment for Ottaway, which is owned by Dow Jones & Co.

INFOLINE provides recorded information derived from The Joplin Globe, an Ottaway paper, and from other sources to callers using a touch-tone telephone. In addition to information on subjects such as weather, news, sports and entertainment, it offers an "audio Yellow Pages," according to Paul D. Cooper, operations manager.

In mid-February, at the end of its first six months of operation, the service had logged 233,819 calls and had contracts with 72 advertisers, Cooper said. ☐

NYNEX offers audio ads

The NYNEX Corp., one of the seven regional holding companies resulting from the Bell telephone breakup, in February began offering a directory service that gives advertisers a new way to reach the public.

The audio service is designed for people who have a product or service in mind but lack vendors' names or addresses. One free 800-number phone call will supply specific information on vendors' services and their phone numbers.

ANPA and NYNEX disagree about whether federal rules on telecommunications permit the regional to offer such a service.

In a separate move, NYNEX Feb. 12 took another step into the information field by forming a partnership with two other corporate heavyweights to explore how to offer interactive electronic services in areas such as home banking, entertainment and electronic shopping. The alliance teams NYNEX with RCA, which owns NBC, and Citicorp, owner of one of the country's largest banks.

The audio directory service, called Hello Yellow, and the electronic services partnership are new ways that NYNEX is building on its expertise in telecommunications and publishing. (See story, p. 16.)

The experimental directory service, which a subsidiary runs, has operated since Feb. 13 in the Albany, N.Y., area. Through the service, for example, callers can ask for a list of florists that are open until 9 p.m., deliver and accept a specific credit card, then get the telephone numbers of stores fitting the description. The service, now free to advertisers, is expected to be later totally advertiser supported.

ANPA Vice President/General Counsel W. Terry Maguire said there is "no question" Hello Yellow is an electronic information service—an undertaking prohibited to regionals by the consent decree that dismantled the Bell system.

NYNEX maintains that Hello Yellow is not such a service and that the regional does not need regulatory approval to offer it, according to Peter T. Goodale, district staff manager for editorial services.

Concerning NYNEX's alliance with Citicorp and NBC, Goodale said the regional does not need regulatory approval so long as the partnership sticks to research. That will change should the partnership progress to actually offering services, he said. ☐

ANPA nominee Heard selected to receive Golden Pen Award

The International Federation of Newspaper Publishers has selected ANPA's nominee to receive the Golden Pen of Freedom, awarded annually to a journalist for major contributions to press freedom.

Anthony Heard, editor of the Cape Times in Cape Town, South Africa, faces a possible three-year prison sentence for defying a government ban against interviewing a "banned" person [**presstime**, Jan. 1986, p. 38].

In announcing the decision Feb. 7, the board of the publishers' federation cited Heard's 14-year "record of fearlessly reporting human rights violations and struggling for press freedom." ☐

FIEJ, IPI meetings

Two world press organizations will hold annual meetings in May: the International Federation of Newspaper Publishers, or FIEJ, 39th Congress in Lisbon, May 24-28, and the International Press Institute 35th General Assembly in Vienna, May 11-16.

Executives of ANPA member newspapers are eligible to be included in ANPA's FIEJ delegation. Those who plan to attend but have not yet notified ANPA should call Martin Casey, manager/government and international affairs, at (703) 648-1054. ☐

Panama journalist jailed, released

A columnist for Panama's major independent newspaper was jailed for several hours Feb. 18, then released, apparently in response to strong reaction within and outside the country.

More than 500 civic and professional leaders held a public meeting in Panama City, and protests were lodged by groups such as the Inter American Press Association and the Committee to Protect Journalists.

These actions were "very helpful," said I. Roberto Eisenmann Jr., publisher of La Prensa, whose associate editor, Guillermo Sanchez Borbon, was the journalist involved [**presstime**, Nov. 1985, p. 18].

Several months earlier, the columnist had gone into hiding for two weeks when he thought his life was in danger. ☐

Engineers reject contract

The Brotherhood of Locomotive Engineers voted against accepting a tentative labor contract reached with most of the nation's major railroads in December.

However, a strike would not become imminent unless an impasse is reached in negotiations. If that happens, a strike could be called 30 days after either side rejects arbitration. A strike can be delayed for 60 days by the creation of a presidential emergency board. Thereafter, congressional action would then be needed to prevent a walkout.

Meanwhile, mediators are continuing to hold talks with other U.S. rail unions.

In Canada, 85 percent of the labor contracts have been signed. However, some of the shopcraft unions have not reached agreement with CP Rail and Canadian National. The unions are in a position to strike but have decided to reopen discussions with the railroads [**presstime**, Feb. 1986, p. 41]. ☐

DOT proposes more deregulation

The U.S. Department of Transportation submitted to Congress proposed legislation to deregulate the trucking and household-good industries as well as the freight-forwarding and domestic water-carrier industries.

The measure would eliminate regulations affecting rate and non-safety matters. It also would eliminate tariff filing requirements and antitrust immunity for collective ratemaking. ☐

Railroad reorganized

Reorganization of the Chicago, Milwaukee, St. Paul and Pacific Railroad—known as the Milwaukee Road—has been completed after an eight-year effort to resolve its financial problems through federal bankruptcy proceedings. More than half of the railroad's 10,000 miles of line were abandoned.

About 3,000 miles were sold to Soo Line Railroad Co. last March for $571 million [**presstime**, April 1985, p. 43].

Meanwhile, the Interstate Commerce Commission has renewed temporary authority allowing interim service by various railroads on certain Milwaukee Road lines. ☐

ANPA, others argue for no change in rules for TMC

ANPA and at least 15 newspapers individually have asked the U.S. Postal Service Board of Governors not to change rules under which some daily newspapers deliver total-market-coverage publications via second-class mail.

The Association and others were responding to a recommendation of the Postal Rate Commission that the governors effectively disallow second-class TMC by requiring a separate mailing list for such publications.

The recommendation stemmed from a complaint filed by direct-mail firm Advo-System Inc. against newspapers' use of second-class TMC [presstime, Feb. 1986, p. 41].

The recommendation was put on the governors' agenda for their March 3-4 meeting. However, in late February, it was not clear whether they will render a decision on the matter at that time.

ANPA sent the governors a 14-page document signed by Postal Committee Chairman Sandra C. Hardy and stating the Association's dismay "at the commission's apparent willingness to lay open its complaint docket for an unabashedly competitive assault and to adopt without quibble the complainant's arguments, concerns and requested relief."

"We urge the Governors not to change the rules in the middle of the game just to suit Advo, but rather to require the Postal Service to enforce its existing regulations to bar true advertising publications from second-class mail," said Hardy, vice president of Calkins Newspapers in Levittown, Pa. "The targeted discrimination against daily newspapers intended by this decision is indefensible in law or public policy."

One reason newspapers have become aggressive in their TMC activities—including their use of second-class—is that they must respond to direct-mail firms that have been given a competitive advantage because of unfairly low third-class rates, the ANPA document said.

Advo told the governors they should adopt the recommendation, saying the publications in question are not "issues" of the daily newspaper as allowed under existing rules. "They are separate weekly publications, designed primarily for advertising purposes and free circulation.

"As such," the direct-mail company continued, "they are inconsistent with the essential nature of second-class mail and are ineligible for the second-class mail privilege, unless they independently meet the eligibility criteria. . . ."

Among newspaper companies offering comments was the Dallas Times Herald, which said that the commission mistakenly believes so-called "plus" issues, a name given the controversial TMC papers in postal circles, "are nothing more than a means of distributing advertising at second-class rates."

In actuality, the Times Herald's publication, "Community Close-Up," published every Wednesday and received by subscribers as well as non-subscribers, is a "legitimate editorial product," said Arthur E. Wible Jr., publisher and chief executive officer. It contains news, sports and other information about "a wide range of activities which are of genuine interest to the local community to which it is addressed," he said.

Robert D. Fairchild, business manager of The Spokesman-Review and Spokane Chronicle, said it "seems for some reason the post office is not wanting to cooperate with newspapers in their effort to communicate to the broadest number of people in a circulation area."

The Daily News of Los Angeles said if the governors accept the recommendation, the newspaper could "no longer publish and distribute in a timely manner the local community news, Little League scores, and time-valued information our market has been receiving for nearly a year." President and Publisher Byron C. Campbell said the Daily News has worked closely with postal officials to ensure that its program complies with all regulations.

William C. Eisenbeiss, vice president of The Virginian-Pilot and The Ledger-Star of Norfolk, said the change would drive away "a number of newspapers that are significant dollar-volume customers under present regulations." ☐

In-county rate increase likely March 9

Second-class, in-county rates are liable to go up March 9 for the second time this year, said John R. McKean, chairman of the U.S. Postal Service Board of Governors. There are two reasons.

One is that Congress allocated less money than expected for the current fiscal year in the subsidy for "preferred" mail—including newspapers mailed in-county and for mailings of fewer than 5,000 copies outside the county of publication.

McKean pointed out that Congress' appropriation of $748 million was $72 million less than needed to maintain rates that were put into effect Jan. 1 [presstime, Jan. 1986, p. 39].

The second reason is that the Balanced Budget Act of 1986—also known as Gramm-Rudman-Hollings for its legislative sponsors—will cause further subsidy cuts and therefore further price increases. According to McKean, the act may knock another $33 million off the subsidy for the current fiscal year.

The board chairman also outlined higher rates that likely will be imposed because of cuts necessitated by the budget-balancing law, which remains in effect pending a decision expected later this year by the U.S. Supreme Court.

For in-county mail, the current per-pound rate of 7.9 cents is likely to increase to 9.3 cents. The per-piece rate is expected to increase from 4.3 to 5 cents; and the per-piece rate for mail presorted to carrier-route level, from 2.5 to 3.2 cents. ☐

POSTAL NOTES

- President Reagan suggested in February that mail delivery in the United States could be cheaper and better if handled by the private sector.

The "most direct approach" to such "**privatization**" would be eliminating the so-called private express statutes that prohibit competition with the government monopoly, he said.

In his annual economic report to Congress, Reagan also said a profit-oriented firm would operate at costs lower than those of the U.S. Postal Service.

- A "**service improvement kit**" has been developed for publications delivered by mail. It was prepared by the Eastern Region focus group that includes three newspaper companies. The group is one of six mailer groups that USPS formed in an effort to improve publication delivery.

Among other things, the free kit contains information on postal field management and a directory of postal managers to call for help.

For more information, contact Program Manager Paul H. Roche, USPS Eastern Region, P.O. Box 8601, Philadelphia, Pa. 19197-0612; (215) 496-6062.

13 technical seminars planned for second half of '86

ANPA is planning 13 "hands-on" technical seminars for the second half of 1986.

These seminars are conducted by the Association's Technical Services Department at The Newspaper Center in Reston, Va. Class size is limited to no more than 10, and the registration fee for each is $575.

There will also be nine non-technical sessions during the six-month period. They were listed in the September 1985 issue of presstime, pp. 56-58. Any changes in the schedule for these seminars will be announced in future issues.

The July-December schedule for technical seminars is as follows:

Advanced Offset Press Operations **July 7-11**
Aug. 4-8
Sept. 15-19
Oct. 27-31
Nov. 17-21
Dec. 8-12

Pressmen will learn advanced techniques such as web offset trouble shooting and quality control programs for consistent results on the press. Non-pressroom personnel will gain hands-on experience operating a newspaper press. This seminar will utilize ANPA's double-width M.A.N.-Roland 4/2 press and the single-width Goss Urbanite Press. Specific areas to be covered include: offset press unit components, precise adjustment of all systems, registration systems, plate processing and control, printing problems and offset press care and maintenance.

Color Scanner Operation for Newspaper Reproduction **July 21-25**
Nov. 10-14

Newspaper production and management personnel will learn the skills needed for utilization of electronic scanning systems. The program encompasses newspaper processes relative to producing consistent, high-quality color. Through a combination of classroom instruction and hands-on training, attendees learn the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses. Participants are given a thorough background in color reproduction—including the purpose of making additive and subtractive color theory, the relationship of ink and paper in color printing, and proper evaluation of colors.

Process Camera Techniques for Newspaper Reproduction **Aug. 4-8**
Oct. 27-31

Production and management personnel will obtain working knowledge of the customary instruments used for process camera operation at a newspaper. Also, the seminar will introduce attendees to the proper use of contact screens, processor control, chemistry, films and diffusion transfer material. Lectures and demonstration on the Hell and Royal Zenith Scanners will be conducted. Instruction and operation of the ECRM Autokon camera will be provided.

Newspaper Quality Control **Aug. 18-22**

This seminar reviews procedures needed to establish quality standards throughout the newspaper production cycle. Through lectures, demonstrations and "hands-on" operational experience, a complete system for documenting, measuring and maintaining high quality printing will prepare participants to initiate their own systems. The quality control system will proceed through the following steps: copy standards and photographic reproduction density ranges (color and black-and-white); establishing and maintaining typesetting procedures and equipment; process camera control of line copy and halftones; color separation standards for scanners and direct screen operations; and maintenance and set-up procedures for newspaper presses.

Direct Screen Color Separation for Newspaper Reproduction **Sept. 29-Oct. 3**

This seminar covers the skills needed for utilization of direct screen color systems. Participants are given a thorough background in color reproduction, including the purpose of masking the relationship of primary and secondary colors, and how to properly evaluate colors. Attendees learn the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses. Elements covered include: evaluation of color originals and reproduction standards; color correction techniques; instruments and controls for predictable quality; operation of the direct screen separation equipment; proofing of color by color key and actual press runs; and safety in the camera room and dark room, including chemical handling, ventilation, problems and working with high intensity lights.

Management Introduction to Newspaper Technology **Oct. 6-10**

Management personnel are introduced to the latest developments in electronic editorial and production systems. The seminar is intended to create increased awareness of the capabilities and limitations of modern newspaper production equipment. Instruction includes personalized sessions that assist attendees in achieving an understanding of the new technologies. They experience hands-on operation of modern phototypesetting equipment plus electronic editorial and advertising copy processing systems. Participants also produce their own four-page newspaper, working through all the procedures from copy preparation to the actual press run.

For more information on these seminars, contact Arthur M. Boudreau, manager/technical training, ANPA, The Newspaper Center, Reston, Va.; (703) 648-1217. ☐

Starting pay, enrollments up, placement survey shows

Starting salaries at daily newspapers are on the rise, and so again are enrollments in schools of journalism.

Those were among the highlights from two annual surveys: one detailing where recent graduates found work, the other charting journalism school enrollments.

According to the annual placement survey by The Dow Jones Newspaper Fund, the median salary paid recent J-school graduates by daily newspapers rose 13 percent in 1985, the largest one-year gain of any of the communications fields.

Over the last three years, the starting salary has jumped from $11,180 a year to $13,520. "That is a significant increase," said Thomas E. Engleman, executive director of the fund.

Englemen attributed the gain to increased awareness among editors and publishers of the salary problem. Through articles in the trade press and at meetings of educators and editors, he said, "journalism schools . . . have made their point to editors that their students are very concerned about salaries and are making choices of college majors and careers in part because of the salary question."

According to Engleman, growth in starting salaries also is linked to the increased emphasis on minority hiring by daily newspapers. As papers examined their recruiting practices in an effort to increase minority hiring, they found a need to raise salaries across the board, he said.

According to the 1985 survey, 11.5 percent of the graduates hired by daily newspapers were minorities; that compares with only 3.3 percent in 1975. "There's a lot more work to be done, but to show some progress is also important, and we can see some progress in this series of surveys," Engleman said.

Of all minority J-school graduates in 1985, newspapers hired 13.9 percent, down from 16.5 percent in 1984 [presstime, Feb. 1985, p. 37]. Daily newspapers alone hired 11.1 percent, down from 12.7 in 1984.

Overall, daily and weekly newspapers and news services hired about 3,160, or about 15.5 percent of all, journalism and mass communications college graduates in 1985, according to the survey. This was down from 17.1 percent in 1984.

Other communications industry segments increased their hiring percentages. Public relations agencies and corporate public relations departments hired 11.8 percent of the graduating class, up from 8.5 percent; advertising agencies 10.5 percent, up from 8.6 percent; and radio and television 11.8 percent, up from 10.6 percent.

More than half of the class of 1985 found media-related work—55.3 percent compared with 55.8 percent in 1984. Other employers hired 26.1 percent, 6.6 percent reported they were attending graduate school and 12 percent were unemployed when the survey was conducted.

Of the 1,892 questionnaires mailed to 1985 graduates by The Newspaper Fund, 1,028, or 54.3 percent, were returned. Respondents represent 5 percent of the graduates.

The enrollments survey was conducted by Professor Paul V. Peterson of Ohio State University and showed that enrollments in schools of journalism and mass communications for the 1985-86 school year are up 4.9 percent.

That increase "is really quite significant," says Peterson, who does the annual study for the Association for Education in Journalism and Mass Communication. It is the first time in several years that journalism enrollments have increased significantly, he said. "Otherwise, they have been pretty level." Last year, enrollments rose only 1.7 percent.

Peterson compared 1985-86 and 1984-85 enrollments reported by schools with 500 or more journalism majors. Coincidentally, the number of journalism majors reported in this year's survey was about 4.9 percent more than reported last year—175 schools reported 82,766 majors this year, compared with 180 schools that reported 78,856 majors last year.

The makeup of the journalism student body was much the same as last year, according to the Peterson statistics. The percentage of female students this year is 59.8 percent, up slightly from 59.2 percent. The percentage of minorities is 8.6 percent, up from 8.15 percent. Black student enrollment is 6.14 percent, up from 5.9 percent. Peterson noted that several historically black colleges did not participate in the study.

The complete findings will be reported in the spring issue of Journalism Educator, published by AEJMC.

Funding sources examined

Newspaper companies and individuals provide the bulk of the private-sector support for education for journalism and mass communication, according to a survey conducted for the Education for Journalism Committee of the American Society of Newspaper Editors.

Among the other findings presented at the committee's Jan. 24-25 meeting in Nashville were:

- "The bulk of private-sector support goes in very large grants to only a few programs.
- "Most such support goes to accredited programs.
- "Most of the programs get significantly little support from the private sector."

The survey was conducted by Emil Dansker, associate professor of journalism at Bowling Green State University, with assistance from The Dow Jones Newspaper Fund. Schools were asked to report all private-sector support they received during the 1984-85 school year. Responses were received from 108, or one-third, of the 324 U.S. schools and departments of journalism and mass communication surveyed.

Newspapers were the largest source of support, giving $2,491,073 of the $5,058,336 reported by the schools. Individuals were second, giving $1,584,746.

The survey found that most private-sector support goes toward scholarships.

Dansker concluded that there is a need to find ways to make the distribution of aid more even among the schools.

ANPA Foundation plans to survey newspapers and newspaper-related foundations this month on their support of journalism education, according to Judith D. Hines, vice president and director of the Foundation.

Varied preparations in swing for 4th NIE Week observance

Newspapers are getting ready to observe the fourth annual Newspaper in Education Week March 3-7 with something old, something new and something borrowed.

NIE Week is aimed at promoting use of the newspaper as a classroom teaching tool and is cosponsored by ANPA Foundation and the International Reading Association [presstime, April 1985, p. 44].

California newspapers are sticking with the tried and true, a statewide contest in which students in grades four through six compete to create the best classroom newspaper.

The contest is in its third year. According to Jody Taylor, communications and educational services manager for The Orange County Register, 11 newspapers are participating this year, up from nine last year and seven the year before.

A first-time participant is The Hanford Sentinel. The contest "has created a lot of excitment in the schools here," reported Publisher Jack C. Morgan. Several of the participating classrooms toured the newspaper plant. And two even asked the Sentinel to print their entries. To be fair to the other entrants, the newspaper had to charge a fee for the service, Morgan said.

The Sentinel will choose local winners for each grade. One of them will be entered in the statewide contest. The paper planned to run a full page feature story on the competition on Feb. 27. To kick off NIE Week, it will announce the local winners March 3.

In Montana, a new effort was made this year to promote NIE Week throughout the state, according to Nancy S. Robinson, coordinator of the NIE program for the Bozeman Daily Chronicle and co-chairman for the entire state effort.

As in Montana, NIE Week steering committees have been formed in almost every state, with members designated by ANPA Foundation, the IRA and state press associations.

The Montana steering committee sent packets of information on NIE Week to more than 75 newspapers and offered to help newspapers organize observances, Robinson said. It also conducted two statewide teacher workshops.

In Illinois, 56 daily newspapers—90 percent of the dailies in the state—are committed to participation in NIE Week, according to John G. Whyte, director of community services for the Herald-News in Joliet. Only 37 dailies participated last year, said Whyte, state NIE Week co-chairman.

"We're getting it off the ground," said Whyte, who added that newspapers formed an Illinois Newspaper in Education Association last year.

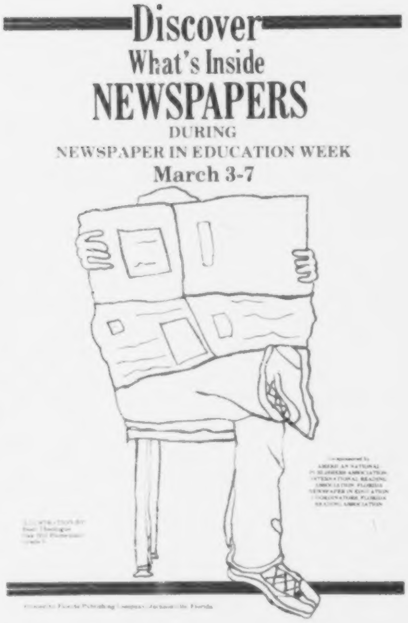
Florida has had a state NIE organization for several years. President of the organization, Caroline H. Charbonnet, said that at the end of this year's NIE Week observance, she hopes to compile a book of activities sponsored by newspapers in the state.

Director of educational services for The Florida Times Union and Jacksonville Journal, Charbonnet said newspapers are working with local chapters of the Florida Reading Association. For example, the Jacksonville papers printed an NIE Week poster featuring a drawing by a student of a Reading Association member.

The East Oregonian of Pendleton borrowed an NIE Week idea from across the country. The Golden Apple Award was "copied"—with permission—from The Tennessean in Nashville, according to Amy A. Bedford, NIE coordinator. Readers were asked to write 50 words or less about their favorite teacher. Every teacher nominated for the award will receive a certificate from the newspaper.

The paper plans to run house ads each day of NIE Week explaining how to use the newspaper as a teaching tool. With a local college, it is also sponsoring a two-weekend, for-credit course in using the newspaper in the classroom.

Bedford said she expects good cooperation from local schools. Some are even considering making one day during NIE Week a "no books" day—only newspapers allowed. —*Margaret Genovese*



Jacksonville newspapers have this NIE poster.

Foundation, ABA plan Constitution observance

In conjunction with the American Bar Association, ANPA Foundation is planning several programs and publications to observe the 1987 bicentennial of the U.S. Constitution.

Currently under consideration are five to eight issues to be explored in materials that would be made available to newspapers without charge. They include government checks and balances, judicial power, free expression, equality and rights of the accused. The bar association would like to know whether newspapers would use these or similar materials; whether materials should be camera-ready or in another form; and whether there are other suggested topics appropriate to the bicentennial.

For information or to respond to the ABA's questions, contact Rosalind Stark of ANPA Foundation at The Newspaper Center, Reston, Va.; (703) 648-1047. ☐

Grades 4-8 target of new booklet

A new guide to using the newspaper to teach grades four through eight is available from ANPA Foundation.

"Using the Newspaper in Upper Elementary and Middle Grades" contains lessons in four basic subject areas: language arts, science, math and social studies. It also has lessons designed to acquaint students with the newspaper.

Copies may be purchased in camera-ready, reproducible form for $35 each. Contact the Foundation's Ruth Finn at The Newspaper Center, Reston, Va.; (703) 648-1048. ☐

Shuttle disaster prompts extra editions, many creative local stories

The explosion of space shuttle Challenger tested the mettle of U.S. daily newspapers, particularly afternoon papers—many of which already were in the throes of regular deadlines when the 11:39 a.m. EST accident occurred.

They responded by replating pages, extending deadlines and taking all other possible steps to print the latest developments and reaction.

At least one p.m. newspaper, the Fort Lauderdale News, published an extra edition because the last regular p.m. edition already had gone to press. "Our first responsibility was to get something out on the streets," said Managing Editor Earl Maucker.

A handful of morning newspapers also responded with same-day coverage by producing extra editions circulated on the afternoon of Jan. 28.

Maucker said the Fort Lauderdale News' extra was produced by remaking pages from the A section and distributing that section primarily as a wrapper for full copies of the News already on the street.

After the decision to publish, the News' editorial staff had one hour and 10 minutes before deadline. Relying heavily on stories and photos from wire services, it put together four pages on the accident and even prepared a new lead editorial headlined, "Space effort must go on despite shuttle tragedy."

Local copy included reaction stories from South Florida educators and a photograph of people watching news coverage on TV sets in a Sears store.

The p.m. Concord (N.H.) Monitor, being the hometown paper of teacher-astronaut Christa McAuliffe (see story, p. 12), had two staff writers at Cape Canaveral who wrote the day's tragic lead story.

Other staff members in Concord set out to get local reaction. The newspaper pushed back its press time from 12:45 to 1:30 p.m. and increased the press run from about 23,500 to 26,000, said Editor Mike Pride.

The Public Opinion of Watertown, S.D., another afternoon paper, delayed by about 25 minutes its usual page lock-up time of 11:55 a.m. Central time (12:55 p.m. EST).

Editor Gordon R. Garnos said that gave the paper time to get in several local stories. One was about a retired Watertown resident who had worked on the design of the spacecraft's heat-resistant tiles. Another was about a resident who was a personal friend of shuttle Commander Francis R. (Dick) Scobee.

The Charlotte Observer

Hawker sells Charlotte Observer's extra.

The Scranton (Pa.) Times has three p.m. editions with press times of 11:30 a.m., 11:45 and 2:30 p.m. The first press run was almost finished when word arrived of the explosion, said Managing Editor Ed E. Rogers. The staff remade the second edition, using photos and a wire service story. Press time was postponed until between 12:15-12:30 p.m.

For the final edition, which got out on time, the news staff was able to produce a local photograph and four local stories—including one about a Navy commander who attended test-pilot school with shuttle pilot Michael J. Smith. Cmdr. David Newton happened to be visiting the family of Edward J. Lynett Jr., editor and co-publisher of the Times.

Morning newspapers had much more time to develop the disaster story, of course, but among those that did not wait until the next day to break the news was The Charlotte Observer. It was one of three Knight-Ridder newspapers to print a shuttle-explosion extra.

"We had some fits and starts because we weren't sure if we could handle it," said Bob Ashley, acting managing editor. The decision to "go" was made at 2 p.m. By 3:40 p.m., the first copies were rolling off the press. Minutes later they were on the street. The edition consisted mainly of that morning's paper with three pages of the A section replated with wire and local reaction stories.

Hawkers sold copies on city streets. Observer district circulation managers and others took bundles to the suburbs and other towns. "We had district managers taking armloads into convenience stores and selling copies on the way in," Ashley said.

The Sun in San Bernardino was one of four Gannett Co. papers to come out with a special, same-day edition. With an extra time advantage by virtue of its being in the Pacific time zone, the Sun actually published two extras.

"We were fortunate enough to have the plates still on the press from the night before," said Executive Editor Robert W. Ritter. This made it possible to print a "down and dirty" first extra in which the front page and one inside page were redone; other pages were picked from the previous run.

The paper hit the streets shortly after 11 a.m. (2 p.m. EST), in time for lunch crowds, Ritter said. The second extra had an additional page and a half of coverage and was out by 3:15 p.m.

The Observer and The Sun are examples of newspapers in cities that have lost a p.m. paper in recent years. The two were among a few a.m. publications that filled a void in afternoon coverage of the shuttle explosion—an event that many observers likened to the assassination of President John F. Kennedy, not only for its emotional intensity but also for its mid-day timing. The Kennedy assassination occurred at 12:30 p.m. Central time, Nov. 22, 1963. There were about 1,450 evening newspapers in the United States then, compared with less than 1,250 now.

Besides efforts to serve breaking-news coverage, many newspapers demonstrated creative ways to localize the disaster story. One was The Press-Enterprise of Riverside, Calif., an a.m. paper that interviewed psychologists on how teachers and parents could help children deal with the shuttle tragedy. Such a story was appropriate because the space mission was "so oriented to children and the schools," said Managing Editor/News Marcia A. McQuern.

—C. David Rambo

Journalist project to proceed

The Journalist-in-Space project will go on despite the Jan. 28 Challenger tragedy, according to spokesmen for the National Aeronautics and Space Administration and the Association of Schools of Journalism and Mass Communication.

ASJMC has resumed its selection process for the journalist, who would become the third civilian to be sent aloft. The second will be teacher Barbara Morgan, who was Christa McAuliffe's backup.

The journalist flight, originally scheduled for this fall, has been postponed indefinitely, as have all shuttle missions.

The deadline for filing journalist-in-space applications was two weeks before the Challenger explosion [presstime, Feb. 1986, p. 44]. Jack Bass, public affairs coordinator for the project, said that none of the 1,703 applicants has asked to have his or her name withdrawn since the tragedy, in which McAuliffe and six other astronauts were killed.

The original timetable had called for the journalist/astronaut and his or her backup to be announced April 17. The plan now is for review panels of working journalists and journalism educators to meet this month and select 100 regional semifinalists, 20 in each of five regions. Their names will be announced in April.

In the second stage, selection panels at five coordinating schools of journalism will interview the regional semifinalists and narrow the field to 40, who will be named in May.

A 15-member national selection committee will meet with the regional nominees at a time yet to be determined to select five finalists. After physical examinations and briefings at the Johnson Space Center in Houston, seven senior NASA officials will select the journalist/astronaut and a backup.

Project Director Eric Johnson said the selection process was resumed at this time in order to take advantage of the administrative process already in place. ☐

The Pittsburgh Press has created a new position of "special editor" to recognize significant achievement among news staff members and to provide helpful input to management. See page 56.

Committee to urge approval of coupon promotion

With the results of a three-market test in hand, the liaison committee representing ANPA and the Newspaper Advertising Bureau has urged the Audit Bureau of Circulations to allow nationwide the same-day promotion of newspaper coupons' monetary value.

Donald A. Nizen

Committee members believe the results of the NAB test will help allay advertisers' fears that promotion of the monetary value of coupons on the day they are distributed in newspapers will cause wild fluctuations in the marketplace [presstime, Feb. 1986, p. 46].

According to final figures released in February, the test showed only mild fluctuations in circulation and product purchases—increases of 3.2 percent and 5.5 percent, respectively. A 29.7-percent increase in coupon redemption was considered "not statistically significant" by NAB because this fluctuation was "well within the range of variations experienced every week under normal business conditions."

The test was conducted last September in stores of the Harris-Teeter grocery chain in Charlotte and Raleigh, N.C., and in Charleston, S.C.

The ABC prohibition has long been a source of controversy between newspapers and major coupon advertisers, some of whom sit on the ABC board.

Many coupon advertisers contend that same-day promotion would encourage "misredemption" [fraudulent use of coupons] or skew advertisers' marketing plans by attracting large numbers of people with demographic profiles different from those of typical newspaper readers.

New data included in NAB's final report to the audit bureau indicate that even without special promotion of coupons, circulation jumps significantly on the weekday when most coupons are distributed. The data, compiled by Knight-Ridder Newspapers Inc. and covering a number of newspapers of various sizes, shows that circulation rises 13.3 to 30.4 percent for papers carrying coupons and food ads on "Best Food Day."

"This survey shows a unique opportunity to increase circulation," said Donald A. Nizen, Knight-Ridder vice president/circulation.

"One of the things advertisers have been telling us is they would like to see circulation increased and penetration increased. When we have people who don't necessarily take the paper buy the paper [for coupons], perhaps they will find other interesting material that makes them into readers," he said. ☐

INFE panel refining invoice standards

A committee of the International Newspaper Financial Executives has begun refining that organization's list of recommended standard elements for advertising invoices. It also has designed a proposed standard invoice.

As part of the expanded Standard Advertising Unit system, INFE previously recommended that newspapers include 27 standard elements in their ad invoices [presstime, Feb. 1984, p. 37].

Responding to comments from the advertising and financial communities, INFE's Advertising Liaison Committee re-evaluated each of the elements and, at a Feb. 11 meeting attended by representatives of other industry organizations and major newspaper companies, proposed a new list of 28 standard elements, according to Donald W. Kearney Jr., assistant controller of The New York Times.

The prototype invoice and new list of elements will be presented for review and comments to the INFE Board of Directors and membership, to the Standardization Subcommittee of the Newspaper Advertising Bureau's Future of Advertising Committee, to the International Newspaper Advertising and Marketing Executives, and to other newspaper industry organizations, Kearney said.

"The adoption of a standard or universal invoice by the newspaper industry makes a lot of sense at this time," he said. "It is the next logical step to be taken after the successful implementaion of the expanded SAU® program in July 1984." ☐

Wichita Eagle-Beacon curtails ad-rate differential

Conventional wisdom has it that significant trends begin on the East or West Coast, then drift slowly inward to the heartland.

But if The Wichita Eagle-Beacon has its way, Kansas will become known in newspaper circles as the place where the revolution in national advertising began.

The Eagle-Beacon recently began a program to equalize rates for national and retail advertisers, a move that has been demanded for years by national advertisers. The program applies to national advertisers buying a minimum of six full pages a year.

"I cannot foresee ever turning back," said Advertising Director William L. Poitevint. He said he expects "some form of this type of program will in fact be adopted by most newspapers."

Yet just as the Wichita program was being launched, the American Association of Advertising Agencies released figures showing that the national/retail rate differential reached an all-time high last year—64.6 percent. (See chart below.)

"The widening gap" puts off national advertisers both psychologically and economically," said Richard P. Gallagher, chairman of the 4As Newspaper Committee and vice president, associate media director of McCann-Erickson Worldwide.

Meanwhile, the chairman of the counterpart committee of the Association of National Advertisers communicated his unhappiness about the national trend in a letter to Harold W. Andersen, publisher of the Omaha World-Herald. Andersen is chairman of the Newspaper Advertising Bureau's Future of Advertising Committee, formed to increase newspapers' share of advertising—particularly national.

"The potential for newspapers in the area that newspapers label 'national' is enormous, but this area carries what one distinguished newspaperman recently referred to as 'our self-inflicted wound'—the national rate differential," wrote Thomas J. Purcell, corporate director, advertising and marketing services, of the George A. Hormel Co.

He told Andersen that if members of the Future of Advertising Committee "could put themselves in the seat of advertisers and their agencies trying to plan a year's program in newspapers on a nationwide basis, they'd see immediately why major advertisers and their agencies look elsewhere for dollar-efficient reach and frequency.

"The irony of many plans that eliminate (run-of-paper advertising) is that the desired reach and frequency are attained within the newspapers' own circulation systems via free-standing inserts and other vehicles at dollar levels advertisers find efficient."

With national advertisers' sentiment about newspapers' advertising policies running so high, the Wichita initiative is attracting a lot of interest—among advertisers, ad agencies and publishers alike.

The program has won the support of the newspaper's parent company, Knight-Ridder Newspapers Inc., which formally introduced "Laboratory/Wichita" in a presentation to the New York advertising community Feb. 19.

"We have a team in each of our Knight-Ridder sales offices out selling this (Wichita's new rate policy) to target accounts," Frederick C. Weiss, senior vice president/marketing director of Knight-Ridder Sales, told presstime. "We're going to pinpoint advertisers who are not using newspapers but logically could be or should be, then prepare a special proposal as to how they can test this in the laboratory context of Wichita."

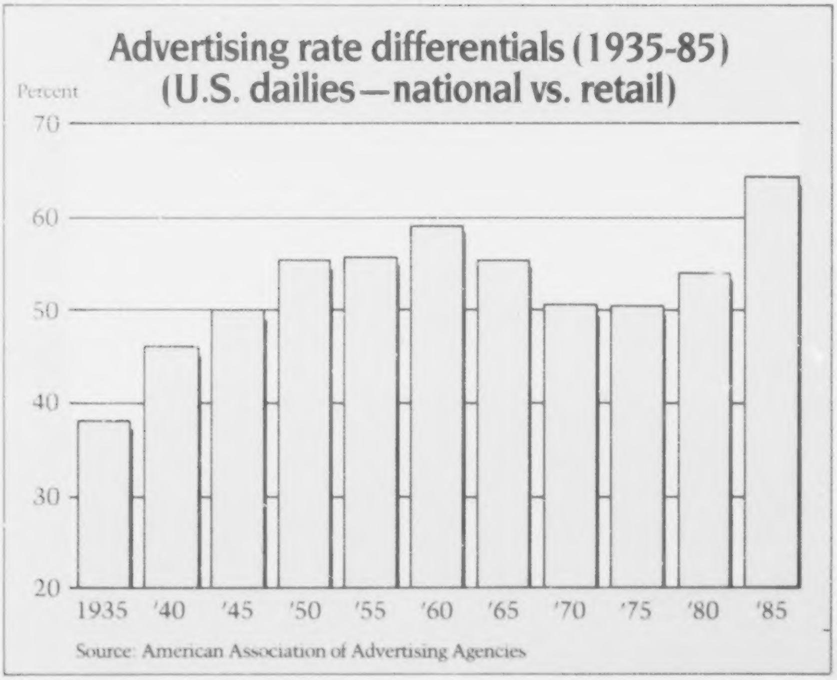
Although Weiss said he was "sure that Knight-Ridder and the industry will be watching (the project) carefully," he noted that "Knight-Ridder newspapers are autonomous in their pricing structure."

"There are some people in the business that are gutsy and take risks," he said, referring to the out-front position taken by Poitevint and Eagle-Beacon President and Publisher Norman J. Christiansen.

Both point out that the program takes advantage of some unique characteristics of the mid-continent city of about 280,000 population and its daily newspaper (circulation 126,807 morning, 190,447 Sunday).

"The rate differential is only one facet of the program," said Poitevint. "An advertiser will be able to (test) an awful lot of things along with the rate." For example:

- With almost 80 percent of the com-



Advertising rate differentials (1935-85) (U.S. dailies—national vs. retail)

Source: American Association of Advertising Agencies

Alberto Pacheco

munity wired for cable television and with one of the nation's highest rates of daily newspaper penetration, Wichita offers an opportunity to study the effects on advertising of the erosion of network television's audience.

- Geographically isolated, as well as a distribution center for a large area, Wichita is a good place to track sales.
- Demographically, Wichita already has some characteristics that are destined to become national in scope. Sixty percent of its married women work outside the home, which is considered a few years ahead of the national trend, and the effective buying income per household—more than $32,000—is projected as the nationwide average about two years hence.
- The Eagle-Beacon's presses have split-run capacity to conduct a variety of tests, including comparisons of color and black-and-white ads. The paper also has a research staff with direct-input computer capacity to help advertisers assemble test results.

Despite the advertising community's long advocacy of a single rate for national and retail advertising, reaction from at least one ad-agency executive to Wichita's specific proposal was initially guarded.

"The spirit in which [the project] is being done is very interesting," said Thurman R. Pierce, a vice president at the J. Walter Thompson ad agency and chairman of the Advertising Research Foundation's Newspaper Audience Research Council. "But people don't change their media according to what one newspaper does to its price."

He added: "The only way to truly test lowering rates is for the whole industry to do it for two to three years."

—Marcia Ruth

New INAME chief Momsen urges more newspaper cooperation

Asked for the theme of his coming year as president of the International Newspaper Advertising and Marketing Executives, Robert C. Momsen replied, "Make 1986 the 'Year of the House Call.'"

Three weeks after he was sworn in at INAME's winter meeting in Las Vegas, the vice president/marketing for the St. Paul Pioneer Press and Dispatch told presstime, "The big drive will be in further standardization of practices in the way newspapers do business with our customers."

Moves toward standardization will be particularly emphasized in the areas of research, billing and circulation reporting, he said.

In remarks to the organization's 75th anniversary gathering, Momsen also stressed the theme of cooperative action. "The day when we took pride in the independence displayed by 1,700 publishers going 1,700 different directions is a thing of the past," he noted. "If we have learned nothing else in our 75 years, it's that—as Lincoln suggested back in the 1860s—only by being united will we succeed."

Momsen told the more than 850 newspaper executives attending the Jan. 26-29 meeting that "if we want to increase our share of the business, we have to sell the way our customers buy." In order to do this, he said, "We have to spend *more* time in our customers' offices and *less* in our own."

Stern words about newspapers' missed opportunities were delivered by an advertiser from television. "We're trying to spend money in newspapers, and you're not helping us," said Dennis Fitch, director of entertainment advertising for ABC Entertainment, a division of Capital Cities/ABC Inc. Newspapers are losing out to the more aggressive marketing of radio in the competition for an additional $20 million in advertising by network television, much of it available through co-op arrangements with local stations, he said.

Spokesmen for Montgomery Ward, J.C. Penney and Sears Roebuck urged newspapers to offer opportunities for more volume discounts for large advertisers.

In a presentation titled "City Alive," Alfred Eisenpreis, vice president/retail advertising of the Newspaper Advertising Bureau, alerted ad executives to the opportunities presented by the trend toward revitalization of urban centers.

NAB President Craig C. Standen said he expects newspaper advertising will be up 10 percent in 1986, 1 percent above last year's increase. He predicted national will rise 10 percent, retail 9 percent and classified 11 percent, compared with 9, 5 and 12 percent, respectively, in 1985.

Other new INAME officers elected were: president-elect, Alan H. Dant, The Plain Dealer, Cleveland; first vice president, Roger H. Clapp, Richmond (Va.) Times-Dispatch and The News Leader; second vice president, Fred D. Crisp Jr., The News & Observer and The Raleigh (N.C.) Times. ☐

The 25-cent daily starts to fade as single-copy prices keep going up

For five years, most daily newspapers have sold for 25 cents a copy. But where many newspapers charged less than a quarter in 1981, many charged more than that in 1985.

Thus the predominant price of 25 cents is showing signs of giving way. More than one in five newspapers charged more than a quarter last year, while the percentage of those selling for 25 cents dropped for the first time—from 74 to 70.9 percent.

The numbers come from ANPA's annual survey of street-sale prices (city zone) for dailies in the United States, Canada, the Bahamas, Bermuda, Guam, Puerto Rico and the Virgin Islands. The 1985 survey covered 1,789 dailies and 795 Sunday papers.

Over the years, the surveys show, prices have risen rapidly in periods of high inflation and more slowly when inflation moderated. When the predominant price of 25 cents was first achieved, in 1981, it marked the third straight year of 5-cent increases in the most common price of a daily newspaper. That year, 55.8 percent sold for a quarter.

Once the two-bit threshold was reached, many other papers quickly joined the trend. The percentage of 25-cent papers increased to 70.4 percent a year later. And after leveling off at 74 percent, the percentage is now on the way down as the number of papers charging more than a quarter grows.

Last year, as 123 papers went from 25 cents to higher prices, the percentage of papers selling for more than a quarter rose to 22 percent. Only 7 percent cost less than a quarter last year. Five years earlier, just 2 percent sold for more than 25 cents while 42 percent were priced at less than a quarter.

Changes in Sunday prices in 1981 through 1985 reflect a similar pattern. The predominant price of 50 cents has held, but the number charging above the average has ballooned while the number charging less has dwindled.

In 1981, 37 percent charged less than 50 cents compared with 15 percent last year. The number costing more than that amount went up during that period from 21 to 48 percent. Those at 50 cents dropped from 42 to 37 percent.

Individual newspapers surveyed continue to reflect a broad range of prices.

The Daily Bulletin in Dauphin, Manitoba, still costs 5 cents, making it the least expensive newspaper in the survey. Six dailies, including USA Today and The Wall Street Journal, sell for 50 cents.

One Sunday newspaper—the Pleasanton Valley (Calif.) Times—sold during the year for 10 cents, and another—The New York Times—went for $1.25. □

ABC issues may be studied

A meeting concerning Gannett Co.'s unhappiness with two policies of the Audit Bureau of Circulations has led to those issues being submitted for possible consideration to the boards of ANPA and the Newspaper Advertising Bureau.

The issues were referred to the chairmen of the two boards by the ANPA/NAB committee that serves as a liaison with the audit bureau. Members of the committee met with top Gannett officials Jan. 29. Later that day, Gannett announced it had decided to return 14 of its newspapers to ABC after pulling them out late last year.

According to committee chairman Edward W. Estlow, one issue concerns whether a publisher should have the option of having audience research included in ABC circulation statements, how such data might be presented and which sources of research might be acceptable. The other issue deals with whether there should be a greater emphasis on bulk sales in ABC reports for national newspapers.

Estlow, chairman of the executive committee of Scripps Howard, declined to speculate about why Gannett decided to return the 14 newspapers to ABC. "I view it as an act of good faith," he said.

Following the meeting, John J. Curley, Gannett president and chief operating officer, said, "We would much rather work within ABC than outside of it, and we are hopeful some of our suggestions for updating ABC policies will be thoughtfully considered."

A day before Gannett's return, the Association of National Advertisers issued a statement of support for ABC.

At The Globe and Mail of Toronto, which withdrew from ABC several weeks before the Gannett papers, a spokesman said no return to membership was contemplated (presstime, Feb. 1986, p. 48).

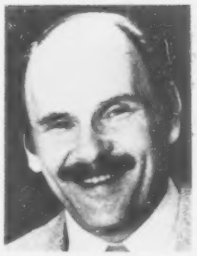
Increase exceeds CPI

Between December 1984 and December 1985, the average price of a newspaper climbed 4.4 percent, according to the U.S. Department of Labor's Bureau of Labor Statistics. During that time, the Consumer Price Index increased 3.8 percent.

The previous year, the average price of a newspaper climbed 3.9 percent, while the CPI went up 4 percent (presstime, March 1985, p. 44). □

New editorial position enlivens careers

The Pittsburgh Press has put a crimp in "The Peter Principle"—the notion that employees tend to be promoted in an organization until they reach their level of incompetence.



Roger W. Stuart II

As a result of in-house brainstorming among reporters and editors, the new position of "special editor" was born at the Scripps Howard daily.

"It is typical in our industry and certainly true here at the Press that outstanding staffers could only be recognized by being promoted out of their area of expertise," said Editor Angus McEachran.

For example, he noted, an excellent writer stops writing and becomes an editor, an excellent photographer stops shooting and starts making assignments, cropping pictures and writing cutlines. "Very often these people are not nearly as happy or as effective as they were in their former jobs," McEachran said.

By creating the special editor position, he said, the newspaper not only recognizes superior performance but also brings fresh ideas to management "without removing our finest workers from what they do best."

"We wanted to keep people interested in their careers and get recognition outside of contests," McEachran explained.

The designation of special editor carries a one-time stipend of $1,000 and the opportunity to take part in management matters for three years while pursuing one's own field of work.

The first person to be so designated, Roger W. Stuart II, is a 46-year-old special-assignments reporter. He still works at his regular job, which he calls "my basic mission in life," but he now finds himself invited to many management meetings.

"I'm still getting the feel of it," he reported in mid-February, a month and a half after being named to the new position. Stuart said he is not obligated to attend meetings if they interfere with his regular job.

The special editor designation also allows attendance at a professional seminar of up to two weeks during the first year, to be mutually selected by the special editor and McEachran.

Although one new special editor will be named each year, those already holding the title will not lose it at the end of their three-year stints. Each will be identified at the end of an article or in credit lines as, for example, "Stuart is a Special Editor/News for The Pittsburgh Press." Other designees could come from the sports department, the business staff, the copy desk, features, editorial, graphics, cartooning or photography.

To be eligible, an employee must have been with the Press for at least five years and have "demonstrated consistent outstanding achievement, cooperative spirit and the highest ethical standards."

Stuart joined the Press in 1961. In addition to serving as an editorial writer for six years, he has covered civil rights, courts and state government. He was an investigative reporter before joining the special-assignments team in 1983.

McEachran said he does not know of a similar program at any other newspaper. "We're gratified with the results thus far," he said, adding that Stuart is "bringing a different perspective to our (management) sessions."

Concord wage-hour case delayed until June

There has been a postponement until June 9 of the trial involving the Concord (N.H.) Monitor's contention that its reporters are professional employees exempt from coverage under the Fair Labor Standards Act.

The trial was interrupted in its second week when word was received Jan. 28 that the space shuttle Challenger had exploded, killing Concord teacher Christa McAuliffe. The newspaper's chief lawyer is a law partner of McAuliffe's husband.

On Feb. 4, U.S. District Court recessed the trial for four months because of scheduling problems [presstime, Feb. 1986, p. 57].

Discrimination case dismissed at Plain Dealer

A 14-year-old case charging The Plain Dealer of Cleveland with sex discrimination in employment has been dismissed by a federal judge.

U.S. District Judge Thomas D. Lambros granted the newspaper's motion for summary judgment based on the defense of "laches"—a reasonable time limitation on a party's right to bring suit.

The case began April 12, 1972, when Local 1 of The Newspaper Guild filed a charge with the Equal Employment Opportunity Commission. The union alleged that the newspaper was discriminating against women in the editorial department on the basis of merit pay, promotions and assignments.

The company received the EEOC's notice of the charge four weeks later, but the agency said it was uncertain when the investigation would begin because of a "heavy backlog of pending work."

In April 1974, the EEOC informed the Guild that it still had not been able to process the charge. The EEOC asked the union either to allow the agency's investigation to go forward, to sue The Plain Dealer in federal court or to drop the charge. The Guild chose to keep the matter within the jurisdiction of the EEOC.

However, the commission's investigation did not begin until two years later. And in 1982, the EEOC informed the Guild that conciliation efforts had failed. The Guild then filed its class-action suit in U.S. District Court [presstime, Oct. 1982, p. 53].

Judge Lambros found the Guild did not present "a sufficient explanation" for its delay in bringing suit. He noted that the Guild is a union with "specific knowledge and responsibility in equal employment opportunity matters" and with legal counsel. "Its course of continued inaction and disinterest cannot, therefore, be written off to ignorance of legal rights," he said.

While Lambros said the Guild's April 1974 choice to keep the matter before the EEOC "by itself cannot be condemned, it is the continued omission to obtain a right-to-sue letter for the next eight years that is inexcusable."

The Guild is appealing the decision.

(The Cleveland Newspaper Guild, Local 1, v. The Plain Dealer Publishing Co., USDC ND Ohio, ED No. C 82-2128)

Arbitrator upholds driver's dismissal after cocaine was found in test

The discharge of a circulation delivery driver for using cocaine has been sustained by an arbitrator in what is believed to be the first case of its kind in the newspaper business.

Since 1970, the driver had worked for the San Francisco Newspaper Agency, the company that handles non-editorial functions of the San Francisco Chronicle and the San Francisco Examiner. He was represented by Local 921 of the Teamsters.

Arbitrator Donald H. Wollett noted that the driver had "fought a battle with drug abuse" over the years, and that both the company and union were aware of his problem. In March 1983, he had been discharged for addiction but later was reinstated on condition that he:

- Pass a drug-screening test.
- Continue treatment under a union rehabilitation program.
- Pass random drug-screening tests each month.

In June 1983, a random test showed traces of cocaine, indicating usage of that drug within the previous three days. He was then fired for the second time.

In the arbitration hearing, the union argued that the driver should be reinstated again, saying he had rehabilitated himself since the second discharge. The company contended that evidence of rehabilitation was irrelevant to the question of whether there was sufficient reason to discharge him at the time of dismissal.

Arbitrator Wollett noted that he has consistently applied the principle of excluding post-discharge evidence. However, he said, he was persuaded by the Teamsters' lawyer that the union be given an opportunity to show that "the modern view" of arbitrators makes exceptions when the ground for discharge is substance abuse.

After receiving briefs from the parties, Wollett upheld the company's position. "I do not understand how a discharge which is justified at the time it occurs becomes wrongful because of the grievant's subsequent rehabilitation," he said.

Additional arbitration awards

Altoona (Pa.) Mirror, ITU: Arthur A. Sloane upheld the company's contractual right to reduce its composing room workforce.

Fairmont (W.Va.) Times-West Virginian, GCIU: James C. Duff ruled that the newspaper was not obligated to retain as a journeyman an apprentice pressman who had completed his apprenticeship.

Minneapolis Star and Tribune, Guild: James L. Hetland Jr. ordered the company to remove a disciplinary letter of reprimand given a reporter for an "aggressive verbal confrontation" with a news source.

Montreal Gazette, Guild: Raymond Leboeuf ruled that the company was unjustified in suspending a sports columnist for doing radio commercials for local businesses.

San Diego Union and Tribune, Guild: Louis M. Zigman sustained the discharge of a circulation district manager for mishandling company funds.

San Francisco Newspaper Agency, ITU: Armon Barsamian ruled that the company was entitled to recover $22,455 in damages from a mailers' union for additional payroll costs incurred as a result of two work stoppages on July 28, 1984.

San Jose Mercury News, Guild: Harvey Letter sustained the discharge of a janitor for physically assaulting a foreman; at the same time, he rescinded the discharge of a second janitor who was involved in the incident.

Seattle Times, Guild: Philip Kienast ruled that the company did not violate a union-security clause in the labor agreement by refusing to discharge two advertising sales employees for not joining the union.

Toronto Star, Guild: J.W. Samuels overturned the five-day suspension of a part-time newspaper deliverer for allegedly damaging a parked car.

Youngstown (Ohio) Vindicator, Guild: Marvin J. Feldman ruled that a person who worked 81 days as a "tryout" on the copy desk had become a regular full-time employee.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Layoff dispute at Virginia daily heads for arbitration

The U.S. Supreme Court has declined to review a ruling that a dispute between the Roanoke (Va.) Times & World-News and 16 of its printers be submitted to arbitration.

The printers allege they were laid off in violation of a pledge of lifetime job security contained in an addendum to the labor agreement with Roanoke Typographical Union No. 60. The addendum states there will be no layoffs unless the company determines that its business has been adversely affected by reduced advertising linage.

The company had sought to arbitrate the dispute, but a federal judge in 1983 held that the addendum was a document separate from the labor agreement and was therefore not subject to the arbitration provisions of the basic agreement.

Two years later, however, the 4th U.S. Circuit Court of Appeals instructed the judge to allow the arbitration to go forward. The printers then appealed to the Supreme Court.

The case is complicated by a lawsuit filed by the printers in 1983 against the company, the international union and its local. The suit, which is pending in U.S. District Court in Danville, Va., seeks some $42 million in compensatory and punitive damages. The plaintiffs allege that union officers were hostile to them and that the union had breached its duty of fair representation.

(Adkins v. Times-World Corp., U.S. Supreme Court No. 85-888)

Court lets stand ruling in Paterson case

The U.S. Supreme Court has refused to review an order of the NLRB directing The News of Paterson, N.J., to bargain with a union representing mailroom and delivery workers. The board's order had been affirmed by the 3rd U.S. Circuit Court of Appeals.

The case involved T&T News Co. employees represented by the Newspaper and Mail Deliverers' Union of New York and Vicinity. The board found that T&T was not an independent contractor, as contended by the company, but an "administrative arm" of the newspaper [presstime, Sept. 1984, p. 45].

Allbritton Communications v. NLRB, U.S. Supreme Court No. 85-[illegible]

Arbiter reinstates 8 ITU reps

An arbitrator recently sustained one discharge of an international representative but overruled eight others that took place when the International Typographical Union changed presidents—and prospective merger partners—in 1984.

Arbitrator Joseph M. Sharnott sustained the union's discharge of Thomas J. McGrath for actively promoting merger with the Teamsters at the ITU's 1984 convention. McGrath had been ordered by new President Robert S. McMichen not to attend the event in Atlantic City, N.J.

McMichen's predecessor, Joe Bingel, had favored merger with the Teamsters, but McMichen supports merger with the Graphic Communications International Union or some other AFL-CIO union.

Besides sustaining McGrath's discharge, Sharnott dismissed—without ruling on the merits—the grievances of two other international representatives who retired after being discharged.

But in reinstating the eight other representatives who also were discharged after McMichen took office, Sharnott said there was "insufficient basis to justify" their being dismissed.

Another representative was reinstated last year [presstime, July 1985, p. 60]. A grievance by a 13th international representative was withdrawn.

The grievances were filed on behalf of the ITU employees by their bargaining representative, Local 1 of the independent International Federation of Staff and Office Employees' Union. McGrath was president of the local.

NLRB elections

Elgin (Ill.) Daily Courier-News, ITU: Editorial employees represented by Chicago Typographical Union No. 16 voted 21-1 in favor of invalidating the union security clause in their labor agreement. As a result of the deauthorization election, the union continues to be the bargaining representative for the unit, but employees are no longer required to join or remain in the union as a condition of employment.

(NLRB Case No. 13-UD-339)

Harrisburg (Pa.) Patriot and Evening News, ITU: Composing room employees voted 20-16 against further representation by Typographical Union No. 14.

(NLRB Case No. 4-RD-1242)

Hudson (N.Y.) Register-Star, Guild: All employees voted 36-22 in favor of representation by The Newspaper Guild of Albany. The bargaining unit includes employees of the weekly Chatham Courier.

(NLRB Case No. 3-RC-8828)

Mount Vernon (Wash.) Skagit Valley Herald, Guild: A unit of all employees except pressroom workers who are represented by another union voted 38-33 in favor of representation by The Newspaper Guild. The unit includes employees of the weekly Anacortes American.

(NLRB Case No. 19-RC-11282)

Waukegan (Ill.) News-Sun, Guild: Drivers voted 9-4 against representation by the Chicago Newspaper Guild.

(NLRB Case No. 13-RC-16791)

Recent contract settlements

Chicago Sun-Times, Chicago Tribune, GCIU: Three-year agreement covering employees in the pre-press photo department; retroactive to Aug. 17, 1985.

Cincinnati Post, Guild: Three-year agreement covering editorial and library employees; retroactive to March 1, 1985.

Columbus (Ohio) Dispatch, GCIU, Teamsters: Three-year agreements covering photoengravers, mailers and drivers; retroactive to Feb. 16, 1985, Jan. 1, 1985, and Sept. 15, 1985, respectively.

Denver Post, ITU: Two-year agreement covering composing room employees; retroactive to April 1, 1985.

Milwaukee Journal and Sentinel, ITU: Three-year agreement covering mailroom employees; retroactive to Aug. 16, 1985.

Washington Post, GCIU: Twenty-nine-month agreement covering photoengravers; retroactive to Sept. 16, 1985.

(Details in February and March 1986 ANPA Labor & Personnel Relations Letters.)

California daily seeks review of bargaining order

The Daily Republic of Fairfield, Calif., has asked the 9th U.S. Circuit Court of Appeals to reconsider a recent ruling that upheld an NLRB order to bargain with a union.

The Northern California Newspaper Organizing Committee was certified in 1984 to represent a unit of all full-time and regular part-time employees at the newspaper. The company refused to bargain with the committee, which goes under the acronym "NOCNOC," contending that it was not a labor organization within the meaning of the Taft-Hartley Act.

NOCNOC was formed in 1981 by several San Francisco-area newspaper unions. It includes locals of the Graphic Communications International Union, The Newspaper Guild, the International Typographical Union and the Teamsters.

The NLRB ruled last year that the newspaper was "attempting to relitigate" issues that "were or could have been" resolved in the representation proceedings that led to an election won 62-53 by NOCNOC.

The company appealed the board's decision to the 9th Circuit [presstime, June 1985, p. 88].

AIDS issues addressed

The American Management Association has published an 82-page booklet about a growing concern among employers and their personnel departments: how to deal with acquired immune deficiency syndrome—AIDS—in the work environment.

AMA points out that it is important for employers to prepare and not wait for a case of AIDS to develop. Medical authorities say there is no indication that an employee with AIDS constitutes a health risk in the workplace [presstime, Nov. 1985, p. 58].

Don L. Bohl, AMA's managing editor of membership publications, said the response to the booklet from the association's members has been "extraordinarily positive."

Copies of "AIDS: The Workplace Issues" are available to AMA members for $7.50 and to non-members for $10 from the American Management Association, 135 W. 50th St., New York, N.Y. 10020, (212) 903-8042.

Speeches

Virgil Fassio

Robert C. Momsen

Ferguson Rood

Sheri Herman

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Report on the Future of Advertising Project
Harold W. Andersen, chairman and chief executive officer, Omaha World-Herald Co. Report to the Directors of ANPA and of the Newspaper Advertising Bureau, January 1986.

Advertising and Public Relations
Charles R. Werle, director/corporate relations, Leo Burnett International, Chicago. International Newspaper Promotion Association Central Region conference, Kansas City, Mo., Oct. 7.

The Libel Climate Today: An Overview
David Anderson, Stanley D. Rosenberg centennial professor, University of Texas Law School, Austin. Southern Newspaper Publishers Association Foundation libel seminar, Chapel Hill, N.C., Sept. 30.

The Impact of the Information Age on Science
John Diebold, chairman, The Diebold Group Inc., New York City. Testimony before the House Science and Technology Committee, Washington, D.C., Sept. 10. (Or see Feb. 1, 1986, Vital Speeches of the Day, Box 606, Southold, N.Y. 11971.)

From the ANPA Labor and Personnel Relations Conference, San Diego, Jan. 5-8:

Circulation Organization Culture: Each Newspaper Is Unique
Virgil Fassio, publisher, Seattle Post-Intelligencer.

The Hazard Communication Standard
William D. Rinehart, ANPA vice president/technical, Reston, Va.

"Employment at Will" Update—Focus on the Newspaper Industry
Claudia M. James, ANPA assistant general counsel, Reston, Va.

From the International Newspaper Advertising and Marketing Executives sales conference, Las Vegas, Jan. 26-29:

Acceptance Speech
Incoming INAME President Robert C. Momsen, vice president/marketing, St. Paul Pioneer Press Dispatch

Selling Newspaper Advertising with the 1985 Simmons-Scarborough Study
Ferguson Rood, vice president and assistant to the president, Atlanta Journal and Constitution

An Approach to Advertising Information Systems
Louis E. Alexander, retail advertising manager, San Jose Mercury News

Newspaper Advertising: An Overview and Current Trends
Craig C. Standen, president, and Leo Bogart, executive vice president and general manager, Newspaper Advertising Bureau, New York City

The Power of the Newspaper Environment
Christine D. Urban, president, Urban & Associates Inc., Sharon, Mass. (This speech was delivered by Kathy Beitler, market research manager of the firm.)

Newspapers and Sears: Partners in Progress
Ralph W. Hoch, manager/national retail general merchandise, Sears Roebuck and Co., Chicago

United Cable's Audience Promotion Program
Sheri Herman, director/programming and new product development, United Cable, Denver.

Fluctuating exchange rates cloud outlook for newsprint prices

The recent decline in the value of the Canadian dollar in relation to the U.S. dollar and the weakening of the U.S. dollar versus other world currencies has fueled divergent speculation over the fate of newsprint prices.

Some observers predict there will be no price increase by North American producers this year. Others foresee one.

The Canadian dollar, which has been falling against the U.S. dollar for about a decade, hit an all-time low Feb. 4, closing at 69.24 cents (U.S.). By Feb. 18, it had rebounded to 71.64 cents. As recently as 1976, the Canadian dollar was worth $1.04 U.S.

A weak Canadian dollar means more profit for Canadian newsprint producers who sell to U.S. publishers. Although their share of the U.S. market has been declining as American newsprint-making capacity has grown, Canadian manufacturers still account for the majority of U.S. newsprint consumption, some 57 percent last year.

The list price of newsprint from North American mills has not risen since July 1984, when it went to $535 a metric ton [**presstime**, Jan. 1986, p. 7]. Last year, producers repeatedly tried to implement a 6.5-percent increase but were unable to make it stick because of abundant supply.

William Metzfield, president of Gannett Supply Co., noted that the exchange rate is giving Canadian producers more revenue than that once-proposed price increase would have. The Canadian dollar declined about 9 percent against the U.S. dollar last year, he pointed out.

According to Metzfield, who oversees newsprint buying for Gannett Co., the consensus among U.S. publishers is that if there is a price increase, it will not be implemented until late in the year.

Homer E. Taylor, vice president of manufacturing and supply for Scripps Howard, said the sagging Canadian dollar makes it less likely that producers will be able to raise prices this year.

"If the Canadian dollar continues to be weak against the U.S. dollar, I don't anticipate an Eastern price increase at all this year," he said. Taylor added that there is even a "remote possibility" of a list-price rollback for Eastern customers to combat heavy discounting.

Western producers, Taylor said, have instituted two temporary, 5-percent price rollbacks since the list price went up to $535. "Most people insist on discounts being written into contracts," he said. "The advantage of a temporary rollback [to producers] is they can discontinue it at any time."

Because they do not share in the windfall enjoyed by Canadian companies because of the disparity between the Canadian and American dollars, U.S. newsprint producers will have to "tighten their belts and continue to try to be cost-effective," he added.

U.S. papermakers generally peg their prices at the going rate for Canadian newsprint, which means the Canadian companies currently enjoy a hefty advantage over U.S. mill operators. That is, they can take the $535 (U.S.) for a ton of newsprint and exchange it, as of Feb. 19, for $746.50 (Canadian).

> *Because of the exchange rate, Canadian firms can take the* $535 (U.S.) *and exchange it, as of* Feb. 19, *for* $746.50 (*Canadian*).

On the other hand, the per-ton cost is a delivered price, observers noted, which means that a U.S. mill that is in proximity to its customers has some advantage over Canadian manufacturers in shipping expenses.

Despite all the attention given to the Canadian/U.S. exchange rate, John M. Duncanson, newsprint analyst with McLeon Young Weir Ltd of Toronto, said the key to future newsprint prices lies in other currency exchange rates. Said Duncanson: "The main question is: 'Is the U.S. dollar going to continue to weaken against some of the European currencies?'"

During the past two years, the strong American dollar has made the United States an attractive market for newsprint produced outside North America, he pointed out. In 1985, about 3 percent of the newsprint consumed in the United States was imported from Scandinavia and other overseas suppliers; it was offered to publishers at less than the North American list price, Duncanson said.

But the position of the U.S. dollar has declined in many world money markets, Duncanson said. For example, in mid-1985, $1 fetched 9 Swedish kronor. In mid-February, $1 was worth only 7.4 kronor. "You are going to start to see imports from outside North America begin to taper off," he said.

At the same time, Duncanson predicted Canadian shipments overseas will pick up.

Historically, Canada has exported about 20 percent of its newsprint overseas. Last year, the Canadian dollar was rather strong relative to some key world currencies, and this depressed the country's overseas exports, which declined to 14 percent.

If U.S. imports from overseas taper off, and if Canadian overseas exports pick up, "I think it sets the stage for upward movement in the U.S. list price," Duncanson said.

A higher list price would "fuel a whole new round of plant upgrading and machine upgrading," he noted.

But another Canadian analyst observed that "the need for a price increase doesn't bring about a price increase."

Just because some Canadian mills are losing money and "badly" need a price increase does not mean one will be forthcoming, said Ross Hay-Roe, publisher of Hay-Roe's PaperTree Letter in Vancouver, British Columbia. He believes prices will not rise in 1986 because supplies will continue to be ample.

However, Hay-Roe cautioned, newsprint producers' profitability is "very, very low, particularly compared to publishers' profitability.

"And if they are going to supply the quantity of newsprint [publishers] are going to need and the quality [publishers] are increasingly demanding, they are going to have to spend money on their mills. Without an improved profit position, it's hard to see where the money is going to come from," he said.

—Margaret Genovese

Contracts expire at 13 newsprint mills this year in the United States and Canada

Labor contracts involving the major unions representing pulp and paper workers will expire at five Canadian and eight U.S. newsprint mills this year. They had an estimated capacity of about 3.9 million metric tons in 1985 – 25.7 percent of the combined Canadian and U.S. total of 15.1 million tons.

After 1986 the number of newsprint mills with expiring contracts will jump to 42 in 1987 but drop to three each in 1988 and 1989, according to a compilation by ANPA's Newsprint and Transportation Department (presstime, Jan. 1984, p. 45).

Not listed in the U.S. chart are North Pacific Paper Co.'s Longview, Wash., mill, Bear Island Paper Co.'s Doswell, Va., mill, and Southeast Paper Manufacturing Co.'s Dublin, Ga., mill. Pulp and paper workers there are not represented by any union.

January's statistics delayed

Newsprint statistics for January were not available at press time. They will be published in the April issue.

Video-to-print technology nears newspapers' doorsteps

At least four firms have developed machines that produce prints from a video source, and this has led to predictions that the technology is well on its way to widespread application in the newspaper business.

"Nobody is saying that the technology is perfect" at this time, said William D. Rinehart, ANPA vice president/technical. "However, it shows promise, and we expect it to be in use in many newspapers in about two to three years."

One of the video printers—the Sony Mavigraph—was tested for a two-week period in February by ANPA researchers at The Newspaper Center in Reston, Va.

The Mavigraph, which in three minutes can turn a video image into a full-color or black-and-white print with relatively high resolution, will be available for purchase this spring, company officials said.

C. David Rambo

Video monitor shows image before it is printed in full color (top) by the desk-top-size Sony Mavigraph, one of several machines that have been developed with similar capability.

Slightly larger than a typical desk-top copying machine, the Mavigraph costs $15,000, according to Damon E. Roach, district manager for video communications of Sony Communications Products Co. This price includes a laminator that provides a glossy finish for the picture and preserves it.

John W. Iobst, ANPA research manager/computer applications, said such a system could facilitate on-deadline photography at newspapers by eliminating darkroom work. A photographer could shoot a scene with a video camera and, using a modem, send the electronic images of the photos back to the newspaper's Mavigraph via a phone line. Editors could then view the videotape on a video monitor, freeze frames as desired, and get a print by pushing a button.

The technology could be of particular benefit to small- and medium-size newspapers because it is a relatively inexpensive way to get into electronic photography, said the Association's director/technical research, George Cashau.

While initial picture quality of the Mavigraph and other video-to-print systems is not as good as that of most conventional still photography, improvements are expected in the future.

"There is no question that in the immediate years ahead, conventional color photography and conventional means of making color separations will be superior to the developing TV technology," ANPA's Rinehart said. "However, in time to come, with future developments of high-definition television, it is expected that the TV technology will prove more than adequate for color printing on conventional newsprint."

He and other experts said that, in time, machines employing video-to-print technology probably will produce color separations, too. Such a development would be a boon for newspapers because of time savings that would be achieved, they noted. A more immediate improvement Sony is planning will make it possible for multiple frames to be stored within the Mavigraph simultaneously. Currently, it can store only one 4⅝-by-6-inch photographic image in its 7.6 megabytes of internal memory, but that image can be broken into quadrants to display four separate video frames.

Rinehart said video-to-print technology in general is being developed and used by industries other than the newspaper business, chiefly the medical profession. "It is expected that some developments [in medicine] will spin off to newspapers, and vice versa," he said.

> *"We expect (this technology) to be in use in many newspapers in about two to three years."*

Sony's Roach said the Mavigraph is expected to have numerous uses in journalism, medicine and other fields primarily because it will accept images from sources other than video cameras, including broadcast TV news, optical disks, personal computers and medical equipment such as sonogram machines.

Besides Sony, other companies that are marketing or developing video-to-print systems include:

- Advanced Imaging Devices Inc., whose equipment has been installed at The Record in Bergen, N.J., and at the Times-Tribune in Palo Alto, Calif. [presstime, Dec. 1985, p. 54]. Both newspapers have successfully captured news photographs from television broadcasts for publishing in the paper.
- Hell Graphic Systems
- Matsushita Graphics of Japan.

Someday, large newspapers likely will transmit electronic photography from the field to the home office by using vans equipped with microwave relays, Rinehart said, while smaller newspapers probably will continue to depend on telephone hookups.

Rinehart also predicted that electronic photography will dovetail with newspaper pagination. Photographers will send their photos directly to editors who will then work with the pictures on a screen electronically. Conventional photographic prints would be bypassed. ☐

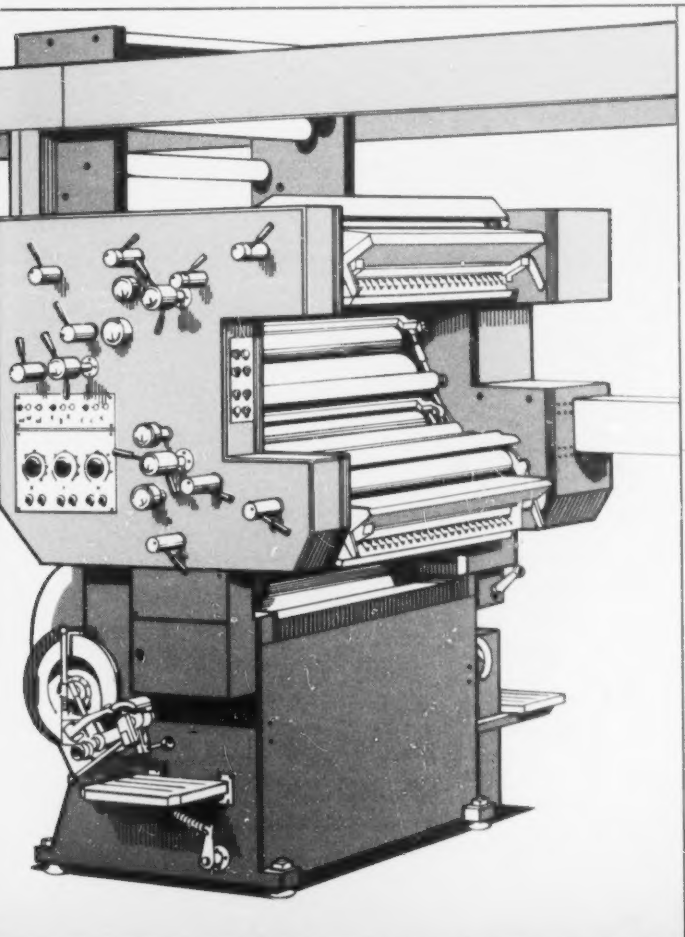
Kodak again sponsoring color printing contest

Deadline is April 7 for newspapers to enter the 1986 "Run for the Money" color reproduction contest sponsored by Eastman Kodak Co. Winners will be announced and on display at the ANPA Operations Management Conference & Exposition in Atlanta June 21-25.

Kodak provides entrants a 35mm slide, negative or print that must be run in a regular edition. For more information, contact "Run for the Money," P.O. Box 10476, Rochester, N.Y. 14610; (800) 448-3400, ext. 206. ☐

New users group

An organizational meeting will be held late this month for a newspaper computer and electronics hardware users group called "NEWHUG." The group plans to maintain an electronic, dial-up database that would tell newspapers where to get spare parts. For information, contact Jack F. Fidiam of The Washington Post at (202) 334-5026. ☐



Cut your Gosses.

Before you replace your old Goss with another Goss, look into how much more economical a new Distributor from Solna can be. The standard features of the Distributor –like the spot color capabilities of our unique 2 + 1 spot color unit–are optional extras on a Goss.

The Distributor can do much more. For less.

Call Solna and see how easily you can turn your Gosses into gains.

A double-width TKS-USA press unit to be converted for flexography is moved into ANPA's pressroom in Reston, Va. TKS-USA donated the $750,000 unit for research.

TECHNOLOGY NOTES

- Cary Co. Inc., which manufactures flying pasters and converts non-heat-set offset presses to heat-set offset, has been **acquired** by Zerand Corp., a supplier of rotogravure and flexographic printing presses for the carton industry.

  Cary will operate under the name of Cary Design Inc. and will be based in New Berlin, Wis.

- Itek Graphic and Composition Systems Division of Litton Industries has been sold to a new company, Itek Graphic Corp., in a **leveraged buyout**.

  R. Patrick Forster, former division president who became chairman and president of the new firm, said Itek will continue to make "necessary investments" in research and development, manufacturing and marketing "to capitalize on the growth strategies now being implemented in each of our product areas."

- Hell Graphic Systems Inc. has **relocated** its corporate headquarters from Hauppauage, N.Y., to another community on Long Island—Port Washington. The new 220,000-square-foot facility there also houses the company's New York sales and service office previously located in nearby Great Neck, N.Y.

  About 280 of Hell Graphic's 450-member U.S. workforce are situated at the new site.

TECHNOLOGY CALENDAR

- **Graph Expo West**, the biennial graphic arts show, will be March 1-4 at the Los Angeles Convention Center.

- The **Collier-Jackson Users Group** will meet March 1-4 at The Lincoln Hotel in Tampa.

- The Southern Newspaper Publishers Association will hold its **1986 Production Conference** March 9-11 at the Radisson Hotel in Orlando.

- The sixth annual **Seybold Seminars** on electronic publishing systems will be March 9-14 at the Beverly Hilton Hotel in Los Angeles.

- The Pennsylvania Newspaper Publishers Association will hold its **America•East Newspaper Operations Conference** March 12-14 at the Hershey (Pa.) Lodge and Convention Center.

- ANPA's **Pressroom Options III** symposium will be March 18-19 at the Hyatt Regency O'Hare near Chicago.

- The **Atex Commercial Users Group** will meet March 23-26 at the Westin Hotel in Washington, D.C.

- **DRUPA '86**, the international graphic arts show, will be May 2-15 in Duesseldorf, West Germany.

Minorities task force makes headway in key areas

The industry-wide Task Force on Minorities in the Newspaper Business moved into high gear in February, with progress reported on many fronts.

Formed one year ago, the task force is composed of representatives of 29 major organizations that have made a commitment to increase minority employment in all newspaper departments [presstime, Sept. 1985, p. 59]. At the Jan. 30 meeting at The Newspaper Center in Reston, Va., organizations discussed programs to carry out the priorities of the task force:

• **Recruitment and training.** ANPA Foundation has prepared a manual—*Recruiting and Retaining Newspaper Minority Employees: How To Do It*—and will be distributing copies this spring to all member-newspapers as well as to members of all the organizations participating in the task force. With the manual will be other materials aimed at helping a newspaper develop a tailor-made program.

• **Training executives.** The American Press Institute May 18-19 will sponsor a seminar for 35 top executives to assist them in developing programs and techniques for expanding minority opportunities at their newspapers. The seminar is being held in cooperation with ANPA Foundation and the task force.

API Director Frank Quine said the seminar will stress the role of the chief executive officer in defining the corporate culture of the newspaper company, establishing policies on minority hiring and promotion, and managing a multi-cultural staff. The seminar will also help build an awareness of the resources offered by major minority organizations and those developed throughout the newspaper business.

• **Association programs.** The International Circulation Managers Association announced the results of its membership poll on minority employment at all job levels.

Booker T. Izell, chairman of ICMA's Minorities Committee and bulk distribution director at the Atlanta Journal and Constitution, said the report showed minorities hold 15 percent of the jobs in circulation and 11 percent in circulation management. But 55 percent of the newspapers responding to the survey said they had no minorities working in circulation, and 40 percent said they had no affirmative action program. The sample was based on 204 responses to a questionnaire sent to 729 ICMA newspaper members in August.

The International Newspaper Promotion Association discussed its development of an overall marketing plan to get the task force's message across to both newspapers and the general public.

Dickerson-Jones (left), Quine and ANPA Foundation's Judith D. Hines plan May 18-19 seminar.

Charles V. Pittman, promotion director of the Daily Times and Morning News in Erie, Pa., said the INPA plan could include ads in newspapers and trade journals, logos for papers to use indicating equal opportunity employment, and videotaped programs.

• **Job fairs.** Plans are under way for the task force to hold a major industry-wide job fair in conjunction with one tentatively scheduled by the American Society of Newspaper Editors for October in Louisville. In addition to ANPA Foundation, participants include the International Newspaper Advertising and Marketing Executives, Newspaper Personnel Relations Association, International Newspaper Finance Executives, INPA and ICMA.

• **Promoting newspapers as career opportunities.** The task force decided to focus on educational programs at the secondary school level and cooperative programs with colleges, but no specific programs have been developed so far. George J. Lockwood, managing editor/features of The Milwaukee Journal and president of the Inland Daily Press Association, will be in charge of this effort.

"The important thing is that ANPA has raised the issue," said Charles T. Brumback, president and chief executive officer of the Chicago Tribune Co., one of the two task force vice chairmen. "We're now involved and we're going to stay involved," said Brumback, an ANPA director. "We're not going to hog the show, but we're going to try to assist and coordinate the work of organizations that have been in it for several years."

Although he said he was "delighted" with progress in the first year, newly elected task force chairman Loren Ghiglione also warned that "so much remains to be done."

"We need and expect leadership not lip service, commitment not commiseration, from the nation's newspapers and their trade associations. If we get that leadership and commitment, some day soon there will be no need for the task force. I welcome that day," said Ghiglione, publisher of The Bristol (Conn.) Press, who has been chairman of ASNE's Minorities Committee for the past two years. "In the meantime, though, every newspaper and every newspaper organization has to do a lot more than it is now doing."

After the task force meeting, ANPA Foundation announced the appointment of Terri Dickerson-Jones as Minority Projects Coordinator. In addition to her duties for the Foundation, she will assist the industry-wide task force.

Dickerson-Jones, who holds a B.S. degree in education from the University of Virginia, was formerly a program manager with the National Abortion Rights Action League in Washington, D.C.

The Foundation had previously announced the allocation of $500,000 to fulfill its "mission" to enhance minority opportunities with newspapers.

In the first change to its mission statement in 22 years, the Foundation added the goal of enhancing minority job opportunities. *—Marcia Ruth*

12 newspaper employees awarded minority fellowships

Twelve newspaper employees have been awarded ANPA Foundation minority fellowships for the first half of this year.

The fellowships are aimed at widening minorities' avenues into newspaper management. They cover expenses for travel, accommodations and registration fees for attendance at training seminars sponsored by ANPA and other newspaper organizations [**presstime**, Sept. 1985, p. 60].

The Foundation has awarded more than 100 fellowships since the program began in 1981. Winners of the current fellowships were selected from more than 100 applicants. They and the training sessions they will attend are:

- Joseph M. Lewis, evening and Sunday city home delivery manager, The Evening Sun, Baltimore; and Stan Yoshida, state circulation manager, Reno (Nev.) Gazette-Journal—Managing People in the Circulation Department Workshop, sponsored by ANPA, International Circulation Managers Association and Newspaper Personnel Relations Association, Austin, March 3-5.
- Jeanne A. Fox-Alston, graphics planner Metro section, The Washington Post—News and Informational Graphics Seminar, The Poynter Institute for Media Studies, St. Petersburg, March 9-15.
- Charles T. Moses, project manager, Newsday, Long Island, N.Y.—Strategic Planning Seminar sponsored by ANPA and International Newspaper Promotion Association, Houston, March 23-27.
- Charles A. Peal, assistant sales manager/retail advertising, Dallas Times Herald—Advertising Executives Seminar, American Press Institute, Reston, Va., March 23-28.
- Randy Hagihara, assistant metro editor, Times-Tribune, Palo Alto, Calif., and Philip Avila, copy editor, The Wall Street Journal—Leadership in the Newsroom Workshop, sponsored by ANPA, American Society of Newspaper Editors and Associated Press Managing Editors, Chicago, April 28-30.
- Billy R. Warren, distribution manager, Houston Chronicle; Benjamin J. Cloud III, press foreman, The Billings (Mont.) Gazette; and Aly Colon, assistant economy editor, The Herald, Everett, Wash.—ANPA Management Development Workshop, Norfolk, Va., May 5-8.
- Harold Burton, head computer coordinator, Newsday, Long Island, N.Y.—Managing Computer Systems Applications Seminar, American Press Institute, Reston, Va., May 11-16.
- Mack Quintana, pre-press manager, San Jose Mercury News—ANPA Labor Relations and Technology Seminar, Atlanta, June 20-21, and ANPA Operations Management Conference & Exposition, Atlanta, June 21-25. □

Corrections

Wyoming was inadvertently dropped from the chart of state sales and use taxes affecting newspapers [**presstime**, Feb. 1986, p. 42]. Wyoming levies no tax on advertising or circulation and exempts newsprint/ink purchases from sales tax. **Presstime** regrets the omission.

• • •

In an article on the implementation of the 21st Century Comics project [**presstime**, Feb. 1986, p. 25], the impression was conveyed that the Tulsa World implemented a new feature by following the project, when in fact it was developed independently by the newspaper. Also, the standing feature, which presents a news story in third-grade English on the comics page, appears on Thursday, not Sunday.

Presstime regrets the errors. □

News gathering exempted from divestment law

New Jersey's attorney general has ruled that a law barring the state from investing in companies doing business in or with South Africa does not apply to news organizations whose "principal activity" there is "concerned with the gathering of news for dissemination abroad."

"The news organizations play a critical role in the efforts to end apartheid," South Africa's policy of racial segregation, said Irwin I. Kimmelman in his Jan. 10 ruling. "Their absence from South Africa could only seriously undercut such efforts." Kimmelman's term as attorney general ended Jan. 21.

The New York Times Co. and The Times Mirror Co. were among 46 firms on a divestment list compiled before Kimmelman's ruling by the state's Division of Investment [**presstime**, Nov. 1985, p. 66].

By the time of the ruling, the state had already sold all 60,000 shares of Times Mirror stock in its portfolio. No New York Times Co. stock was sold.

The ruling does not mean the end of the controversy in the state over divestment and media companies, however.

Division Director Roland M. Machold pointed out that the attorney general's opinion refers to companies whose "principal" activity in South Africa is news gathering.

"It's not clear to me what the meaning of 'principal' is," he said. "I understand from the people at The New York Times that they have accepted advertising from South African concerns. While it doesn't appear to be too material, it still might implicate the company."

Machold said he will question all media companies on the division's "approved for purchase" list of potential investments.

The division already planned to send a questionnaire to all companies on that list because, in a separate opinion issued in December, Kimmelman said the division could not use an outside source to determine which companies to include in the investment ban. The division used a directory published by the Investor Responsibility Research Center of Washington, D.C., as the source of its original divestment list.

The attorney general is reviewing the questionnaire. One question is directed at media firms and asks if their principal activity in South Africa is news gathering. □

Group-owned dailies: 1,186; independents: 489

At the end of 1985, newspaper groups owned an even larger share of U.S. dailies—71 percent, up from 68 percent a year earlier.

But the group-owned papers accounted for a slightly smaller portion of total daily circulation—77 percent versus 78.

BUSINESS
ROUND-UP

The figures come from Lynch, Jones & Ryan, a Washington, D.C., brokerage firm that tracks newspaper companies.

At the end of the year, groups owned 1,186 of the country's dailies, 17 more than a year earlier, Lynch, Jones & Ryan said.

Bruce Thorpe, a media analyst at the firm, said the increase stemmed from conversions to daily publication as well as acquisitions of independently owned papers.

In contrast, the number of dailies owned by groups was the same at the end of 1984 as it had been at the end of 1983 [presstime, April 1985, p. 11].

However, acquisitions alone do not account for the drop in the number of independently owned U.S. dailies in 1985. The ranks of those newspapers shrank by 54 to 489. Other reasons for the drop include newspapers' deaths and switches to non-daily publication.

Regarding groups' slightly smaller share of daily circulation, Thorpe said factors included higher circulation prices that cut some group-owned newspapers' sales, closings, mergers, and the dropping of certain editions.

Lynch, Jones & Ryan also reported a net increase of one last year in the number of groups—defined as ownership of two or more dailies—to 156. This reflects group purchases of established groups [such as the Register and Tribune Co. of Des Moines by Gannett Co.], as well as the creation of new ones.

In more recent newspaper-business activity:

- The Times Mirror Co. has raised defenses against an unfriendly takeover. Shareholders Feb. 12 approved the company's reincorporation in Delaware in a move that includes staggered terms for directors, a fair-price provision and a requirement that "a supermajority vote" of shareholders—including a minimum 80 percent of outstanding common shares—approve certain mergers. The reincorporation was expected to be completed in late February.
- Lee Enterprises Inc. has chosen another defense against a hostile buyer. Shareholders Jan. 31 approved creation of a new class of stock that will eliminate potential for an unfriendly takeover, said Dick Galligan, Lee's controller.

The new B stock will have 10 votes per share and limited transferability. To sell the shares on the open market, a holder of B shares must convert them on a 1-for-1 basis into common stock.

Galligan said the B stock will be issued this month to stockholders of record Feb. 10. While the new stock provides a defense, Lee is not the target of a takeover attempt, he said.

- In a different move that also gives existing owners ironclad control, Landmark Communications Inc. and TeleCable Corp. repurchased 39 percent of their stock. The price was not disclosed.

Frank Batten, chairman of both companies, said he, his family and other company executives now own more than 90 percent of the stock. Batten said the purchases "ensure that Landmark and TeleCable will remain privately owned companies."

TeleCable, formerly a Landmark subsidiary, became an independent company in 1984. Landmark's properties include dailies, non-dailies, a cable-TV network and an interest in several magazines.

- The St. Louis Globe-Democrat began publication as scheduled Jan. 27 after a seven-week lapse [presstime, Feb. 1986, p. 60]. A spokeswoman said in late February the paper is averaging 40 to 44 pages a day with ad content of 25 to 30 percent.
- While the Globe-Democrat begins life anew, its former publisher and owner, Jeffrey M. Gluck, is planning to start a p.m. tabloid in St. Louis. Gluck was forced to quit as the Globe-Democrat's publisher after the newspaper declared bankruptcy.

The new tabloid to debut in late March will be called the St. Louis News, Gluck said. He is president of the company planning the venture, and the newspaper's publisher will be a former marketing executive of a St. Louis department store.

- The hunt was on in February for a buyer for the Colorado Springs Sun that would continue to publish the newspaper. The U.S. Department of Justice said the paper's owner, Oklahoma Publishing Co., had agreed to search for such a buyer.

In January, Freedom Newspapers Inc., which runs the rival Colorado Springs Gazette Telegraph, announced it would buy and then close the Sun. Justice said it would not oppose the sale if no bona fide potential buyer emerged by March 1.

- Daily circulation of The Columbus (Ohio) Dispatch has jumped about 27 percent since Jan. 1, when it became a morning newspaper and the Columbus Citizen-Journal folded.

Between Dec. 31 and mid-February, the Dispatch's circulation rose about 54,000 to an estimated 254,000, according to Richard M. Franks, executive vice president.

Franks estimated that 40 percent of Citizen-Journal subscribers were not getting the Dispatch, giving the surviving paper a potential windfall of about 44,000 new subscribers. The switch to morning publication, new sections and design changes might account for other new buyers, he said.

—Barbara J. Friedman

UPI seeks extension of deadline for reorganization

Federal Bankruptcy Judge George F. Bason in late February was considering a United Press International request to extend by three months the time in which it has an exclusive right to file a reorganization plan for the wire service.

The plan, to be approved by creditors, would specify details of the planned acquisition of UPI by Mexican publisher Mario Vázquez-Raña and Houston businessman Joe Russo. The sale already has been approved tentatively by Bason.

Existing deadline for filing a reorganization plan is March 31, and UPI, saying it needs more time, wants it set back to June 30 [presstime, Feb. 1986, p. 61].

In a separate action, a U.S. District judge in Washington rejected efforts of UPI owners Douglas F. Ruhe and William E. Geissler and a competing bidder for UPI, Financial News Network, to gain the right to file a reorganization plan of their own.

FOI Day March 16

Freedom of Information Day will be observed again this year on March 16, birthday of James Madison, principal architect of the First Amendment. The Society of Professional Journalists, Sigma Delta Chi, is urging all news organizations to participate in the observance.

Knoxville papers to change cycles

Knoxville's two daily newspapers will change publishing schedules July 1 under a new, 20-year joint operating arrangement negotiated between Gannett Co. and Scripps Howard.

Scripps Howard's The Knoxville News-Sentinel (evening, circulation 92,767) will switch to morning publication while Gannett's The Knoxville Journal (morning, 59,812) will get the afternoon slot. Both newspapers will continue publishing Saturday mornings, and the News-Sentinel will continue to have the only Sunday edition.

The two papers have been operating under a JOA since 1957. Last September, Scripps Howard informed Gannett it would not renew the agreement, due to expire in 1987, unless it was renegotiated [**presstime**, Aug. 1985, p. 16.] Under the arrangement, Scripps' News Sentinel performs business, advertising, circulation and production functions for Gannett's Journal. The new contract runs to Dec. 31, 2005.

Ironically, Scripps Howard closed its morning paper in Columbus, Ohio, in December after its JOA partner in that city, The Columbus Dispatch, refused to renew their agreement. The Dispatch had been the business, advertising, circulation and production agent for Scripps Howard's Columbus Citizen-Journal. On Jan. 1, The Dispatch switched to morning publication.

Meanwhile, Gannett and Scripps Howard extended the JOA between their newspapers in El Paso until Dec. 31, 2015. Under that arrangement, Gannett's morning daily, The El Paso Times, serves as the agent for Scripps Howard's afternoon El Paso Herald-Post. ☐

3 more dailies convert to a.m.

Three more afternoon newspapers have converted to morning publication, bringing to 25 the number that have made the conversion since the beginning of 1984.

Converts not previously listed in **presstime** [Nov. 1985, p. 44] include:

- The Daily Advertiser (circulation 31,818) of Lafayette, La., Oct. 1
- Visalia (Calif.) Times-Delta (circulation 19,982), Sept. 16
- Southern Illinoisan of Carbondale, Ill., (circulation 28,906), Sept. 28.

Afternoon papers also disappeared recently in Greensboro, N.C., and Chicago.

The Greensboro Daily News & Record (circulation 111,440) published its final afternoon edition Feb. 7. The newspaper now publishes four morning editions.

The Chicago Sun-Times ended its two p.m. "red streak" editions Jan. 31, leaving Chicago without an afternoon daily. The Chicago Tribune published its last afternoon edition last summer.

However, about the same time the p.m. edition of the Tribune was suspended, the Las Vegas Sun (circulation 56,264) added one for street sales. ☐

Recent acquisitions

Ingersoll Publications of Lakeville, Conn., acquired the Daily Local News, West Chester, Pa., circulation 38,356.

The Woodward (Okla.) News acquired the Woodward Daily Press, circulation 5,424.

Copley Newspapers of La Jolla, Calif., acquired the Lincoln (Ill.) Daily Courier, circulation 6,820.

Small Newspaper Group of Kankakee, Ill., acquired the Rock Island (Ill.) Argus, daily circulation 18,336.

Donrey Media Group of Fort Smith, Ark., is acquiring the Clinton (Iowa) Herald, daily circulation 20,576.

Garden State Newspapers of Woodbury, N.J., is acquiring from Hagadone Newspapers of Coeur d'Alene, Idaho, The Daily Journal, Elizabeth, N.J., circulation 34,395. ☐

Press associations: changes in command

The **Washington Journalism Center**, at its annual meeting Nov. 26 in Washington, D.C., elected the following new officers for its board of trustees.

- *Chairman*—Charles W. Bailey, National Public Radio, Washington, D.C.
- *Vice Chairman*—Jerry W. Friedheim, ANPA, Reston, Va. ☐

Quoted accurately

I commend (Clark Newsom) for another fine job in your "Executive Contracts" article (January). I'm pleased to be of any assistance I can to you when you're researching an article because I know I'm going to be quoted accurately and fairly.

Keep up the good work.

Recommended reading

Thank you for the excellent article "Newspaper Technology: Reflections and Projections" in the January **presstime**.

Bill Rinehart told our newspaper technology story so completely and neatly, it has become recommended reading to many of our staffers. It must have been painful to edit it down so tightly, but he did it beautifully.

Thank you for this useful contribution to an always interesting publication.

Stephen W. Ryder
Vice President
Ottaway Newspapers Inc
Medford, Ore.

Choosing daily or weekly

Congratulations to **presstime** and Barbara Friedman, the writer, on your special report in December: "Daily or Weekly?" It's a story that needed to be put together and presented the way you did.

Smart people like Bill Strasburg are making the move back to non-daily while other smart ones like John Finn are grooming non-dailies to become dailies. Both are right. Both are basing their decisions on the right reasons: the market, the niche and the competition.

John S. Prescott

Curley, Hardy, Hladky to be nominated

Three new ANPA directors will be elected at the Association's annual business meeting April 22 during the ANPA Convention in San Francisco.

The Nominating Committee, chaired by past ANPA Chairman and President William C. Marcil, will—with the approval of the Board of Directors—nominate the following newspaper executives for two-year terms as new directors:

- John J. Curley, president and chief operating officer of Gannett Co., Arlington, Va. He is past president of the New Jersey and Washington, D.C., chapters of the Society of Professional Journalists, Sigma Delta Chi and a past chairman of the Washington Journalism Center Board of Trustees. A member of the board of Dickinson College in Carlisle, Pa., he received a bachelor's degree from Dickinson and a master's in journalism from Columbia University in New York City.
- Sandra C. Hardy, vice president of Calkins Newspapers of Levittown, Pa., which publishes six daily newspapers in Pennsylvania, New Jersey and Florida. A member of the ANPA Postal Committee since 1982, she became its chairman last year. She received a bachelor's degree from Penn State University and did graduate work at the University of Florida and at Drexel University in Philadelphia.
- J.F. (Joe) Hladky III, president and publisher of The Gazette Co. of Cedar Rapids, Iowa. A member of the Iowa Newspaper Foundation Board of Directors, he is a past member of the United Press International Advisory Board, past chairman of the Production Committee of Inland Daily Press Association and past vice president of the Harris 2500 User's Group. He has been a member of the ANPA Technical Committee since 1984. Hladky earned a bachelor's degree from the University of Iowa.

John J. Curley

Sandra C. Hardy

J.F. (Joe) Hladky III

In addition to the nomination of these three new directors, the committee will nominate 10 directors for re-election to two-year terms. They are: Garner Anthony, chairman and chief executive officer of Cox Enterprises Inc., Atlanta; Frank A. Bennack Jr., president and chief executive officer of The Hearst Corp., New York City; Charles T. Brumback, president and chief executive officer of the Chicago Tribune Co.; Robert F. Erburu, president and chief executive officer of The Times Mirror Co., Los Angeles; Edward W. Estlow, chairman of the executive committee of Scripps Howard, Denver; Jacques G. Francoeur, president of UniMedia Inc., Montreal; Edwin L. Heminger, editor and publisher of The Courier, Findlay, Ohio; Uzal H. Martz Jr., president and publisher of the Pottsville (Pa.) Republican; John G. Montgomery, publisher of Montgomery Publications Inc., Junction City, Kan.; and James M. Moroney Jr., chairman and chief executive officer of the A.H. Belo Corp., Dallas.

The terms of four directors do not expire this year. They are: Charles M. Meredith III, publisher of The Free Press, Quakertown, Pa.; Donald E. Newhouse, president and general manager of The Star-Ledger, Newark, N.J.; Charles S. Rowe, editor and co-publisher of The Free Lance-Star, Fredericksburg, Va.; and Lloyd G. Schermer, president and chief executive officer of Lee Enterprises Inc., Davenport, Iowa.

The customary tenure for directors is four consecutive two-year terms, which may be extended for those who are elected officers. Three directors who have reached or exceeded that limit and will be retiring from the Board at the Convention are Marcil, president and publisher of The Forum, Fargo, N.D.; Helen K. Copley, chairman and chief executive officer of The Copley Press Inc., La Jolla, Calif.; and K. Prescott Low, president and publisher of The Patriot Ledger, Quincy, Mass.

Richard J.V. Johnson, president of the Houston Chronicle, who will step down as ANPA chairman and president at the Convention, will continue on the Board for another year and will serve as chairman of the Nominating Committee.

Making up the final four members of the 22-member Board are four current Board members who will be nominated at the April meeting for election to one-year terms as Association officers. They are: for chairman and president—Alvah H. Chapman Jr., chairman and chief executive officer, Knight-Ridder Newspapers Inc., Miami; for vice chairman—George W. Wilson, publisher, Concord (N.H.) Monitor; for secretary—Arthur O. Sulzberger, chairman, The New York Times Co., and publisher, The New York Times; and for treasurer—William H. Cowles 3rd, president and publisher, The Spokesman-Review and Spokane Chronicle [presstime, Jan. 1986, p. 66]. ☐

McLendon, Nguyen join technical research staff

Two new employees have joined ANPA's Technical Research Department.

C. Scott McLendon, a chemist, has a bachelor's degree in biology from Virginia Polytechnic Institute and State University. He previously was a laboratory technician-toxicology at National Health Labs in Vienna, Va.

C. Scott McLendon

Nhac Nguyen

Nhac Nguyen, a mechanical engineer, has a master's degree in administrative science from Johns Hopkins University and a bachelor's degree in mechanical engineering from Virginia Tech. Prior to joining ANPA, he worked for R.R. Donnelley & Sons in Lancaster, Pa., as a mechanical engineer. ☐

Board amends ANPA objectives on technology, public policy

The ANPA Board of Directors at its Jan. 22 meeting in Key Largo, Fla., amended one of the implementing objectives for the Association's mission statement.

To the Association's fourth objective, "To assist newspapers in enhancing their operating effectiveness," the directors added the phrase: "particularly in anticipating and understanding future developments in technology and public policy."

The document, as amended, now reads:

ANPA Mission Statement

"To advance the cause of a free press, and to ensure that it has the economic strength essential to serve the American people."

ANPA Objectives

- "To enhance the worldwide ability of newspapers to cover, transmit and publish the news freely and fairly.
- "To represent the newspaper business in dealings with the government, the courts and others.
- "To assist newspapers in enhancing their operating effectiveness, particularly in anticipating and understanding future developments in technology and public policy.
- "To widely disseminate information to and about the newspaper business.
- "To strengthen ANPA's service to newspapers in cooperation with other organizations representing all facets of the business."

The mission and objectives were adopted as part of a strategic-planning process instituted in 1982 [presstime, March 1985, p. 72]. The language in the document was changed once previously.

ANPA Executive Vice President Jerry W. Friedheim invites newspaper executives to express their views on the mission and objectives by writing him at The Newspaper Center in Reston, Va.

Carolyn Ebel to head literacy project

ANPA Foundation has named Carolyn Ebel as literacy project coordinator.

She will be responsible for directing the Foundation's three-year project to get newspapers more involved in fighting illiteracy [presstime, Jan. 1986, p. 56].

"Carolyn will be creating awareness within the newspaper industry of the literacy problem facing our country," said Linda B. Skover, assistant director of the Foundation. "She will also assist newspapers in implementing local literacy projects, create curricula for the use of the newspaper with non-readers and serve as a clearinghouse for ideas on fostering literacy."

Carolyn Ebel

A linguist, teacher and administrator, Ebel holds a doctorate in education from Temple University in Philadelphia, where she also received a master's of education. Both graduate degrees were specifically in the teaching of English as a second language. She earned a bachelor's in French from Wells College in Aurora, N.Y.

For the three years prior to joining ANPA Foundation, Ebel was affiliated with Georgetown University in Washington, D.C.—two years as an assistant professor of English as a second language, and one year as a consultant for a teacher-exchange program.

Ebel also served as executive director of the National Association for Bilingual Education in Washington, D.C., was director of public information strategies for the National Education Association/National Foundation for the Improvement of Education, and administered programs in English as a second language.

New members

Pekin Daily Times

Pekin, Ill. (circulation 17,647). Robert W. Marshall, publisher.

The Daily Review

Alameda Newspapers Inc., which publishes three California dailies: The Daily Review of Hayward, the Fremont Argus and the Livermore Tri-Valley Herald (combined circulation 89,845). J. Allan Meath, president.

Mock libel trial on the docket for Convention

Some of the most dramatic moments at the ANPA Convention April 21-23 in San Francisco are expected to be provided by a mock libel trial.

A partial list of participants includes the California appeals court judge who upheld a multi-million dollar verdict against the publisher of the San Francisco Examiner.

Zerne P. Haning III, a justice on the California Court of Appeal, will play the role of the judge in the hypothetical case. He is known for his decision in *McCoy vs. The Hearst Corp.*, upholding a $4.5-million judgment against Hearst. It is believed to be the largest libel judgment ever upheld on appeal. The California Supreme Court recently accepted the case for review. (See story, p. 43.)

Other participants known at this time are Thomas Winship, former editor of The Boston Globe, who will portray the defendant editor; Jack Nelson, Washington bureau chief for the Los Angeles Times, the defendant reporter; William Lambert, a Pulitzer Prize-winning investigative reporter now retired from The Philadelphia Inquirer, an expert witness for the defense; Samuel E. Klein, a Philadelphia libel defense attorney, and David Boies, the New York City lawyer who defended CBS in the libel case brought by Gen. William C. Westmoreland, co-counsel for the defense; and A. Charles Peruto, a Philadelphia lawyer, the plaintiff's attorney.

According to Convention Arrangements Committee Chairman Joseph F. Barletta, president of the San Francisco Newspaper Agency, other speakers added to the program are: Jonathan Kozol, author of *Illiterate America*, and Robert W. Pittman, president and chief executive officer for MTV Networks Inc.

By late February, registration was "just about where it was this time last year," reported ANPA Senior Vice President Thomas C. Fichter. The 1985 Convention in Miami Beach had 2,170 registrants. All meal events, Fichter added, are "very well subscribed."

For attendees planning to travel to the Convention via United Airlines, United has announced an additional discount. It is now offering 5 percent off any United fare for which a Convention-goer qualifies, including the Ultra Saver. This is generally a better deal than the previously announced offer of a minimum 30-percent reduction in normal coach fares.

over-set

No color here

What's "Black and white. And beautiful all over"? It's the headline used in a recent ad for The Wall Street Journal, featuring a picture of a zebra. However, "black and white" no longer accurately describes the Journal.

Full-color advertisements began appearing Jan. 2 in The Wall Street Journal/Europe. And The Asian Wall Street Journal has been running color ads for about a year.

But don't look for the zebra to change its stripes in the United States. The Journal has no plans to run color ads in its domestic edition, according to spokesman Lawrence A. Armour.

Finally, a reason to stop complaining about the price of stamps

Once upon a time, somebody wryly suggested that the U.S. Postal Service cover its losses by selling tiny ads to appear on postage stamps.

Even in this era of "privatization" of the public sector, that does not seem likely. However, something similar to it is planned by a group of enterprising capitalists.

Trumpeted by its founders as "the first *new* advertising medium since television," stamps are the foundation of a new Houston-based business called American Discount Stamps, or ADS.

Scheduled to begin operation in April, the system works like this:

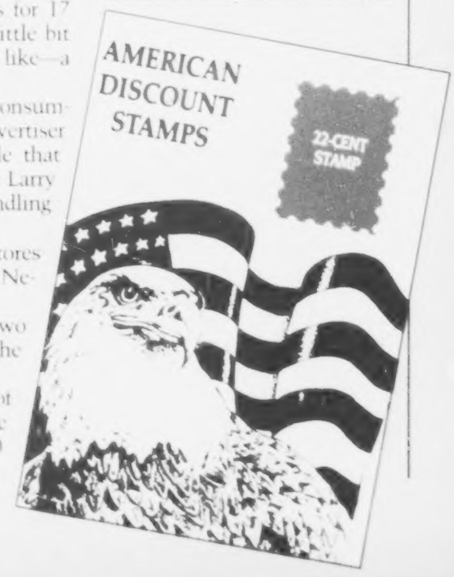
ADS purchases first-class stamps directly from the Postal Service at the going rate—currently, 22 cents apiece. The stamps are then affixed to 2-by-3-inch, self-adhesive advertisements, and the stamp-on-ad combination is then sold to consumers for 17 cents each. The advertiser pays the extra nickel plus a little bit more to give ADS something the Postal Service might like—a profit.

And that's not all: The cut-rate stamps, to be sold to consumers in sets of 10, will come in an envelope with 30 advertiser coupons. With this additional feature, "it is conceivable that people could actually make money buying stamps," says Larry Goldman, president of Goldman & Co., which is handling public relations for ADS.

ADS will probably be sold in 7-Eleven convenience stores in five Western states—California, Washington, Oregon, Nevada and Arizona—beginning in the spring.

Plans call for expansion to markets on the East Coast two months later and to the rest of the country by the end of the year.

If all goes well for the new venture, Ron Brewen, one of three founders of ADS, says his company would become the largest customer of the post office, purchasing about 200 million stamps a month.



Diversity deja vu

In reading a history of the Associated Press, Ohio publisher Edwin L. Heminger was struck by the fact that the newspaper industry's struggle in the 1980s to keep telecommunications carriers from being information providers over their lines was a reincarnation from the 19th century.

According to *AP—The Story of News*, by Oliver Gramling, similar concern led to the news cooperative's founding in 1848.

There were reports, the book says, that the telegraph companies "were secretly toying with the idea of setting up regular subsidiary organizations to gather and transmit news for sale. The dangers were obvious; with no governmental supervision, the telegraph companies could make it virtually impossible for any news but their own to move on limited wire facilities; papers would be forced to surrender the vital function of news gathering, and news itself would be reduced to a purely commercial and unreliable commodity dished up for a price by outsiders on a take-it-or-leave-it basis."

Heminger, editor and publisher of The Courier in Findlay, notes: "It's been a long battle!"

WHAT'S BLACK AND WHITE AND RED ALL OVER?

A newspaper without Mutual Insurance.

A newspaper can end up in red ink due to a number of financial calamities: libel suits, invasion of privacy suits, strikes, and catastrophic events that are simply unique to the newspaper industry. Without proper coverage, any one of these can force a newspaper to close.

The Mutual Insurance Company of Hamilton, Bermuda, has been protecting the newspaper industry from financial loss for over twenty-five years. Founded by an Act of the Parliament of Bermuda, effective March 30, 1961, Mutual provides ANPA-member newspapers with libel and strike insurance, policies for special needs, and seminars on the prevention of libel and privacy suits.

Mutual Insurance Company's experience and total commitment to serving the unique insurance needs of the newspaper industry are unsurpassed; that's why more than 700 daily newspapers in the U.S. and Canada turn to Mutual for the protection they need. They know that Mutual keeps newspapers in the black and white, and out of the red.

WHAT'S BLACK AND WHITE AND GREEN ALL OVER?

A newspaper that's benefited from the libel and privacy seminars of Mutual Insurance.

Preventing libel and privacy suits can save a newspaper a lot of money, but keeping up with the rapid changes in the law is a difficult task. That's why the reporters and editors of so many newspapers attend "How To Prevent Libel and Privacy Suits," a seminar offered by The Mutual Insurance Company of Hamilton, Bermuda.

Offered in half-day and full-day sessions, this seminar presents the facts behind recent cases affecting the current status of libel and privacy law, using actual stories, columns, cartoons, and photographs to illustrate important concepts. Seminar leader Barbara Dill is an experienced professional in the field of libel and privacy law, whose incisive commentary and exciting classroom method have been hailed by editors, reporters, and photographers across the country.

Offered to publications insured by Mutual as well as to press associations, this seminar gives journalists the insight they need to do their jobs with a minimum of risk. For more information on this unique opportunity, contact Barbara Dill at (305) 576-8651.

For years newspaper readers have had to deal with the problem of ink rub-off. Now, Flint Ink Corporation leads the way in solving the rub-off problem with "Low-Rub" Arrowlith and Arrowhead blacks for offset and letterpress printing. Extensive field tests show that these inks reduce rub-off up to 80% compared to conventional news inks.

"Low-Rub" black offset inks are available for both open fountain and injector presses. And we offer a "Low-Rub" letterpress black as well. These inks are compatible with conventional news inks. You can expect improved mileage from 15 to 30% and still obtain the same runability, printability and high quality as our present newsprint inks. Many of our customers are already running these "Low-Rub" inks, and more and more printers are asking to test them each week.

Our same commitment to research that produced "Low-Rub" black is also pioneering water-based Flexo news inks. These inks virtually eliminate rub-off, and provide a cleaner paper and a brighter image.

For more information on "Low-Rub" black, contact your local Flint Ink representative.

INDEX VOLUME 8, NUMBER 4 APRIL 1986

Special Report *Foreign news has become less foreign to newspaper readers lately, as dailies increase their international coverage. With few exceptions, the wire services are the backbone of foreign reporting, but many newspapers of varying sizes are augmenting the basics on their own, large dailies by increasing the number of correspondents abroad, mid-size and smaller papers by sending reporters and photographers on periodic trips for reports of particular interest to their readers. All are dedicating more space to analysis and background pieces.* 28

Debt management *Many newspaper companies have increased their borrowing for acquisitions and other purposes, but analysts see no "red flags" flying.* 6

Insurance at a premium *Newspapers are discovering that the cost of liability insurance, if they can get it, is skyrocketing.* 8

Sizzling Sunday scene *The competition in the Sunday magazine supplement field is heating up. Regional and ethnic magazines are joining the nationals.* 12

Keeping the customers satisfied *Going beyond fielding circulation complaints, newspapers are placing more emphasis on service in other departments.* 18

The "Mac" attack *Apple's Macintosh computer is proving to be a popular, multipurpose tool for newspapers of all sizes.* 23

Libel concerns *More libel cases are going to trial, a trend that is worrisome because of the cost and the tendency of media defendants to lose jury trials.* 36

Purchasing a telephone system *Paying attention to details is important when setting out to buy phone equipment.* 40

Essay: Global perspective *The Associated Press's Thomas J.R. Kent says foreign correspondents today have to present analysis along with the facts.* 42

Profile: Alvah Chapman Jr. *Knight-Ridder Newspapers Inc.'s chairman and chief executive officer is poised for ANPA leadership.* 44

Press options *More fascinating facts about flexography are presented at a well-attended ANPA symposium on pressroom developments.* 70

California, here we come! *ANPA's 100th Annual Convention takes place April 21-23 in San Francisco. Here's the program and a guide to the city.* 82

CHAIRMAN'S CORNER

Stop stalling and start hiring more minorities at your paper

In a talk I gave to the Inland Daily Press Association last month, I raised the question, "What are we *really* doing about bringing minorities into our newspapers, especially into the newsrooms?"

I felt duty-bound to answer, "Very much by very few . . . but very little by most."

This month every ANPA member newspaper will receive a package that may help to change that answer.

The package will contain ANPA Foundation's new publication, "Recruiting and Retaining Newspaper Minority Employees: How To Do It." This booklet will offer a collection of current programs and ideas for better recruiting, hiring, training and promoting minority employees in all departments of our newspapers [presstime, March 1986, p. 66]. The package also includes a "Newspaper Minority Employment Plan" that can help you assess what steps you may want to take in coming months.

Richard J. V. Johnson

Any newspaper organization that wants to improve minority employment can use the manual to help move our business from talk to action. No one publication can offer a guaranteed blueprint for success in minority opportunity programs. But I urge you to pick three, four or five ideas from this manual that best fit your situation, set them in motion, and check progress regularly. Chances are you'll have something to brag about a year from now.

I also commend to your attention the special conference scheduled by the American Press Institute for May 18-19 in Reston. Recognizing that it will take a commitment from upper management to bring about significant progress, API has tailored this day-long session to provide expert assistance in starting or expanding minority hiring and advancement programs. Charles Brumback, president and chief executive officer of Chicago Tribune Co., an ANPA director and vice chairman of the Task Force on Minorities in the Newspaper Business, has been instrumental in organizing this conference.

API already has registered a number of participants, and space is limited. I suggest you call soon to assure a spot for a top executive of your organization.

David Lawrence Jr., publisher of the Detroit Free Press, has pointed out our self-interest in matters of minority hiring. He says, "What is at stake here, ultimately, is our relevance to our readers. Unless we make progress and at a faster rate than heretofore, the price we pay will be missed readers and missed customers."

I agree. There is no doubt in my mind that poor performance in hiring minorities has been directly related to outdated attitudes toward gaining minorities as subscribers, readers, advertisers and buyers of advertised products.

We now have the opportunity, using the many effective minority opportunity programs being initiated throughout the newspaper business, to serve ourselves and our communities. We are too vibrant a business to let worn-out excuses and lack of executive commitment keep us from seizing this opportunity.

The benefits are there for everyone. ANPA can be a catalyst and provide you tools. You must be the action officer.

Dick Johnson

Why is Bill Hogan in newspaper pagination?

There are people in the newspaper industry who believe pagination is 'somewhere down the road.' But not Wm. R. "Bill" Hogan, vice president and general manager of Phoenix Newspapers, Inc., publishers of The Arizona Republic/The Phoenix Gazette.

"Pagination is a necessity for us to remain competitive. Without it today, we would not have the production flexibility to meet the challenges of the future."

With that in mind, Hogan and Phoenix Newspapers chose Information International's Newspaper Pagination System. "Triple-I has a proven, completely integrated system that works," Hogan says, "and that's why we're in pagination today."

As Bill Hogan knows, there's no need to wait for pagination. Find out why Information International systems produce hundreds more full pages every day than any other pagination equipment.

Call triple-I today.

CASH FLOWS PROVIDE CUSHION

BORROWING TIME

To finance acquisitions, some newspaper companies have gone deeply into debt, but analysts are not raising any 'red flags'

BY BARBARA J. FRIEDMAN
presstime staff writer

Newspapers are frequently "cash cows," but their pastures are not always green enough to finance fully their owners' acquisitions. The companies then resort to borrowing, which many have done in record amounts in the past 15 months—a period of moderating interest rates.

But despite record borrowing by some publicly held newspaper companies, investment analysts see no particular danger in the higher debt.

To supplement their often heavy influx of cash, the companies used the borrowed money to bid successfully in the lively market for additional newspapers, television stations, cable television franchises and sometimes their own stock.

Yet while these publicly held firms extensively used debt last year and early this year, they also continued to rely heavily on the financial anchors of cash from stockholders and retained earnings.

Looking at the higher proportion of debt on the companies' balance sheets, Marvin Bader, a media analyst at Moody's Investors Service, says, "I don't see any red flags." Moody's rates the credit worthiness of bonds and commercial paper, which are corporate IOUs that usually fall due in a matter of weeks.

The newspaper-owning companies have used different kinds of debt, and they have ranged as far afield as Europe and Japan to get the lowest rates. Borrowings have been small enough to finance the purchase of small-town weeklies and huge enough to make possible the birth of Capital Cities/ABC Inc. and to recapitalize Multimedia Inc., a Greenville, S.C., company that owns newspaper, broadcasting and cable television properties.

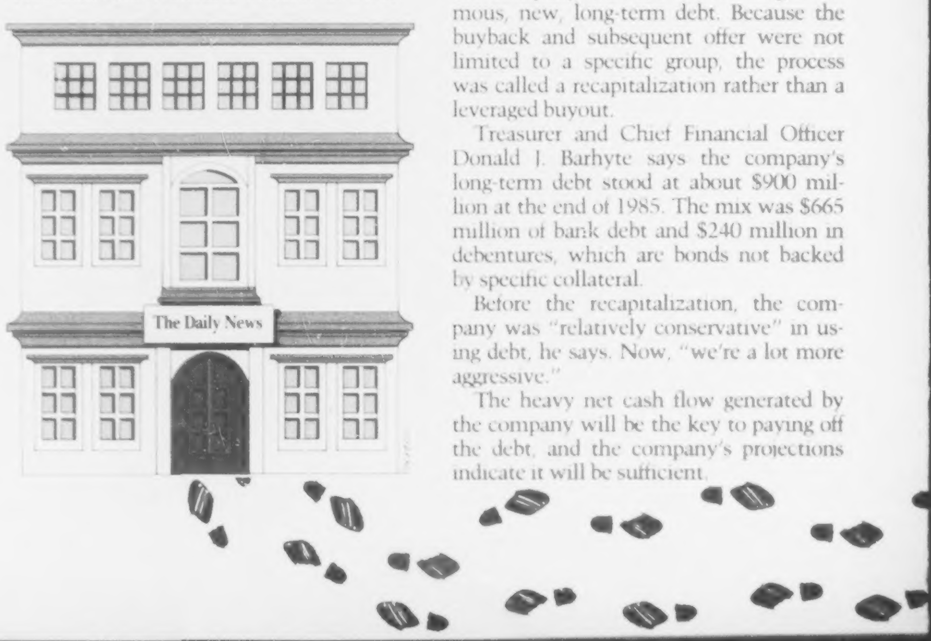
"You saw some very aggressive use of debt" at companies in the newspaper business in 1985, Bader says. "I think the trend permeated the industry."

By the end of 1985 and into the first quarter of 1986, debt provided a proportionately larger share of financing at several publicly held firms in the newspaper business including Multimedia, Gannett Co., The New York Times Co., The Times Mirror Co. and Knight-Ridder Newspapers Inc.

At Gannett, which may have the highest revenues of any newspaper company in North America, long-term debt climbed from $189 million at the end of 1984 to $492 million a year later and more recently to around $950 million. The company's board has authorized borrowing of up to $1.85 billion.

Gannett, like The New York Times Co., says it borrowed to pay for its heavy round of acquisitions last year that included buying the Evening News Association of Detroit and The Des Moines Register. At the Times Co., borrowing provided most of the $400 million it spent in 1985 buying five dailies and two television stations.

RISK DOWNPLAYED. Even at Los Angeles-based Times Mirror, which owes more "than anyone here is comfortable with," the amount is not close to the point where debt becomes risky, says Vice President and Treasurer Stender E. Sweeney. Furthermore, he says Times Mirror plans to reduce its debt.



In general, the amounts borrowed to date have not alarmed financial analysts, because healthy cash flows at newspaper companies are believed ample to service the debt.

One rationale for debt is that it can be combined with profits and shareholders' cash to produce more growth and earnings than would otherwise be possible. Shareholders then earn a bigger return on their original stake and enjoy the fruits of expansion. The company also lowers its tax obligation by counting the interest as a deduction.

At Multimedia, the company has used huge borrowings to accomplish what was essentially a leveraged buyout. By borrowing heavily against the market value of the assets of the company and its future cash flow, the company was able to buy its stock back from the owners, then issue new stock Oct. 1.

The recapitalization left most of Multimedia's former owners with cash and a smaller stake in the new company, while the company was left shouldering enormous, new, long-term debt. Because the buyback and subsequent offer were not limited to a specific group, the process was called a recapitalization rather than a leveraged buyout.

Treasurer and Chief Financial Officer Donald J. Barhyte says the company's long-term debt stood at about $900 million at the end of 1985. The mix was $665 million of bank debt and $240 million in debentures, which are bonds not backed by specific collateral.

Before the recapitalization, the company was "relatively conservative" in using debt, he says. Now, "we're a lot more aggressive."

The heavy net cash flow generated by the company will be the key to paying off the debt, and the company's projections indicate it will be sufficient.

However, Barhyte says, in the "worst, worst case, which we don't see happening," Multimedia "could sell something or possibly refinance" if it had trouble servicing the debt.

The company has moved to protect itself by fixing the interest rates on debt. Also, interest on a large portion of the debt is not first due until 1990.

Multimedia expects to pay $87.7 million in interest this year. At the same time, Barhyte says, the company will be spending money to improve its properties and to expand where warranted, although he adds there is little chance of making any sizable acquisitions.

The borrowings do not make for a "built-in damper effect," he says. "Our assumption is the company is going to grow."

As for spending internally, he says, "We can't really afford to let the quality of the product diminish. You can't kill the goose."

WHEN TO BORROW. Some newspaper publishers have taken to heart Polonius' advice in *Hamlet*: "Neither a borrower, nor a lender be."

George V. Lenher, a Rhode Island banker who lends to newspapers and to people buying them, says he knows publishers of independently owned papers "who take great pride in the fact that they've never borrowed a penny to do anything." Those are the ones who wait until they have the money in the bank before they buy the color scanner, adds Lenher, first vice president of Rhode Island Hospital Trust National Bank.

Those owners do not have to worry about satisfying stockholders or producing returns that shine when compared to other investments, he notes. They want to have a good lifestyle and to build a business they can leave to heirs. "You don't do that by going in hock to the bank," he says.

However, Lenher has found a market for his services among newspapers outside of the big publicly held groups. Smaller groups are buying more newspapers and using the acquisitions as collateral on the loans Lenher's bank provides.

Also, editors seeking to become owners by buying a non-daily and entrepreneurs trying to break into the business often use the same technique. They supply seed money, then finance the rest of the purchase with a loan extended in anticipation of the newspaper's future ability to produce cash.

Lenher says when he lends money for a newspaper's purchase, the amount is keyed to the overall value of the franchise (including goodwill and—where appropriate—monopoly status), rather than the tangible assets alone.

Just as some smaller owners or would-be owners are eager to borrow, some of the biggest companies in the business keep debt to a minimum. According to an article published Feb. 24 by The Globe and Mail of Toronto, Thomson Newspapers Ltd. in 1985 used only 17 cents of debt for every $1 of equity—money from earnings or sale of stock. Thomson owns the Toronto daily and 130 others in Canada and in the United States.

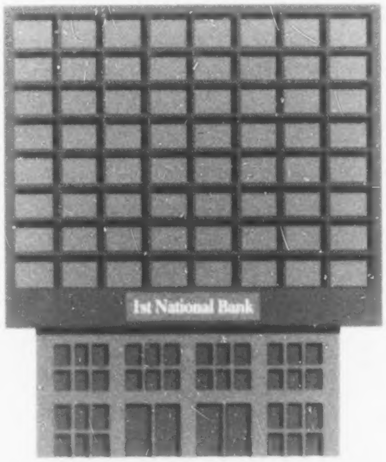
In contrast, Times Mirror was recently using 74 cents of long-term debt for every $1 of equity. Such comparisons at Times Mirror, as at other companies that buy back stock, are affected by the repurchases that shrink the equity base.

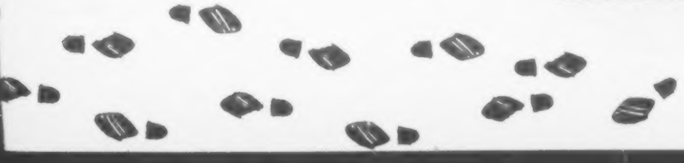
Fifteen years ago, Thomson's sparing use of debt was much more typical at newspaper companies.

Throughout most of the 1970s, three of the biggest players in the newspaper business—The New York Times Co., Knight-Ridder and Times Mirror—generally steered clear of heavy borrowing.

Ann Wrenn King, treasurer and a vice president of Knight-Ridder, says the Miami-based company did not change its ways until early in this decade.

Times Mirror and The New York Times Co. started borrowing more heavily in the late 1970s. Treasurer Denise K. Fletcher says the Times Co. "wanted to grow" in newspapers, television, cable and magazines. "To make all this happen, we had a number of resources we could use": the company's good name, its strong cash flow and a balance sheet relatively devoid of debt.





Times Mirror's Sweeney says an intensive round of acquisitions and the need for capital projects such as new printing plants made the company decide to use more debt seven years ago, even though interest rates at that time were heading sharply upward.

Another reason companies in the newspaper business borrow money is to buy back stock, which gives them a stronger defense against potential raiders.

Moody's Bader indicates those barriers were warranted last year.

Cash rich, relatively debt free and in the spotlight, companies in the newspaper business were tempting targets, he says. The first two of those features, while making companies attractive to raiders, also allow them to handle debt easily, Bader says.

Recent record borrowing is occurring when interest rates have generally sunk to six-year lows, notes Knight-Ridder's King. "You can look back a few years and see 20 percent prime. Now its down to 9 percent, and some people say it's going to 8."

Rates are even lower for commercial paper. Gannett and Knight-Ridder are among the companies issuing millions in commercial paper—a strategy that lets them benefit as rates drop and the company rolls old debt over into new. However, the strategy also exposes the company to the risk of having to pay more should interest rates rise.

That risk has led Gannett to issue $400 million in bonds with maturities of three to 10 years. The company wanted that portion of its debt to have a fixed rate, says Jimmy L. Thomas, vice president for financial services and treasurer.

Wrenn says Knight-Ridder has taken steps that will allow it to issue $200 million in bonds because "now might be an opportune time" to fix the rate on some of the debt now in the form of commercial paper.

Noting the strength of recent bond sales, Wrenn says, "You're seeing a lot of newspapers doing a lot of fixed rate financing. They're being very aggressive and getting it. They're pricing them (bonds) at low rates, but they're very successful with selling issues."

Summing up, ANPA's senior vice president, Thomas C. Fichter, says newspapers have traditionally used debt very conservatively but that approach shows clear signs of changing. Managers have adjusted to the new financial environment, and "they've shown themselves adept at using one of the leading raw materials of commerce—money," Fichter says. ☐

Newspapers adjust budgets as premiums rise
INSURANCE

BY CLARK NEWSOM
presstime staff writer

Lehman Newspapers of Longmont, Colo., publisher of three dailies, reports that its umbrella liability insurance premium for the policy year beginning March 1, 1986, increased 240 percent from the previous year.

A day-care center directed by a board of employees of The Greenville (S.C.) News and Greenville Piedmont saw its liability premium jump more than sixfold this year—from $650 to $4,100, reports Edward H. Dawson, Piedmont city editor who is one of the board members.

The Philadelphia Inquirer and Philadelphia Daily News have been stymied for a year in plans to set up a day-care facility for employees' children because of the difficulty of obtaining adequate insurance.

These cases highlight a two-year-old trend in the casualty insurance industry that continues to plague newspapers and other businesses [presstime, March 1985, p. 16].

The problem is huge claims that in recent years have caused insurers to rack up unprecedented losses. The result has been sharply higher insurance premiums and, in some cases, discontinued indemnity programs.

> *"Last year's numbers will pale in the face of the 1986 renewal premiums," one insurance expert says.*

Libel insurance also continues to be a headache for many newspapers because of ballooning premiums and other changes.

The upshot for newspapers is forced and drastic budget adjustments.

For example, The Peoria (Ill.) Journal Star is allowing for a 30-percent increase in the cost of all business insurance this year, says Business Manager/Controller Fred L. Bergia. "The market has been really chaotic," he says.

In the field of casualty protection, insurance firms posted a record pre-tax operating loss of $5.5 billion in 1985, according to the New York City-based Insurance Information Institute. That followed a then-record loss of $3.8 billion in 1984. The institute attributed $2.8 billion of last year's losses to catastrophes, mainly hurricanes.

Experts forecast little or no improvement this year. John J. Crout, a partner in the Union, N.J., insurance consulting firm Blades & Macaulay, describes the outlook as "bleak."

"Last year's numbers will pale in the face of the 1986 renewal premiums," especially for "umbrella" policies—those that provide coverage in addition to regular liability policies, he says.

If there is anything positive to report, it is that newspapers have weathered the initial shock of the trend and at least have a good idea of what to expect for the future. "The dust has settled," says Edward F. O'Donnell, business manager/controller for MetroNet Inc., a subsidiary of The Providence Journal Co. "People now know where they stand."

But The Peoria Journal Star's Bergia warns, "We're not out of the woods yet." He notes that the company's directors' and officers' liability policy was renewed Dec. 1, 1985, for one year but with a 471-percent premium increase. In addition, coverage was cut in half and the deductible was raised "substantially."

Results of a recent survey underscore heavy rate increases for top company officials. Sixty-eight percent of responding major companies said they had to pay, on average, three and a half times more for directors' and officers' insurance premiums this year over last. The survey of 1,000 firms, in which several newspapers were part of 592 companies that responded, was conducted by the executive search firm Korn/Ferry International.

Fred Rollison, The Greenville News and Piedmont

Insurance cost soared for this day-care center for children of News and Piedmont employees.

Another reason for skyrocketing rates is the increasing number of lawsuits being filed in federal and state courts with juries handing out larger and larger awards. "Court decisions are driving premiums sky-high, and many directors are afraid they are not adequately protected," says Korn/Ferry Chairman Lester B. Korn.

"The insurance issue is making it difficult for companies to recruit high-level outside directors," Korn adds. "It's just the beginning of the problem."

Newspaper executives are feeling the pinch not only with their company policies, but also with their personal policies.

David A. Hurst, senior public relations specialist for State Farm Fire and Casualty Co., says, "We don't automatically exclude any occupational groups [from personal umbrella policies] but may charge higher rates for certain groups." One of those groups, he says, consists of "publishers, reporters, editors and broadcasters."

A Wisconsin newspaper publisher who two years ago unintentionally let his personal umbrella liability insurance coverage lapse applied recently for a new policy. His insurer [not State Farm] denied the application, saying the firm no longer writes umbrella policies for newspaper executives because of their liability for libel damages.

Despite such gloomy reports, there may be better news ahead on the liability insurance front. Ann L. Heavner, assistant vice president of the insurance brokerage firm Johnson & Higgins in New York City, notes that the insurance business is cyclical. The current "hard" market may begin to soften in "about 12 to 18 months," she says.

LIBEL INSURANCE. That may not hold true for libel insurance, however. One of the biggest concerns in this field is continuing price increases—which can be blamed largely on high libel defense costs [presstime, June 1985, p. 52].

Bergia reports that the Peoria daily's premium for libel and slander insurance for the year beginning April 7, 1985, went up 200 percent over the previous year. And his experience is generally thought to be typical for all newspapers.

Some insurance executives say libel insurance rate hikes are warranted partly because the costs historically have not been high enough initially.

"Most newspaper libel policies have been relatively under-priced compared with other types of business insurance," says Larry Worrall, chief executive officer and general counsel of Media/Professional Insurance Inc. in Kansas City, Mo.

But Joseph P. Averill, general counsel of The Miami News, counters: "Libel policies have not been under-priced given the state of the law. What has happened is that the law is evolving very quickly in a way that has produced judgments far in excess of what the underwriters anticipated. Libel policy premiums are being dramatically increased in these years as the insurance companies try to make up for past losses."

There have been so many difficulties that two companies, Chubb/Pacific Indemnity Co. and CNA Insurance Co., recently stopped issuing libel policies.

Libel policy premiums have increased dramatically as insurance companies try to recoup past losses.

Currently, there are three major players in the field: Mutual Insurance Co. Ltd. of Hamilton, Bermuda; Employers Reinsurance Corp. of Overland Park, Kan.; and Safeco of Seattle, which replaced CNA as Media/Professional's insuring company.

Future headaches could emanate from a change in the works at Mutual, which underwrites libel coverage for ANPA-member newspapers. That largest of all libel insurers for newspapers is considering offering only "claims-made" policies, which could limit the protection it offers against claims from prior years.

"There is every indication that the London reinsurance market will cause a change in the policy from an 'occurrence' to a 'claims-made' basis," says Paul L. O'Brien, U.S. general counsel for Mutual and a member of the Washington, D.C., law firm Hanson, O'Brien, Birney and Butler. In occurrence policies—the type most newspapers now hold—the full policy amount applies to each alleged occurrence of libel during the policy year regardless of when the claim is filed.

Edward W. Estlow, chairman of the Newspaper Insurance Advisory Group, which provides liaison with Mutual for ANPA members, says one of the biggest factors working against libel insurance is excessive damage rulings in the courts.

What is "desperately needed" is for state legislatures to "do something about capping damages," says Estlow, chairman of Scripps Howard's Executive Committee. So far, no state has done so.

Despite these and other worries, at least one libel specialist sees a bright spot. "We're beginning to see a trend in fewer cases being filed," says Bruce W. Sanford, a partner in the Washington, D.C., office of the law firm Baker & Hostetler.

Perhaps, Sanford says, "in the middle of this year we will see something we can call a trend." ☐

1986 THE ASSOCIATION OF AMERICAN RAILROADS

"Loyalty to petrified opinion never yet broke a chain or freed a human soul."

Mark Twain, 1887

America's railroads were strictly regulated for so long–nearly a century–that many rail customers came to view such regulation as part of the natural order.

But government regulation of everyday business decisions was not natural for the railroads. When competing forms of transportation, including trucks and barges, emerged and grew strong, rail regulation became a tightening noose–choking the life from the national rail system.

By the 1970's, 20 percent of the nation's rail trackage wallowed in bankruptcy. Track and equipment had deteriorated and what rail profits there were provided only a two percent return on rail investment.

Under the century-old scheme of government control, only annual federal subsidies totalling in the billions could have kept the railroads afloat. But Congress wisely took another course. In 1980, the Staggers Rail Act eliminated many of the regulatory chains and permitted railroads to function more like other businesses. The results have been healthier railroads, better service, improved plant and equipment–and lower rates for many customers.

Today, a small minority of shippers want to recapture the advantages they perceived in a strictly regulated railroad industry. Blinding themselves to the many benefits of deregulation–including those that have recently helped them–these shippers are pressing Congress to turn back the clock and make major changes in the Staggers Act.

It is a fact that reregulation–which would plunge railroads into another era of decline and deterioration–would not be in anyone's interest. The shippers who need railroads the most, including those who are complaining, would suffer most.

Regulation was proven a failure long ago. That's no opinion, it's a fact. Deregulation is already a proven success. Now that the century-old chains have been broken, it would be folly to reforge them.

ASSOCIATION OF AMERICAN RAILROADS

DIVERSITY INCREASES

SUNDAY MAGAZINES

Despite vast differences, they may stand together in bidding against other media for advertising

BY MARCIA RUTH
presstime staff writer

At a meeting earlier this year of the International Newspaper Advertising and Marketing Executives, the moderator of a panel on Sunday magazines wore a referee's uniform and wielded a whistle. His attire was symbolic of a heated-up contest involving multiple players.

There is, of course, USA Weekend—the product of Gannett Co.'s acquisition and transformation of Family Weekly. The unfolding of USA Weekend heightened the competition with the other nationally distributed Sunday magazine, Parade.

Less well-known is a new Sunday magazine called Texas Weekly that is now carried in two dozen of the state's newspapers. Another newcomer is Vista, aimed at Hispanic Americans and being made available to newspapers nationwide.

Newspapers' local Sunday magazines are changing, as well. Two of them produced by California newspapers have been "downsized" into a format normally associated with newsweeklies and other so-called "consumer magazines."

Another recent development may alter the production of many local magazines. That was the decision of the Houston Chronicle and of the Atlanta Journal and Constitution to allow Parade to print the two papers' local Sunday magazines and to insert them into the middle of Parade in a program called "Tandem.".

With so many changes in Sunday magazines, their publishers have been urging advertisers to take a fresh look at the medium.

In 1985, Parade's revenues were up 26 percent and USA Weekend's increased by 6.7 percent, according to Publishers Information Bureau as compiled by Leading National Advertisers, which measures advertising in national magazines.

However, the Sunday Magazine Network, which sells ads for 46 of the 53 Sunday magazines locally edited by U.S. newspapers, had a lackluster year, reporting a 14-percent revenue loss.

After the shakeout period that followed USA Weekend's debut Sept. 8, 45-year old Parade emerged with distribution in 282 newspapers with a combined circulation of about 30 million. USA Weekend—calling itself a "weekend" rather than a "Sunday" magazine because of its Friday, Saturday or Sunday delivery—is now carried by 263 newspapers with total circulation of about 13 million.

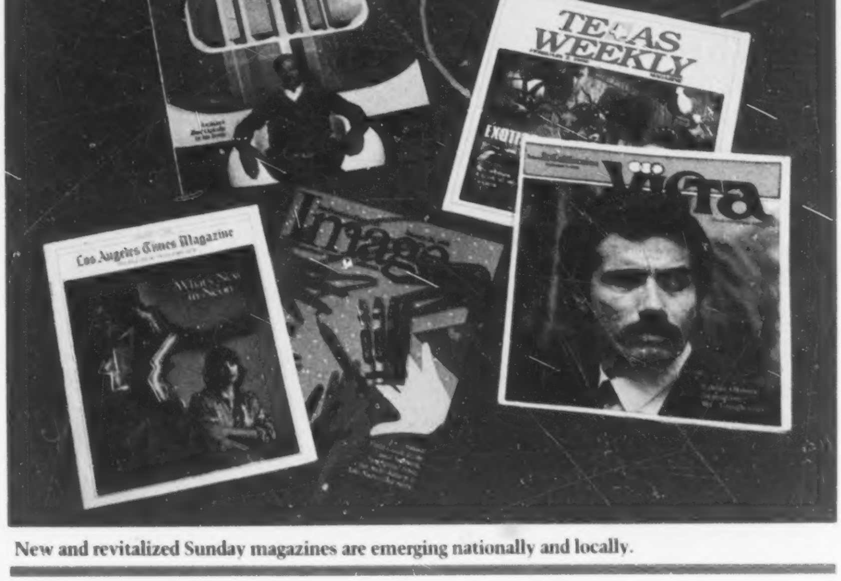
Metro Sunday has a combined circulation of more than 21 million in its member newspapers. With four magazines joining the network and four ending publication in 1985, the total remained the same in 1985, while circulation grew by 650,000.

"More and more, the traditional television advertisers are looking at print," says Sterling Dimmitt, president of Metro Sunday Newspapers, an advertising network of local magazines. He says Sunday supplements are in a good position to attract this growing business that otherwise might be diverted to traditional magazines.

Despite the vast differences among the various Sunday magazines, most observers agree that the publications must stand together as a category as they make their bid for advertising, stressing strong color capabilities and high readership.

"There is only one way to sell Sunday magazines, and that's to sell them as a field," says Carlo Vittorini, president of Parade.

Color printing quality, long a hallmark of these publications, once resulted from the use of the rotogravure printing process



New and revitalized Sunday magazines are emerging nationally and locally.

Trend Toward 'National Retail' Causes a Flap

The most controversial point of the heightened interest in Sunday magazines is the national supplements' pursuit of so-called "national retail" advertising. This refers primarily to large companies such as Sears, J.C. Penney and K mart and smaller chains such as Kinney Shoes that are national in scope but have traditionally placed ROP or insert advertising through local stores at newspapers' lower-priced retail rate.

One of the most outspoken critics of this development is Leo L. Kubiet, advertising director of the St. Petersburg Times and Evening Independent. "We have a policy of selling retail advertisers locally rather than having the space brokered by someone else," he says. "We just do not need to have any brokers—including Parade—sell retail advertising." Nationally distributed Sunday magazines, says Kubiet, "were founded on the business of selling national advertising to national advertisers through national agencies, and I see no reason to change."

But another newspaper executive says it is "tunnel vision" to place such strict limits on the national magazines. Adds Ferguson E. Rood, director of research and marketing for Cox Newspapers: "We place enough walls around the newspaper."

So far, the issue of possible siphoning of advertising away from newspapers has arisen most concerning Parade.

Parade President Carlo Vittorini assured the International Newspaper Advertising and Marketing Executives Jan. 29 that as a matter of policy, Parade will not publish national retail ads in editions that are carried by newspapers with local Sunday magazines. These papers account for about seven million of Parade's circulation of about 30 million.

"The general practice we follow is that we do not try to solicit business that the paper would ordinarily get," he subsequently told presstime.

However, "If a newspaper has not gotten any business for seven years from a particular acccount and the account is running millions of dollars in television (and Parade gets it), doesn't it seem shortsighted to say that's a conflict?" Vittorini asks. "We should recognize that newspapers share in our revenues in a more general sense if we can bring more attention to the newspaper field. In the long run, that's going to help the paper," he maintains.

Ramon Gaulke, president of Parade rival USA Weekend, agrees with Vittorini. He says newspapers should realize that the national retail advertising being courted by the national Sunday magazines "does not represent lost business. This is really money they are not going to get in any way, shape or form."

But if newspapers use magazines to help boost their image among advertisers, many may become inclined to use ROP, says Gaulke. "So we think working together we can get more for newspapers. We think it represents an opportunity for both of us."

used to produce them. Now the trend is to heat-set offset printing, which is faster and less expensive (presstime, Oct. 1983, p. 49).

On the readership front, Sunday magazine publishers point to a 1983 study by the Newspaper Advertising Bureau showing that two-thirds of U.S. Sunday newspapers carry national and/or local supplements, which reach more than 86 percent of U.S. Sunday circulation. Another NAB study three years earlier found that 86-87 percent of Sunday readers read their newspapers' magazines.

Of those who read locally edited magazines, Metropolitan Sunday Newspapers says its research indicates that 65-70 percent read four consecutive issues.

REPOSITIONING. Since Gannett took over and reformulated Family Weekly, the two big national magazines have grown farther apart editorially.

While Parade features long cover stories on popular topics, often written by nationally known writers, USA Weekend concentrates on shorter pieces. "At least 50 percent talk about what might be happening this week and what might be happening next week," says USA Weekend President Ramon Gaulke. He adds that the articles are written with a view toward answering the reader's question "What does it mean to me?"

> *"There's only one way to sell Sunday magazines, and that's to sell them as a field."*

Although the local magazines may at times use a mix of these techniques, they specialize in a regional approach to coverage. "These magazines focus not on the lowest common denominator but on the closest personal connection," Metropolitan Sunday Newspapers' Dimmitt told INAME members at their January sales conference in Las Vegas. "Each Sunday Network magazine is edited to reflect the character and interests of the people who call that city home."

Local interest also figured heavily into the planning by Harte-Hanks Communications Inc. of San Antonio prior to the launching last September of Texas Weekly. "Our research shows Texans consider any news about Texas to be local news," says Editor Philip M. Schoch.

Although the project had been on the drawing board for some time, Texas Weekly was started somewhat hurriedly when many Harte-Hanks papers said they felt the prototype for USA Weekend was too closely linked to Gannett's USA Today. The new magazine began as a supplement to 13 papers and now is carried by 24, about half of which are not owned by Harte-Hanks. It has the largest circulation of any Sunday magazine in the state—560,000.

Texas Weekly is strongest in small to mid-size Texas communities, so heavy national advertising is not the major goal of the new venture, says Schoch. "Our bread and butter will be advertisers in Texas that need exposure throughout" the state; the pitch is that "after you buy the major metropolitan areas (through the metro dailies), we can give you the rest of the state."

Also from the Sun Belt has come Vista, directed at Hispanics—identified by the U.S. Census Bureau as the fastest-growing minority in the United States. Now distributed by more than 20 newspapers to over 600,000 homes, the Sunday supplement's circulation "could very well be a million and a half in a year's time," says Publisher Arturo Villar.

Produced in Coral Gables, Fla., the magazine is aimed at English-speaking Hispanics. Most host papers reach that target audience by pinpointing appropriate neighborhoods or ZIP codes for Vista distribution.

However, newspaper executives say it is difficult to evaluate Vista's success so far because the magazine is published only once a month.

"We have received very favorable comments from people who have read it," says Tucson Citizen Editor and Publisher Gerald Garcia. "It comes out and they [the readers] whet their appetite, and next week it doesn't get here. I just don't think the magazine comes out frequently enough."

With Vista's focus on Hispanic people, from astronauts to Rhodes scholars to beauty queens, and with articles on topics like bilingual education, Garcia believes its audience could be broadened. "My perception is it should be targeted to the Anglo population," he says. Vista conveys a "great sense of pride for Hispanics," he says, but it could also be an "educational and informational magazine for Anglos."

LURING ADVERTISING. As the Sunday magazines have firmed up their content, they have stepped up efforts to persuade advertisers to use the medium.

Both Parade and USA Weekend have made inroads into automobile advertising this year. Vittorini reports that Parade is getting a larger number of ads from network television and from the insurance industry.

And USA Weekend is proving increasingly attractive to travel, hotel and package-goods advertising, according to Paul Kessinger, vice president of marketing for Gannett Media Sales.

Whatever the impact Parade and USA Weekend have on the individual newspaper, the picture for locally edited Sunday magazines is mixed.

Kessinger says a lot of the advertising going into Sunday magazines today seeks to be a showcase for long-term building of product image, in contrast to the past when ads for quick-sale, mail-order merchandise was dominant. He calls this "the biggest change in our business" so far as advertising is concerned.

As an example, he notes that USA Weekend has reduced its share of mail-order advertising from 58 percent in the Family Weekly era to 42 percent.

Recently, some newspaper executives have raised questions about whether the national supplements drain revenue that might otherwise go to newspapers, or whether in the long run they lure more ad dollars to newspapers by helping them build circulation and thus attract more advertisers. (See story, p. 13.)

Whatever the impact of Parade and USA Weekend on the individual newspaper, the picture for locally edited magazines is mixed.

Within the Metro Sunday network, four newspapers dropped their magazines last year—The Indianapolis Star, The Sacramento Union, The Arizona Republic of Phoenix and the St. Louis Globe-Democrat (which suspended publication in December but resumed under new ownership in January).

Balancing the dropouts were four new members of the network: The Seattle Times, The Sacramento Bee, San Antonio Light and Houston Chronicle (which had dropped its magazine but rejoined as part of Pacific Tandem).

Among the locally produced Sunday magazines, only The New York Times (now a Metro Sunday member) gets a high percentage of national advertising—61 percent in 1985. The next-highest share, 8.7 percent, was for the magazine of The Boston Globe.

For the local magazines, says Dimmitt of Metro Sunday, overall success "comes directly from the publisher"—in other words, it cannot be attained without a strong commitment from the top.

Among those that are prospering is The Dallas Morning News' Dallas Life Magazine, which has increased its ad page count by almost 60 percent in the past three years.

When the Morning News added Parade to its Sunday paper in 1982, "we felt we needed to redesign and make a more local magazine," says Harry M. Stanley Jr., the Morning News' senior vice president for marketing. Changing into a "city magazine," says Dallas Life Editor Melissa East, "allowed us to develop an image: 'If you live in Dallas, you should be reading it.'"

Morning News readers thus get two distinctly different and valued products. "Our paper has never taken the stand that Parade is a conflict," East says. "It is another bonus they [readers] get in our package."

FORMAT SHIFTS. While Dallas stayed with its 10¼-by-11½-inch format—a size used by many Sunday magazines—two California papers are being watched as harbingers of a new trend—converting to newsweekly size and printing on slick paper.

The Los Angeles Times and the San Francisco Examiner each introduced the 8¼-by-10¾-inch format last Oct. 6. "We wanted a magazine that you could put in a newsstand and put a price on it and it would stand up," says Curtiss Anderson, editor in chief of the Examiner's new magazine, Image, although he adds that the newspaper has no plans to sell it separately.

What the Examiner and the Times are banking on, he says, is an increase in national advertising that traditionally goes to consumer magazines, because national advertisers will not have to change the size and shape of their ads to run them in Sunday supplements.

Anderson, who is also editor of magazine development for Hearst Newspapers, says he is convinced that the "new direction" for the Sunday magazine in a newspaper "is converting the present, oversized, 850-line rotogravure, calender-stock supplement to the 700-line, heat-set offset, consumer-size magazine, printed on coated stock with a 60-pound cover and 34-pound paper inside."

"And if that isn't the trend," adds Anderson, "we are in a lot of trouble."

In Los Angeles, development of the Los Angeles Times Magazine came after what Research Director John Mount terms "the most extensive research of its kind ever undertaken" by the newspaper, followed by "the largest and most aggressive sales effort ever undertaken" by the newspaper.

Although dollar figures are not available, Times spokeswoman Carolyn J. Hom reports a page-count growth of more than two-thirds in the fourth quarter of 1985, compared with year-earlier figures for the predecessor magazine.

At least one other daily, The Washington Post, has decided to follow the lead of the Los Angeles and San Francisco papers. It will switch to the smaller size Sept. 7.

While the various changes in Sunday magazine content and format are too recent for their success to be evaluated fully, the innovators believe they are on the right tracks.

Texas Weekly Editor Schoch puts it this way: "We're probably one of the new generation of the kind of magazine we're going to see down the road." ☐

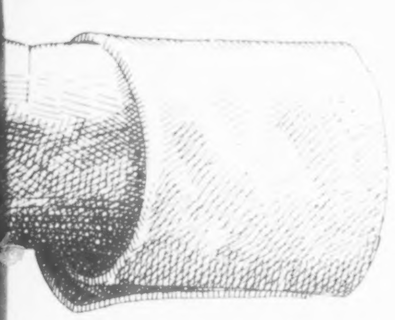
newsprint....
for publishers and printers...



with Imagination

More than 500 daily newspapers and numerous printers throughout the south, midwest, and southwest depend on dependable newsprint made by Champion. Our two Texas newsprint mills make us one of the two largest U.S. producers. We also make paper for magazine publishers, printers, direct marketers, directory publishers, and label, envelope, and business forms converters. In fact, Champion makes more grades of paper for more kinds of customers than any other paper company. For more information, call or write Jock Bair, vice president-newsprint sales, Champion, 12201 Merit Drive, Dallas, TX 75251. (214) 233-8300.

Newspapers Increase Emphasis On Customer Service

BY BARBARA J. FRIEDMAN
presstime staff writer

Customer service is a bit like apple pie: Not everyone is wild about the taste, yet it is hard to find anyone against it.

That's true for industry in general. It's also true for the slice of industry known as the newspaper business.

But at a number of newspapers, customer service is moving beyond mere lip service, as publishers prove more willing to fork over money for programs to improve customer-company relations.

Customer service at newspapers has often meant making sure subscribers get the paper on time and intact. But if an emphasis on customer service frequently starts in the circulation department, increasingly it does not stop there. Services now encompass other ways newspapers try to make themselves more amenable and understandable to people who are sources, advertisers and members of the local community with a question or problem.

The job of circulation ombudsman is to field complaints not taken care of after initial calls.

Bill Chambers

The range of activities is broad: from operating customer offices in shopping malls, to sponsoring forums that give the public a look at how newspapers work, to training employees to deal politely and effectively with people on the telephone.

At the Austin (Texas) American-Statesman (all-day, circulation 164,803), Deborah Heintschel runs seminars in customer service open to the entire staff. The American-Statesman's training and development manager says she is now getting a couple of calls a month from other newspapers interested in the program.

Heintschel says the heightened interest in customer service shows newspapers have joined the trend "you've seen with all businesses, as they become competitive and start to pay attention to basics." A key fundamental is courtesy, which helps newspapers win and keep customers, she notes.

Harte-Hanks Communications Inc. feels so strongly about the importance of understanding customers' perspectives and filling their needs that it has formally designated attention to customers as a corporate priority.

As H. Rad Eanes III, the company's vice president for human resources, explains it: A sharp focus on customers is one of "our operational marching goals throughout the decade."

SMOOTH STARTS. Because people in the circulation department typically field more complaints than their colleagues elsewhere at the newspaper, much of the energy being devoted to customer service is spent there. In some instances, long has it been so.

For example, the circulation director of the Alexandria (La.) Daily Town Talk (morning, 39,318) says the prevailing attitude there is that "the customer is always right." It's been that way "for 20 years," Gary McKay adds.

Three employees at the paper, among other duties, handle starts, stops and complaints, which McKay estimates run about 16 a day.

At The Richmond Times-Dispatch (morning, 138,191) and The Richmond News Leader (evening, 112,511), Richard A. Neely has a different perspective. Neely, circulation services manager, says the attitude toward serving subscribers has changed over the years at the Virginia dailies. The circulation department has "learned the hard way that service is the only commodity we have to offer," he says.

Started in the early 1960s, the Subscriber Relations Department of the Richmond papers has grown to 12 full-time and 54 part-time employees. Neely estimates that 25 to 30 percent of the telephone calls they get concern service problems while many of the others are for starts or stops.

Different twists to serving subscribers—and other "publics"—have taken hold in Louisville and Quincy, Mass.

Since 1977, The Courier-Journal (morning, 170,699) and The Louisville Times (evening, 128,572) have employed what may be the first and only circulation ombudsman in the business.

To make sure the word is out, the dailies continue to run a house ad occasionally that opens with this line: "Here's One Bill We Enjoy Paying."

The "Bill"—Circulation Ombudsman Bill Chambers—says his job is to field complaints that are "not taken care of" after the initial calls. A veteran of 36 years at the Louisville newspapers, Chambers says he also gets his share of first-time calls with complaints about how a newspaper-flinging carrier broke a storm door or a window.

Besides Chambers, the Louisville papers also have ombudsmen for news—theirs was the first in this category, too—and for advertising, another first, the paper believes. The advertising ombudsman's responsibilities include providing customer service to advertisers and enforcing the newspapers' guidelines on advertising.

At The Patriot Ledger of Quincy (evening, 89,153), Human Resources Manager Karen Dobbyn says the paper staffs a customer service office in a shopping center where people can submit a complaint, start a subscription, pay a bill, take out a classified ad, get a copy of a photograph that ran in the paper, or talk with newsroom staff during the "Meet the Editor" series.

With perpetually heavy foot traffic through the shopping center, the newspaper becomes easily accessible to large numbers of customers, Dobbyn observes.

CAUSE AND EFFECT. Heintschel of Austin believes there is a cumulative effect to customer service that goes beyond the individual telephone call or encounter.

The goodwill that newspapers earn over a period of time means customers who are consistently treated well will be less likely to look elsewhere for other places to advertise or for other sources of information, she says.

Specifically in circulation, the idea is to provide subscribers with convenience. "If we give them another problem in their lives," they may become single-copy buyers who then may choose another newspaper. And in Austin, she notes, there are plenty of other newspapers available these days, such as The Wall Street Journal and USA Today.

Heintschel emphasizes the importance of tact. Do not tell a customer the subscription was canceled "because you didn't pay your bill," she advises. Rather, she suggests saying, "I'm so sorry. When did you last mail your payment?" The idea is always to give the customer the benefit of the doubt.

Another approach in exchanges between a newspaper representative and a customer is to filter out information about internal procedures the caller does not need to know, Heintschel says.

The point of all this is to be more responsive. "When it's all said and done, we must adjust to the customer," she says.

According to Heintschel, newspapers are starting to acknowledge that "the customer's perception and perspective are important and probably different from ours." But first they had to lose some subscribers, advertisers and news tips, she says.

Some of the same themes emerge when Eanes of Harte-Hanks talks about focusing on customers and how that corporate goal percolates through to daily operations.

Employees are told to give customers the benefit of the doubt in a conflict over a bill, for example, and to be courteous on the telephone.

The focus on customers has also led Harte-Hanks newspapers to arrange meetings with local advertisers. The purpose is for the newspaper staffs to explore ways they can help the advertisers in their day-to-day businesses. "We've been entering into a dialogue much more than we were before," says Eanes.

Arnold Rosenfeld, editor of the Austin American-Statesman, holds a "Meet the Editor" session as part of a multi-department program to serve the public better.

He points out that newspapers are "really a two-headed beast" facing different constituencies of readers and advertisers. "As long as the editorial staff is doing their job correctly," Eanes says, "the negative consequences from that are ones we're prepared to live with."

At The Post-Standard (morning, 85,043) and Herald-Journal (evening, 103,218) in Syracuse, Clifford C. Hebard, who last year moved from news to the recently created job of training manager, has similar thoughts. A "good newspaper can be

A Determined Effort for a Determined Reader

Not long ago, a circulation supervisor for The Richmond Times-Dispatch ran into a sad, odd situation in one of the city's poorest neighborhoods.

An elderly man who lives alone in a second-story apartment wants his morning newspaper left just outside his door sill where he can reach it from his wheelchair.

But the top of the stairway is dark and the neighborhood dangerous, so the circulation department has not wanted to send a carrier all the way upstairs before daylight.

So Hayes Smith, supervisor for the area, has been delivering the paper to the door between 3 and 4 a.m., and he has gotten to know the old man.

Smith says he has tried to find ways that would literally put the paper within the man's reach. Smith considered fashioning a stick with a hook so the man could reach out the door and snag the paper when it was tossed up to the second-floor hallway. Then he thought about rigging a pulley with a basket and cord so the man could pull the paper up from his window. But, for various reasons, nothing has worked, Smith says.

The man feels like it is the company's responsibility to put the paper exactly where he wants it before daylight, Smith says. And the company wants "to provide him with the best possible service we can."

Smith has been delivering the paper while the newspaper searches for an adult carrier to take over the route. Once one is found, Smith does not plan to ask the person to go to the top of the stairs because "it's just too dangerous." Instead, Smith figures he may continue with his personal, special delivery. First, the customer is not shy about calling to complain, and second, "I just wouldn't want to cut the old man off."

His situation "really touched me," Smith says. "I'm scared to death, but I take his paper up."

civil as well as a good editorial product," he says. But when a newspaper is doing its job, "you have to accept that some people are going to be unhappy with what you do because the truth hurts."

To help the newspaper earn public goodwill, Hebard has been running a staff-wide training program that uses a videotape to make three main points: Treat people with common courtesy, listen first rather than trying to get in a fast explanation, and help the customer or find someone who can.

The newspapers used employees to make the tape, which included a sequence in which a would-be customer tries to order a subscription over the phone. By bouncing the call to four different employees, Hebard says, "We translated someone who wanted to pay us money into someone who hates us."

People who viewed the tape "were pretty responsive," he says. Perhaps the biggest surprise came from the editorial side, because newsrooms have a reputation of being "hard to train." But the discussions involving the news staff were some of the best, perhaps because of a natural orientation toward public service, he says.

At the York Daily Record (morning, circulation 40,085), Publisher Kai Spencer has also found several ways to limit the unhappiness a newspaper sometimes causes. The paper runs columns explaining how the Record works and has sponsored an open house. It also began running an advertisement last year with information such as how to phone in tips and get meeting notices in the paper. The Record has also run a special section that includes the paper's history.

The results of all this are difficult to quantify. It is "hard to know if the message is getting through," Spencer says. But he believes the community is showing more respect for and interest in the newspaper, and he attributes it to efforts at better customer service. ☐

Newspapers large and small have found a cost-effective way to electronically store their clipping files. They use DataTimes to install, support and market their electronic library. Some of these libraries are in-house systems, others run on service bureau computers. All utilize BASIS,™ the industry's fastest, most comprehensive search and retrieval software, developed by Battelle Laboratories, the world's largest research and development organization.

DataTimes is designed to interface with almost any editorial system including DEC, Atex, SII, CSI and Hastech. DataTimes even offers optical disk technology for maximum cost saving of clipping file storage. The DataTimes electronic library allows reporters and editors to retrieve information in seconds from their own desks.

These newspapers have found DataTimes to be more cost-effective, reliable and usable than their old clipping files. A better newspaper is the result.

Join these prestigious newspapers and become one of America's Newspapers Online.

Marketing, economics will be focus of graduate programs

Two journalism schools recently established master's programs they believe are firsts in the United States in their fields—direct marketing and economics.

The Medill School of Journalism at Northwestern University in Evanston, Ill., will offer a master's degree program in direct marketing designed to prepare students for management-level positions with direct marketing organizations. Henry A. Johnson, former president and chief executive officer and now vice chairman of Spiegel Inc., has been named acting director.

The American University in Washington, D.C., will offer a master's degree program in economic communication. The program, which aims to train journalists and others in the understanding and communication of economic and business information, will be offered jointly by the School of Communication and Department of Economics. American University houses the National Center for Business and Economic Communication, which also will assist the program.

Both programs will begin in the fall of 1986. ☐

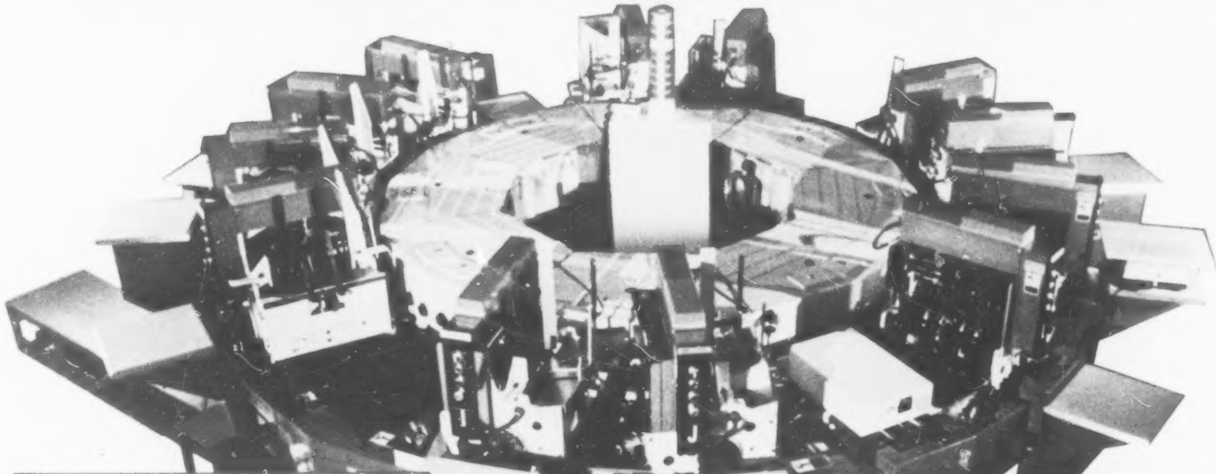
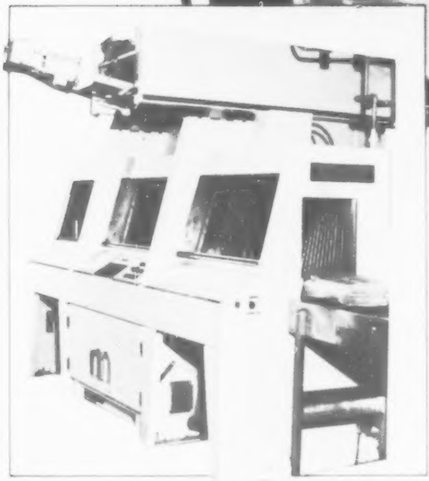
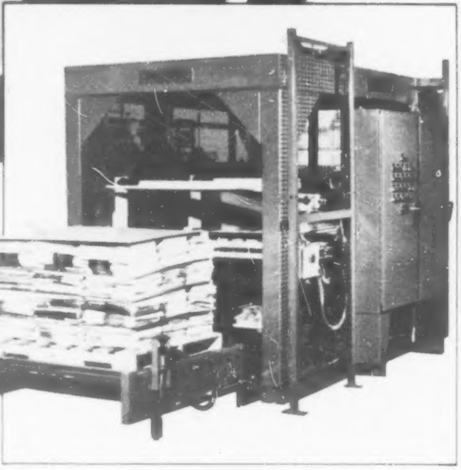
Automation is one thing. Productivity is three.



NP 1472 Newspaper Inserter



BOSS 60 Packaging System



NP-100 Programmable Palletizer

Harris Graphics' NP-1472 inserter, BOSS-60 packaging system and NP-100 programmed palletizer are designed to bring new productivity to newspaper mailrooms.

The NP-1472 has the versatility to adapt to any inserting job quickly and easily. It produces packages of up to 300 broadsheet pages in many jacket formats and automatically repairs incomplete sets.

The BOSS-60 automates packaging by doing the work of two conventional lines in half the floor space and with half the labor. The integrated functions produce high quality, strapped or unstrapped bundles at up to 50 per minute.

The NP-100 neatly palletizes stacks or bundles quickly, for better product protection and improved storage/retrieval. A programmable logic system controls all functions.

Alone, each is a dependable unit that pays off investment with lower operating costs and increased speed.

Together, the three form an integrated system that will raise mailroom efficiency higher than it's ever been. Each machine is designed to work smoothly with the others, moving product from press to pallet quickly, precisely, and with a minimum of labor.

The NP-1472, BOSS-60, and NP-100 bring more than automation to material handling. They deliver productivity.

BUT THERE ARE DRAWBACKS

Many Newspapers, Small and Large, Turn to
'THE MAC'

Users say the Macintosh personal computer stands out in graphics, typesetting and pagination at low cost

BY STUART SILVERSTONE
and CRAIG L. WEBB

While it might not qualify as a revolution, the growing use of Apple's Macintosh computer is shaking up American newspapers in ways that few other computer systems have done before.

Everything from community weeklies to national dailies have bought "the Mac" and the accompanying Apple LaserWriter—a plain-paper printer—to serve as typesetter, electronic sketchpad, pagination machine, advertising tool and circulation database. It is the Model T of printing systems—the first computer-printer package that makes it possible for someone with as little as $11,000 to typeset a professional-looking newspaper. (See chart, p. 24.)

"We have never seen a product that has had the impact on the publishing market that the Apple LaserWriter and Macintosh have had," The Seybold Report on Publishing Systems, a trade newsletter, said in January. "In less than one year, Apple Computer has become the second-largest supplier of typesetting output devices and systems in the North American market. For 1986, we are betting that it will be number one."

"It's really the only affordable computer graphics tool available for newspapers at this point, and it outperforms even some of the more expensive stuff," says Roger Fidler, director of graphics and newsroom technology for Knight-Ridder Newspapers Inc.

Apple isn't the only company trying to cash in on the booming industry that has become known as "desktop publishing." No other system can do as many things as the Mac, however, and experts say publishers would be hard-pressed to find a comparable computer-printer combination at even twice the price.

Stu Neilson's story helps explain the Macintosh's popularity. Neilson, production manager of the weekly Wilmington (Mass.) Town Crier, visited Compugraphic Corp.—based in his hometown—in search of a new typesetter.

"We were looking to upgrade our typesetting system. One of our machines was a dinosaur from 1969 that was constantly breaking down," he says. "But when I went to Compugraphic, by the time we were ready to walk out the door, they wanted us to spend $70,000."

Instead, Neilson paid less than half that amount for six Macs, two LaserWriters, a storage system and computer software programs. (See story, p. 26.) He says he wishes he could get better resolution than the 300 dots per inch the LaserWriter produces and is hoping for programs that typeset copy better, but on the whole he has no regrets.

Small publications use the Mac in nearly every part of the newspaper. Larger newspapers buy the machine primarily to serve as a graphics tool.

A May 1985 survey by the Society of Newspaper Design found that nearly half of 174 responding newspapers employing microcomputers in their graphics departments were using the Mac.

At least two companies sell entire Mac-based publishing systems. The Electronic Publisher Inc. of Excelsior Springs, Mo., has installed Mac systems in about two dozen newspapers around the country. Discovery Data Systems of Fairfax, Va., offers complete Macintosh newsrooms, training and other support services.

Multi-Ad Services of Peoria, Ill., which keeps several hundred daily newspapers up-to-date on developments in co-op advertising, used to provide monthly informational updates on microfiche sheets; the company supplied its customers with microfiche readers. Now, newspapers

Dan Beiser, USA Today

USA Today artists Elys Ibrahim (left) and Julie Stacey produce a graph on the Mac.

Silverstone is a journalist and computer/communications consultant whose clients have included The Washington Times, New York Daily News and United Press International. Webb is an editor on UPI's foreign desk.

buying the service are provided a Macintosh at no extra charge, and Multi-Ad mails a diskette of new information every month.

Rob Jennings, supervisor of micro data systems for Multi-Ad, says the new system also enables publishers to do their own searches through the company's database for particular types of co-op ad packages. Previously, Multi-Ad performed searches for them.

ARRAY OF FUNCTIONS. Uses for the Mac are as diverse as the newspaper business.

- **Graphs.** The Wall Street Journal uses Macs to plot graphs because the computer does the work much quicker than an artist could by hand. The machine also can adjust the chart automatically to reflect a different scale or show how data look in pie, bar or graph format.

With the Mac, editors say they worry less about making errors, using incorrect scales or creating the wrong type of chart. They can concentrate more on how to present data in the most appealing fashion.

- **Maps.** Joost Romeu, editorial artist of The Denver Post, uses a Mac to create daily weather maps covering his region and the United States, and to draw maps for local stories. Other editors rely on U.S. and foreign maps that are available in commercial clip-art software for the Macintosh.

> *"The introduction of this equipment enables small publishers like me to exist."*

- **Information graphics.** USA Today graphics artists switch on one of their department's 17 Macs when they want to produce logos or almost any other visual element. "The Macintosh is especially good for newspapers that don't have artists because it is so easy to create charts," says Jeffrey (Buzzy) Albert, USA Today graphics director.

Fred Wiebe, owner of the Toronto-based graphics service Fast Facts, turns to the Macintosh daily to help create a money trends graphic and charts in French and English for clients of the Canadian Press. He easily adjusts the charts to reflect differences in the languages.

- **Networks.** Knight-Ridder, Gannett Co., Scripps Howard and The Times Mirror Co. are establishing Mac-based graphics networks to share maps and charts produced by each group's home office or by member papers. Fidler says he expects the Knight-Ridder network, including a new graphics headquarters in Washington, to be ready in May. He also is attempting to establish a standard transmission format to link the various networks.

- **Layouts.** Dozens of small-town newspapers, including The Lake Times, a weekly in Osage Beach, Mo., lay out sections of pages on the Mac. Software improvements in the past four months make it possible to lay out a tabloid page, run it on a high-quality laser printer and produce a camera-ready sheet, but it appears no newspaper yet has used that capability.

- **Typesetting.** The Mountaintop (Pa.) Eagle, also a weekly, uses the Macintosh to write and edit stories, then sets the copy on a LaserWriter. Publisher Stephanie Grubert says the cost of the equipment is defrayed by not having to buy phototypesetting paper and chemicals. "The introduction of this equipment enables small publishers like me to exist," she says.

- **Paste-up.** Rather than pasting up boxes by hand, Co-editor and Co-publisher Peter Morales of the weekly Rogue River (Ore.) Press creates them on his Mac. Simple charts, such as basketball tournament pairings, take minutes to prepare. In addition, editors using the Mac have stopped buying screens from graphics supply houses because pagination and drawing software can create them.

- **Advertising sections.** Dale R. Pearson, advertising director of the Valley Morning Star in Harlingen, Texas, put a

WHAT IT COSTS

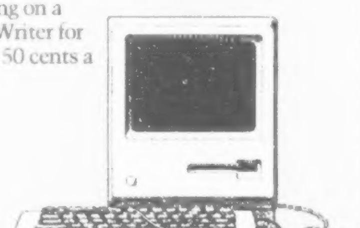
A Macintosh computer system can be purchased in building-block fashion, depending on needs and financial commitment. Experts say the biggest factors to consider in deciding what equipment and software to buy are how the system will be used and the level of quality that is needed.

This chart shows how one system could be structured. Prices are estimates based on widely available discounts.

$2,500

BARE BONES SYSTEM

Includes a Macintosh **computer with "mouse"** and one megabyte of random access memory, and **software** for word processing, charts and drawing. Diskettes can be taken to an outside vendor for printing on a LaserWriter for about 50 cents a page.



$4,000

WITH HARD DISK DRIVE

Apple Computer's "Hard Disk 20," a **20-megabyte hard disk drive**, enables the Mac to remember more and helps run its programs faster. This and other external hard disk units can give the system up to 80 megabytes of storage memory.

Also available for the Mac are **internal hard disk drives**, in which permanent data storage is achieved within the computer.

A less-expensive storage alternative is an **external floppy disk drive**, which may be more cumbersome when dealing with large amounts of data because of more limited storage capabilities.

Mac and LaserWriter in the ad department and took control over production of special advertising sections. "We've done so many special sections in five months that the profits have probably paid for the machine," he says.

"It answers all the newspaper's problems," Pearson added. "Instead of the sales person typing copy to give to the keypunch operator to give to the photocomposers, this way the sales person types up the copy and he'll have it in one minute. We're also using a lot more screens — computer-generated — backgrounds, overlaps — stuff that might take two to three days to produce by hand."

• **Subscriber lists.** The weekly Todd County Standard of Elkton, Ky., used to keep its subscriber list on Addressograph stamps. With the Mac, it not only has a more accessible list but also — by manipulating the printing of mailing labels — can give advertisers the option of targeting their audience by sending an insert to readers on a particular mail route.

PROS AND CONS. As technology advances, the list of possible uses for the equipment will grow. Before jumping into the fray, however, newspapers should ask some key questions.

For example, if a newspaper wants to use the Mac for typesetting, can it live with the LaserWriter's 300-dots-per-inch resolution? Editors of weeklies and small dailies who use the LaserWriter say yes.

Can a newspaper live with the LaserWriter's 300 dots per inch resolution?

One alternative is to produce Macintosh text and graphics on an Allied Linotype typesetter or imagesetter. Such a system is more than four times more precise, but also three to four times more expensive — costing about $33,000 for Macintosh and typesetter.

Can a newspaper live without sophisticated kerning, leading and automatic hyphenation? Mac-based typesetting programs are improving, but they still fall short of what older systems provide. Editors can get around the problems in a variety of ways, such as using ragged-right copy.

How much pagination ability does the newspaper want? Current Macintosh software is limited to tabloid or smaller pages, but its typesetter is even more limited. Apple's LaserWriter handles nothing bigger than a legal-sized sheet, but another laser printer, the Dataproducts 2665, turns out 11-by-17-inch pages. Apple reportedly is working on a new model of the LaserWriter that would do the same.

Most Mac-based newspapers today set copy a story at a time, complete with headline, and print it on the LaserWriter in the same shape as they expect the story to occupy on the pasted-up page. This method saves some backshop time but still requires work on a full-size paste-up sheet.

Does the newspaper need a Macintosh in order to get more graphics? While the Mac enables editors to turn out crisp-looking charts with a minimum of effort, there are other ways to get more charts and maps in a newspaper, particularly through syndicated graphics and wire services [presstime, Aug. 1985, p. 26].

If a paper has graphic artists on staff, what tools do they need? The Mac shines brightest as a drafting program. Even the fanciest of charts and boxes can be turned out in minutes. Talented artists might feel uncomfortable using the Mac for freehand sketching, however, because most computer commands are made with a gadget called a "mouse."

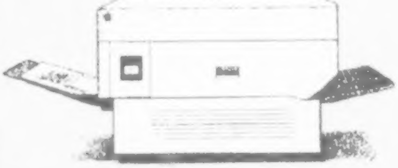
For most purposes, editors say, it is easy to move the mouse and thus make the cursor reach the desired part on the screen. Using the mouse as a pen or pencil is much different, however, and tracing with a mouse can be excruciating. In such cases, a publisher might consider buying a special piece of hardware that replaces the mouse with a pen-like device that

$9,000

WITH PRINTER

Apple's LaserWriter **laser printer** completes the basic "publishing" setup with "near-typeset" quality of 300 dots per inch on paper up to 8½ by 14 inches. Other laser printers handle 11-by-17-inch sheets but are much more expensive.

Another more costly alternative, but one resulting in up to 1,270 dots per inch, is a Mac-compatible **typesetter.**



$12,000

EXPANDED SYSTEM

Includes "AppleTalk," a simple **wiring system** that links Macs, printers and other peripheral devices such as storage systems at a cost of $50 per connection; a **modem and necessary software** permitting Macs to "talk" via phone lines with other computers and databases; and **additional software** for pagination, graphs and applications such as keeping track of appointments, indexing stories and checking spelling.

$15,000

ADVANCED GRAPHICS

Includes a **scanner/digitizer** such as the Abaton Technology Corp. Scan 300 that allows logos, photos and other artwork to be entered into the Mac, manipulated, re-sized and printed; a **drawing tablet with pen-like stylus** called "MacTablet," manufactured by Summagraphics, that allows tracing of maps and other artwork; and other **advanced software** for building customized databases and performing complex computations.

"writes" on a special tablet.

Does the newspaper have an older computer system that isn't worn out yet? Various versions of Allied's typesetter can work with non-Apple systems as well as the Mac. Stories also can be brought onto the Mac system from other computers via a modem. This method is particularly valuable for reporters who already own laptop computers like the Radio Shack TRS-80 series (presstime, Dec. 1985, p. 36) and need the laptop's portability.

Some newspapers use the low-priced laptops to write their stories, then move the copy onto the Mac for editing and typesetting. The Mac itself also is fairly easy to cart home or move into another part of the office, depending on the day's needs.

If answers to these and other questions indicate a Mac will not meet current needs, wait a while. Advancements come so rapidly these days that a publisher can count on most of today's major problems with the Macintosh to be solved in a few years.

For instance, laser printers that can lay down about 600 and eventually 1,200 dots to the inch—enough resolution to please all but the pickiest newspaper artist—are on the horizon. Clip art featuring company logos and pictures of brand products soon may come via diskette. Programs also are likely to enable the Mac to drive more typesetters, including ones that were on the market before Mac even was conceived.

Several computer magazines specializing in the Macintosh can give a good, basic education on what the computer can or cannot do, as well as keep publishers abreast on new products. The monthly Seybold Report also reports regularly on the Mac.

Other sources include local Macintosh user's groups and trade shows, such as the ANPA Operations Management Conference & Exposition June 21-25 in Atlanta. □

Much Mac Software Has Newspaper Applications

The Macintosh is a box full of possibilities, but it only can do what computer programs tell it. Those software programs give "the Mac" scores of special talents.

Following is a summary of some popular software that newspapers can use with the Macintosh. List prices are included, but discounts often are available.

- **Text editing.** *MacWrite* (produced by Apple, $125) and *Word* (Microsoft, $195) offer the usual word-processing functions but require no fancy codes to produce special text sizes, typefaces or styles. *Word* also can divide the screen so that a reporter can put notes on one side and write the story on the other, or pull out sections of the notes and drop them into the story. Writers with suspect spelling skills can get programs that check spelling and sometimes suggest synonyms and homonyms.
- **Graphs.** With programs like *Chart* (Microsoft, $125), an editor can punch in a slew of numbers and churn out a bar chart, then see the same data in a pie shape or as a line graph. So-called spreadsheet programs, such as *Excel* (Microsoft, $395), go one step further with charting programs by taking data that the editor has filed, doing computations and then putting the answers into a chart.
- **Page Layout.** *PageMaker* (Aldus, $495), *ReadySetGo* (Manhattan Graphics, $125) and *MacPublisher II* (Boston Software, $150) all can be used to call up stories from a Macintosh or other computer system, edit the articles, compose headlines, crop charts and other electronically created graphics, and then put everying on plain paper for printing and subsequent paste-up. Entire tabloid-size pages can be produced with certain typesetters. Automatic hyphenation, kerning and the variety of types available still are relatively limited but are getting better all the time.
- **Drawing.** *MacDraw* (Apple, $125) and *MacDraft* (Innovative Data Design, $239) turn out boxes, circles and charts much faster and cleaner than many production crews can do by hand. Objects can be created, stretched to the desired size, flipped, filled with a variety of patterns, rotated to any angle and then put on a page. While composing ads, sales personnel have found they no longer are restricted to using particular sizes of a client's logo that had been made in the composing room. Instead, they use a camera-like device called a digitizer to make a computer image of the logo. Staff members then can stretch or shrink that digitized image to the desired space and set the entire ad on a laser printer.
- **Clip Art.** Pre-drawn logos, symbols and maps help the graphic designer—particularly the non-artist—create quality graphics quickly. Programs such as *Maccessories Graphic Accents* (Kensington Microware, $50), *ClickArt Publications* (T/Maker Graphics, $49.95) and *Mac the Knife* (Miles Computing, $40-60 per volume) offer hundreds of different kinds of clip art per diskette. *MacAtlas* (MicroMaps, $79-119 per volume) features simple outline maps of the United States and the rest of the world. Creating maps from scratch is possible with *MacDraw*, *MacDraft* or *MacPaint*, while some editors have copied maps from books and then digitized them.
- **Artwork.** With *MacPaint* (Apple, $125), an artist can use the electronic equivalents of pen, palette and airbrush to create almost anything desired. *Easy 3-D* (Enabling Technologies, $99) permits creation of three-dimensional objects that can then be rotated, resized and manipulated. The *MacTablet* (Summagraphics, $550) provides a stylus and electronic drawing tablet, making it easier to trace items or draw new ones freehand.
- **Data.** Publishers can use the Mac to help monitor the bottom line. Programs such as *Helix* (Odesta, $395), *Omnis 3* (Blyth Software, $495), *OverVUE* (ProVUE Development, $295) and *Jazz* (Lotus Development, $595), can help maintain a subscriber or advertiser list that can be organized according to such factors as names, mailing area or promptness of payments. Several popular spreadsheet programs such as *Excel* (Microsoft, $395) do similar work as well as calculate profit or loss.
- **Utilities.** *Switcher* (Apple, $20) helps a journalist work on several programs at once by quickly switching from one to another. So-called terminal emulation software such as *MacTerminal* (Apple, $99) gives Mac the language skills needed to talk via modem with other types of computers and with databases. *Tempo* (Affinity Micro Systems, $99) offers macro commands, which record any sequence of keystrokes or mouse operations. That sequence then can be played back by striking just one key. *Copy II Mac* (Central Point Software, $40) permits copying of software onto other diskettes or hard disks.

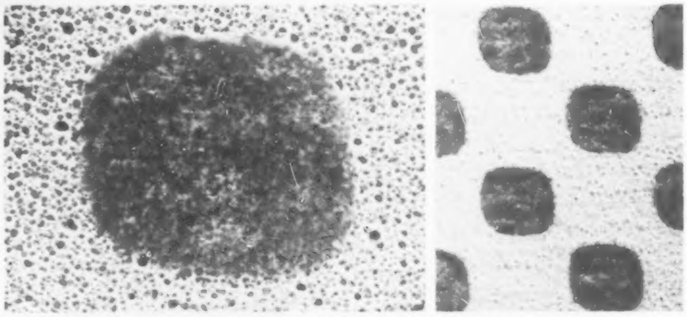
There are 250,000 reasons in this photo for using Hoechst Newsplate

They add up to superior dot reproduction. Dots with *sharp*, well defined edges, produced as a result of the plate's electrochemical grain.

Newsplate S is easy to live with. Process it in your existing processor with a developing lacquer. There's no cross-contamination of chemicals.

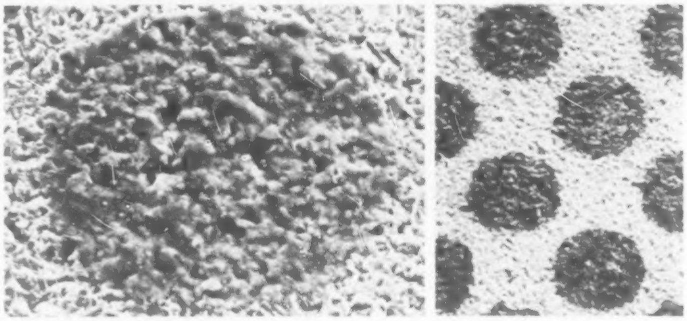
On the press, you can depend on Newsplate S for fast rollup, better ink/water balance and built-in capacity for runs up to 250M impressions. The quality of these plates gives you "room to improve" in the pressroom.

Newsplate S negative-working presensitized offset plates are manufactured in the U.S.A. by American Hoechst Corporation.



MAGNIFIED 400 TIMES **MAGNIFIED 100 TIMES**

Hoechst Newsplate S produces sharp well defined dot edges.



MAGNIFIED 400 TIMES **MAGNIFIED 100 TIMES**

Typical wipe-on plate dot edges begin to grow.

COVERING FOREIGN NEWS

Going beyond 'coups-and-earthquakes' reporting, newspapers and the wires are using various approaches to increase the breadth and depth of their foreign coverage

BY MARCIA RUTH
presstime staff writer

The dense, white cloud settled ominously over the squalid huts surrounding the Union Carbide plant in Bhopal. By dawn, thousands of people clogged the roads leading from this little-known Indian city of 800,000; hundreds of others lay dead or too weak to move.

Within hours, the wire services had alerted most of the world's newspapers to what is now known as the worst industrial disaster of modern times.

Within days, journalists from major newspapers and national television networks descended upon Bhopal, many brought in quickly from bureaus in places like New Delhi or Tokyo.

And within the week, 27-year-old John D. Kimelman of the Charleston (W. Va.) Daily Mail found himself holed up in Bhopal's Hotel Rajdoot, the only American among turbaned Sikhs, writing the "biggest story of my life."

As the only reporter there from a paper with no foreign bureaus and no foreign correspondents, Kimelman remembers how he learned on the job to use the unfamiliar telex at the Associated Press office and find interpreters on the street as best he could. Reflecting a trend to make foreign news more relevant to readers, his publisher had sent them to Bhopal because the only other Union Carbide plant producing the deadly methyl isocyanate gas was situated less than 10 miles from Charleston.

This sequence for coverage of foreign news by U.S. daily newspapers is fairly common: First alert on fast-breaking stories by the major wires, who as AP veteran Nate Polowetzky says are "always there"; saturation coverage by large dailies with overseas bureaus or extensive travel budgets; and, increasingly, selective attention by smaller papers working a local angle.

As all these layers of attention reflect, reader interest in foreign news is rising. A 1984 study commissioned by the American Society of Newspaper Editors showed readers have become "a more sophisticated, cosmopolitan group" demanding that even their local papers be "complete," with a mix of local, national and international news.

AP

AP Rome Photo Editor Gianfranco Jacopozzi got a chance to chat with John Paul II during the pontiff's 1984 trip to Switzerland.

Advances in telecommunications have made the movement of international copy and pictures to the news desk as rapid as that from the local courthouse. With virtually all daily papers subscribing to AP or United Press International, and many also to supplemental wires, the volume and variety of foreign news have mushroomed.

And just as they have done on the national scene with their instantaneous coverage of breaking news, electronic media have pushed newspapers toward a more detailed, more analytical approach to foreign news.

"You have got to assume going in that people who are going to read your story already know what it says. They know the news — the hard part of it," says Walter R. Mears, AP vice president and executive editor. "You have to be able to go past what they can see in the abbreviated accounts they are going to get from radio and television and be able to tell them more."

So beyond the traditional "coups and earthquakes" reporting where hundreds of journalists suddenly appear, write their stories, then disappear until the next "hotspot" explodes, a cadre of specialists is providing in-depth reports that tell not only what happened but also what an international event means to Main Street USA.

"The typical foreign correspondent today is not the here-today gone-tomorrow, hard-drinking adventurer" often featured in novels and on film, says Dana Bullen, executive director of the World Press Freedom Committee and one-time foreign editor of the now defunct Washington Star. "Many have graduate degrees in international subjects and have learned the languages of the areas they will cover. In more and more cases, they are well-trained, culturally aware, sensitive students of the people and situations they will write about," he says.

Not only have foreign correspondents for U.S. newspapers become more astute, their ranks have swelled in recent years—particularly in the developing nations of the so-called Third World. A March presstime survey of the 100 largest-circulation U.S. dailies, plus The Christian Science Monitor and The Washington Times, found that 23 of the papers now have a total of 186 foreign correspondents. All of the major dailies with correspondents overseas report that they have increased their contingents in the 1980s, and there are more correspondents in the Third World than ever before.

But the cost of operating a foreign bureau can easily exceed $100,000 per year, so many other U.S. dailies take lesser steps to obtain special reports from other countries:

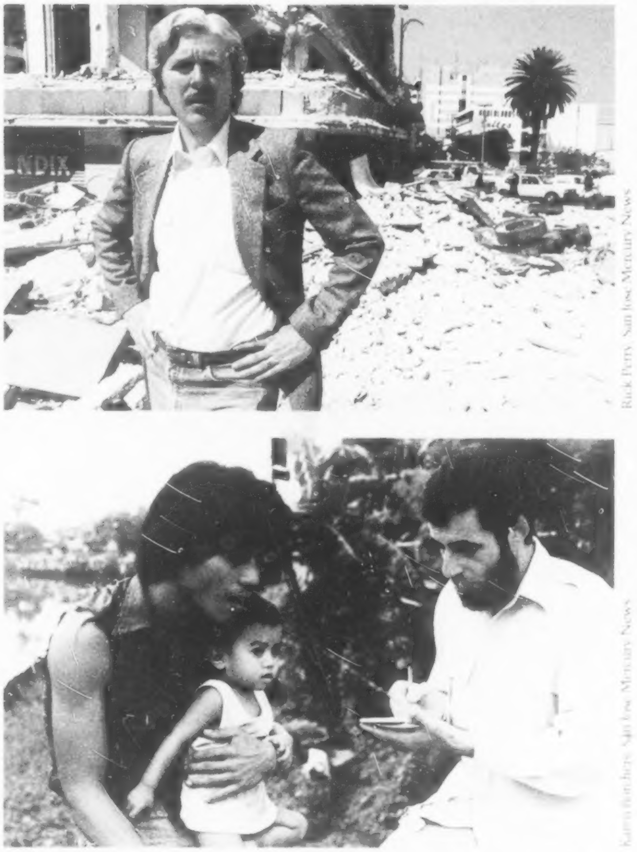
- Mid-size papers are expanding stringer networks or sending reporters and photographers on more special projects abroad.
- Newspapers in cities with large ethnic populations, and those located near Mexico or Canada, are expanding coverage selectively beyond the U.S. borders.
- Some small or mid-size dailies are flying reporters and photographers to places thousands of miles away when a special circumstance with a strong local tie-in arises, such as the gas leak in Bhopal.

For newspapers of all sizes, the endless and seemingly growing flood of foreign news is posing a challenge for news desks, as editors must select only a small portion of available copy for each day's newshole.

In the past, U.S. newspapers' coverage of foreign news has been criticized on two main counts—that there is not enough of it and that countries most different from the United States (particularly the developing world) are treated superficially.

"This is unfortunate, because the average reader is not seeing the world in proper perspective. His home town appears much larger than all of Europe, Asia and Latin America combined," says Richard Leonard, associate editor of The Milwaukee Journal and immediate past president of the International Press Institute.

There are no comprehensive figures on the amount of foreign news carried by U.S. newspapers. A 1985 study for UNESCO charted the percentage of "general news" space—news columns, not the total newshole—that five major dailies devote to international affairs. It found a range from 41 percent in The Washington Post to 19 percent in the Daily News of New York. Also counted were: The New York Times, 39 percent; Minneapolis Star and Tribune, 30 percent; and Los Angeles Times, 30 percent.



Rick Perry, San Jose Mercury News

Karen Borchers, San Jose Mercury News

Patrick Oster (top), San Jose Mercury News' Mexico City correspondent, stands amid rubble from last year's earthquake, and the newspaper's Tokyo correspondent, Lewis M. Simons, interviews Filipinos in Manila.

But Donald L. Shaw, professor of journalism at the University of North Carolina at Chapel Hill, who helped compile the study, cautions it was based on "pretty atypical newspapers." He estimates an average for all U.S. dailies of 15 to 20 percent of news columns.

What is credited with bringing more and better foreign news to many U.S. papers lately is the growing awareness that foreign news has relevance for U.S. readers, even when there is no connection as obvious as the one between Bhopal and Charleston.

Panamanian journalist I. Roberto Eisenmann Jr. observes: "I think when it (coverage of Latin America) was really poor, it was basically because there were not really interesting stories that affected American interests. What's interesting about poverty and oppression if it doesn't affect you?" asks Eisenmann, publisher of La Prensa in Panama's capital city. But as more people began to realize "that poverty and revolution equal immigration to the United States," he says, the wire services and U.S. newspapers responded with additional, permanent correspondents on the scene and bigger play in the news columns.

Even when editors doubt that increasing foreign news is among their readers' top priorities, some have taken a stand that world realities simply demand more coverage. Whether it takes the form of opening foreign bureaus with full-time correspondents or publishing special sections based on occasional trips abroad, their rationale is the same.

"Running an eight-part series on the problems of Africa is not going to increase the single-copy sales in the racks," says G. Woodson Howe, vice president and editor of the Omaha World-Herald, who concedes that those "who want to read a sophisticated paper that has a global outlook are probably with us anyway."

"But it's a duty, I think. We have to keep our readers well-informed. It's an interconnected world, and things that happen in Europe and Asia and the Middle East certainly have a quick effect in Nebraska."

C. K. McClatchy, president and editor of McClatchy Newspapers, which recently opened a bureau in Mexico for its group of mostly California-based papers, puts it this way: "If you start to figure out the cost of opening a bureau overseas in a place like Mexico and try to compare the number of stories on a strict dollar per story value, you won't do it. You have to decide it's worth it because it's something you ought to do."

> *The "new mandate" is to produce additional stories that "give meaning to events."*

WIRE FOUNDATION. For virtually all newspapers, the baseline of foreign coverage is the wires.

Beginning in the critical year of 1848 when political upheaval swept major European capitals, six New York publishers formed the Associated Press as a cooperative to gather foreign news for less than it would cost each paper on its own. Though fiercely competitive at home, their joint venture set a new tone for journalism at the time, demanding that at least the foreign news transmitted to all six papers be free of whatever bias might appear later in their own, contentious publications.

In 1907, E.W. Scripps founded United Press Associations, which later became United Press and then merged with International News Service in 1958 to form United Press International.

UPI, subscribed to by about 700 U.S. newspapers, is the world's largest privately owned wire service. AP—now owned by about 1,500 U.S. newspapers—is the world's largest wire cooperative.

In addition to the basic wires, many large newspapers subscribe to "supplemental" services such as those offered by The Washington Post and Los Angeles Times, The New York Times, Knight-Ridder Newspapers and Dow Jones. A few of the largest dailies also buy foreign-based wires such as Britain's Reuters and Agence France Presse.

AP has about 400 full-time reporters, editors and photographers working abroad, three-fourths of whom are citizens of countries other than the United States. Its European-based staff has remained fairly stable over the past 10 years; most of its nearly 45-percent growth in the number of Americans sent abroad has been to posts in Third World countries.

UPI's foreign contingent consists of about 200 reporters and editors, but a spokesman said figures are not available on how many are U.S. citizens or on how today's complement of foreign correspondents compares with those of previous years.

Both wire services view their coverage as worldwide 24 hours a day. They augment their full-time staffs with thousands of stringers native to particular areas.

Wire reporters seeking foreign assignment must first prove themselves in domestic bureaus, then study the language and history of the region to which they will be assigned. Increasingly, they are being asked to produce not only breaking stories but also more complex forms of background, perspective and analysis. (See essay, p. 42.)

As Polowetzky, assistant general manager for foreign news, puts it, "The AP will always cover 'the fall of the sparrow.' That's our job. . . ." The "new mandate," he says, is to produce additional stories that "give meaning to events."

"People always ask me if there is a decline of foreign news," says Polowetzky. "And I always say, 'Yes, I think there is a decline in the number of foreign-dateline stories, but not a decline, and I think actually an increase, in the space devoted to foreign stories.' " He says that unlike the early 1950s when he became a foreign correspondent, newspaper editors today "will

Canadian Newspapers Also Expand Global Coverage

Over the past half-decade, Canadian daily newspapers—like their counterparts in the United States—have also increased international coverage, particularly in the Third World. The 10 with the largest circulations now have 22 correspondents in 20 foreign bureaus, and more expansion is planned this year.

Several of the country's newspapers "have become more conscious of the need for more Canadian interpretation of the news," says Joseph Hall, foreign editor of The Toronto Star. "More and more in the last few years, we have come to recognize that Canada's attitudes do not always coincide with the United States'."

Complementing longstanding bureaus in London, Washington, D.C., and Peking, The Globe and Mail of Toronto has added four bureaus since 1980: Mexico City, Tokyo, Moscow and Harare, Zimbabwe.

The Toronto Star's additions to the requisite London and Washington bureaus are even more recent—Tokyo and Johannesburg in the past two years, with Moscow coming later this year.

Toronto's third daily, the Sun, will set up its first foreign bureau in London this spring.

Southam Newspapers, which has maintained at least one foreign correspondent since the 1920s, adds and relocates bureaus to follow the shifts in world events. Following the establishment of bureaus in London and Washington, major expansion began in the 1960s with Paris, then the Far East and Africa in the 1970s, and the Middle East in the 1980s. Within these regions locations have also shifted—from Tokyo to Peking to Hong Kong in the Far East, and from Cairo to Nicosia, Cyprus, in the Middle East.

La Presse, a French-language paper in Montreal, has maintained bureaus in Paris and Washington for many years.

These newspaper bureaus are in addition to the coverage provided by the Canadian Press wire service.

Like the Associated Press in the United States, CP is a news cooperative. Unlike AP, however, CP has a relatively small foreign operation for its 106 member newspapers, with eight reporters assigned full-time abroad: three in Washington, two each in London and New York and one in Tokyo. Their copy supplements what comes into CP from AP, Reuters and Agence France Presse, which CP repackages for Canadian readers.

"Major expansion is not in the works," says CP President Keith Kincaid.

devote a full takeout (or) a full page to one story and throw away those two, three, five, six stories that really don't mean anything."

The global reach of the wire services enables them to wrap up the intercontinental ramifications of a major event. UPI Editor-in-Chief Maxwell McCrohon cites, as an example, an oil price story that otherwise might be "handled in bits and pieces." Says McCrohon: "You'll get a news agency report on OPEC prices. Then we may get a follow-up on the effect on American oil prices. And then we may get a story out of Texas on the falling prices of oil leases. And then there may be some visible effect on Japan, and our Tokyo bureau might send us a piece. . . . Then maybe you get one from Brazil. So rather than let it happen that way, what you have to do is recognize the importance of the story . . . and then begin to orchestrate."

AP

Massai warriors bargain for a damaged tire with Munich AP photographer Dieter Endlicher, who changes a flat while on assignment in Kenya.

For the oil story, key UPI bureaus were alerted to file on the impact of changing oil prices in their areas. Then client papers were notified of the scope of the reports and of the schedule for moving the entire package of articles, photographs and other graphics.

With this change to a more comprehensive approach to foreign coverage, the word "feature" has taken on a new meaning, McCrohon notes. "It used to connote 'soft.' Now I would describe it as 'planned' coverage."

In a similar way, AP assigned a reporter to prepare a comprehensive series on terrorism. "Twenty-five years ago, we probably wouldn't have done that," says Executive Editor Mears. "We would have covered the events that comprise terrorism, but we would not have detached somebody for an extended mission to write a very penetrating series."

Although neither AP nor UPI keeps detailed records of copy use by newspapers, they both note that dailies are running a lot of these "features" or "background" pieces as op-ed page analysis and occasionally as special sections. For instance, on Feb. 3, The Sun in Lowell, Mass., ran a full-page of articles prepared by AP on the background of what soon turned into a major political upheaval in Haiti. Last year, for the 10th anniversary of the end of the Vietnam War, The Indianapolis Star based most of a special section on copy prepared by UPI.

BUREAU BUILD-UP. As the wires seek to provide an improved international report, some newspapers are taking steps to expand their own foreign coverage.

For The New York Times, which has had a large international component from its beginnings, recent increases in foreign staff have been incremental—focused on Third World countries.

For the Los Angeles Times, in contrast, there has been a rapid build-up over two decades. In 1960, the paper had one overseas correspondent; today it has 24 in 23 bureaus throughout the world.

For Knight-Ridder Newspapers, full-time foreign correspondents are a phenomenon of the last half-decade. In the late 1970s, the company declared foreign bureaus a priority and began to fund eight—two assigned to each of its four largest dailies: The Philadelphia Inquirer, the Detroit Free Press, The Miami Herald and the San Jose Mercury News. In the past five years, these papers individually have established an additional 10 foreign correspondent positions.

The growth pattern, which also applies to a number of other U.S. dailies and newspaper groups, runs counter to a 1969-75 decline in the number of journalists working abroad for all U.S. media. The 23-percent decline was reported in a study by Associate Professor Ralph E. Kliesch of the Ohio University School of Journalism. (The study is to be updated this year.) In 1979, a U.S. State Department study reported a leveling off in this number.

The geographic distribution of today's U.S. newspaper correspondents also differs markedly from a decade ago. Comparing presstime's March survey of newspaper correspondents with Professor Kliesch's 1975 census of all media, the indication is that there has been a major shift away from Europe and a greater emphasis on Latin America.

The comparison shows a decline in the European presence from 54 percent to 31 percent, while in Latin America it has increased from 10 percent to 23 percent. Other shifts include increases in Africa from only a "token" presence to 8 percent, in the Middle East from 8 percent to 12 percent, and in Canada from 5 percent to 8 percent. Conversely, correspondent presence in Asia appears to have declined from 23 percent to 18 percent.

Tracking correspondents geographically is an imprecise practice, however, as most tend to travel frequently from their bases for coverage in other parts of the world.

The advantages of having one's own people reporting from abroad do not come cheaply. James I. Houck, managing editor of the morning edition of The Baltimore Sun, estimates the annual costs for operating a one-person foreign bureau ranges from $98,000 to $172,000, with an average of about $140,000, including salaries.

A key variable, he notes, is the amount of travel required of the correspondent to cover an assigned region and fluctuations in monetary exchange rates. Currently, the expense of the Sun's foreign coverage, including seven one-person foreign bureaus, accounts for about 8.8 percent of the total editorial budget, Houck says.

The Sun and The Boston Globe are examples of independently owned papers with a firm belief in the need for foreign bureaus, but that belief was much later in coming to the Globe.

The Sun opened its first foreign bureau in 1924. "We still think having someone in the area, a resident . . . picking things up by osmosis, definitely has its rewards," says James S. Keat, foreign editor. For the past few years, the paper has supplemented its established bureau coverage with annual special reports. In 1985, it sent a science reporter down the Amazon River, tracing the impact of what Keat terms "the last of the untouched rain forests" on the world's climate and resources.

Mike Lloyd, The Oregonian of Portland

Oregonian reporter Holly Danks appears to have no trouble getting close to sources in an Ethiopian feeding camp.

The Globe is relatively new to the business of foreign correspondence, having opened six bureaus in the past three years. "Obviously, with six people, we don't expect them to match the wires," says Foreign Editor Katherine Tolbert. Associate Editor H.D.S. Greenway adds, "It gives us a chance to direct what we think is the right mix for our readers . . . or examine a facet we don't think anyone else is examining properly." For example, during the recent election in the Philippines, Globe correspondents were asked to keep tabs on a Massachusetts member of the U.S. inspection team and to file a report on the historic role of the Roman Catholic Church in opposing former President Ferdinand Marcos.

Another advantage of having foreign-correspondent slots is that many stateside reporters find them tantalizing, Greenway says. "If you want to attract and keep world-class talent, you probably ought to have more for them to do than cover the city of Boston."

Augmenting the work of the Globe's foreign bureaus are two "airport" correspondents, who cover Latin America and Africa from Boston. "When you're going to cover a huge area, a person is going to need a base from which to work," notes Tolbert, but that base need not be on another continent. "So it makes almost as much sense to base them in Boston where in the downtimes we can have close contact in the newsroom."

Not surprisingly, the U.S. newspaper with the largest network of foreign correspondents—currently 35 assigned to 27 bureaus—is The New York Times. Its emphasis on comprehensive international coverage is legendary. From Executive Editor A.M. Rosenthal on down, the newspaper's editorial leadership is made up largely of journalists who served as Times correspondents in world capitals.

With such an expansive foreign staff, the Times can encourage its correspondents to range far beyond topical news stories. Foreign Editor Warren Hoge says he tells them: "Everything you see and do and eat is something we can write about." Thus, in addition to covering day-to-day events and providing background for breaking news, they are asked to lend international perspective to all parts of the newspaper—business, science, the arts, the Sunday magazine, etc.

Eschewing stringers, the Times relies on its foreign contingent plus domestic reporters who sometimes travel to other countries on assignment, with occasional use of the wires Hoge says. "We move very fast here. There are very few times I couldn't get someone there the same day."

Some other newspaper organizations use stringers to supplement the work of bureaus. For example, the Atlanta Journal and Constitution—whose parent company, Cox Newspapers, provides seven full-time foreign correspondents—have a network of 10-15 stringers.

"While I have to say the 'majors' are better at it than my people, they are sometimes late, and there are things you want that are most easily done with our own people," says J. Randal Ashley, foreign editor of the Constitution.

Ashley says his paper had one of the earliest reports of Marcos opposition leader Benigno Aquino's intention to return to the Philippines in 1983; it was filed by a Filipino journalist working as a Constitution stringer.

ALTERNATIVES VARY. While the bureau build-up has been substantial among a few U.S. dailies, many others equally determined to upgrade foreign news have balked at the high costs of having reporters stationed abroad.

"We're not big enough to have bureaus around the world or even a single bureau," says Omaha's Howe, who also discounts the use of "correspondents that file occasionally." The World-Herald editor says "that doesn't work out very well. Communications are very difficult, and what they file is often opinion or soft feature pieces."

Instead, like most papers, the World-Herald depends "almost entirely" on major and supplemental wire services for daily coverage of world news. "We're looking for breaking stories supplemented by soft stories and enterprise stories that tell how people live in other lands," says Howe. "After we've gone through breaking stories, we look for what's interesting to exporters or people traveling abroad . . . but would probably favor a really readable story about the people of a country than the mechanics of government."

In addition, the Omaha paper has adopted a pattern popular with a number of papers—supplementing daily coverage with special series or separate sections requiring foreign travel by domestic reporters. The cost "may not seem very much to The Boston Globe and The New York Times," says Howe, "but we could have hired another reporter last year if we had forgone" the most recent such project.

One of Omaha's three special sections on international matters over the past four years concerned overseas markets for

Famine Worsens
Contras Seek Aid
Spain Backs NATO

Midwestern agricultural products such as grain and beef. The other two—on the roots of famine in Africa and the population explosion in Latin America—represent "the kind of cosmic story that ought to be done," he says.

Among papers producing special international sections, hunger was indeed a popular topic in 1984-85. Many were produced by U.S. dailies without a regular foreign presence and bore such titles as "Death in Another World" (The Sacramento Bee), "Politics of Hunger" (Florida Times-Union, Jacksonville) and "Small Victories" (The Oregonian, Portland). The Portland section was an extension of a story on the humanitarian efforts of a medical team from the Pacific Northwest that went to drought-stricken Ethiopia.

Taking an approach somewhere between having full-time correspondents abroad and sending stateside reporters on occasional foreign trips, the St. Petersburg Times has a globe-trotting foreign editor who operates from St. Petersburg. Wilbur G. Landrey, who once held the same title at UPI, writes columns or analytical pieces several times a week.

Although Foreign News Editor Jack Payton considers the wires "the backbone" of the Times' international coverage, he stresses the value of Landrey's articles to the average reader who "is not an employee of the State Department or a think tank." Particularly popular is a question-and-answer format in which Landrey explores issues readers might have difficulty understanding.

Not sharing Omaha's aversion to stringers, the Times expanded Landrey's operation this year by establishing a network of 15 stringers in various countries. Often working for more than one paper, these free-lancers may supplement his reports with sidebars or provide different accounts of widely covered breaking news.

Unlike Omaha, where world news rates a daily page, St. Petersburg devotes most of its first section to national and international news, because much of the population is not native to Florida and therefore lacks a traditional attachment to local coverage.

Another paper with a home-based foreign correspondent is The Seattle Times. The reporter, assigned full-time to the "Pacific Rim," has produced three special sections in nine months.

Even among the largest papers and groups, there is a variety of alternatives to foreign bureaus.

For example, the nation's largest general-circulation daily, the Daily News of New York, sends reporters abroad only occasionally on big stories, says National Editor John F. Sims. Mindful of The News' role as a "cityside" paper, "we don't really feel our readers look to us as a newspaper of record, so that allows us a lot more latitude," Sims says. In the search for "good reading stories," the paper might give preference to a story "with a local angle" such as "a New Yorker in trouble in Nicaragua."

Although The Plain Dealer in Cleveland also occasionally sends staff members on international trips, National Editor Robert J. McAuley observes: "From perhaps a selfish, prestigious point of view, sure you would like to have bureaus. But from a practical point of view, the wire services do a fine job. From a prestige standpoint, sure we'd like to have someone in London, in the Middle East, in Moscow and in Japan. But as a practical matter, I don't lose any sleep over not having those bureaus."

Despite its status as the nation's largest newspaper group, Gannett Co. also does without foreign-based correspondents. "Our aim is to show how world events, be it an ousted leader in Haiti or an election

Paul Rubin, Sierra Vista Herald

Photographer T. J. Lynch of the Sierra Vista (Ariz.) Herald visits a Nicaraguan refugee camp as part of that newspaper's project on Central America.

8,000 miles away, affects the USA reader," says Nancy Monaghan, managing editor/news of USA TODAY. For example, Gannett coverage of the Philippine election included a report on the thoughts of Filipinos living in New York, San Francisco and Los Angeles. In addition to the wires, Gannett relies on three Washington-based staff writers for foreign news, plus teams assembled from time to time to cover major events or to handle special projects for USA Today and Gannett News Service.

At most smaller papers, foreign news coverage seldom achieves priority status. Most take the position expressed by an editor who describes his 60,000-circulation daily as "pretty typical for a newspaper our size … We give most of our attention to local and regional issues. We pay less attention to foreign news than I think we ought to, but according to our readership surveys, we provide as much as our readers want."

The Seattle Times has developed a system of copy desk editors who have international "specializations."

A few, however, are more aggressive.

"We're not The New York Times, but there is no reason a small town editor has to be provincial," says Loren Ghiglione, publisher of the Bristol (Conn.) Press and of The News in Southbridge, Mass. Prior to buying the Bristol daily last year, Ghiglione built a reputation for including a great deal of foreign news in the 7,375-circulation Southbridge paper.

One thing daily newspapers of all sizes have in common is dealing with the torrent of foreign stories arriving in the newsroom—principally from the wire services. The volume is far greater than even the biggest papers can accommodate. To aid in the process of selecting which stories to run, The Seattle Times has developed a system of copy desk editors who have international "specializations."

Using editors who specialize in processing copy from certain geographic areas has proved far superior to operating with "people who are simply wire handlers," says Assistant Managing Editor Alex MacLeod.

It has helped the Times augment its regular foreign news with a daily "Close-up"—a half page of foreign news analysis from a wire service, the Times staff or a combination of both. Illustrating the stories with Times-produced graphics, "we try to do things with a high impact," says MacLeod. "If you dribble things in here and there, it just doesn't have the same effect." His newspaper's goal, he says, is to "go at something with a plan and pull it all together and give (readers) something they can put their arms around and say, 'Yeah, I understand.'"

SPECIAL SITUATIONS. Specialization is also the watchword for foreign coverage at newspapers serving large ethnic communities or publishing near an international border.

With about 50 percent of Miami's population of Hispanic origin and Miami's emergence as the leading U.S. gateway to Latin America, The Miami Herald concentrates heavily on news from that region. In addition, it circulates an international English edition in Latin America and a Spanish-language version, El Miami Herald, in Miami.

"There's lots of debate on whether we have enough European news … and I would argue that we don't," says Foreign Editor Mark Seibel. "We don't run as much as we might run in Philadelphia. We tend to be more focused on Latin America."

The Herald has five correspondents covering Latin America regularly. One reports on Central America from El Salvador, another on South America from Brazil. Three more live in Miami

Organizations Offer Help for the Foreign Beat

Some organizations are acting to upgrade the skills and perceptions of newspaper journalists handling foreign news. For example:

- With funding from the Ford Foundation, Benton Foundation and Carnegie Corp., the Sigma Delta Chi Foundation is sponsoring a two-year program to demonstrate the relevance of Third World news to U.S. newspapers.

After a pilot program at The American, a 24,274-circulation daily in Hattiesburg, Miss. [**presstime**, June 1985, p. 62], the project's director is now preparing a book with model stories collected from a variety of newspapers. It will be used by the SDX Foundation to conduct workshops for reporters and editors next year.

- Concerned about U.S. newspapers' portrayal of Third World countries, particularly in Africa, and about the small number of minority journalists with foreign news experience, the National Association of Black Journalists sponsored an African trip last summer.

Former NABJ President Mervin Aubespin, associate editor/development for The Courier-Journal and The Louisville Times, says the goals were to improve coverage of Africa, to meet African journalists and to help black U.S. journalists get overseas posts.

- The American Society of Newspaper Editors and the National Council of Editorial Writers have sponsored overseas trips during the past few years.

"The main advantage of having a (formal) program is you are more likely to get a major figure to meet with you," says Clarke Thomas, associate editor at the Pittsburgh Post-Gazette, who organized NCEW's first trip in 1980. It included an interview with then-Vice Premier Deng Xiaoping.

- Other U.S. journalists are involved in programs such as the Jefferson Fellowships and the seminars for senior editors at the East-West Center in Hawaii [**presstime**, Jan. 1986, p. 46].

Aimed at "gatekeepers," the three-day seminars offer a chance to meet with experts in Asian affairs, while the eight-week Jeffersons include Asian travel.

"(Editors) are the ones that need to have a better understanding of what's going on, so they can say, 'There's an important story' when they see one," says William J. Woestendiek, executive editor of The Plain Dealer in Cleveland, who attended the East-West Center workshop, then encouraged Associate Editor John Clark to take a Jefferson Fellowship.

International coverage in the St. Paul Pioneer Press has "about doubled over a three-year period" since Editor and Vice President John R. Finnegan participated in an East-West Center seminar on Pacific Rim issues.

but travel throughout the region.

Although at the other end of the spectrum in terms of size, the New Bedford (Mass.) Standard-Times faces a similar situation. Half of New Bedford's population traces its ancestry to Portugal or to the Portugese-speaking islands of the Azores or Cape Verde. The Standard-Times attempts to report developments in all three areas through a mix of staff, stringers and special arrangements with the foreign desk at AP to cover such events as presidential elections and major celebrations.

For papers near the borders with Mexico or Canada, stories granted only a few inches in other parts of the country may rate big headlines. For example, the Jan. 11 front page of the Tucson Citizen carried this banner head: "Peso Tumbles As Prices Rise 63.7%"; the Feb. 19 business section of The Buffalo News declared: "Cash In on the Canadian Dollar Crisis."

Neither of those papers has what could be called "foreign" correspondents in the neighboring land.

"It's a lot easier for us to get to Sonora from Tucson than from Mexico City," so when a trip south of the border is merited, the Citizen dispatches someone from its newsroom, says Publisher Gerald Garcia. On an ongoing basis, the paper covers in some detail Mexican politics and economics, as well as immigration and drug traffic emanating from Mexico and Central America.

The Buffalo daily retains several stringers in Canada who work full-time for Canadian papers.

Small dailies published along a border also can tackle foreign issues. The 5,531-circulation Sierra Vista (Ariz.) Herald last year sent three reporters and a photographer to Nicaragua, Honduras and El Salvador for three weeks of news gathering. Upon their return, they produced three 12-page special sections.

EVOLVING APPROACH. The surge of interest in foreign news and its presentation by U.S. newspapers appears to be continuing, with no hint of a drop-off coming.

Most major dailies seem to have reached a plateau in the establishment of foreign bureaus and are developing complementary methods that will allow them to increase the amount and depth of foreign coverage. In this regard they are joining mid-size and [illegible] smaller dailies, which have made greater use of special coverage—flying reporters and photographers from home to foreign sites to go after stories of particular interest to their readers.

In addition, there appears to be no let-up in the search for additional ways to, as AP's Polowetzky puts it, "give meaning" to the news—more analysis of day-to-day events, more background pieces to place news in perspective, more creative use of graphics to make international stories clear to the average reader.

If developments in the last half-decade are any indication, the fact that more and more copy is available through wire services will not deter newspaper editors from also seeking more first-hand accounts of what takes place outside U.S. borders.

As Judith Clabes, editor of The Kentucky Post in Covington, puts it after an enthusiastic reception of a series she wrote on a recent trip to Southern Africa: "When somebody they know writes about these issues, I think they (the readers) pay more attention."

LIBEL UPDATE

Issues remain heated in legislatures, courtrooms

BY MARGARET GENOVESE
presstime staff writer

Libel remains a simmering issue in the United States, as evidenced by what's been going on in statehouses, courtrooms, newsrooms and other locales around the country. Once in a while, as happened in Oklahoma recently, it even boils over.

Frustrated by failure to get a law enacted that would enable libel defendants to recover legal costs when they prevail in suits, the Oklahoma Press Association looked around late last year for other groups with similar concerns.

It found plenty.

In December, more than 30 representatives from trade associations and professional societies across the state gathered in OPA's offices in Oklahoma City to discuss the possibility of making changes in "tort" law—the type of civil law under which a person may recover damages for an injury, or tort. Defamation, or injury to reputation, is a kind of tort.

By early this year, a 50-plus member coalition called "Oklahomans Against Lawsuit Abuse" was formed to draft legislation. And on Feb. 26, the Oklahoma House passed an amended version of the coalition's bill. The main benefit of the bill, as the newspapers see it, is that it would require courts to order losing parties to reimburse the prevailing party for legal fees if the lawsuit was found to be frivolous.

In most instances, it also would limit punitive damages awarded by juries to half of actual damages.

Although the House passed the bill overwhelmingly (89-10), Ben Blackstock, OPA executive vice president and spokesman for the coalition backing the measure, predicts an uphill battle in the state Senate.

An indication of the donnybrook ahead came in early March when the chief opponent of the bill, the state's trial lawyers association, invited consumer activist Ralph Nader to address the Senate in opposition to the bill. At a subsequent press conference, Nader pounced on OPA in general and Blackstock in particular for their leadership on the legislation. Press associations should restrict themselves to lobbying on First Amendment matters, he said. Blackstock, he added, "ought to be ashamed of himself" for lobbying to restrict the rights of injured people.

But OPA was not cowed.

"It's a progressive piece of legislation and that's why we're behind it," says Donn R. Dodd, OPA president and editor-publisher of the Claremore Daily Progress.

"Under Oklahoma law," Dodd notes, "if you are a defendant in a [libel] action and you win, you get nothing but the experience."

TREND TO TRIALS. More and more, the press is getting that "experience."

There is something of an anomaly in the status of libel litigation today. While some observers say there has been a decrease recently in the number of suits filed, the number of trials appears to be increasing.

"From all appearances, it seems that more cases are making it through the process—through trial," says Henry R. Kaufman, general counsel of the Libel Defense Resource Center, a New York City clearinghouse on libel information supported by media organizations.

"The increasing incidence of trials in an area that has been unique in its freedom from trials, unique in its ability to have cases resolved on pretrial motions, is one of the most important trends," agrees Robert D. Sack of the New York City firm of Patterson, Belknap, Webb & Tyler.

"Newspapers that went years without having a trial, The Washington Post, The Wall Street Journal and others, are now starting to have trials or look toward trials for a variety of reasons," says Sack, who is outside general counsel for Dow Jones & Co., which publishes The Wall Street Journal.

Not the least of the reasons for more trials, according to Sack, is "some receding" in media defendants' ability to have cases thrown out of court before trial on motions for summary judgment—requests that the complaint be dismissed because the plaintiff has not stated legal grounds to support the case.

In research that covered the period 1980-84, LDRC found that media defendants prevailed 75 percent of the time on motions for summary judgment. "The question becomes," says Kaufman, "are fewer [summary judgment motions] being made or, at least, are a lower percentage of cases dealt with on summary judgment?"

A case currently before the U.S. Supreme Court addresses the question of whether summary judgment will continue to be as available as it has been in the past. *Liberty-Lobby v. Anderson* could have a "vast practical impact" on whether public-figure libel cases proceed to trial or are dismissed, according to Washington, D.C., media lawyer Bruce W. Sanford. The court is being asked to decide whether a plaintiff must show

Hays (right) and Reynolds review complaint procedures.

J. Don Cook, The Daily Oklahoman

Nader criticizes the Oklahoma Press Association's lobbying for a bill to limit damage awards.

with "convincing clarity" that the defendant acted with actual malice in order to overcome a defense motion for summary judgment [presstime, Oct. 1985, p. 42].

Not all of the trial-related developments are anti-press.

New York City libel lawyer Floyd Abrams notes that several lower courts have held recently that journalists in libel cases may testify about what their sources told them without identifying those sources. "This is, in my view, a significant new development," says Abrams, of the firm of Cahill Gordon & Reindel. "The issue is by no means ultimately decided, but that does seem to be the direction that the cases are going."

CALCULATING THE COST. The increasing incidence of libel trials is significant for two reasons. The cost to defend a case that goes to trial is almost double that of one that ends in summary judgment. And once a case goes to a jury, media defendants lose 75 percent of the time, according to LDRC.

Paul L. O'Brien, U.S. general counsel for Mutual Insurance Co. Ltd. of Hamilton, Bermuda, estimates that the average cost to defend a libel case from conception through trial is $150,000—and that does not take into consideration the cost of appeals. On the other hand, one ending at the summary judgment stage costs a media defendant about $80,000, he says.

Whatever the extent of the legal proceedings, "It is horrifyingly expensive to litigate," observes LDRC's Kaufman.

Kaufman recently received a grant from the Gannett Center for Media Studies to study libel defense costs. His findings will be presented at a June 13 center-sponsored conference in New York City titled "The Cost of Libel: Economic and Policy Implications." According to Center Executive Director Everette E. Dennis, the conference will be one of the first to focus on libel litigation's economic, rather than editorial, consequences.

To get a handle on why juries so often go against the media, and to recommend strategies to employ or to avoid, LDRC has conducted two attitude studies of jurors. These showed "that things aren't quite as bad as some people fear, but certainly not as good as we would like," says Kaufman, who reports that two similar studies are planned.

Writing last fall in the American Bar Association's quarterly Communications Lawyer, he explained: "The recent trial results and studies indicate . . . that juries are not inherently biased against the media in libel cases. On the other hand, the recent evidence shows that jurors are prepared to hold the media to a very high standard, despite the heavy burdens imposed on libel plaintiffs by the First Amendment. And once jurors find liability, they are perfectly prepared to enter heavy damage awards."

Although no other state press association appears to have taken as outspoken a role as OPA in pushing legislation to cap damage awards, others are getting involved in so-called "tort reform" efforts, too. For example, the South Carolina Press Association is supporting a bill to put a $250,000 cap on punitive damages. The Wisconsin Newspaper Association recently told a state manufacturers' association looking into limits on damages that it is interested in such efforts. And the West Virginia Press Association has associated itself with a coalition to promote tort reform legislation.

In addition, the Executive Committee of the LDRC has authorized an examination of tort-reform efforts. "We just want to be sure that these reforms, if they are undertaken, don't leave us out," says Kaufman.

> *"Things aren't quite as bad as some people fear, but certainly not as good as we would like."*

On the federal front, an interagency task force has suggested tort-reform measures and various tort reform bills have been introduced in Congress.

HANDLING COMPLAINTS. ANPA Vice President/General Counsel W. Terry Maguire considers improvement in complaint-response procedures to be "the most significant window of opportunity" for newspapers in the libel arena.

"I think it's an area in which there would be a high rate of return in response to the amount of effort and attention devoted to the issue," says Maguire. He says he doesn't believe "that all newspapers have developed procedures for dealing adequately with editorial complaints."

A recent study by three professors at the University of Iowa, in which 114 libel plaintiffs were interviewed, bolsters this belief.

"The manner in which media publishers deal with plaintiffs following publication unnecessarily fosters litigation," concluded the Iowa Libel Research Project. "The media, therefore, have some self-examination to do."

The Iowa researchers recommended ways newspapers could improve their complaint-response procedures, including insisting on courtesy in dealing with complaints (see story, p. 47), assigning responsibility for handing complaints to a person who is not responsible for news coverage, developing written policies and procedures for handling complaints and "making sitting on other than a frivolous complaint a firing offense."

Two newspapers that have recently adopted more formal procedures for handling complaints are The Press-Enterprise of Riverside, Calif., and the Des Moines Register. Both were influenced, to some degree, by the Iowa study.

"We think that a reader who is complaining about the accuracy of our paper is doing us a favor, and we want to treat him that way," says Howard H. (Tim) Hays, editor and publisher of The Press-Enterprise.

Under the new procedure, outlined in the paper's handbook for employees, Associate Editor Bruce Reynolds fields all initial complaint calls, visits or letters. He then confers with the appropriate managing editor who initiates a fact-checking process to determine what, if any, action should be taken by the paper. If a complainant deals directly with a reporter, the reporter must tell his or her supervisor immediately and write a follow-up memo with details.

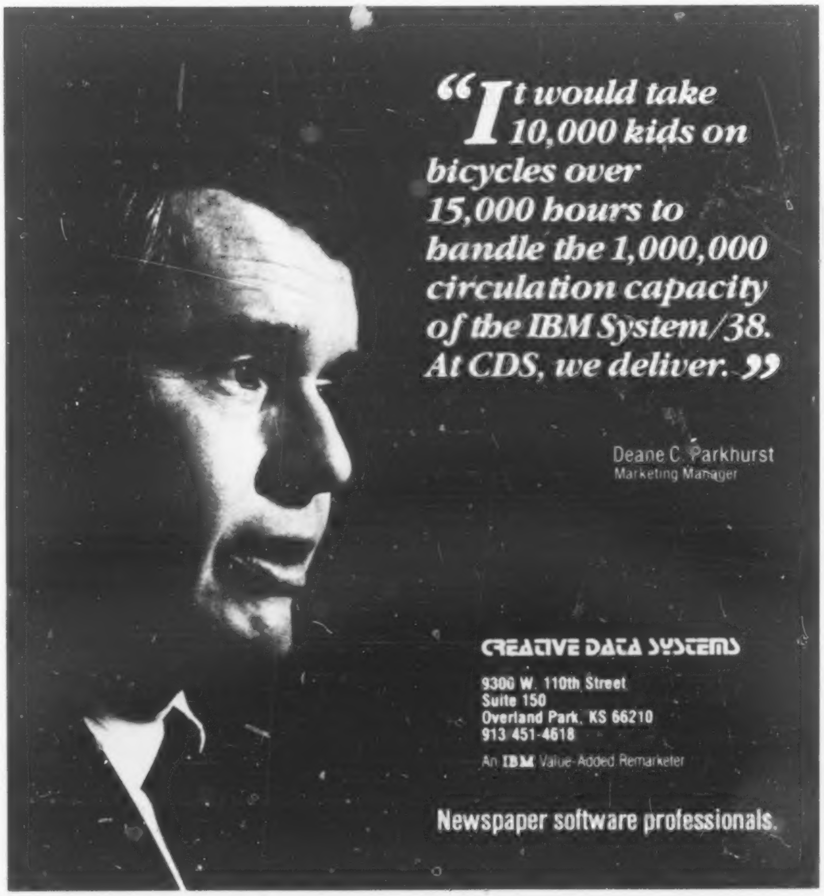
The handbook advises: "For many people, calling an institution like the newspaper is a stressful experience; a tone of voice, impatience or defensiveness can easily be interpreted by them as hostility, a stone wall."

A similar procedure is in place in Des Moines, according to David R. Witke, deputy editor. When a reporter receives a complaint, it is immediately reported to the supervising editor who then discusses it with the managing editor.

Complaints that cannot be resolved through discussions between the reporter and editors, or that involve a matter of newspaper policy, are referred to Witke. If it is a complaint that he believes may lead to a law suit, Witke consults with Editor James P. Gannon.

The new, unwritten, complaint procedure stresses three basic principles, says Witke: "Be courteous, be cautious and make sure that your boss knows about it."

The findings of the Iowa study will be the subject of a conference June 5-6 at the Law School of the College of William and Mary in Williamsburg, cosponsored by ANPA and the Institute of Bill of Rights Law.



"It would take 10,000 kids on bicycles over 15,000 hours to handle the 1,000,000 circulation capacity of the IBM System/38. At CDS, we deliver."

LITIGATION ALTERNATIVES. The notion that there may be less expensive alternatives to libel trials also is beginning to get a look.

The people involved in the Iowa Libel Research Project, for example, are proposing that alternatives to litigation be tested. They have a grant application pending before the John and Mary R. Markle Foundation, which supported their initial study.

Congress also is looking into alternatives. The House Subcommittee on Civil and Constitutional Rights opened hearings in February on libel law problems and solutions, including a proposal by U.S. Rep. Charles Schumer (D-N.Y.) to create a new "cause of action" in the libel area. It would allow a public official or public figure to sue, not to recover damages, but to get a declaration that the publication or broadcast was false.

Libel experts, however, see little chance that such a bill will be enacted.

"I think that the question of what the libel law in this country is going to be is going to be determined by the Supreme Court and only by the Supreme Court," says James C. Goodale of the New York City firm Debevoise & Plimpton. "I don't think there is one chance in a million that Congress will pass a libel law," adds Goodale, who is chairman of the Practising Law Institute's Communications Law faculty.

Even fellow New York lawyer Abrams, author of a September 1985 article for The New York Times magazine titled "Why We Should Change Libel Law," does not think there will be a congressionally mandated change in the near future. "I would think it unlikely that that would occur until significantly more people are persuaded of the need for change," he says.

It may be, he adds, that a solution such as that proposed in the Schumer bill is "an idea whose time has not yet come."

"What would make it come?" Abrams asks rhetorically. From the standpoint of the press, he says, congressional action might become desirable if appeals courts upheld "a few libel suits that involved very substantial sums of money." From the point of view of plaintiffs, he adds, the day for congressional intervention might come "if they continue to lose public-official libel suits for failure to prove actual malice, and they genuinely desire a change to deal with reputation and not dollars." □

BUYING TELEPHONE SYSTEMS

The Best Advice Boils Down To This: Leave Nothing to Chance

(Editor's note: The following is the second article in a two-part series on planning for and buying an internal telecommunications system.)

The difference between education and experience perhaps is illustrated no more clearly than in the purchase of a new telephone system.

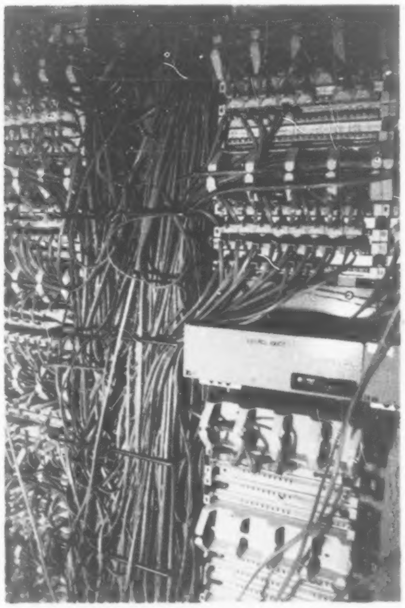
As management consultant William Oncken Jr. puts it: Education is what you get by reading the fine print, whereas experience is what you get from not reading it."

Thus, newspaper executives are well-advised to pay close attention to the myriad details in buying telecommunications equipment so as to avoid any short circuits.

The first step in procurement parallels that of the earlier "needs assessment" [presstime, March 1986, p. 20]. It is gathering preliminary information, starting with comments from all departments.

Experts say top management should call a meeting of department heads to explain findings of the needs assessment and to plan for the actual purchase of equipment. Comments and suggestions should be sought.

It may help to form a procurement committee to provide expertise on various facets of the project and to ensure that the acquisition is widely accepted in all newspaper departments. Possible committee members are the general manager, data processing manager, production manager, editor, finance manager, classified advertising manager and, of course, the telecommunications manager.



Installations can be quite complicated.

Each committee member should be educated to the task at hand and should become familiar with current technology. This education can take many forms: Seminars and training classes, articles in the trade press, preliminary vendor presentations and vendors' system description manuals are all good information sources.

It also is wise to consider professional consultation. Telecommunications is an increasingly complex field. Even organizations with large, in-house telecommunications staffs use consultants regularly to supplement their expertise. A good consultant earns his or her fee many times over in cost savings and efficiency.

Make clear that the newspaper environment differs from that of most businesses.

A word of caution, however: A poor consultant is worse than going it alone. It is imperative that a consulting firm's references be checked and double-checked, and that its experience closely matches the particular project. Newspapers have special needs that may be foreign to some otherwise good consultants. The ANPA Telecommunications Department has compiled a consultant list recommended by member newspapers. Copies are available upon request from the department at The Newspaper Center in Reston, Va.

SEEKING PROPOSALS. In all but the very smallest acquisitions, it is highly desirable to provide vendors with a written "request for proposal," or RFP.

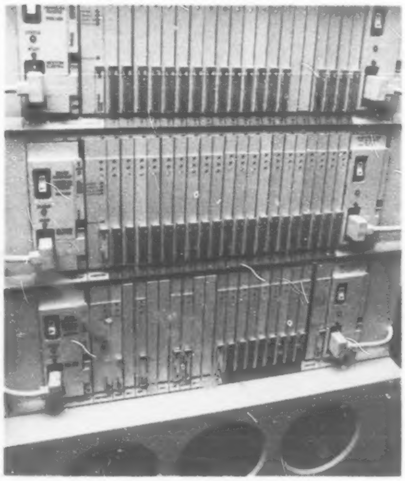
The complexity of these documents will vary according to the complexity of the acquisition, but there is information they all should include:

- **Basic Information,** including the purchaser's name, address of installation, general size of the system required, installation deadlines, deadlines for responding to the RFP, any meeting dates scheduled for discussion of the project and names of key project contacts. It also is important to supply instructions for responding to ensure that vendors give equivalent proposals.

The Concord (N.H.) Monitor, which recently acquired a new telephone system, did not issue such detailed instructions. "The proposals came back to us in a variety of formats, including handwritten notes," says Publisher George Wilson. "There was no similarity of language. . . . It was impossible for us to conduct an apples-and-apples compari-

---

Walker is telecommunications systems specialist in ANPA's Telecommunications Department.



Computerized switching equipment is now a part of most any telecommunications setup.

son." The Monitor had to go back to vendors for clarification.

- **System specifications,** describing operating parameters of the system in detail. This should include present and future capacity requirements; system and feature descriptions; ancillary equipment needs; power, space, heating and air-conditioning needs; and cabling specifications, covering the use of new or existing wiring and an explanation of all local fire and safety laws pertaining to the acquisition and installation.
- **Costs,** including a list of all equipment, labor and service plans. It is a good idea to request payment schedules based on both lease and purchase options. Ask for all possible service and maintenance options and for warranty specifications. Helen Waicunas, telecommunications manager at The Hartford Courant, also suggests requesting additional-equipment price lists guaranteed for one year from the date of system's acceptance.
- **Procedures and penalties,** including completion dates for each step of the installation, testing and acceptance procedure, and penalties for failure to meet deadlines. Make clear that the newspaper environment differs from that of most businesses and that the vendor is expected to accommodate any special needs. Vance Caesar, executive vice president of the Long Beach (Calif.) Press-Telegram, which is in the process of acquiring a new phone system, considers the installation schedule to be crucial because of time constraints inherent in putting out a daily newspaper. "The equipment is needed 24 hours a day . . . so quality levels must be up immediately," Caesar says.

It is imperative, therefore, that a clearly defined installation procedure be requested from each vendor. The document should include responsibilities of all parties; names and phone numbers of all intallation project team members; details on how problems will be resolved, including "escalation" procedures—specifying who in the vendor's employee hierarchy should be contacted to resolve difficulties and when; and other information.

Follow the same procedure for service requirements. At the Courant, for example, the service policy states that the vendor will provide immediate response to any problem occurring between 8 a.m. and 5 p.m. Beyond that, the vendor will provide immediate response 24 hours a day when a problem affects 10 percent or more of the newsroom. Waicunas points out, "You can buy the most state-of-the-art system in the world, but if it goes down and you can't get service, it isn't worth a nickel."

- **Payment schedules,** which should be weighted toward delivery and acceptance of the system. For example, a typical payment schedule might look like this: 20 percent of system price upon contract signing, 25 percent upon equipment delivery, 35 percent after installation and testing, and 20 percent upon formal acceptance of the system.

BIDS, NEGOTIATION. Once proposals have been received, the procurement committee should review their contents and eliminate vendors that cannot meet RFP specifications or that submitted incomplete proposals.

If clarification is needed on a few points, it is acceptable to call the vendor. However, vague or poorly conceived paper work could be an indication of general inferior quality of a vendor and might justify that firm's elimination from the competition.

Ideally, there should be two to four vendors whose presentations stand out. Make arrangements to visit these firms at their offices and get complete tours of the facilities. Talk to the employees about the equipment and about their jobs.

> *"If (phone service) goes down and you can't get service, it isn't worth a nickel."*

Request a list of five to 10 of the most recent customer installations of similar-size systems. Note that this is not a reference list. Make arrangements to visit some of those customers' facilities independently and talk to the people who work there. Verify customer satisfaction.

The final step in procurement is contract negotiation. Remember that negotiation is not simply presenting a list of demands. Be willing to give a little on less-important points. But remember, too, that certain items are critical to the efficient operation of the newspaper. Stand firm on them.

Margaret Genovese

Employee acceptance is important for a new telephone system to succeed.

Some suggested areas of negotiation include enhanced service policies, extended equipment warranties, lower cabling and equipment prices, better payment terms and penalty amounts.

Be certain that the final contract spells out *in detail* each item covered in the RFP, including prices for each piece of equipment, performance schedules, problem-solving procedures, service policies and prices, items of individual responsibility, penalty clauses and payment schedules as agreed upon in negotiations. Have the contract reviewed by legal counsel and, if one is available, by a telecommunications consultant.

Above all, remember the meaning of management consultant Oncken's dictum about the difference between education and experience: Leave nothing to chance. ☐

Foreign reporting demands patience and quick wits in addition to good journalism

BY THOMAS J. R. KENT

In just a few decades, the job of foreign correspondent has changed dramatically.

Thirty or 40 years ago, Associated Press foreign correspondents devoted most of their efforts to gathering basic facts and transmitting them to New York, often by unreliable telegraph links. They had little day-to-day contact with their editors, and frequently had little assurance that their precious telegrams were getting through at all.

Thomas J. R. Kent

Today, the prime job is still to gather the facts, but that's only the beginning of the work. Within hours after they file the first bulletins on a major story, foreign correspondents are expected to provide background stories and news analyses to explain the story's larger significance.

Newspaper readers today are eager for stories that put events in perspective, identify patterns in the flow of spot news, and explain regional and long-term trends. Often, AP runs packages of stories—recent examples include international terrorism and world famine—that look at a major problem from a variety of angles.

Improvements in technology make filing stories today easier. AP has dozens of portable terminals in operation overseas, and with widespread use of the portable picture transmitter, stories and photos can be transmitted from virtually anywhere in the world. Copy travels by high-speed satellite circuits into central computers where it can be edited immediately for retransmission to the rest of the world.

New York editors, once a distant power at the end of a telegraph line, now can be on the telephone to foreign correspondents in seconds with questions or suggestions.

While the technology for sending a story has become faster and easier, however, the access to information to write that story is often more restricted.

These days there is very little direct censorship. But access can be limited in other ways: denial of visas, difficulties of meeting with news sources, inability to speak on the street to people who fear reprisals, threats of expulsion or of physical harm.

In recent years, AP staffers and stringers have been kidnapped in Beirut, killed or injured by bomb blasts in Nicaragua and Rome, forced to send messages over the wire at gunpoint in Chile, targets of death threats in El Salvador, and imprisoned or summoned before judges in half a dozen countries. In March, our chief Middle East correspondent, Terry Anderson, marked one year as a prisoner of a war he sought only to report.

Ironically, the very nature of AP's global reach makes an AP foreign correspondent a local correspondent as well. Modern communications can deliver a story back to the region where it originated in seconds.

AP requirements for foreign correspondents are more stringent than they were even a decade ago. Like all newspeople on the staff, they need a college degree and two years of prior daily news experience. To be sent overseas, one must first work in a domestic AP bureau and on the New York foreign or world service desks or both.

Reporters who seek assignment abroad are expected to speak at least one, and preferably two, foreign languages; to know history and have a broad knowledge and interest in foreign affairs; to write clearly and quickly about complex issues; and to adapt readily to foreign cultures and the pressure of being on call 24 hours a day. Backgrounds in economics and science, as well as politics, are encouraged.

They should be able to understand how a country looks through the eyes of its own people and from a foreign perspective. Moreover, that foreign perspective cannot be only American. They are writing not only for AP members in the United States but for subscribers in 116 countries around the world.

Traveling itself can test the patience of the best correspondent. In the Third World, the distances can be vast. Territories are sometimes controlled by competing, warring groups. Roads, landing strips, buses and trains are sometimes inadequate or non-existent. Costs to go anywhere or get anything done can escalate overnight.

What are the toughest areas in the world to cover? The Middle East is one, due to the distances involved, the cultural and religious differences, and the complexity of the stories. In Africa, the distances and the lack of technical facilities can seem overwhelming. Afghanistan is an example of one country where the access for covering a major story is minimal.

I've been arrested or detained by the police in every country I've ever worked in, had guns pointed at me and had my byline in half the newspapers in the world. Would I recommend the profession to others? Absolutely.

Kent, news editor for the World Services Division of the Associated Press, is a graduate of Yale University with a degree in Soviet and East European studies. He has worked for AP in Hartford and New York City and overseas as newsman in Sydney, as NATO and Common Market correspondent in Brussels, as head of AP operations in Iran and as bureau chief in Moscow. He speaks French, Spanish and Russian.

WHEN YOU'RE GOOD AT FOLLOWING LEADS, YOU NEVER HAVE TO PLAY FOLLOW THE LEADER.

Our skill at following and developing leads puts us ahead of the competition.

We were first to piece together a bizarre drug puzzle in Tennessee. And we uncovered abuses in the human organ transplant system that stretched from Pittsburgh to Bombay.

Our people do more than just report the obvious. They dig. They make connections. And they stick with it until they're satisfied the whole story has been told.

Our readers know they can rely on us to get it first, and get it right.

PROFILE

Alvah Chapman

Lending talents to professional and civic worlds

BY MARGARET GENOVESE
presstime staff writer

Those who know him well say Alvah Chapman Jr. is a consummate newspaperman and a classic citizen.

As chairman and chief executive officer of Miami-based Knight-Ridder Newspapers Inc., Chapman oversees a diversified communications company whose operating revenues last year exceeded $1.7 billion and whose properties include 27 daily newspapers, five suburban weekly newspapers, eight television stations, a cable-TV system and the Journal of Commerce.

"Alvah is the most complete newspaperman that I have ever known," says Knight-Ridder President James K. Batten. "He understands the minutiae and the pressure points of every aspect of newspaper operations." At the ANPA Convention in San Francisco this month, Chapman will be nominated for election as ANPA chairman and president.

But Chapman is not the type of person who devotes all of his energies to the workaday world. Says Dennis Pastrana, executive director of Goodwill Industries of South Florida: "There is not enough I can tell you about his generosity, his compassion, and his sense of duty to the community and all its citizens."

His knowledge of newspapering and his sense of "duty, honor and country" were nurtured early in life.

Born into a newspaper family 65 years ago in Columbus, Ga., Chapman grew up in Bradenton, Fla. His family owned the daily newspapers in both cities, and Chapman says, "I always assumed I would be in the newspaper publishing business."

He studied business administration at The Citadel, a military college in Charleston, S.C., and graduated as regimental commander—head of the corps of cadets.

One of his classmates, who now is president of the college, remembers Chapman as a fine leader. "We were peers," says Maj. Gen. James A. Grimsley, "but some are more equal than others, and he was one that was more equal."

Chapman has said he owes a lot to his military schooling, and he has attempted to repay it. Last year, he and his wife, Betty, presented the school with its first million-dollar gift.

After graduating, Chapman served in World War II as a B-17 pilot and squadron commander, flying 37 combat missions. After the war, he returned to Columbus where he worked briefly as a reporter before becoming business manager of the Ledger and the Enquirer.

In 1953, he left Columbus and the family business to become general manager of the St. Petersburg Times. Twenty years later, Chapman became reinvolved in the Columbus and Bradenton papers when as president of Knight Newspapers Inc. he was involved in their acquisition by the company now known as Knight-Ridder.

Chapman's path from Columbus to the Knight organization also involved a stop in Savannah, Ga., where in 1957 he became publisher and part owner of the Morning News and Evening Press.

He joined Knight Newspapers in 1960 and rose steadily, serving as vice president and general manager of The Miami Herald and executive vice president before attaining the presidency in 1973, a year before Knight merged with Ridder Publications. In 1974, he became the consolidated company's first president.

Chapman says his major accomplishment at Knight-Ridder has been "the building of a management team that works well together, a management team that has confidence in itself and knows where it wants to go." The company has just completed a five-year plan that is the product of 168 Knight-Ridder executives.

Although he admits he is "not overjoyed" by the failure of the company's Viewtron videotex project (see story, p. 56), Chapman says he derives "some comfort in knowing that for quite some years to come there will not be that particular threat to the basic newspaper business."

He also speaks with pride about the fact that since he became CEO in 1976, Knight-Ridder has greatly expanded foreign coverage. Today, it has 18 foreign correspondents.

However, Chapman may have made his biggest personal mark at home in Miami.

"If you asked me 'Who are Miami's 10 top citizens?' I would be hard pressed to tell you who two through 10 are," says Miami businessman Armando Cordina. "But number one, unequivocally, is Alvah Chapman."

He was chairman of Miami Citizens Against Crime, spearheaded a Chamber of Commerce revitalization plan for downtown Miami, and is active in the campaign to keep casino gambling out of Florida. In recognition of his contributions, the city of Miami in 1984 renamed the street that runs in front of the Herald building "Alvah Chapman Boulevard."

In addition to his civic endeavors, Chapman also has served as president of the Southern Newspaper Publishers Association and as a director of the Newspaper Advertising Bureau and of ANPA.

As he prepares to take on the role of ANPA's top elected leader, Chapman says the major challenges facing the newspaper business are "not new ones." He lists increasing readership and successfully competing for advertising against the growing number of new communications outlets.

He said ANPA will be reorganizing its Industry Affairs Committee into a new Circulation and Readership Committee to help the business make its way through the competitive thicket.

"I think we've got a good future, but I think we have a difficult job to do," he says. And he adds, "I think we will do it."

Described by many as "well-organized," Chapman finds time to enjoy fishing, golfing and his family that includes two daughters and six grandchildren.

Tax proposals, FOIA among committee concerns

Less than a week after members of the ANPA Government Affairs Committee left the Nation's Capital following their semiannual meeting, the issue that had dominated their discussions and strategy sessions left Washington, too.

That was a proposal to disallow 20 percent of business tax deductions for advertising expenses. It surfaced in a Treasury Department document in mid-February [presstime, March 1986, p. 42] and briefly was included in a tax revision package being drafted by Sen. Bob Packwood (R-Ore.), chairman of the Senate Finance Committee. But the proposal was deleted before Packwood unveiled his complete package March 13.

Although the proposal to limit tax deductions for advertising appears dead, ANPA staff is continuing to monitor the situation. "The tax-writing process is a fluid one," observed Martin Casey, ANPA manager/government and international affairs. "Changes could still take place. And it is still important for senators to be reminded of our concerns."

Casey said he thinks the proposal was scuttled "in response to expressions to all of the [Senate Finance Committee] members, both from business advertisers and media representatives."

The proposal, described initially as a denial of 20 percent of deductions for advertising expenses, subsequently was described as allowing immediate deduction of only 80 percent of advertising expenses, with the remaining 20 percent amortized over five years.

While the ad-deduction plan has been laid to rest—at least for the time being—other matters of concern remain for ANPA's public-policy overseers.

During its March 6-7 meeting, the Government Affairs Committee went on record in opposition to two bills that would deny business tax deductions for tobacco advertising expenses [presstime, Jan. 1986, p. 34].

The committee also reaffirmed its position that ANPA not support efforts to amend the federal Freedom of Information Act for fear of opening up the access law to damaging amendments.

In addition, it heard from and met with a variety of government officials.

Charles F. Rule, chief deputy assistant attorney general in the Antitrust Division of the Justice Department, addressed a joint luncheon held with the ANPA Telecommunications Committee.

Rule, whose division is responsible for enforcing the AT&T consent decree, suggested new technology may render the kind of restrictions placed on the Bell regional holding companies, including the ban on providing electronic information services, "an anachronism." [See stories, pp. 54-55.]

This new technology would give firms equal access to the local telephone network, and when it arrives, the Bell companies will have to be allowed to provide information services, he said.

On another matter of importance to publishers, Rule told the committees that "help is on the way, if we in the administration have our way," for newspapers subject to antitrust suits by competing shoppers over total-market-coverage programs. "The fact is, I think almost all of these cases are nuisance suits," he said.

Explaining that legislation proposed by the administration would eliminate the possibility that plaintiffs could recover treble damages in some antitrust cases, he said: "I think, to some extent, our legislation would provide relief from the nuisance suits that have been plaguing your industry."

Other speakers before the Government Affairs Committee included Sen. John C. Danforth (R-Mo.), who discussed the need for long-range solutions to national problems, and James C. Miller III, director of the Office of Management and Budget, who described details of President Reagan's proposed fiscal 1987 budget.

One feature of the meeting was a dinner to which committee members were asked to invite members of congress and other government officials. More than 25 accepted the invitations. □

Meredith III (left) of The Free Press, Quakertown, Pa., and Donald E. Newhouse of The Star-Ledger, Newark (center), share a joke with Rep. Peter W. Rodino Jr. (D-N.J.)

Terrorism coverage talks suggested

A high-level federal government task force has recommended that government officials meet regularly with the media to talk about coverage of terrorism.

It also has proposed that the Justice Department investigate whether members of terrorist groups are using the federal Freedom of Information Act to identify FBI informants, frustrate investigations and tie up government resources in responding to requests. If so, said the Task Force on Combatting Terrorism, Congress should close this "loophole."

The recommendations were contained in a report released March 6 by the task force, which is headed by Vice President George Bush.

In a March 11 letter to Bush, ANPA Executive Vice President Jerry W. Friedheim said the Association was gratified to see the recommendation emphasizing regular discussions between the government and the media about the coverage of terrorist incidents.

Noting the task force's fears about terrorist abuse of the FOIA and the suggestion for corrective legislation, he said ANPA has found that "existing exemptions to the Act are fully adequate to prevent any such abuses."

The task force devoted two pages of its 34-page report to a discussion of terrorism and the media. It listed six media practices it said "can lead to problems" during a terrorist incident: "Saturation television coverage, which can limit or preempt the government's options. Political dialogue with terrorists or hostages. Coverage of obviously staged events. Becoming part of the incident and participating in negotiations. . . . Payments to terrorist groups or supporters for interviews or access. Coverage of military plans or deployments in response to terrorist incidents."

The Bush panel said the solution to those problems "is not government-imposed restraint that conflicts with the First Amendment's protection of freedom of speech and the press."

But while it rejected the idea of government regulation of the media, the task force said: "The media must serve as their own watchdog. Journalistic guidelines have been developed for use during wartime to protect lives and national security, and in some circumstances should be considered appropriate during a terrorist situation."

Although individual media organizations have discussed guidelines on covering terrorism incidents and "ethical standards" have been adopted by some, "there is no industry consensus on either the need for or the substance of such guidelines," the task force added.

In its conclusions and recommendations, the task force reported this about terrorism and the media: "Terrorists deliberately manufacture sensations to capture maximum media attention—a ploy that often takes advantage of U.S. press freedom. This activity can be offset by close communication between media and government. The U.S. government should provide the media with timely information during a terrorist crisis. The media, in turn, should ensure that their reporting meets the highest professional and ethical standards." ☐

Kentucky publisher seeks federal law requiring libel suit loser to pay all fees and costs

The publisher of a Kentucky weekly newspaper that successfully defended itself against seven libel suits in the last 10 years has asked Congress to require the losing party in a libel suit to pay all legal fees and court costs.

"By taking away the incentive to sue poor newspaper publishers on the hope that the suit, itself, will have a chilling effect, you take away the biggest obstacle standing in the way of freedom of the press: the inability of its practitioners to pay the legal fees," said Homer F. Marcum, editor and publisher of The Martin Countian.

Considered a bad risk by libel insurance companies since the first libel suit was filed, his newspaper has spent $30,000 for legal defense of the seven libel actions, Marcum testified at a hearing before the House Judiciary Committee's Subcommittee on Civil and Constitutional Rights.

Marcum countersued once to recover legal fees and was awarded more than $21,000 [presstime, May 1985, p. 6]. However, the plaintiff has appealed, and Marcum has yet to receive the money.

The publisher also said state and national bar associations should fine lawyers who file unwarranted suits and disbar them for repeated offenses.

The Feb. 26 hearing was the first of a series of three or four planned by the subcommittee on problems and deficiencies in libel laws, and on proposals for change.

Also testifying was former U.S. Rep. Andrew Maguire, who spoke in support of a bill introduced by subcommittee member Charles Schumer (D-N.Y.). The bill would establish a new legal process through which a public official or public figure could sue not to recover damages but to get a declaration that the publication or broadcast was false.

Maguire said he had been victimized by publication of erroneous information about him in a book titled *Poisoning for Profit: Organized Crime and Toxic Waste*.

"No public official in the position in which I found myself is looking for a financial award—although in cases like this one tends to feel some such award would be amply justified," he said.

"What we are looking for is a correction, publicly made and attested to in the appropriate places, after the determination has been made by a responsible adjudicatory process that false and defamatory statements have been made."

The Schumer bill also would bar punitive damages in any libel suit brought under current law and would allow the prevailing party to be awarded attorneys' fees.

U.S. and Canadian trade talks advocated

ANPA has urged constructive bilateral trade talks between the United States and Canada.

In a March 19 letter to Senate Finance Committee Chairman Bob Packwood (R-Ore.), ANPA Executive Vice President Jerry W. Friedheim said two specific matters that presumably would be subject to such negotiations are of interest to ANPA: Canada's denial of business tax deductions for Canadian companies placing advertising in U.S. media, and softwood lumber issues that could affect newsprint supply and price. ☐

Congress proclaims 'FOI Day'

National "Freedom of Information Day" was proclaimed on March 16, the birthdate of James Madison, congressional sponsor of the Bill of Rights.

Joint resolutions calling for the observance were passed by the House Feb. 22 and by the Senate March 4. President Reagan signed the proclamation March 14.

Chief sponsors of the measures were Sen. Bob Packwood (R-Ore.) and Rep. Timothy E. Wirth (D-Colo.).

The effort to get the national designation began in 1979 by the Society of Professional Journalists, Sigma Delta Chi. It has been supported by other press organizations, including ANPA and the First Amendment Congress. Until this year, resolutions had been passed by one house but not by both.

The designation is for one year only. Jean Otto, who was SPJ,SDX president when the movement began, said the designation will be sought again next year. "If we get it passed a number of years, they may well make it an annual observance," said Otto, editorial page editor of the Rocky Mountain News in Denver.

Senate TV coverage to start June 1

On a trial basis, the U.S. Senate began providing live, gavel-to-gavel audio coverage of its proceedings March 12. Video coverage will begin June 1.

As of late March, the Cable Satellite Public Affairs Network (C-SPAN) was carrying the complete audio report, according to Senate officials. C-SPAN, which also carries gavel-to-gavel coverage of the House of Representatives, was making the Senate audio available to cable systems via a second satellite transponder.

About 30 systems were carrying the Senate audio, some as background on alpha-numeric channels, according to a C-SPAN spokeswoman.

The Senate will end the experiments on July 15 and two weeks later will consider whether to make such coverage permanent.

Senators agreed to allow the broadcasting tests Feb. 27 on a 67-21 vote. The House of Representatives has allowed TV and radio coverage since 1979, and about 2,000 cable systems currently carry the House proceedings, the C-SPAN spokeswoman said.

COURTS

Insert ruling seen as beneficial

A recent U.S. Supreme Court decision involving First Amendment rights of commercial establishments has favorable implications for the newspaper business, according to a media lawyer.

By a 5-3 vote, the court ruled Feb. 24, that utility companies have a right under the First Amendment to refuse to accept billing inserts from groups with which they disagree. The court thereby nullified a California Public Utilities Commission order requiring Pacific Gas and Electric Co. to include inserts from a consumer group in its billing envelopes.

Writing for the majority, Justice Lewis F. Powell Jr. cited the Supreme Court's 1974 decision in *Miami Herald Publishing Co. v. Tornillo*, which held that a newspaper could not be compelled to give free space to respond to editorial criticism.

The recent decision appears to extend *Tornillo* "to apply not just to the basic newsprint part of the newspaper, but to anything that is distributed with the newspaper," said P. Cameron DeVore. "In other words, it includes inserts," said DeVore, a partner in the Seattle law firm of Davis, Wright, Todd, Riese & Jones. ☐

COURT BRIEFS

- The Tribune in Oakland has dropped its antitrust suit against San Francisco's two daily newspapers over exclusive rights to syndicated material.

In an out-of-court settlement March 14, the San Francisco Chronicle agreed not to enforce its rights of **territorial exclusivity** to features sought by the Tribune [presstime, Aug. 1985, p. 35].

The first features, three cartoon strips, were to begin appearing in The Tribune on March 31.

- U.S. District Judge Francis J. Boyle March 18 cited The Providence Journal Co. and Charles Mc. Hauser, vice president/executive editor of The Journal, for **contempt of court** for violating a gag order.

The newspaper published an article Nov. 14 involving Raymond J. Patriarca, a reputed organized crime figure, a day after Boyle had issued an order forbidding publication. Boyle subsequently lifted that order but issued the contempt citation nonetheless.

"Although the order might ultimately be held to be invalid, there is enough substance to it to expect law-abiding persons to respect it, at least briefly," he said.

- U.S. District Judge Neal P. McCurn Feb. 27 issued an interim order providing Legi-Tech, a California firm that operates a computerized legislative information service, **access to a legislative database** owned by New York state.

Legi-Tech had challenged the constitutionality of a New York law prohibiting companies that market computerized legislative information services from subscribing to the state database.

The judge directed Legi-Tech and the state to come to a mutually agreeable fee for the service.

REGULATIONS

Plan agreed to on 'must-carry'

Representatives of associations representing the cable-TV and commercial broadcast industries have reached a compromise agreement on new rules for carrying local broadcast TV stations on cable-TV systems.

After formal ratification of the agreement by the organizations' leaders, the agreement was submitted March 21 to the Federal Communications Commission, which is considering whether to adopt such new rules [presstime, Dec. 1985, p. 36].

The FCC's previous "must-carry" rules, requiring cable systems to carry every local broadcast TV station in their areas, were struck down last July by a federal appeals court, which said they violated cable operators' First Amendment rights. The U.S. Supreme Court has been asked by broadcasters to review that decision.

Under the 12-point compromise agreement, cable systems with fewer than 20 channels would be exempt from any must-carry requirements. Those with between 21 and 26 channels would be required to carry no more than seven local TV stations. Larger systems would have to devote no more than 25 percent of their channels to local stations. ☐

There are two trade newsweeklies that try to be all things to all readers.

That's fine, but let's face it. They can't be comprehensive in any one specific area.

Marketing & Media Decisions, in 20 years of publication, has focused on one thing: providing intelligent insight into profitable media planning.

In that one area, our coverage is broader, deeper and more penetrating than any other book.

As a result, we've gained the confidence *specifically* of those with clout: executives personally involved in the selection of media at major advertisers and agencies...the group you want to reach.

So next time you're choosing among media, don't go for the most. Go for more.

MARKETING & MEDIA DECISIONS

Those who make them, read us.

ANPA asks court to uphold 2nd-class TMC

The governors of the U.S. Postal Service delivered a possibly fatal blow to most daily newspapers' second-class total-market-coverage programs by requiring that they independently qualify for a second-class mailing permit.

Within minutes of the March 3 decision, ANPA filed a notice of appeal in the 5th U.S. Circuit Court of Appeals, New Orleans. The case was pending in late March.

In their decision, the governors fully accepted a recommendation of the Postal Rate Commission [presstime, March 1986, p. 46] to amend the Domestic Mail Manual so that it declares an "issue" of a newspaper be a separate publication if it:

- Is published regularly on the same day as another regular issue of the same publication.
- "Is distributed to more than 10 percent [of] nonsubscribers or twice as many nonsubscribers as the other issue on that same day, whichever is greater."

Such separate publications, the new provision states, must independently meet the Domestic Mail Manual's various qualifications for second-class permits.

Changes to the manual will take effect June 8.

The governors said that since 1876 "regular publications designed primarily for advertising purposes" have been excluded from second-class mail.

So-called "Plus" issues, as many second-class TMC products have been called, "consist principally of advertising material, and usually include advertising inserts," the governors said. "They generally contain relatively little editorial content."

"Historically," the governors also said, "the twin touchstones of second-class have been evidence of reader demand—demonstrated by willingness to pay for subscriptions—and evidence of having been designed for the dissemination of information, rather than for advertising purposes. We agree with the commission's finding, based on the record in this case, that Plus publications do not satisfy these touchstones."

ANPA has argued that second-class TMC programs, if done properly, do not violate postal rules and no change in the Domestic Mail Manual is needed. ☐

Postmaster General Albert V. Casey (center), ANPA Treasurer Arthur O. Sulzberger of The New York Times Co. and Postal Committee Chairman Sandra Hardy of Calkins Newspapers talk shop during a break from a meeting March 7 of the Association's Government Affairs Committee.

Flap erupts over disclosure plan for publications

A U.S. Postal Service proposal regarding mailers' volume statements would give direct-mail firms an unfair competitive advantage over newspapers, ANPA has charged. The Association asked that the proposal be dropped.

The plan calls for a change in rules by which most mailers' volume statements are available for public inspection—if not upon demand, then by request under the federal Freedom of Information Act. The change would permit USPS to keep secret all mailing statements except those filed by second-and-third-class periodical publications.

The reason USPS singled out such periodicals for disclosure, officials said, is that publishers' groups including ANPA said during an earlier comment period that mailing information need not be kept secret [presstime, March 1985, p. 38].

Direct-mail firms, on the other hand, claimed their postal forms should be kept secret for proprietary reasons. Hence, postal officials proposed they be excluded from having to bare data.

W. Terry Maguire, ANPA vice president/general counsel, said in a letter to USPS that the proposal is an "unwieldy attempt to draw arbitrary lines of openness. There is no sound future in a policy that keeps the public needlessly in the dark."

Maguire also said that for the Postal Service to "craft one policy for publications' mailing statements, but another for competitive advertising mailers, is not only to create secrecy where it does not presently exist, but to tilt the marketplace toward our competitors." ☐

NNA appeals latest round of increases

The National Newspaper Association filed a court appeal over the latest postal rate increase affecting all "preferred" mail—including second-class, in-county mail and mailings of less than 5,000 copies outside the county of publication.

That increase, approved in early March by the U.S. Postal Service Board of Governors, had been expected because of federal funding shortfalls [presstime, March 1986, p. 46]. The governors said the new rates will hold at least for the remainder of the fiscal year.

NNA said the governors did not have authority to implement the increase because the new rates go beyond an applicable phase-in schedule established by the 1970 Postal Reorganization Act. In order to set rates beyond that schedule, NNA said, USPS must initiate a proceeding at the Postal Rate Commission.

Briefs in the case are due April 21. NNA filed its appeal in the U.S. Court of Appeals, District of Columbia Circuit. ☐

Report to IAPA shows press freedom is gaining in Latin America

Press freedom is on the rise in Latin America, according to a report presented to the Inter American Press Association at its mid-year board meeting March 3-6 in Salvador, Brazil.

Heralding the "return of democracy" in several Latin American countries, particularly the demise of the Duvalier dictatorship in Haiti, IAPA's Committee on Freedom of the Press and Information observed that severe restrictions persist in only four major countries—Cuba, Nicaragua, Chile and Paraguay.

Another positive step, the committee reported, was the November 1985 ruling of the Inter-American Court of Human Rights against licensing of journalists [presstime, Dec. 1985, p. 40].

However, IAPA expressed concern over an impending hearing at the Inter-American court on another free-press matter—so-called "right of reply," which requires newspapers to print rebuttals by people who feel they have been injured by previously published stories [presstime, Feb. 1986, p. 39].

"This is a touchy subject," said Wilbur G. Landrey, chairman of IAPA's press freedom committee and foreign editor of the St. Petersburg Times. "Any decent and responsible newspaper will provide a right of reply for those who believe they have been unfairly treated in its news columns," he wrote in his press freedom report. "But when laws are enacted to make this compulsory, the freedom of the press is threatened."

Brazil, Chile, Colombia, Ecuador, El Salvador, Guatemala, Mexico, Peru, Uruguay the Dominican Republic and part of Argentina mandate the right of reply, according to an informal poll taken at the March meeting by Edward Seaton, publisher of The Manhattan Mercury in Kansas and chairman of IAPA's Executive Committee. Legislatures in Jamaica, Costa Rica and Argentina are considering right-of-reply proposals, said Seaton.

The issue has been brought before the court for an advisory opinion by Costa Rica, which also raised the licensing issue there. IAPA is planning to file an amicus brief in the case.

In addition to resolutions opposing state licensing and mandated right of reply, the IAPA board passed a resolution against government use of advertising to manipulate the press.

According to the resolution, this is an increasingly severe problem in Latin America, where governments often own large segments of the economy, including factories and banks.

"This state involvement in business gives governments the power of decision over a large part of newspaper advertising and thus the ability to reward or punish newspaper officers according to whether they are considered friends or opponents," the resolution said.

WORLD PRESS NOTES

- British press tradition was broken this year with the **introduction of offset printing** at major dailies.

Starting with offset from the beginning, Today—a new daily owned by Eddie Shah—made its debut in March.

In February, publisher Rupert Murdoch won a court ruling against union opposition to the conversion to offset printing at four of his newspapers. The court fined the nation's largest printing union and ordered the seizure of its assets.

Murdoch owns The Times of London and three other dailies.

- Several days before Philippine President Ferdinand Marcos fled the country, The Manila Times—which the Marcos government had forced to close in 1972—**resumed publication** [presstime, July 1985, p. 22].

Also, the Confederation of ASEAN [Southeast Asian] Journalists urged the new president, Corazon C. Aquino, to restore press freedom in the Philippines. In addition to many governmental restrictions during the Marcos regime, 15 Philippine journalists were killed in 1985.

- In what appeared to be a **softening of press restrictions in South Africa**, the government in March reinstated three CBS journalists four days after they were ordered out the country for filming protests against the policy of racial segregation called apartheid.

The ban on television filming and print photography was imposed late last year to limit worldwide knowledge of the violence erupting over the apartheid issue, including government actions to curb dissent [presstime, Dec. 1985, p. 41].

Rail engineers return to bargaining table; clerks tentatively settle

The Brotherhood of Locomotive Engineers returned to the negotiating table in March. The union had previously rejected a tentative labor contract reached with most of the nation's railroads in December [presstime, March 1986, p. 45].

In a related matter, the nation's railroads and the non-operating union of the Brotherhood of Railway and Airline Clerks agreed to a tentative agreement which must be ratified by the union membership.

Also in the railroad industry:

- The U.S. Senate approved the sale of the Consolidated Rail Corp. [Conrail] to Norfolk Southern Corp. However, stronger resistance to the sale is expected in the House of Representatives [presstime, Feb. 1986, p. 41].
- The Union Pacific Railroad System and Katy Industries terminated an agreement under which UP Corp. would have acquired KI's Missouri-Kansas-Texas Railroad Co. [presstime, July 1985, p. 72].
- A Canadian Transport Commission official predicted that deregulation legislation for Canada's railroads will be introduced in Parliament this spring. Canadian railroads have argued for regulatory reform so that they will not remain at a competitive disadvantage with U.S. carriers [presstime, April 1985, p. 43].

Longshoremen talks

The International Longshoremen's Association opened negotiations in March with employers at South Atlantic and Gulf of Mexico ports. Negotiations with North Atlantic ports are scheduled to start April 2.

The current contract with the union is due to expire Sept. 30.

Safe Driving Campaign for 1986 opens

Registration is open for the newspaper industry's 1986 Safe Driving Campaign. The campaign is cosponsored annually by ANPA and the International Circulation Managers Association.

Purpose of the campaign is to promote safe driving records for newspaper circulation vehicles, which can result in lower insurance rates [presstime, June 1985, p. 82].

There'll be a new attraction in Watertown, N.Y.

It's the new *Uniman 4/2* double width offset press at the *Watertown Daily Times* and it's providing metro press capabilities at midsize press cost.

The *Uniman 4/2* will help the *Daily Times* expand its revenue base by printing a wide variety of products: inserts, supplements, comics, catalogs, and more. Optional *Uniman* folder capability permits running the daily paper and commercial work at the same time.

Certainly the high quality of the products will appeal to advertisers and readers alike. Quality in black, spot, and full process color is achieved by features like non-contact spiral brush direct dampening which reduces contamination in the dampening system, variable-speed ink fountain roller, and infinite color positioning.

And the production crew will love *Uniman!* Easy access from a unique step-down feature in the arch, continuous running at 50,000 pph, and accurate plate mounting without tools are just the beginning of the capabilities that will boost productivity in the press room.

Uniman 4/2 also offers maximum flexibility in press arrangement. Units can be stacked or lined up on either side of the folder, and can accommodate both left hand and right hand color decks. Reels, tensions, and pasters can be substructure or floor mounted.

All in all, the *Daily Times* is getting the most for its money in versatility and productivity. If you'd like to find out more particulars, please call or write to M.A.N.-Roland USA, Newspaper Press Division, CN 1112, Middlesex, NJ 08846-0604; (201) 469-6600.

Martz tells Hill panel diversity principle works

The diversity principle—the basis of ANPA's telecommunications policy—is "alive and working well," the chairman of the Association's Telecommunications Committee has told a congressional subcommittee.

Testifying March 13 before the House Subcommittee on Telecommunications, Consumer Protection and Finance, Uzal H. Martz Jr., president and publisher of the Pottsville (Pa.) Republican, outlined ANPA's position in the increasingly heated telecommunications debate.

"There has been significant development of a broad range of electronic information services," said Martz, who is also an ANPA director.

Yet while the marketplace for those services "is clearly robust," it "is still developing," he said.

To permit further growth and diversity, the ban keeping the Bell regional holding companies out of the information services business must remain, Martz said. "Removal of these restrictions would unleash the risks of anti-competitive behavior and threaten the diversity of information sources."

The divestiture order that broke up the Bell telephone monopoly on Jan. 1, 1984, denies the seven regionals entry into the information services business. Some of the regional companies are pushing to have the ban removed. ANPA is pushing to have it retained (presstime, March 1986, p. 16).

One arena for this activity is Congress, where bills have been introduced to lift the ban.

The subcommittee hearing, however, was not on any of those specific bills but rather was an oversight hearing on the entire issue of the competitive status of the Bell operating companies.

Besides Martz, representatives of regional phone companies and officials from federal agencies, including the Justice Department, testified before the subcommittee.

Martz said reasons for the ban have not changed, noting that the regionals "clearly retain their monopoly over local (telephone) networks" needed to convey information electronically.

U.S. District Judge Harold H. Greene, in shaping the divestiture order, reasoned that a telephone company with such control "would have the incentive and ability to discriminate against competing information providers and to subsidize the price of its own information services with revenues from the local exchange monopoly," Martz said.

Because of the potential for anti-competitive abuses, "The monopoly transmission conduit must not be allowed to control or have an interest in information content which flows over their facilities," the Pennsylvania publisher added.

While arguing in favor of retention of the ban, Martz said ANPA "recognizes the key role to be played by the BOCs (Bell operating companies supplying local telephone service) in developing a sophisticated voice/data network and has taken steps to work with the BOC's to achieve this goal. We support BOC provision of services which enhance network transmission."

He said ANPA had taken the initiative in setting up meetings with six of the regionals "to discuss how we can work together to improve the network and hasten the delivery of new service to consumers."

Martz said: "We will continue to work with BOCs to enhance the transmission function of the network."

Getting to the core of 'publishing' versus 'information services'

The difference between "electronic publishing" and "electronic information services" has been a tough one for telecommunications experts to define, but at least the effort is getting closer to the layman's lexicon.

Asked during his congressional appearance to explain the difference between the two, Uzal H. Martz Jr. used the analogy of an apple.

Electronic publishing, which involves the most intensive changes to the information—such as originating, editing and compiling—is at the core. Information services, which require fewer changes, are farther out. Enhanced transmission services such as protocol conversion—a means of translating signals among various computers—is around the skin, he said.

Telecommunications duties are dispersed, survey shows

Initial results from a survey by ANPA's Telecommunications Department indicate that only a small percentage of newspapers have a telecommunications staff.

Tabulation of questionnaire returns found that 13 percent of the 200 responding newspapers had a telecommunications staff. Deborah S. Walker, ANPA telecommunications systems specialist, said the percentage is probably high because a disproportionate number of large newspapers, which are more likely to have telecommunications staffs, have responded so far.

A follow-up mailing of the questionnaire was sent in mid-March to ANPA-member newspapers that had not responded, and ANPA Director/Telecommunications Affairs Kathleen Criner urged all newspapers to participate.

A final report on the survey and a list of telecommunications consultants recommended by newspapers will be released at the ANPA Operations Management Conference & Exposition in Atlanta June 21-25.

Responses to date indicate that staff members responsible for telecommunications at newspapers come from a broad range of departments, Walker said. They are often business managers, controllers and—at smaller newspapers—publishers. But personnel directors, mangement information systems directors and even classified advertising managers were shown to be responsible for telecommunications at some papers.

Among other findings:

- AT&T remains the main supplier of telecommunications services and equipment at newspapers.
- About 80 percent of the newspapers are satisfied with the long-distance service they buy.
- Few newspapers use voice mail—a company-wide system permitting callers to leave recordings of messages—or electronic mail.
- Almost half have hired a telecommunications consultant at some point.
- A reason often given for not having a telecommunications staff is that the newspaper's telecommunications requirements "are not complex enough."

Walker said she is available to answer questions on the follow-up mailing.

"The more responses we have, the more valuable the information will be," she noted. □

Committee affirms support of phone company curbs

The ANPA Telecommunications Committee has reaffirmed its support for judicial restraints on the Bell regional companies that control most of the local telephone service in the United States.

The committee at its meeting March 5-6 in Washington, D.C., indicated it saw no reason for any change in the consent decree that broke up AT&T and created the seven Bell regional holding companies as separate entities.

A week later, the committee's chairman, Uzal H. Martz Jr., delivered that word to Capitol Hill. (See story, previous page.)

One of the decree's key restrictions bars the regionals from entering the electronic information-services business. Another limits the type and amount of diversification the companies can pursue beyond local telephone service [presstime, March 1986, p. 16.].

To varying extents, the regionals argue they need more freedom to expand and to offer new services as competition increases in the telephone business. ANPA contends that companies, through their telephone subsidiaries, retain a strong grip on local service that creates the potential for anti-competitive abuses.

The issue was addressed by Federal Communications Commissioner Dennis R. Patrick who met with the ANPA committee. The FCC is in the midst of a major review of its rules affecting telephone companies.

On the one hand, Patrick agreed with the regionals that they face increased competition in the telephone business—an argument they have used to push deregulation. However, Patrick said, the burden of assuring non-discriminatory access falls mainly on the regionals' Bell operating companies to see that safeguards are in place "before we go forward."

Discussion about what form that access might take led the committee to recommend that ANPA investigate the BOCs' proposals for what is termed "comparably efficient interconnection." The concept is designed to produce equal access by all companies using the telephone network to convey information.

Another question raised concerned where the newspaper business wants to be in five or 10 years in terms of markets and services.

The answer, committee members felt, will influence ANPA's stand on telecommunications issues being decided now. The question was referred to the Technology and Marketing Opportunities Subcommittee, which will consider how to tackle the issue.

The committee focus shifted from telecommunications to print directory publication when a representative of a subsidiary of NYNEX regional Bell company described his firm's plans to expand its publishing operations. Some in the newspaper business feel that kind of expansion may one day put the Bell companies in a strong position to offer electronic advertising. There's even more immediate concern about how the proliferation of directories affects newspaper advertising. (See story, p. 60.)

Joel S. Barber, vice president-business development group of NYNEX Information Resources Inc., sketched the subsidiary's strategy for prospering in the increasingly competitive business of directory publishing. Since the breakup of the Bell monopoly, the regionals have begun moving into each other's territory with new types of directories [presstime, March 1985, p. 16].

He said 379,000 advertisers buy space in the 288 directories published by NYNEX Information Resources. He detailed plans to win new sales and provide additional ad revenues. Barber also mentioned NYNEX's directory service called Hello Yellow, which ANPA says violates the electronic information services ban. ☐

Martz (right) confers with Charles F. Rule of the Justice Department's Antitrust Division during committee luncheon.

Two services violate decree, ANPA says

Two Bell regional companies appear to be offering electronic Yellow Pages, despite a prohibition in the AT&T divestiture decree against their involvement in electronic information services.

That's the gist of comments ANPA filed in mid-March with the Justice Department. The Association asked the department to investigate whether Telequest Service of Pacific Northwest Bell and Hello Yellow of NYNEX Information Resources Inc. violate terms of the consent decree.

The regional NYNEX Corp. owns NYNEX Information Resources, which is unregulated. NYNEX Corp. has said it does not consider Hello Yellow to be an electronic information service [presstime, March 1986, p. 44].

The regional US West Inc. owns Pacific Northwest Bell, a regulated telephone company. Company officials were not available for comment on Telequest.

Each of the services does more than fill requests for specific telephone numbers. They allow a caller to describe the product and service they want, whereupon an operator provides names, addresses and phone numbers of appropriate firms.

Hello Yellow and Telequest seem "to fall precisely within the definition of 'information service,'" according to ANPA's comments. The services give NYNEX and Pacific Northwest Bell an incentive "to discriminate against competing electronic publishers, particularly those providing an advertising type of service," the Association said.

The Bell companies can "deny necessary service," or they can discriminate indirectly through "delays in providing initial service or in making necessary repairs," ANPA said. They could also design the networks they control so as to benefit their Telequest and Hello Yellow services rather than those of competitors, it added.

ANPA urged the Justice Department to direct the companies to "cease such illegal activities." ☐

Videotex languor claims victims

As two companies in the newspaper business were pulling out of consumer videotex, another announced its venture in the field had broken even.

Revenues pulled even with costs at Startext, the consumer videotex service of the Fort Worth Star-Telegram, in February. Startext decided to go public with the news after the Gateway service announced it would close, said Star-Telegram Publisher Phillip J. Meek. Then came word of Viewtron's demise. The "pallor" cast by the fate of those services "really does not tell the whole story," Meek said.

In contrast to Gateway and Viewtron, Startext is a much less expensive undertaking, and it can be received by any personal computer without special software. The strategy behind the venture is to "learn the business and attract subscribers without ever getting so exposed financially that we get in trouble," Meek said.

In short order, The Times Mirror Co. announced Feb. 27 it would close Gateway on March 7, and Knight-Ridder Newspapers Inc. said March 17 it would shut down Viewtron. The two videotex services, probably the boldest and most watched in the newspaper business, had much in common.

They initially took aim at a broad consumer market they hoped to reach through specialized, dedicated terminals and planned to win by offering an array of electronic services enlivened with color and graphics. When consumers were slow to buy or lease the expensive terminals, Gateway and Viewtron sought a market among personal-computer owners after developing software that made the hookups possible.

Looking back, spokesmen for Gateway and Viewtron concluded that the market for videotex was growing too slowly to justify the cost of staying in the business and that the medium is not an alternative or a threat to newspapers, at least in the near future. They agreed subscribers proved more interested in using videotex to talk with each other electronically than to receive news.

Reid Ashe, president of Knight-Ridder's Viewdata subsidiary that has operated Viewtron, said he believes consumer videotex can be a successful business if it starts small and keeps costs under control. The scale of Viewtron was such that it had to go after a large market in an effort to recoup its investment, he said.

Knight-Ridder said it has spent about $50 million on the Viewtron project since 1980. When the company weighed the potential payoff against the extra risk and investment required, Viewtron lost, Ashe said. "The most critical factor" in the decision was average use of the service, which was at "exactly the minimum level" projected by the business plan, he said.

From other angles, Viewtron looked better. It had become available nationwide in January, and the number of its subscribers had exceeded 20,000. Ashe had said earlier this year that he believed Viewtron could become "a pretty good little business" (presstime, Jan. 1986, p. 36). In late March, he commented: "I think we could have pulled it off. . . . I think that would have happened. But it would have cost a lot of money to get there."

The schedule for closing Viewtron called for laying off 80 of its 139 people March 21. Most of the rest will follow or be absorbed by Knight-Ridder in the several weeks the service continues to run, Ashe said.

Times Mirror, meanwhile, is laying off Gateway's 120 employees. The service, which was commercially launched in November 1984, had 3,000 subscribers in Orange and Los Angeles counties of California when it closed, according to Jim Holly, president of Times Mirror Videotex Services Inc.

Times Mirror felt consumer videotex had "no real, short-term prospects" of being profitable, Holly said. "We think it's going to happen over time," he added, but the expectation is that the process will be a slow one. While Gateway had sold a total of $1.2 million in advertising, the service did not feel it could produce the numbers on subscribers and usage that future sales would require, he said.

A videotex journal has estimated Times Mirror spent $30 million on Gateway. Holly declined to say how much Gateway cost and called published estimates wrong.

In contrast to the much more expansive Viewtron and Gateway projects, the budget for Startext was tight from the beginning. The service was "started on a shoestring," said Meek of the Fort Worth daily, which is owned by Capital Cities/ABC Inc. The capital investment to date has been $210,000, and operating losses before the break-even point was reached totaled $129,000, said Joseph L. Donth, director of Startext.

By breaking even, Startext has shown "videotex has a future, and it doesn't require large outlays of capital and personnel to tap the personnel computer market successfully," Meek said.

Startext gives subscribers access to news from the Star-Telegram, stock quotes, electronic classifieds, airline schedules and other services. With a flat, base rate of $9.95 a month, it was able to break even in its fourth year.

The service, which does not sell advertising (classifieds in the newspaper are run free on Startext), operates with a staff of seven and uses software developed in-house. By late March, it had 2,200 subscribers.

The next step is for Startext to offer home banking, which was scheduled to start March 31.

Fees will be $6 a month for non-subscribers and an extra $1 a month for subscribers to the overall service.

Barbara J. Friedman

TELECOMMUNICATIONS NOTES

- An Australian newspaper company and a U.S. newspaper library service plan to launch an **international newspaper library retrieval service.**

Datatek Corp. announced March 10 that its electronic service, DataTimes, will join forces with Queensland Newspapers Pty. Ltd. in the venture.

Australian users will have access to the DataTimes U.S. newspaper library network, and DataTimes customers will be able to tap a database containing archives of Australian newspapers. Datatek is owned by Oklahoma Publishing Co. of Oklahoma City.

- Scripps Howard is **buying out its partner** in TeleScripps Cable Co. Founded three years ago, TeleScripps Cable has 265,000 subscribers to systems in the Southeast and in Indiana.

After the purchase of TeleCommunication Inc.'s 50-percent interest, Scripps Howard will be the sole owner of TeleScripps Cable.

PRINTERS OF THE ANPA PRESSTIME MAGAZINE

AD/SAT back on track

A demonstration period for AD/SAT, the satellite delivery system for national ads that has been held up for lack of funding, is now set to begin in September.

The new schedule came as part of news that AD/SAT was purchased from The Robert Wold Co. of Los Angeles and Mitsui & Co. of Japan by British Printing & Communications Corp., the largest commercial and newspaper printer in Europe.

BPCC, which has formed a U.S. subsidiary for its AD/SAT operation, is controlled by Pergamon Press Ltd., holdings of which include Mirror Group Newspapers—the largest newspaper group in England.

The system's demonstration will involve the same 12 newspapers and four advertising agencies that had been scheduled to test the system earlier under Wold's ownership [presstime, Oct. 1985, p. 61].

N.S. (Buddy) Hayden, who remains president of AD/SAT, said he hopes the system will be operating at newspapers in the top 100 markets within a year.

AD/SAT still will use flatbed facsimile equipment manufactured expressly for the project by Matsushita Graphic Communications Systems. The equipment has been tested with "excellent" results, said William D. Rinehart, ANPA vice president/technical.

Matsushita Graphics is a division of Matsushita Electric Corp., which makes consumer electronic products marketed under names including Panasonic, Quasar and Technics.

AD/SAT will lease satellite transponder space from the Associated Press and deliver ads through existing AP satellite receiving dishes in place at newspapers.

AP will be responsible for maintaining the facsimile equipment, according to terms of a contract it has with AD/SAT.

The concept for a satellite-based, advertising facsimile delivery system initially was developed by ANPA in cooperation with the Newspaper Advertising Bureau.

The retail revival downtown

BY CRAIG C. STANDEN

Not long ago, the downtown areas of many of our major cities were being written off as finished, especially as far as retailing was concerned. Today, however, downtown stores and downtown shopping areas all over the country are making a remarkable comeback, with important consequences for newspapers in cities both large and small.

Craig C. Standen

Because retail advertising accounts for 60 percent of total newspaper advertising revenues, I thought you would be interested in hearing about the resurgence of downtown retailing.

Three major recent downtown investments in retailing provide good examples of this major financial and emotional reinvestment by America's retailers in our cities.

The first example is the new Hecht's Metro Center in Washington, D.C., the largest freestanding downtown department store built in the United States in 45 years.

As Washington's mayor, Marion Barry, said at the store's opening, "This corner stood boarded up and bare, an eyesore, for a long time."

Why then, did Hecht's decide to build on such a desolate spot? Hecht's chairman, J. Warren Harris, gives this answer, "To make the decision to come downtown, we first did a very thorough research of the city, studied the demographics, what the trends were as far as employment and things of that nature [were concerned]. Then we worked very closely with the city government, formed partnerships with them in our strategy and our plans as to what we'd like to do, particularly with the economic development area of that segment. We have 145,000 customers within a 10-minute walk of the downtown store, and by the

---

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

end of next year, there'll be another 25,000. That's a powerful customer base."

The second example is the new Horton Plaza shopping center, which extends over a six-block area in downtown San Diego, with 900,000 square feet of space, four department stores and 150 specialty shops. One of the most interesting things about Horton Plaza is that not a penny of federal or state money is involved. According to its developer, Ernest W. Hahn, chairman of the Ernest W. Hahn Co., it is the largest such inner-city development in the United States: "It is truly a private-public partnership with the city of San Diego and our firm."

The third example is a major spending program by Bloomingdale's in downtown New York City and in Chicago: modernizing the midtown Manhattan flagship store and opening a new store in Chicago.

"We see certainly an increasing vitality to our store in New York," says Marvin Traub, chairman of Bloomingdale's. "I think there is a greater interest in cities as entertainment centers. People come to them whether it's for museums, galleries, theater or shopping. Otherwise, we wouldn't be investing the money we are "in New York and Chicago. The two stores, he says, are "very expensive operations, and will have to be very productive in the future for Bloomingdale's to do well . . . and we believe that opportunity absolutely exists."

The downtown revival is not limited to just a few big cities. The retail business in hundreds of American cities will be affected by the resurgence.

Says Walter Loeb, who as a principal in the investment banking firm of Morgan Stanley is involved in financing many shopping centers: "There are at least a hundred locations where you can have a revitalization of the downtown area."

Matt DeVito, chairman of the Rouse Corp., a leading shopping center developer, says, "every city has the opportunity for some retail renaissance in (the) central city. I expect department stores and retailers will be moving to the central city with a great deal more courage and gusto in the next 10 years than they have before."

The retail/revival in America's downtowns is highlighted in the bureau's videotape presentation "The City Alive," given earlier this year to the National Retail Merchants Association. Since the first showing, the bureau has received dozens of requests for it to be used in presentations to retailers and developers all over the country, including one in Washington, D.C., to 250 major developers at a joint meeting of the International Council of Shopping Centers and the Department of Housing and Urban Development.

Many of our member newspapers have told us they plan to use the presentation as the centerpiece of meetings with their key retailer customers, where it is sure to stimulate discussion centered on the local market. They feel that this kind of contact with their most important advertisers—with the meeting often including a panel of local retailers, developers and city officials—is a useful way to remind retailers that they have a strong bond with newspapers and newspaper advertising.

If you'd like to arrange for a showing of "City Alive," call Alfred Eisenpreis, NAB vice president/retail marketing, at (212) 704-4535. ☐

From Sale To Linage Analysis.

CJ/ADVERTISING™ integrates all steps of the advertising process — order entry and rating, sales rep reporting, contract management billing, aging and receivables handling, ad statistics and reporting.

It shows performance by territory or account. Because it's online, managers can easily see where they made money, what products did best and how much preprints impacted sales. They can compare current figures to previous forecasts and check them against actual year-to-date figures. Online information and up-to-the-minute reports are available by revenue, linage, SAUs or whatever type of units you want to use.

When CJ/AD TRACKING,™ CJ/LAYOUT™ and CJ/CLASSIFIED™ are brought online, comprehensive control of the full advertising and production cycle begins. These three systems are tightly coupled to CJ/ADVERTISING — a unique design option which allows all of them to share the most current up-to-date information.

Directory competition topic of NAB report

Billed as a major "threat" to newspaper advertising, the Yellow Pages are the subject of a 25-page report available from the Newspaper Advertising Bureau.

The report estimates that by next year there will be 8,000 directories, double the number in 1984. As a group, they are expected to attract more than $9 billion in advertising in 1987, including $8 billion-plus in local advertising, NAB said.

Although the amount of advertising attracted by Yellow Pages is considerably below that of newspapers, NAB points out it is increasing at a more rapid rate than in newspapers.

Although newspapers had nearly five times the amount of national advertising that went to Yellow Pages in 1985, the directories' national ad revenue has increased by 472 percent since 1974, compared with 299 percent for newspapers, according to the NAB report.

The story is similar with local advertising. Newspapers hold a 3.6-to-1 edge, but the rate of increase for Yellow Pages last year was about double that for newspapers—15.4 percent compared with 7.6 percent.

Besides the statistical analysis of trends, the report discusses strengths and weaknesses of Yellow Pages advertising, and it offers tips on how newspapers can sell against this form of competition [presstime, March 1986, p. 16].

For free single copies, call Thomas Fitzpatrick, NAB marketing manager, at (212) 704-4551.

$1-million-a-week coupon scam foiled

A cents-off coupon scam with the potential to drain $1 million a week from manufacturers has been intercepted by the U.S. Postal Service.

Postal inspectors filed charges March 12 against nearly 100 people in a Miami-based ring that involved more than 700 retail outlets nationwide.

The tip-off ~~that~~ something was awry came from several sources, including The Miami Herald. An 18-month USPS undercover investigation involved distribution of a newspaper-insert coupon for a bogus roach spray called "Broach."

Some observers believe that about 20 percent of all coupons issued are involved in some form of misredemption, and the Miami case was the latest example of the problem [presstime, Dec. 1984, p. 18].

Newspapers hit by N.J. litter tax

A new law in New Jersey taxes manufacturers, wholesalers and retailers of "litter-generating products," including newsprint.

The law, imposing a $300 levy per $1 million in sales, was opposed by the New Jersey Press Association. NJPA noted that the law taxes manufacturers for a situation over which they have no control, and that the companies covered by it are already taxed on their profits.

Newspapers are included under the law's definition of litter.

It is expected that the tax will raise more than $10 million for local litter cleanup programs.

The New Jersey litter law was modeled after one enacted in 1971 in Washington state.

"Our people have not complained that much about it," said Jerry Zubrod, executive director of the Washington Newspaper Publishers Association. The tax is "relatively small," he said: $150 per $1 million in gross sales.

The tax raises about $2 million annually for the Washington Department of Ecology's Litter Control and Recycling Program.

Newspapers in at least one other state pay a litter tax. In Ohio, a small portion of the state's corporate franchise tax goes to fund programs of the Ohio Office of Litter Prevention and Recycling. The maximum tax is $5,000.

Like all other businesses in the state, newspapers pay this tax. However, a second tier of the litter tax, assessed on producers of "litter-stream products," does not affect newspapers.

In effect since 1980, the Ohio tax annually brings in $9 million.

Court ruling could benefit Texas papers

A court ruling in which the state of Texas was ordered to refund $149,107.74 in circulation taxes to Texas Monthly magazine, if upheld, "could have major implications" for newspapers there, according to an official of the Texas Daily Newspaper Association.

Texas Monthly, which had been paying the circulation tax under protest, claimed that the tax law is unconstitutional because it gives an exemption to religious magazines.

In his Feb. 12 ruling, Travis County District Judge Joe B. Dibrell Jr. agreed that the law "constitutes an unlawful discrimination based on the content of [Texas Monthly's] publication," in violation of the First and 14th Amendments.

The state has appealed the ruling to the 3rd Supreme Judicial District Court of Texas at Austin.

Philip A. Berkebile, TDNA executive vice president, said his association will monitor the progress of the state's appeal.

Newspapers fall into the same category as magazines like Texas Monthly, Berkebile said. "If indeed, magazines are exempt, as the court states, then newspapers are exempt as well," he said.

In the meantime, newspapers plan to gear up this summer for an attempt to repeal the circulation tax in the state Legislature when it convenes next January, he said [presstime, July 1985, p. 65].

Controversial business-license tax upheld in S.C.

The South Carolina Supreme Court has upheld the constitutionality of a city's business-license tax that requires daily newspapers to pay a higher rate than other manufacturers.

The decision reversed a lower court judge's ruling that the city of Florence's special gross-receipts tax schedule for daily newspapers was unconstitutional [presstime, Feb. 1985, p. 31].

Noting that the lower court had cited the U.S. Supreme Court's decision ruling Minnesota's newsprint and ink tax unconstitutional, the state high court said that decision was "inapplicable," primarily because "it dealt with a use tax that applied only to newspapers. The constitutional infirmity in that case was a tax that singled out the press for differential treatment.

"In the [Florence] case, all businesses are subject to the business license tax, and newspapers are merely a separate classification. The burden was upon respondent to demonstrate the unconstitutionality of the ordinance beyond a reasonable doubt. We hold it failed to carry that burden," the court said.

The Florence Morning News, which challenged the tax rate, will not appeal the decision, said Eugene N. Zeigler, local attorney for Thomson Newspapers Inc.

Discussion continues on new ABC division

Interest in the formation of a new national newspaper division by the Audit Bureau of Circulations continued in March.

Such a division could affect how bulk sales are counted for national newspapers including USA Today. Its owner, Gannett Co., has campaigned for recognition of bulk sales—often discounted to airlines and hotels—as paid circulation.

A national newspaper division was discussed at the March 5-8 meeting of the ABC board, and at the March 6 meeting of the ANPA Executive Committee.

The ANPA committee left the door open for formation of such a division by endorsing discussions on the issue between the audit bureau and the ANPA/NAB/ABC Liaison Committee.

Jerry W. Friedheim, executive vice president of ANPA, said the Executive Committee "decided it would be appropriate" for the Liaison Committee "to have exploratory discussions with ABC on the matter of a possible national newspaper division."

However, the Executive Committee "took no position with regard to whether such a national newspaper division ultimately should be created," Friedheim said. "All concerned newspapers should be part of any such discussions, the committee felt."

Besides establishment of a national newspaper division, other Gannett suggestions about bureau operations were among "ongoing ABC issues" reviewed by the ANPA committee, he said. Gannett has complained about ABC's refusal to conduct audience research and to count bulk sales on the first page of an audit statement. But the committee decided that these issues "would be more appropriately discussed directly with ABC by Gannett," Friedheim said.

Jerry W. Friedheim

David Keil

The committee's decision is another part of the story involving Gannett's unhappiness with certain ABC procedures. That unhappiness led Gannett to pull 14 of its dailies out of ABC late last year, then return them to the fold following a meeting Jan. 29 with liaison committee officials [presstime, March 1986, p. 55].

At its recent meeting, the ABC Board discussed formation of a national newspaper division, possible criteria for the definition of a national newspaper, and reporting formats that might include a combined figure for bulk as well as general circulation sales, according to David Keil, president and managing director of the audit bureau.

The board took no action on the subjects other than to seek more feedback from advertisers and advertising agencies, he said. To that end, the Newspaper Buyer Advisory Committee of ABC was asked to consider whether a national newspaper division should be formed.

Keil added that the board also referred to the advisory group the issue of same-day promotion of coupons [presstime, March 1986, p. 51]. □

Globe and Mail challenges newsrack ordinance

In what is being called a test case, The Globe and Mail in Toronto is challenging the constitutionality of an ordinance prohibiting the placement of newsracks on public property in Quebec City.

A favorable ruling by the Superior Court of the District of Quebec could also be used to overturn similar laws in Montreal and Sherbrooke, said Geoffrey Stevens, managing editor of The Globe and Mail. Stevens said he knew of no other case in which such an ordinance has been challenged on grounds it violates Canada's four-year-old Charter of Rights and Freedoms, guaranteeing freedom of the press [presstime, July 1984, p. 10]. □

PM to AM Conversions: Don't Get Caught Guessing

Not all cycle switches are successful. The gain or loss depends on: the strength of AM competition, the size and commitment of the "core" PM market, lifestyle patterns, the time preference for information delivery, and more. MOR can tell you if a switch is right for your market.

Analysis of tough strategic problems is our business.

Study suggests competition makes little difference in quality

BY GUIDO H. STEMPEL III

Are competing newspapers better than monopoly newspapers? A study by Robert M. Entman, assistant professor of public policy studies and political science at Duke University suggests there's little difference.

Guido H. Stempel III

Entman looked at quality, diversity, fairness and responsiveness of 91 daily newspapers—26 monopoly newspapers, 33 newspapers that shared the market with a newspaper owned by the same company and 32 newspapers that had local competition.

The main difference he found was that newspapers sharing the market with another newspaper owned by the same company had a higher proportion of staff-written stories than either the monopoly newspapers or the newspapers with local competition.

Newspapers with local competition tended to have a high proportion of national and international news and were slightly more partisan in their news coverage.

Other than that, there is little difference in the content of monopoly, shared market and competing newspapers. Entman concluded that "the wide concern with recent trends toward one-paper cities may be somewhat overdrawn."

The study appeared in the summer 1985 issue of the Journal of Communication.

When the Reagan administration proposed amending the Freedom of Information Act in 1981, one of five reasons given for doing so was the cost of compliance. The Justice Department said it had cost $57 million in 1980.

John Ullmann, assistant managing editor of the Minneapolis Star and Tribune, and Karen List, assistant professor of journalism at the University of Missouri, have analyzed the estimates for 1978, 1979 and 1980. They conclude that while the cost of compliance obviously is higher than Congress anticipated, accurate estimates are impossible because of faulty reporting.

One problem was that no guidelines were provided for how to make the estimate or what to include in it. Each department was left to decide how to calculate the cost. Another problem was that agencies kept poor records or none at all. Estimates for 1980 ranged from $15,561 for the Interstate Commerce Commission to more than $14.5 million for the Department of Justice. The Defense Department's estimate was less than half that of the Justice Department.

The authors also concluded that the reluctance of agencies to comply with requests led to unnecessary litigation, which increased the cost considerably.

It is perhaps indicative of the problem that the authors had to use the Freedom of Information Act to get agencies to release the cost information. Furthermore, the Justice Department, which had compiled the total report, refused to release that report to the authors. Instead, it sent the request to each of the individual agencies.

This study is reported in the autumn 1985 Journalism Quarterly.

When Congress banned cigarette advertising on radio and television in 1971, concern about the First Amendment implications was tempered by the realization that the law did not affect print media.

Now, the U.S. Supreme Court has upheld state laws in Oklahoma and Mississippi that ban alcoholic beverage advertising in all media. The basis for upholding the bans was that they safeguard "health, safety and general welfare" of citizens.

These decisions raise questions of just how far the banning of advertising of legal products might go before the Supreme Court sees such a ban as a violation of the First Amendment.

These two decisions and their implications are discussed by Lemuel Schofield of the School of Communication at the University of Miami in an article in the autumn 1985 Journalism Quarterly.

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime

Newspaper departments need to cooperate, understand each other

Rather than looking for departmental differences, newspaper managers should pursue departmental interdependence, according to the authors of *Newspaper Leadership.*

The book contains practical suggestions, discussions and some historical insights about managerial concerns of newspaper departments, including budgeting and planning, legal issues, promotion, and personnel matters. Authors were Ardyth Broadrick Sohn, associate professor of journalism, University of Colorado, Boulder; Christine L. Ogan, assistant professor of journalism, Indiana University, Bloomington; and John Polich, president, Simmons-Scarborough Syndicated Research Associates, New York City.

"Interdepartmental understanding and cooperation is critical to the success of newspapers now and in the future," comments ANPA Chairman and President Richard J.V. Johnson in the foreword to the 192-page book.

Newspaper Leadership, written for would-be and practicing managers, is available in hard cover for $24.95 from Prentice-Hall, Route 9W, Englewood Cliffs, N.J. 07632. Gannett Foundation provided funding for the project.

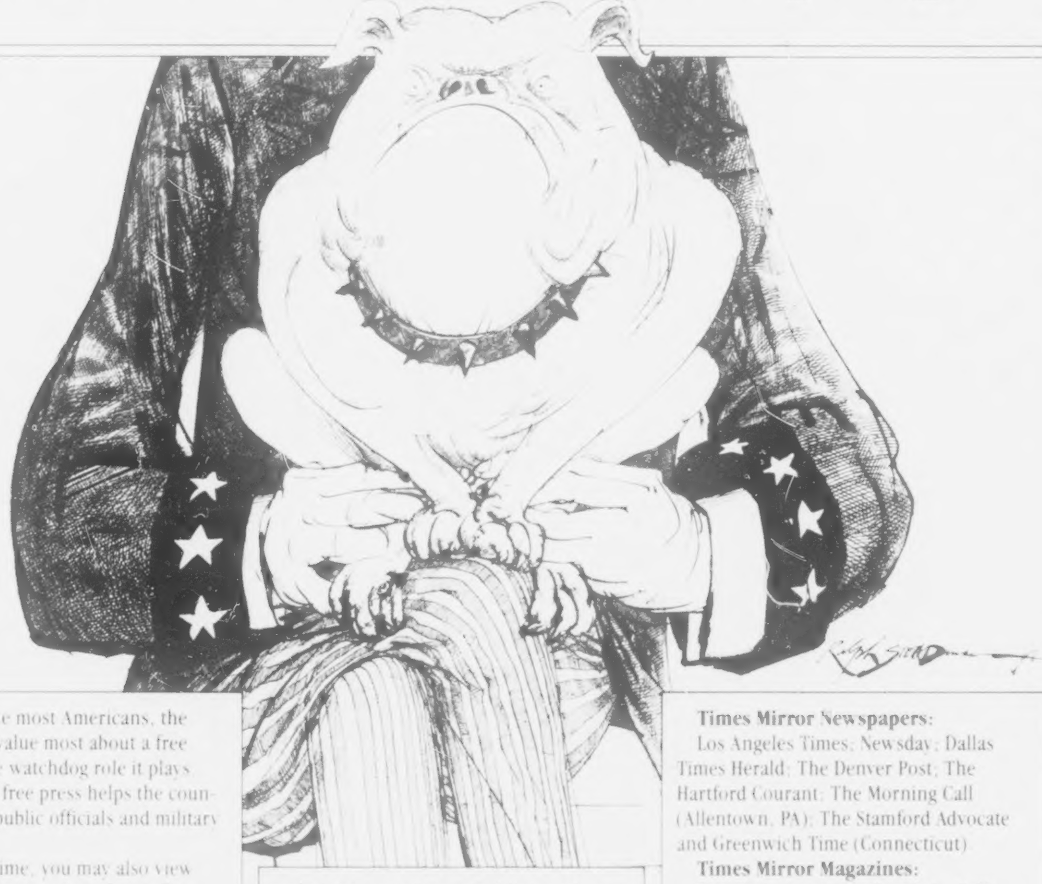
Exploring three threats to free expression in U.S. history

Freedom of expression is threatened when a state experiences political instability that is fueled by the threat of armed war and fanned by fiery rhetoric. Craig R. Smith, president of the Freedom of Expression Foundation in Washington, D.C., charts three such incidents in American history: passage of the Alien and Sedition Acts, 1798; the Radical Republicans' rise to power in Congress, 1868; and the McCarthy trials, 1950-54.

The Fight for Freedom of Expression: Three Case Studies is a 104-page, hard cover book available for $15 from the Institute for Freedom of Communication, 414 S. Capitol St. S.E., Washington, D.C. 20003. Upon written request, free copies are available to educators, students and researchers. Publication of the book was assisted by a grant from The New York Times Co. ☐

"The People & The Press," Ad #5 in a series

Is the watchdog really a lapdog?



If you're like most Americans, the thing you value most about a free press is the watchdog role it plays.

You believe a free press helps the country by keeping public officials and military leaders honest.

At the same time, you may also view America's free press as too often influenced by powerful interests and institutions — including government and the military.

You're worried that the watchdog whose vigilance and tenacity you count on may in fact be a lapdog.

How do we know this? It was one of the findings of a year-long investigation of public attitudes toward the press that we commissioned and The Gallup Organization carried out.

And if it comes as a surprise, you know why we did the study. We felt we simply didn't know enough about how you and your fellow citizens really saw the press.

Now we do, and we intend to share what we know with you, via ads like this and via presentations at public meetings. We also intend to repeat the study regularly to keep tabs, and stay connected.

What do you think?

Is America's watchdog in danger of becoming a lapdog? Send your view on this and other press issues to our Chairman Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

He's also the person to write for a summary of our investigation or a Times Mirror annual report. Or you can call our public affairs people at (213) 972-3946.

ANPA urges labeling reporters as professionals

Newspaper Guild takes opposite view in comments filed with Labor Department.

Newspaper reporters should be recognized as exempt professionals under the Fair Labor Standards Act, ANPA said in comments submitted in March to the U.S. Labor Department's Wage and Hour Division.

Because reporters and editors qualify as both "learned" and "artistic" professionals under the act, they should not be subject to its provisions regarding overtime pay and compensatory time, the Association said.

The Newspaper Guild also has submitted comments taking the opposite view. It urged that reporters continue to be covered by overtime standards of the law.

The Labor Department had requested comments on the issue by March 22 in a review that could lead to revisions in the regulations exempting professional employees [presstime, Feb. 1986, p. 57]. The question of whether reporters are professionals within the meaning of the FLSA also is being addressed by U.S. District Court in Concord, N.H., in a case involving the Concord Monitor. Trial started in January but was postponed in its second week. It is scheduled to resume June 9 [presstime, March 1986, p. 56].

The FLSA was enacted in 1938. The question regarding reporters' eligibility was addressed in a 1944 case in which the 6th U.S. Circuit Court of Appeals established in *Sun Publishing Co. (Lowell, Mass.) v. Walling* that ordinary reporters and editors are not professionals within the wage-hour administrator's definitions.

The appellate court found then that few newspaper employees were graduates of schools of journalism, that there was no licensing requirement for reporters, and that the only practical school of journalism was a newspaper office.

The U.S. Supreme Court denied review of that decision.

In its recent comments to the Wage and Hour Division, ANPA said "licensing is not a prerequisite for qualification as a professional under either the learned or artistic prong of the regulatory test."

ANPA argued that reporters and editors now possess the advanced knowledge and specialized course of study required of a learned profession and engage in the creative work of writing — a recognized field of artistic endeavor.

The Association also contended that newspaper photographers qualify as artistic professionals.

The comments noted that the Labor Department's interpretations of the act were derived mainly from two documents: a 1940 hearing report on FLSA exemptions and a 1943 manual of newspaper job classifications. "However," ANPA said, "since that time, the occupation of newspaper reporting has undergone significant changes." The process of news gathering, the education of reporters and their duties and responsibilities "have developed dramatically" in the intervening years.

In the early 1940s, news was conveyed by the press, with radio being its sole competitor, the Association pointed out. With the advent of television and the massive shifts in demographics and technology that have occurred since World War II, there now exists a "communications industry," and newspapers are just one facet of that industry, ANPA said.

Also having an impact on increasing professionalism have been codes of ethics and libel law, the Association continued. Today's reporter must be "ever vigilant" to the dual obligations of fairness and truth, and the consequence of failing to meet those standards is equivalent in impact to that imposed on lawyers, doctors, architects and other professionals.

The Association noted that interpretations of the act issued in 1949 by the Labor Department recognized then that some newsroom employees qualified for the professional exemption. Those workers included writers in highly technical fields, editorial writers, columnists, critics and top-flight writers of analytical and interpretive articles. Today's newspaper reporters generally qualify for the professional exemption for the same reasons which led to recognition of these early exceptions, ANPA said.

Concerning educational requirements, ANPA noted that a high school diploma is not sufficient for entry into the occupation of newspaper reporting. Of necessity, reporters need a college academic background to give them the knowledge to deal with multifaceted and complex issues. The increases in the number of journalism schools and in student enrollments have paralleled the evolution of the occupation of reporting and the demand by newspapers for students with a specialized course of study. The comments included statistics showing that most reporters have a college degree.

ANPA noted there are numerous awards honoring the professional achievements of reporters and many professional fellowships for journalists. The existence of The Society of Professional Journalists, Sigma Delta Chi, and its code of ethics also was presented as evidence that reporters are professionals.

COHEN
SCHURZ

Raymond G. Cordelli (center), director of the Division of FLSA Operations, gives overview of wage and hour law during ANPA Government Affairs Committee meeting March 6-7 in Washington, D.C. Listening are Carl P. Smith, FLSA wage-hour analyst, and committee member Mary Schurz, editor and publisher of The Advocate-Messenger, Danville, Ky.

The status of the modern news reporter as a professional has been recognized by the courts in cases construing the "reporter's privilege" as grounded in the First Amendment, which functions analogously to privileges afforded other professionals such as doctors, lawyers and the clergy, ANPA said. The cases reflect the fact that today's reporters are not "mechanics" but professionals "who must continually exercise sophisticated and difficult judgments. That reporter's privilege cases have arisen only in the last three decades reflects the evolutionary change of reporters' roles and the change in the courts' perception of those roles over that period," ANPA said.

In adjudicating libel actions against reporters and their newspapers, courts have "scrutinized closely" the fairness with which a writer of an article selects facts to report, the Association noted. "The courts have thus compelled reporters to make judgments in accordance with a higher standard of care—a fact that distinguishes their work from the type of jobs considered non-professional. The same is true with respect to related non-libel litigation, including actions for invasion of privacy or 'false light' portrayals."

The fact that other people in a news organization may review and revise the reporter's work does not detract from the professional nature of reporting, ANPA said, because "professionals working together have complementary functions."

The Association also submitted statements from journalism educators and editors in support of its position.

The Wage and Hour Division has not set a deadline for its response to the comments. —*Clark Newsom*

Fringe benefits stabilize as percentage of pay

Employee benefits in the private sector amounted to 36.6 percent of payroll in 1984, about the same as in 1983 and 1982, the U.S. Chamber of Commerce reported in an annual survey.

The annual dollar amount, however, grew to $7,842 per employee in 1984, compared with $7,582 in 1983 and $7,187 in 1982.

For the printing and publishing industry in 1984, the averages were 36.5 percent of payroll and $7,856 per year. In 1982, the percentage of payroll was the same and the dollar amount was $7,216 [presstime, May 1984, p. 72].

More than 1,500 employers participated in the survey. □

Arbiter upholds reporter's suspension for failing to check news release

An arbitrator has upheld a five-day disciplinary suspension given a reporter at the San Jose Mercury News for failing to check the accuracy of what turned out to be a fraudulent news release.

The newspaper published a retraction after running a story based on the release.

The release did not have a letterhead and gave neither a contact person nor a telephone number. It stated that a drama group would open a new musical production titled "Seven Guys For Seven Brothers" with an all-male cast at the Lincoln High School Performing Arts Center in San Jose.

The grievant wrote an article on the basis of the release without checking its authenticity. The newspaper later received a number of letters and telephone calls about the erroneous story.

In seeking to have the suspension overturned, the San Jose Newspaper Guild emphasized the grievant's background and record as a reporter since 1956. It argued, among other things, that it was impossible to check out all releases inasmuch as individuals like the grievant received about 100 of them a week.

The Mercury News contended that the obligation to check releases was not an unattainable standard. It noted that reporters do not write stories based on every release received.

Arbitrator William B. Gould IV said, "It is axiomatic that reporters check statements that are given to them, whether they be in the form of press releases or in some other form. The testimony at the [arbitration] hearing convinces me that this is the journalistic ethic—particularly at a newspaper like the San Jose Mercury News."

Remarking that newspapers "are suffering from a crisis of confidence," Gould said the Mercury News "is reasonable in its insistence that reporters check the facts."

The arbiter said he recognized that the grievant and other reporters receive numerous press releases, and he understood the pressure that can be placed on reporters by workloads and deadlines. "But the grievant in this case was not under extraordinary pressure on the day in question and had every reason to be suspicious about the press release," he said.

"In short," Gould said, "if there are to be exceptions to the general rule that facts should be checked out, most certainly this is not one of them." □

Richard J. Ramsey (foreground), executive secretary of The Newspaper Guild's Contracts Committee, discusses the union's bargaining program with management representatives at the first ANPA Negotiating Strategy Seminar, held at The Newspaper Center in Reston, Va., in late February. ANPA Vice President/Human Resources Roy W. Anderson is to Ramsey's left.

NLRB judge upholds California daily in manager's discharge

The Salinas Californian did not violate the Taft-Hartley Act by discharging its credit manager for engaging in union activities during a union's unsuccessful organizing campaign, a National Labor Relations Board administrative law judge recently ruled.

Judge George Christensen found that the individual was a managerial employee unprotected by the act.

Christensen noted that the question of whether a particular employee is "managerial" must be answered in terms of the employee's actual job responsibilities, authority and relationship to management. He found that the credit manager possessed and exercised discretionary powers to extend or deny credit to the newspaper's advertisers "in substantial amounts."

Charges in the case were filed by the San Jose Newspaper Guild, which attempted to organize all of the newspaper's employees except those in the composing room. The employees voted 53-37 against the union in an NLRB-supervised election [presstime, July 1985, p. 60].

The NLRB's general counsel has filed exceptions to Christensen's decision.

(Salinas Newspapers Inc. and San Jose Newspaper Guild Local 98, JD(SF) 013-86)

Court overrules NLRB in affiliation case

The U.S. Supreme Court has ruled that non-union members of a bargaining unit do not have to be allowed to vote when the bargaining unit is deciding whether to affiliate with another union.

The court said the NLRB had exceeded its authority by requiring unions to allow non-union members of the unit to vote before the board would order an employer to bargain with the affiliated union.

The board ruled in 1982 that a Seattle bank was not obligated to bargain with an AFL-CIO union after members of an independent union at the bank voted to affiliate with it. Only union members were allowed to participate in the election.

The Supreme Court unanimously overturned the board's policy, saying the Taft-Hartley Act permits union members "to control the shape and direction of their organization."

Some printers return to work at Chicago Tribune

About 25 printers represented by Chicago Typographical Union No. 16 had returned to work at the Chicago Tribune in late March following the union's unconditional offer to end a strike that began July 18, 1985.

Tribune spokeswoman Ruthellyn Roguski said more workers will be returning to fill 38 remaining vacancies in the composing room. About 250 printers walked out when the strike began.

David D. Donovan, president of the local union, said the strike is over. "Now it's an illegal lockout" of the other printers, he said. "We've changed our picket signs to reflect that."

Roguski said, however, that the strike will not be over "until a settlement agreement is reached." Negotiations toward a settlement continued in late March [presstime, Sept. 1985, p. 54].

About 350 pressmen represented by Web Printing Pressmen's Union No. 7 also have offered to return to work. Roguski said that a preferential hiring list has been created, and pressmen "will be taken from that list" as vacancies occur.

Some 400 mailers represented by Chicago Mailers Union No. 2, the third union involved in last summer's walkout, remain on strike.

The mailers' and printers' locals are affiliated with the International Typographical Union. The pressmen's local is affiliated with the Graphic Communications International Union. The two international unions are currently engaged in merger negotiations.

Meanwhile, the NLRB has issued an unfair labor practice complaint against the Tribune based on charges filed by the pressmen's union. A hearing before an administrative law judge was scheduled for March 24. ☐

NLRB elections

Arlington Heights (Ill.) Daily Herald, ITU: Composing room employees voted 21-21 against representation by Chicago Typographical Union No. 16. A majority vote is required for a union to win representation rights.

(NLRB Case No. 13-RC-16792)

Fort Lauderdale News and Sun-Sentinel, GCIU: Paper handlers voted 16-7 against further representation by Local 46 of the Graphic Communications International Union.

(NLRB Case No. 12-RD-574)

Delaware County Daily Times, Primos, Pa., Guild: Editorial and commercial employees voted 55-21 in favor of continued representation by The Newspaper Guild of Greater Philadelphia.

(NLRB Case No. 4-RD-1283)

Central Maine Morning Sentinel, Waterville, ITU: Mailroom inserters voted 17-0 in favor of representation by Typographical Union No. 643.

(NLRB Case No. 1-RC-18641)

Wichita Eagle-Beacon, ITU, Teamsters: Part-time mailroom inserters rejected representation by either Mailers Union No. 85 or Local 795 of the Teamsters. The vote was 23 for no union, 16 for the Teamsters and 3 for the Mailers.

(NLRB Case No. 17-RC-9790)

Additional arbitration awards

Cleveland Plain Dealer, Guild: Marvin J. Feldman ruled that the company did not violate a labor agreement when it changed the work schedule of copy desk personnel.

Minneapolis Star and Tribune, SEIU: J.C. Fogelberg sustained the discharge of a building custodian for absenteeism.

San Jose Mercury News, Guild: Daniel J. Dykstra ruled that the company did not violate the labor agreement by accepting classified advertising electronically from an advertising agency.

South Bend (Ind.) Tribune, GCIU: Edward P. Archer, in a press-manning dispute, granted the union's request for an additional pressman on four-color work but denied its request for an additional black-ink pressman.

Toronto Star, Guild: G. William Dunn upheld the union's position that an assistant city editor was wrongfully transferred to other duties.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

USDA kenaf program advances

The U.S. Department of Agriculture has signed a $100,000 cooperative agreement with Kenaf International to implement the government's kenaf commercialization program.

The program aims to "demonstrate the economic potential of growing, harvesting and pulping kenaf for manufacturing newsprint, kraft board, and other commercial pulp and paper products," according to Orville G. Bentley, assistant secretary for science and education, who announced the agreement. Congress passed legislation last December allowing the program to go forward [presstime, Jan. 1986, p. 54].

Kenaf International, which has headquarters in Bakersfield, Calif., is a joint venture that is promoting the use of the fibrous annual plant in papermaking around the world.

"We're excited about it," said Jerry K. Stanners, chairman of Kenaf International and chief executive officer of The Bakersfield Californian, which is one of the joint venture partners. "We think it gives a whole new dimension to kenaf as a viable raw material for paper products.

"I think it will also give some visibility to kenaf in the United States and the Western Hemisphere that we have not had before," he added.

The only kenaf pulp mill developed thus far is in Thailand.

The agreement between the government and KI calls for the production of kenaf on 2,500 to 4,000 acres and the pulping of kenaf fiber at three or more participating mills in the southern United States.

According to USDA, Kenaf International will "select kenaf growing areas, identify potential kenaf growers, develop individual farm budgets, consult with farmers regarding kenaf production and arrange necessary agreements between mills and farmers."

It also will serve as "the coordinator and technical advisor to establish grants between USDA and the paper mills interested in producing paper products from kenaf."

USDA said "additional resources" beyond the $100,000 in the agreement will be made available "to help defray the expenses of introducing kenaf fiber into processing mills and to harvest, store and transport the fiber to the mills."

The USDA's Bentley said kenaf commercialization could be of major importance to farmers. "The renewed push to find new uses for farm and forest products won't offset the current supply-demand imbalance in U.S. agriculture, but it represents a positive market-oriented response and the best long-term hope for farmers to gain back prosperity," he said. □

Takeover try unveiled

Long, Hoenig, & Walker, an Oklahoma investment company, recently notified the Securities and Exchange Commission of a possible intent to gain control of Southwest Forest Industries. Southwest has one newsprint mill, located at Snowflake, Ariz., and the firm's largest shareholder is The Hearst Corp., which has 17.5-percent ownership.

Meanwhile, Jefferson Smurfit Corp. sold its 9.3-percent interest in SFI. Jefferson Smurfit had previously offered to purchase the company, but that offer was rejected [presstime, May 1985, p. 78].

NEWSPRINT NOTES

- **Contract negotiations** between management of four British Columbia mills and two unions are under way.

The unions—the Canadian Paperworkers Union and the Pulp, Paper & Woodworkers of Canada—are seeking two-year contracts with pay hikes that would amount to 6 percent in the first year and 5.5 percent in the second. The average wage in British Columbia mills is currently $16.70 [Canadian] an hour [presstime, Jan. 1986, p. 54].

- A feasibility study on a **proposed recycling newsprint mill** in Richmond, Calif., has been completed, and possible investors are now being contacted, city officials report. A decision on the project could be made by mid-year, with construction possible by the end of the year and completion 27 months thereafter [presstime, Dec. 1985, p. 52].

Among potential investors are forest product and newspaper companies.

- Southwest Forest Industries **restarted a newsprint machine** at its Snowflake, Ariz., mill in response to increased orders. The machine had been idle since 1984.

- Abitibi-Price Inc.'s Grand Falls, Newfoundland, newsprint mill faces the possibility of some **shutdowns** because of depleted water supply behind the hydropower dam serving the plant.

Three-year contracts are industry norm

More than two-thirds of the labor contracts negotiated in 1985 at U.S. pulp and paper mills were for three years, according to an annual study by the American Paper Institute.

Of the 99 agreements, 69 were three-year pacts, 22 were for two years, three for one year, three for six years, one for five years and one for seven years.

First-year wage increases amounted to a weighted, national average of 2.2 percent. Deferred increases [presstime, Feb. 1985, p. 47] averaged 3.4 percent for the second year and 3.3 percent for the third.

The following charts summarize the wage provisions for 1985 contracts:

1985 first-year wage increases

Region	Mills	Employees	Weighted average[1]
New England	21	6,213	2.3% (23¢)
East	22	6,020	3.4% (33¢)
South	20	10,504	2.0% (24¢)
Midwest	23	8,307	3.1% (35¢)
Pacific	13	3,613	-1.1% (-12¢)
National totals 1985	99	34,657	2.2% (24¢)
National totals 1984	118	47,485	3.7% (39¢)

Deferred wage increases (negotiated in 1985)

Second Year (1986)

Region	Mills	Employees	Weighted average[1]
New England	20	6,163	3.6% (37¢)
East	21	5,430	3.6% (39¢)
South	20	10,504	2.8% (38¢)
Midwest	23	8,307	3.7% (42¢)
Pacific	12	3,338	3.4% (47¢)
National total	96	33,742	3.4% (39¢)

Third Year (1987)

Region	Mills	Employees	Weighted average[1]
New England	13	3,224	3.9% (41¢)
East	13	3,459	3.8% (38¢)
South	20	10,504	2.8% (41¢)
Midwest	17	6,993	3.5% (43¢)
Pacific	11	3,294	3.6% (52¢)
National total	74	27,474	3.3% (42¢)

[1] Excluding cost-of-living clauses and bonuses.

1986 begins as 1985 ended: with higher usage

After setting a record in 1985, newsprint consumption by all users began 1986 with a [illegible] percent above the year earlier figure.

Consumption by U.S. daily newspapers was also up in January, [illegible] percent higher than in January 1985.

Production in both Canada and the United States was down during the month from the previous January — [illegible] percent and [illegible] percent, respectively.

Shipments by U.S. and Canadian mills also decreased, with the exception of Canadian overseas shipments, which were [illegible] percent above the total for the same month of last year.

Newsprint inventories for newspapers in ANPA's statistical sample averaged 40 days in January, compared with 41 days a year earlier. North American mill stocks [illegible].

The January operating rate for Canadian mills was [illegible] percent and for U.S. mills it was [illegible] percent.

Estimated newsprint consumption, 1985-1986 (thousands of metric tons)

The papers that don't use Western Lithotech in the plateroom. They save a few pennies here and there and pay the price of quality. From plates going blind to total press stops.

But quality newspapers know the whole story. Because they depend on the *total systems* supplier that has been the leader for over 60 years. Depend on the famous plate names... Front Page... Metro Express... Final Edition... and more. On the industry's best chemistry and hardest working processors.

Plus Newstek,™ the new extra long run plate system designed for sharp 4-color inserts and supplements.

All backed by the most responsive technical team in the business.

Get the whole story.

Send for our new complete product line brochure. Contact Western Lithotech, 3433 Tree Court Industrial Blvd., St. Louis, MO 63122. 1-800-325-3310. (In Missouri, 314-225-5031). A Bemis Company.

Flexo's advances hailed

One speaker billed it as "Round Two of the Great Flexo vs. Offset Debate," a sequel to the battle joined at the 1985 ANPA Convention.

However, at the end of Press Options III, ANPA's third annual symposium focusing on pressroom developments, it was clear that the newspaper business was the winner as more information was made available on flexography as an alternative printing process for newspapers.

One member of the audience called it "probably the most objective presentation" on the subject he had heard.

The March 18-19 meeting in Chicago drew 260 people, more than either of the previous two programs. Symposium chairman J.A. Riggs, senior vice president/operations for The New York Times, attributed the increased attendance to "the growing interest" in flexo as "an alternative to consider for the pressroom." People wanted to find out, he said, "What is flexo all about? Is flexo real? Is it here to stay?"

According to flexo's advocate in the debate, the answer to the last two questions is yes. "We feel that the replacement units of the future for us are flexo," said Boykin Wright, vice president/operations of The Miami Herald Publishing Co.

Even from offset's corner came a prediction that by 1995, flexo and offset will have the same number of units running in the United States. "Flexo is not offset's enemy," said John L. Irvin, operations director of Times Publishing Co. in St. Petersburg. "Flexo and the printers who will mature it are our best allies toward achieving common goals of customer satisfaction and our profitability."

Prior to the debate, Larry D. Marbert, director of construction and mechanical systems for Knight-Ridder Newspapers Inc., provided an update on the experiments with flexo that have been going on at The Miami Herald since 1984.

As a result of the testing, many but not all of the company's concerns about flexo have been dismissed, he said.

Remaining problems are being worked on, he indicated. A new platemaking machine is on order to deal with concerns in that area. Press manufacturer M.A.N. Roland is designing a bulk ink handling system, which should be in operation by mid-1987. And tests are under way to determine the best newsprint to use to solve what he called "the most nagging problem on press": linting and plugging of half-tones.

Marbert also said he wanted to "set the record straight" on Knight-Ridder's plans for flexo at the Herald [presstime, Nov. 1985, p. 52], about which he said there has been some "confusion."

The decision to order seven additional flexo units and spread them throughout the Herald pressroom, rather than going with a full flexo press, "does not in any way reflect a lack of confidence in flexo's future," he said. The plan will allow the newspaper to upgrade immediately its page-one quality. In this way, he added, "we hope to get a bigger bang for our buck."

James D. Hitchman, assistant vice president/production for Ottaway Newspapers Inc., reported on a number of recent developments affecting offset, including:

- Anilox keyless inking systems are being tested at offset newspapers in the United States and Japan.
- Improved water spray dampening systems are now available from several manufacturers to improve water control.
- Most offset manufacturers have improved electronic controls; many now offer larger, 50-inch reels that mean fewer roll changes, and several have designed new color-unit configurations.

Tracing production trends over the last 10 years, Steven L. Derman, director of operations at The Hartford Courant, noted that "perhaps the most significant event" during that period was the introduction of USA Today and "the impact it's had on not only quality color but consistent quality color."

Another speaker, William J. Hee, purchasing manager for Gannett Supply Co., described the specifications for newsprint used to print USA Today. The mills that are making paper to those specifications "are the ones guaranteeing themselves a place in the future," he said. "Other mills are in the process of improving their product, while still others have done nothing and are losing ground in the quality race."

On the symposium's first day, participants also heard discussions about printing ink, government regulations and defective folders.

Bruce E. Blom, assistant technical director of Flint Ink Corp., reported on several matters: consequences of the switch to treated mineral oil in ink manufacture, progress in the development of ink with low rub-off tendencies, ink companies' commitment to work with flexo users, and work getting under way by ANPA toward solving offset tinting and toning problems.

Richard W. Neergaard, ANPA manager/environmental services, explained newspapers' obligations under the federal Occupational Safety and Health Administration's "hazard communication" standard. Unlike the other subjects on the program, he noted, "mine doesn't give you very many options." Newspapers must be in compliance with the standard, which involves labeling of hazardous chemicals and employee training by May 25.

Leonard Subach, manager/double-width folders for Rockwell International's Graphic Systems Division, reported on progress to solve a cracking problem that surfaced last year with Goss 3:2 press folders [presstime, Oct. 1985, p. 54].

Metallurgical analysis pinpointed the part of the folder that was subject to cracking under high-stress conditions, he said. Company engineers determined that the stress level could be lessened by removing a sharp corner in the folding cylinder. Repair teams were dispatched into the field to make the necessary cylinder repairs or replacement, with the work scheduled to be completed by the end of this year.

Consistent print quality, which can be a strong selling point for newspapers as they battle with other print media to attract and keep advertisers, was emphasized in "Plate and Platemaking Now and For the Future" on the second day.

Howard W. Helmbrecht, manager sales development for NAPP Systems (USA) Inc. in San Marcos, Calif., said consistency is important regardless of the type of printing process a newspaper uses.

Helmbrecht suggested that once an acceptable standard of quality has been reached, a newspaper should go back, step by step, and determine how it was achieved so that it can be duplicated.

In discussing specific processes, Helmbrecht said he believes letterpress has yet to achieve its full potential in print quality. His company and others are currently working on more resilient plates that will permit a smoother ink lay-down, Helmbrecht said. The use of small amounts of water with offset oil-based inks as well as letterpress oil-based inks also contributes to a smoother ink lay-down, he said.

In offset printing, recent emphasis has been on pre-sensitized photopolymer offset plates that can be manufactured in exact sizes, he added.

In flexography, uniform plate thickness can help minimize the variables that contribute to inconsistent print quality, Hemlbrecht said.

Richard J. Finn, sales manager for W.R. Grace & Co., Lexington, Mass., said all printing operations are striving for lower operating costs and higher print quality. New technology can help balance the two concerns.

Operating costs can be reduced when such technology as pagination systems and computer controls reduce manning and thus labor costs, Finn noted.

Looking into the future, he predicted an increasing use of water-based inks, increasing automation, faster platemaking systems, and the coexistence of several types of printing technology.

Symposium chairman Riggs echoed the thought about coexistence and added that he believes the greater variety of printing options was responsible for the symposium's large turnout. "There are a lot of things going on out there, and everybody wants to keep up with what's new," he said.

New ink replaces Red Lake C

The AD-LITHO™ and AdPro™ red inks made with a pigment known as "Permanent Red 2B" will be available from all major ink suppliers before May 25, according to the National Association of Printing Ink Manufacturers.

Permanent Red 2B replaces a pigment, "Red Lake C," large doses of which have been found to cause an increased incidence of spleen cancer in laboratory rats. At its January meeting, ANPA's Technical Committee approved the pigment substitution for ANPA's consolidated AD-LITHO and AdPro color ink book, scheduled to be published later this year.

May 25 is the date by which U.S. newspapers must be in compliance with the "hazard communication" standard, which requires employers to inform employees of hazardous chemicals in the workplace [presstime, Feb. 1986, p. 51].

NAPIM reported that inks formulated with Permanent Red 2B print "cleaner" than inks made with Red Lake C. ☐

TECHNOLOGY CALENDAR

- The **Metro Users Group** will meet April 6-8 at the Lincoln Hotel in Dallas.
- The **Harris 72P Users Group** will meet April 20-22 at the Radisson Hotel in Raleigh, N.C.

Quality reproduction guide completed

A new book titled "Guide to Quality Newspaper Reproduction" is being made available to advertisers and newspapers. The publication was written by the ANPA Technical Committee and produced jointly by ANPA and the Newspaper Advertising Bureau.

Although designed primarily as a guide for retail and national advertisers, the 56-page book is applicable to all newspaper copy. It recommends certain specifications for copy prepared for either offset or letterpress printing, including screen sizes, dot sizes, and ranges for black-and-white halftones and for color separations.

Also featured are techniques to achieve good newspaper photography, artwork and ad makeup.

The Technical Committee members most involved in the book's preparation were Charles R. Blevins, vice president/production of Gannett Co., and Robert L. Moyer, vice president/operations of Small Newspapers Inc.

Committee Chairman Walter E. Mattson, president and chief operating officer of The New York Times Co., said that all of the Times Co.'s newspapers will adopt the guidelines for preparation of all in-house copy, and that their advertisers will be strongly encouraged to submit ads made up to the ANPA/NAB recommendations.

All ANPA member newspapers will receive one copy in the mail by late April or early May. Additional copies will be available, and a number of newspapers have placed multiple orders to distribute to key staff members and to advertisers. Cost is $5 per copy for orders of up to five, $4 each for orders of six to 10, $3 for 11 to 50, and $2 for more than 50.

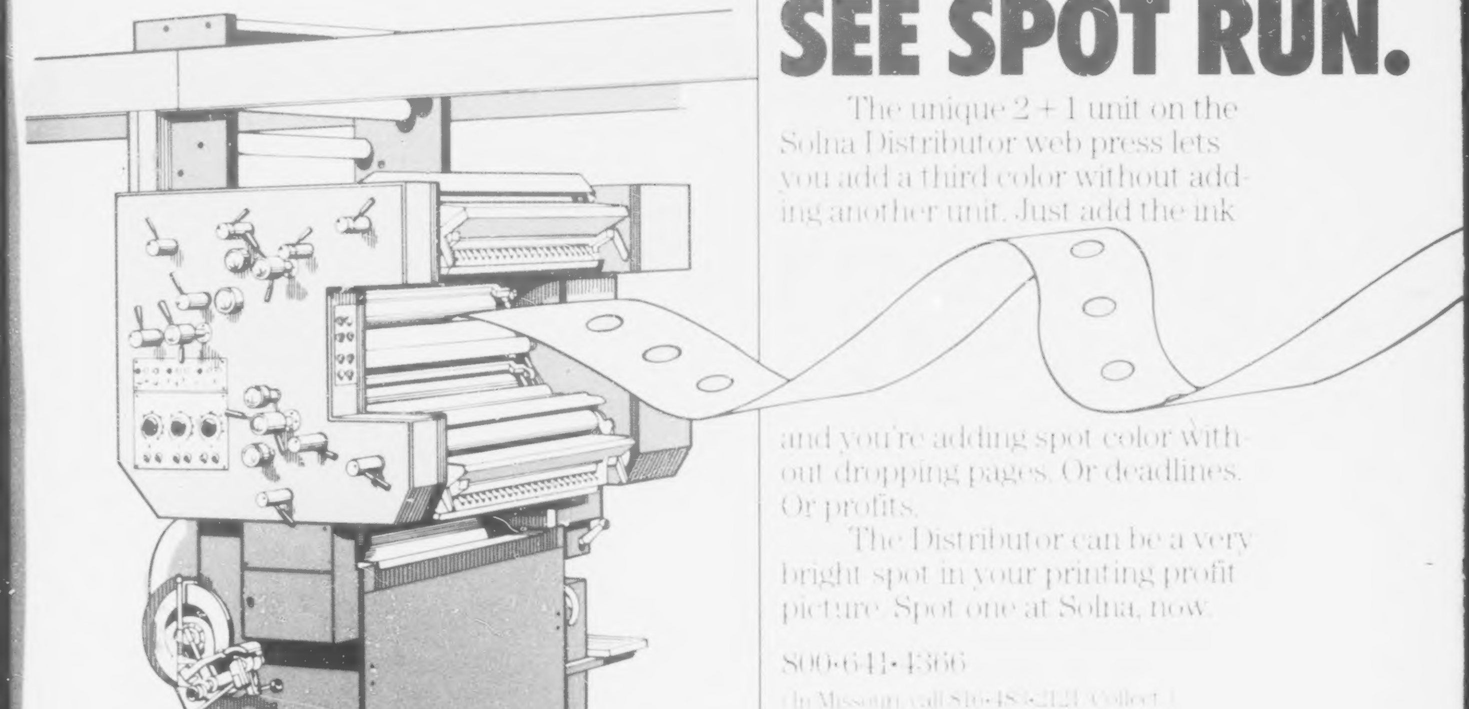
Richard J. V. Johnson, chairman and president of ANPA, said it is important that newspapers follow the new guidelines as part of the industry-wide effort to attain the highest-quality reproduction.

Johnson, president of the Houston Chronicle, also emphasized the importance of getting copies of the book to advertisers. One of the major complaints of newspaper advertisers is poor reproduction, and it sometimes is caused by poor original copy, he said. It is the individual newspaper's responsibility to assure that local advertisers are aware of the new guidelines and of how adhering to them will improve reproduction.

NAB will distribute copies of the book to major advertising agencies and to leading national advertisers.

One newspaper that already has adopted standards to enhance printing quality is The Record in Hackensack. Frank J. Savino, vice president of marketing, said the program involved meeting with some advertisers to explain the copy-quality guidelines, and checking incoming copy. Not only did reproduction improve, but The Record's emphasis on quality proved to be a sales tool that helped to increase ad volume, Savino said.

He recommends that ad and production managers at other papers work to implement the ANPA/NAB guidelines—from the advertisers through the pressroom. ☐



SEE SPOT RUN.

The unique 2 + 1 unit on the Solna Distributor web press lets you add a third color without adding another unit. Just add the ink and you're adding spot color without dropping pages. Or deadlines. Or profits.

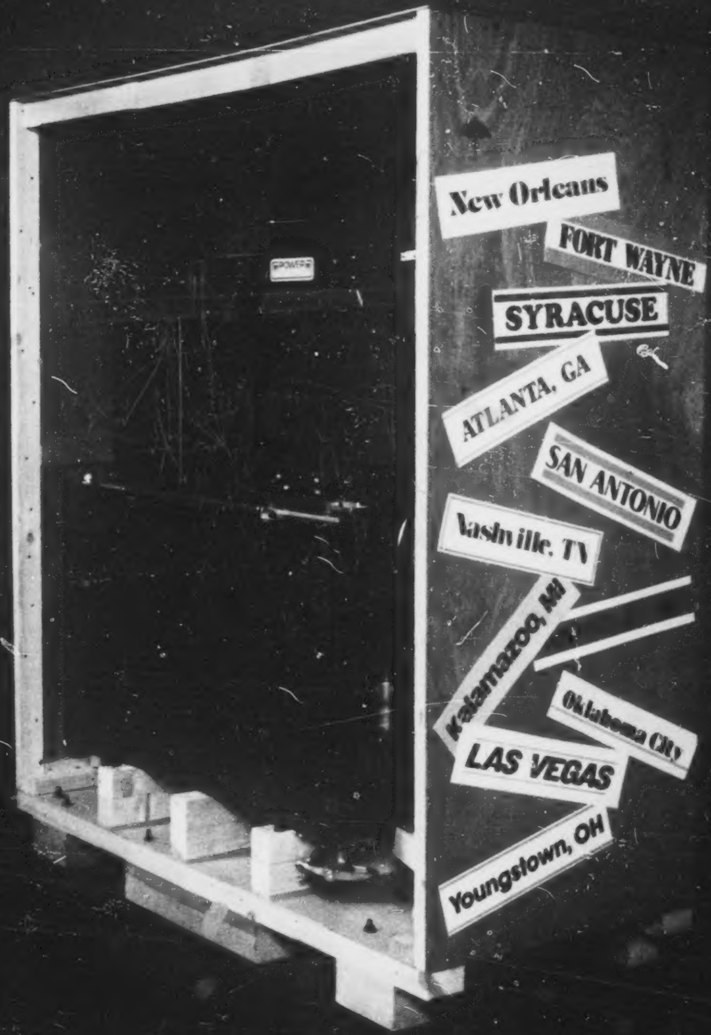
“It’s Happening Across the Country…”



Safe, reliable
35-bundle-per-minute
strapping is happening
in newspaper mailrooms
across the country,
thanks to the
Power Strap PSN-4.

Simplified design and controls keep PSN-4 performing efficiently and reliably.
PSN-4 delivers the features you need for Power Strap Performance:

- Full width infeed and outfeed belts maintain positive bundle control for accurate strap conditioning. This combined with Power Strap’s bundle conditioning system makes the PSN-4 the best machine on the market to handle inserted products.
- Unique controlled high-tension strapping system that handles any size product without hazardous compression bars or clamps.
- Advanced design heat seal unit that provides positive strap welding and is controlled by an integrated microprocessor.
- Fast and easy spool reloading that doesn’t require equipment shutdown.
- Automatic strap feeding with microprocessor controlled monitoring and clearing.
- Can be configured in your system as a single machine or multiple units for cross tie operations.
- The compact design reduces the floor space requirement.

Make Power Strap PSN-4 Performance happen in *your* mailroom. Call or write today for more information.

Power Strap, Inc. • 24500 Center Ridge Road
King James South • Suite 395 • Westlake, OH 44145
Phone (800) 346-4600, toll-free (216) 871-4055 in Ohio

Getting quality 'hands-on'

Newspaper executives and production managers are being confronted by ever-increasing demands for improved black-and-white and color printing quality.

Establishing or updating quality control and training programs is recognized as the foundation for achieving these goals.

But where does one start?

When James H. Hitchman, corporate production director for Ottaway Newspapers, wanted to formulate a new quality control training program, he decided the first step would be to enroll, with production directors from four Ottaway newspapers, an outside training course.

"We selected ANPA's 'hands-on' training seminar on Newspaper Quality Control because it offered the most practical approach," Hitchman said. "We wanted to work together and develop a program with emphasis on color that would cover all departments from editorial right through the mailroom."

ANPA's newspaper technology seminars conducted at The Newspaper Center in Reston, Va., offer a combination of lecture sessions and practical 'hands-on' experience to the more than 150 newspaper employees who attend each year.

Attendees have the opportunity to operate the very latest in state-of-the-art newspaper equipment, including two electronic color scanners, a pre-scan color analyzing computer, a process camera, and both single-width and double-width newspaper presses.

The quality control seminar presents a complete system for documenting, measuring and maintaining high-quality printing systems. This enables participants to initiate their own systems, according to Arthur M. Boudreau, ANPA manager, technical training.

Areas covered include copy standards, recommendations for photographic reproduction density ranges for color and black-and-white photographs, establishing and maintaining control of typesetting procedures and equipment, and process camera control of line copy and halftones through the use of densitometers, gray scales and exposure computers.

The seminars feature demonstrations of methods used to establish color separation standards for scanners and direct-screen operations. They also offer operational experience with proper maintenance and set-up procedures for newspaper presses.

"What we offer," Boudreau said, "is a reasonable, documentable method of achieving quality. Once this system is put into operation, it leaves little room for arguments. You document each department's standards and instruct the personnel on the use of the equipment and recording of monitoring results."

Small classes and an informal atmosphere permit attention to specific individual requirements.

For example, when the Ottaway delegation went to Reston, it carried models of the densitometers the group intended to purchase.

"Sam Harrington, ANPA's color specialist, went over them with us," said Hitchman. "We have since then introduced densitometry into all our pressrooms and provided training in densitometry techniques and checking procedures. That alone has helped us eliminate many problems."

After the seminar, each Ottaway attendee took responsibility for formulating the specifics of a quality control training program for one department in the production cycle. The completed program is currently in place and, according to Hitchman, has produced clearly visible, positive results.

Elwood B. Keim Jr. (left) of ANPA gives instruction to Robert Bode (center) of The Oklahoma Publishing Co., Oklahoma City, and Don Clyburn of Piedmont Publishing Co., Winston-Salem, N.C., during Offset Press and Plate seminar last year at The Newspaper Center.

Other ANPA services also stress print quality

Besides "hands-on" training, ANPA offers newspapers a number of other services designed to enable them to improve print quality. Some of these are:

- Technical Advisory Service specialists to visit newspapers and help personnel there to improve printing quality, photography and color separations.
- Procedures and test negatives to enable a newspaper to do its own trouble-shooting on quality control.
- On request, a critique of a newspaper's printing quality based on an examination of seven or more issues.

These services are being utilized by ANPA member newspapers of all circulation ranges.

In addition, the Association's Technical Committee and staff and Newspaper Advertising Bureau staff are finishing a new manual of guidelines for use by advertisers and newspapers. It will contain recommended specifications on dot-size range and on permissible dot-gain range. (See story, p. 72.) Such voluntary guidelines should improve quality and bring more uniformity among newspapers, according to William D. Rinehart, ANPA vice president/technical.

Syndicate switching predicted

Executives of newspaper syndicates are not looking for a major trend toward consolidation among the companies, but at least one foresees a lot of features switching from one syndicate to another.

That's the prediction of Dennis R. Allen, president of Cowles Syndicate, which is being acquired by The Hearst Corp.'s King Features Syndicate in a $4.2-million deal.

With regard to syndicate-switching by artists and writers who prepare comic strips, cartoons and columns for newspapers, Allen said he expects "more activity in that regard than there has been in the last five years."

But on the subject of possible further consolidation, he commented, "I talked with all the CEOs of the major syndicates" over the last few months. "They all wanted to stay in business" and in fact "all wanted to buy" Cowles Syndicate, Allen said.

"There is constant speculation in the industry there is going to be more consolidation," said Michael Gaudiessi, Cowles executive vice president and general counsel. "Given the nature of the business, it looks like that is the case, but given the nature of the ownership, it doesn't look like that is possible."

All of the major syndicates except Kansas-based Universal Press are currently owned by large newspaper companies: King Features by Hearst, United Feature Syndicate by Scripps Howard, Tribune Media Services by the Tribune Co. of Chicago and News America Syndicate by News America Publishing Inc. Others are affiliated with individual newspapers: Los Angeles Times Syndicate, New York Times Syndication Sales Corp. and The Washington Post Writers Group.

Although he said there would "not necessarily" be more acquisitions, King Features President Joseph F. D'Angelo said some could develop because of the high cost of getting features established and the decline of competitive newspaper markets.

"Obviously, if a syndicate merges or is acquired by another, there are significantly less operating expenses," D'Angelo said.

King Features plans to continue the 35 features currently distributed by Cowles, he said.

26-paper swap, antitakeover measures top business activity

BUSINESS ROUND-UP

Harte-Hanks Communications Inc. and Garden State Newspapers Inc. have agreed to a swap that will leave 24 newspapers and two shoppers in different hands.

Harte-Hanks will get 17 newspapers, most of them clustered around Boston and Dallas, and an undisclosed amount of cash. The company is also getting two shoppers in the swap, which is expected to be completed this month.

Of the newspapers, four are dailies. The rest are a mix of free- and paid-circulation non-dailies. The San Antonio-based company will be left with 23 dailies and more than 100 non-dailies.

Robert G. Marbut, Harte-Hanks president and chief executive officer, said "the Boston and Dallas suburbs are two of the best possible areas for our kind of businesses," and he noted that "we already have a presence in both of these areas."

The trade enables the company to "concentrate our resources in fewer, bigger market areas" with better prospects for growth than the areas Harte-Hanks is leaving, Marbut said.

On the other side of the equation, the trade will do nothing to hurt the claim by some analysts that Garden State is the fastest-growing newspaper group in the country. With the swap, the two-year-old company will get seven dailies for a net gain of three, raising its total to 20. The company also will gain a direct-mail firm.

Garden State is owned by Richard B. Scudder of Navesink, N.J., William Dean Singleton of Woodbury, N.J., and Media General Inc. of Richmond, Va. The Dallas-area newspapers Garden State is trading to Harte-Hanks will be purchased first from Taylor Communications Inc. of Carrollton, Texas.

Harte-Hanks' new dailies are: The News-Tribune of Waltham, Mass. (circulation 13,044), The Daily Transcript of Dedham, Mass. (12,237), the Lewisville (Texas) Daily Leader (4,253) and the Plano (Texas) Daily Star-Courier (14,403).

The dailies Garden State is getting are: in Texas, the Big Spring Herald (9,287), the Del Rio News-Herald (6,471), The Huntsville Item (5,963), the Marshall News Messenger (10,443); in Ohio, The Journal-News of Hamilton (28,111); and The Yakima (Wash.) Herald-Republic (39,992) and the Ypsilanti (Mich.) Press (15,403).

As some newspaper companies come together in friendly transactions, others are throwing up new defenses against possible hostile buyers. In each of the following cases, the company said it was not currently the target of an unfriendly bid.

- In New York City, Dow Jones & Co. shareholders will vote April 16 on a proposal to stagger terms for directors, which would prevent a majority from being elected at a given annual meeting. Other antitakeover measures scheduled for a vote are a "fair price" provision that would require a buyer to make the same offer to all stockholders and a requirement that the board consider non-economic factors in evaluating a bid.
- In Dallas, A.H. Belo Corp. came up with a device to repel a hostile buyer. Belo, which publishes The Dallas Morning News, issued a purchase right for each common share outstanding March 20.

The right entitles the holder to buy 1/100th of a share of preferred stock selling at $175 a share. The trigger is an accumulation of 30 percent or more of Belo's common stock, or announcement of a tender for at least that amount. If Belo is acquired, the rights will entitle each holder to shares of the acquiring company with a market value twice the right's exercise price.

- In Chicago, the Tribune Co.'s board fashioned a so-called "poison pill," which an unfriendly acquirer could be forced to swallow. The "poison" is in the purchase right issued for each common share outstanding March 4.

Each right entitles a shareholder to buy one newly issued share of Tribune common stock for $200—a move that would dilute a would-be acquirer's stake. The rights can be used only if an acquirer accumulates at least 20 percent of Tribune common stock or announces a tender offer for at least 30 percent.

If Tribune Co. is acquired, holders of rights would be entitled to buy, for $200 each, shares of the surviving company with a market value of $400 each.

Elsewhere in the newspaper business:

- Scripps Howard (E. W. Scripps Co.) and The John P. Scripps newspaper group of San Diego signed a merger agreement March 14. Under the plan, which must receive regulatory approval [presstime, Aug. 1985, p. 60], The John P. Scripps group will become an independent operating division within Cincinnati-based Scripps Howard. The company will publish 20 dailies with total circulation of nearly 1.5 million and 46 non-dailies.
- Stockholders of the Pulitzer Publishing Co. of St. Louis rejected March 18 the bid of real estate developer A. Alfred Taubman to acquire the company. In late February, Taubman had submitted a $500-million bid for the company, which owns the St. Louis Post-Dispatch and other properties.
- In Detroit, a battle of another sort escalated in March. Gannett Co. announced The Detroit News, which it recently acquired, would drop the price of single copies sold outside metropolitan Detroit from 20 to 15 cents, effective March 31. The Detroit Free Press, which goes head-to-head with the News, replied in kind. Knight-Ridder Newspapers Inc., which owns the Free Press, said it, too, would drop the price outside metro Detroit by a nickel to 15 cents.
- The Colorado Springs Sun shut down in late February after a hunt for a buyer who would continue to publish the daily. Freedom Newspapers Inc., which owns the rival Colorado Springs Gazette Telegraph, purchased the Sun's assets. The Justice Department had delayed the sale in hopes of finding another buyer [presstime, March 1986, p. 68]. ☐

UPI gets more time for reorganization

A U.S. Bankruptcy Court judge in late March granted the request of United Press International for more time to file a reorganization plan.

The plan will specify details of the proposed sale of UPI to Mexican publisher Mario Vázquez-Raña and Houston businessman Joe Russo [presstime, March 1986, p. 68]. Judge George F. Bason granted UPI's request that it have until June 30 instead of March 31 the exclusive right to file a reorganization plan. ☐

Corrections

Clair Balfour of the Montreal Gazette is vice president of the Organization of News Ombudsmen, not president-elect as listed in a round-up of newspaper organizations in the February issue. The Organization of News Ombudsmen does not have the position of president-elect.

Also, the person who in June will be elected to head the Newspaper Division of the Special Libraries Association, Diane Miller, is with The Pantagraph in Bloomington, Ill. An incorrect state was in the Special Libraries Association listing. Presstime regrets the errors. ☐

EVER WONDER WHAT HAPPENED TO GOOD OLD FASHIONED SERVICE?

Every Media Accounting and Circulation System Customer Gets Outstanding Service from LAN

No. 1 in Service and Support

When you have the best hardware and software, you want to be certain it's performing well. No company supports its customers the way LAN does. For Media Accounting and Circulation Systems (MACS) clients LAN offers:

- 80% of its employees devoted to service and support.
- Immediate answers to problems. An on-line diagnostic hotline lets us see and analyze your screen while you're working.
- An active users group for information swapping.
- A newsletter for the latest innovations.

Unparalleled Flexibility

LAN Systems software provides great flexibility. It's easy to learn and use and is totally integrated. Select those modules that are most important to you and that will generate the greatest return on your system investment.

You're Never Alone

There can be questions even with the highest quality products and thorough training. With MACS from LAN, help is seconds away. Over 100 organizations in the U.S. and Canada rely on LAN for on-going support of their business systems.

Call or write today to learn more about the exciting products and old fashioned service of LAN Systems.

Quality and service leaders since 1972

Task force formed to study distribution, marketing

The ANPA Industry Affairs Committee is forming an ad hoc task force to study the distribution and marketing of newspapers.

Virgil Fassio, publisher of the Seattle Post-Intelligencer and vice chairman of the committee, will organize and head the task force. The group will evaluate available information on circulation issues, particularly the work of the Newspaper Advertising Bureau's Future of Advertising Committee, and report to the ANPA Board of Directors. The decision to form the ad hoc task force was made at the Industry Affairs Committee's meeting Feb. 27-28 in Long Beach, Calif.

Robert L. Burke, ANPA vice president/industry and public affairs, said the decision followed extensive discussion on circulation issues that included:

- The state of the "little merchant system," which some think is slowly coming apart. Other delivery methods tried so far include using more adult carriers and motor routes. Which answers are the most effective?
- The sale of newspapers through agreements with cable television companies, an arrangement that yielded huge circulation gains in Denver. Are the gains important to advertisers? Should newspapers seek other "partnerships"?
- Alternative uses of a newspaper's distribution system. Can a newspaper profitably deliver other materials such as utility bills and phone books?
- Churn among subscribers and turnover among carriers and district circulation managers. What are the most effective ways to achieve stability?

Recent acquisitions

Persis Corp. of Honolulu acquired from Longview (Wash.) Publishing Co. two Washington state dailies: The Daily Journal-American of Bellevue, circulation 27,180, and The Daily News of Port Angeles, circulation 12,176. Meanwhile, Westmedia Inc. of Longview acquired full ownership from Longview Publishing Co. of The Daily News of Longview, circulation 24,396. Westmedia is owned by members of the same family that owned Longview Publishing.

Murphy named publisher of Republic, Gazette

Lorenzo Dow (Pat) Murphy has been named publisher of The Arizona Republic and The Phoenix Gazette. He had been editor of the Republic since 1979.

Murphy succeeds Darrow (Duke) Tully, who resigned Dec. 26 after it became known that he had fabricated a military career [presstime, Feb. 1986, p.61]. Tully April 1 was slated to become publisher of the 7,561-circulation Williston (N.D.) Daily Herald, a member of Sierra Vista, Ariz.-based Wick Newspapers. ☐

Supreme Court misquotes the press on the press

Was it a case of poetic justice at the U.S. Supreme Court?

In his opinion last June in the libel case *Dun & Bradstreet Inc. v. Greenmoss Builders Inc.*, Chief Justice Warren E. Burger got in a few licks at the press when he wrote: "Consideration of these issues inevitably recalls the aphorism of journalism attributed to the late Roy Howard that 'too much checking on the facts has ruined many a good news story'" [presstime, Oct. 1985, p. 16].

That quote didn't sit well with folks at Scripps Howard. They did some fact checking of their own and could find no record that Howard, long-time editor in chief of the newspaper group, ever said such a thing.

Bruce Sanford, a partner in the Washington, D.C., office of Baker & Hostetler, Scripps Howard's attorneys, complained to the high court's reporter of decisions, who subsequently removed the reference to Howard from the version of the opinion retained in the permanent court records.

After The Wall Street Journal Jan. 31 wrote about Burger's improper fact-checking, Scripps Howard received numerous suggestions about who might have been the source of the quotation. The leading contender was William Randolph Hearst, but a check of his records came up empty.

"There are a whole bunch of variations on that basic idea," noted William R. Burleigh, Scripps Howard vice president and general editorial manager. "But they are all said with tongue in cheek, of course, except by the chief justice." ☐

Education

New magazine proposed for educators

A pilot issue of a proposed new magazine for journalism educators will be distributed at the Aug. 3-6 convention of the Association for Education in Journalism and Mass Communication at the University of Oklahoma in Norman.

Essentially, the new magazine will combine two existing AEJMC publications, the quarterly Journalism Educator and the 10-times-a-year aejmc News, according to Carol Reuss, chairman of the committee developing the magazine.

Among other things, the prototype will be used to test the market for advertising, said Reuss, professor at the School of Journalism at the University of North Carolina. Both existing publications accept ads.

If the prototype is well-received, the magazine, which will retain the name Journalism Educator, will be published 10 months a year, excluding two months in the summer. The Department of Journalism at the University of Texas at Austin provided $5,000 to support the design and production of the prototype.

Foundation supports literacy project

ANPA Foundation is among 60 national organizations that have agreed to support Project Literacy U.S., or PLUS, a joint, public-service project on adult illiteracy being sponsored by the American Broadcasting Companies Inc. and the Public Broadcasting Service.

PLUS will begin with an "outreach" phase, in which local literacy task forces will be formed around the country, followed by a public awareness phase, in which programming on both networks will focus on the subject.

ANPA Foundation has established its own three-phase literacy project and recently named a project director [presstime, March 1986, p. 71].

Correction

The origin of the Golden Apple Award was incorrectly attributed in a story about NIE Week in the March issue of presstime. The award, recognizing outstanding teachers, was created by The Knoxville [Tenn.] News Sentinel Co. Presstime regrets the error.

Letters

Disagrees with tobacco-ad stand

My friend Dick Johnson recently (Chairman's Corner, February) rebuked a proposal to ban all advertising of tobacco products as a violation of free-speech rights guaranteed by the First Amendment. He knows I disagree with him on this matter, and invited me to share his platform for a dissenting view.

If we limit this debate to the First Amendment, we ignore the real problem: Tobacco-caused deaths and diseases represent the greatest holocaust ever perpetrated on humankind.

The Constitution is neither an adequate nor accurate defense for tobacco advertising. Calling for freedom of speech protection is disguising the terrible truth about tobacco, thereby denying millions of people their own inherent First Amendment rights to factual information that is free of bias.

Approximately 40,000 published scientific articles provide evidence on the harmful health effects of tobacco. That evidence is solid and unequivocal. The U.S. Office of Technology Assessment reported in 1985 that disease and lost productivity due to tobacco are costing this country $65 billion a year. That sum reflects the combined costs of smoking-associated medical bills, lost time from work and an estimated 500,000 premature deaths annually. The mortality attributed to using tobacco is now one-fourth of all American deaths.

The U.S. Supreme Court has placed advertising in a special category of "commercial" speech, with rights limited to consumers having access to comparative prices and other specified information, but noting that advertising may be restricted as to time, place and manner. Many constitutional law experts maintain that the harmful health effects of tobacco far outweigh the "right" of commercial speech. Testing that tenet, however, remains for the future.

The $2 billion being spent annually on advertising by the six major American tobacco companies is the largest single expenditure for promotion of any consumer product in the country. Most of these ads go far beyond the bounds of commercial speech as they seductively portray cigarette smokers and users of smokeless tobacco as glamorous, successful, healthy, athletic and independent.

Mixed in the whole milieu of misleading factors about smoking is this glaring contradiction: Tobacco products can be legally sold, yet the total and individual contents are exempt from the safety purview of the U.S. Food and Drug Administration.

With such an array of sound scientific data available on the hazards of smoking, I believe there is no greater informational priority for the nation's newspaper publishers and editors than to tell the whole truth about tobacco.

GOSS *Newspaper Products*

THE GOSS MPCS: ONLY A ADVANCED COULD BE SO

On the menu-driven, touch-sensitive display, the operator begins to set the press.

The revolutionary new Goss® Modular Press Control System™ (MPCS)—integral to the latest generation of Headliner Offset® presses—constitutes a quantum leap forward in newspaper productivity. As operationally simple as it is technologically sophisticated, the MPCS provides new capabilities for shorter make-ready and reduced waste through computerized presetting and running adjustments.

Redefining user-friendliness, a menu-driven, touch-sensitive work station display is the key to MPCS simplicity. Following a fast self-diagnostic precheck of system software and microprocessors, the MPCS uses computer intelligence to help the operator select, preset and later adjust press functions from the quick-response touch-screen menu. Subsequent color-coded displays quickly confirm input, progress and function achievement—or report unattainable commands and describe the problem.

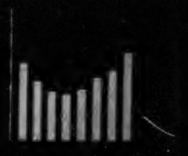
Here's what this unique system means to you. In addition to fast makeready and greater manpower efficiency, the flexible, powerful MPCS also produces significant materials savings. For example, inking values are defined across the web based on stored computer information. Paper is similarly conserved, with waste-reducing adjustments made automatically before any paper is used. There is no wasteful guesswork or experimentation.

MPCS advantages don't end there. The system allows better use of pressroom manpower—for example, multiple work stations on a single press permit input by more than one pressman at a time. The sequence of presetting the press closely follows pressroom opera-

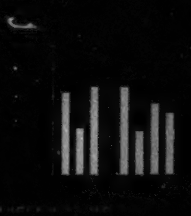
By simply touching the MPCS work station display, a single operator can preset press functions. The productivity-programmed central computer takes it from there.

Headliner Offset **MPCS**

SYSTEM SO SIMPLE.



The display verifies ink zone settings.



On another couple, a problem is indicated on the display.

The new Goss Modular Press Control System achieves significant technological advancement for the newest Headliner Offset presses (a four-color unit is shown).

tions—for example, pages can be input as available and the system automatically presets ink zones for each page. Other MPCS benefits: easier circumferential and sidelay adjustments. Running adjustments by plate or page. Specially designed diagnostic features for checkout and maintenance. Library of impositions. Press settings for a frequently used or an interrupted job can be saved and recalled at the operator's command.

There are important initial economies, too. With the building-block design of the MPCS, you order only what you currently require. The MPCS has assured expandability to grow as your requirements and press operations grow. It is easily maintained and accommodates a wide range of peripherals.

Perfected through more than 30 man-years of quality-assured development, the Goss Modular Press Control System makes the Headliner Offset press more than ever the world's pacesetter for newspaper productivity. For more details on MPCS potential in your pressroom, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. Or phone 312-656-8600.

Program being finalized for 'sellout' 100th Convention

Preregistration for this month's ANPA Convention in San Francisco exceeds the final registration total for last year's Convention in Miami Beach.

As of March 20, preregistration stood at 2,250, compared with 2,170 who attended last year's meeting. The number also tops the final registration for the Association's last meeting in San Francisco: 2,213 in 1982.

According to ANPA Senior Vice President Thomas C. Fichter, the attendance figure for the April 21-23 meeting should approximate that of the 1984 Convention in Montreal, which achieved the second highest registration in ANPA history: 2,307.

Fichter calls the Association's 100th Annual Convention, the third to be held in San Francisco, "a total sellout." Not only have most available guest rooms in designated ANPA Convention hotels been reserved, but waiting lists are forming for most ANPA meal functions, he reported.

Convention-goers who have not yet made hotel reservations through ANPA now must deal directly with the hotels, Fichter said. Arrangements to obtain tickets, or to be placed on a waiting list, for ANPA meal functions may be made by calling the Association's Membership Department at (703) 648-1097.

Convention events will take place in three locations. Registration, most of the meal functions and the Convention clinics will take place at the Fairmont Hotel atop Nob Hill. The General Sessions and the ANPA and Associated Press annual business meetings will be in the Masonic Auditorium, two blocks from the Fairmont. The Tuesday and Wednesday ANPA Lunches will be in the San Francisco Hilton, six blocks from the Fairmont.

Shuttle buses will be available to transport registrants between sites.

At press time, the Convention Arrangements Committee, headed by Joseph F. Barletta, president of the San Francisco Newspaper Agency, was making final program preparations.

Late additions to the program include the following:

- Thomas J. Peters, co-author of two best-selling books on business management, *In Search of Excellence* and *A Passion for Excellence*, who will be among the speakers at the ANPA Keynote Breakfast.
- A panel discussion on the space shuttle Challenger explosion, which will be part of Monday's annual AP meeting.

An entertainment highlight will be the Hearst concert Tuesday evening featuring singers Tony Bennett and Maureen McGovern.

Titled "After the Challenger Disaster: Conversations on a Tragedy in Space," the program will be moderated by Louis D. Boccardi, AP president and general manager. Panelists will be: Alan B. Shepard, Mercury astronaut and the first American in space; Barbara Morgan, who was the backup to teacher-astronaut Christa McAuliffe for the mission that ended in tragedy Jan. 28; William R. Graham, acting administrator of the National Aeronautics and Space Administration; Dr. Alex Roland, associate professor of history at Duke University; and Howard Benedict, AP space correspondent at Cape Canaveral, Fla.

- A panel discussion on terrorism, which will be presented by United Press International at a General Session Tuesday. Helen Thomas, UPI White House bureau chief, will serve as moderator. Panelists will be Sam Donaldson, ABC News chief White House correspondent; Thomas L. Friedman, Jerusalem bureau chief of The New York Times; Peter Smerdon, UPI Beirut correspondent; and Terrell E. Arnold, former deputy director of the State Department's Office for Combatting Terrorism and current vice president of the Institute on Terrorism and Sub-National Conflict.

Also, The Hearst Corp. and its San Francisco Examiner newspaper announced they will be host to a concert featuring singers Tony Bennett and Maureen McGovern on Tuesday from 7:15-9 p.m. Admission to the concert, at the Masonic Auditorium, will be by Convention registration badge.

Among other peripheral activities open to all registrants are two that will precede the Convention.

"Expert Centers" will be set up near the Convention registration area in the Fairmont's Gold Room April 19 and 20 from noon to 6 p.m. ANPA staff and other experts will be available for informal consultation on the following topics: advertising/marketing, insurance, employee relations, literacy, minority opportunity, legal/postal/government affairs, technical operations and telecommunications.

And for the second year, presstime will get the Convention started by sponsoring an early morning "fun run" on opening day. This year's two-mile run will begin at 6:30 a.m. Monday at Marina Green. Shuttle bus service to the start/finish point will be available from the Fairmont. Participants will receive "fun run" T-shirts.

As of late March, the three-day program developed by the arrangements committee was as follows:

The **Monday** ANPA Keynote Breakfast in the Fairmont will begin with the keynote address delivered by ANPA Chairman and President Richard J.V. Johnson, president of the Houston Chronicle. He will be followed by authors Jonathan Kozol, who wrote *Illiterate America*, and Peters.

The AP annual business meeting and panel discussion on the Challenger Disaster will take place at the Masonic Auditorium.

The AP's Annual Lunch, at the Fairmont, will be addressed by former President Richard M. Nixon.

Three two-hour clinics will run concurrently Monday afternoon at the Fairmont.

- "Wellness," with moderator Dr. Wayne O. Buck, medical director, Los Angeles Times, and corporate medical director of The Times Mirror Co. Panelists will be Robert N. Beck, executive vice president, corporate human resources, Bank of America; Willis B. Goldbeck, president, Washington (D.C.) Business Group on Health, and Diana Chapman Walsh, associate director of Boston University's Health Policy Institute.
- "Good-bye — Classified . . . Hello Yellow," with moderator Uzal H. Martz Jr., president and publisher of the Pottsville (Pa.) Republican, who is chairman of the ANPA Telecommunications Committee. Two of the panelists will be ANPA Director Lloyd G. Schermer, president and chief executive officer of Lee Enterprises Inc., Davenport, Iowa, and Telecommunications Committee Vice Chairman Robert M. Johnson, president and chief operating officer of Newsday, Long Island, N.Y.
- "A New Look at Readers," panel incomplete at press time.

The **Tuesday** program will begin in the Masonic Auditorium with the ANPA annual business meeting and election of four new ANPA officers and three new directors [presstime, March 1986, p. 70].

The meeting will be followed by a two-part General Session in the auditorium.

The first part will be a panel discussion on the Audit Bureau of Circulations. Moderator will be ABC Chairman David K. Braun, director of media services of General Foods Corp., White Plains, N.Y. Panelists will be ANPA Director James M. Moroney Jr., chairman and chief executive officer of A.H. Belo Corp., Dallas; James F. Boynton, manager of media services of J.C. Penney Co., New York City, and Dan F. Pearson, director of media of R.J. Reynolds Industries Inc., Winston-Salem, N.C.

The second part will be UPI's panel discussion on terrorism.

The Newspaper Advertising Bureau's marketing/advertising program will follow in the auditorium.

It will begin with a report from NAB Chairman Tom Johnson, publisher and chief executive officer of the Los Angeles Times. Then NAB President Craig C. Standen and Executive Vice President and General Manager Leo Bogart will present an overview for 1986. Louis T. Hagopian, chairman and chief executive officer of N.W. Ayer Inc., will speak about newspaper advertising from his perspective as head of a major advertising agency. A report on NAB's Future of Advertising Project will follow, with reports from the chairmen of the project's 10 task forces.

The NAB annual meeting will close the morning program.

Tuesday's ANPA Lunch, at the San Francisco Hilton, will be addressed by New York Gov. Mario M. Cuomo.

Three concurrent clinics are scheduled Tuesday afternoon at the Fairmont.

- "Newsprint — New Perspectives," moderated by Michael E. Ryan, senior vice president of The New York Times. Panelists will be Edward E. Dunleavy, vice president of Salomon Brothers Inc., New York City; R. Joseph Fuchs, vice president of Kidder, Peabody & Co. Inc., New York City; John M. Duncanson, senior financial analyst of McLeod Young Weir Ltd., Toronto, and Brian F. Topp, senior analyst of Midland Doherty Ltd., Toronto.
- "Circulation's Role on Your Management Team," moderated by Charles A. Lyons, president of Chesapeake Publishing Corp., Easton, Md. Panelists will be Booker T. Izell, bulk distribution director of the Atlanta Journal and Constitution; John B. Raytis, general manager of The Fresno (Calif.) Bee, and John Schueler, vice president/circulation of The Miami Herald.
- Newsracks, panel incomplete at press time.

The featured speaker for the **Wednesday** General Session breakfast at the Fairmont was not set at press time.

A two-part General Session will follow in the Masonic Auditorium.

The first segment will be a speech by Robert W. Pittman, president and chief executive officer of MTV Networks Inc.

The second will be a panel discussion on the "Pacific Rim" of nations. Moderator will be Ray Shaw, president of Dow Jones & Co. Inc. Panelists and their topics will be Derek Davies, editor of The Far Eastern Economic Review, "Politics"; Fred Zimmerman, editor and publisher of The Asian Wall Street Journal, "Perils of Publishing in Asia," and Jeffrey E. Garten, managing director of Shearson Lehman Brothers Inc., "Asia's Economy and Its Significance to the United States."

Wednesday's ANPA Lunch, at the Hilton, will be addressed by a speaker yet to be announced.

The Convention will conclude with a mock libel trial at the Masonic Auditorium.

One person has been added to the previously announced list of participants in the mock trial [presstime, March 1986, p. 71]. She is Mary Cunningham, president of Semper Enterprises of Osterville, Mass., who will be in the role of the plaintiff.

Annual meeting notice

Notice is hereby given by the Secretary of the Association, K. Prescott Low, that the Annual Meeting of the American Newspaper Publishers Association, Incorporated, a corporation organized under the laws of the Commonwealth of Virginia, will be held at the Masonic Auditorium, San Francisco, at 8 a.m. Tuesday, April 22, 1986, for the purpose of electing Officers and Directors, and to transact such business as may properly come before the membership.

What to do in San Francisco

BY BOB COCHNAR

Let's face it: there's too much to see and too much to do in a week, even a month. And every resident advice-giver has his or her own ideas about what's worth seeing and what's not.

People who live in San Francisco are unreconstructed chauvinists. They just *know* they live in the best place on earth and are more than willing to tell you that again and again and again. We are – I hate to say it – rather smug.

Take the weather, for instance. San Francisco isn't called the air-conditioned city for nothing. At 37 degrees 48 minutes north latitude and 122 degrees 34 minutes west longitude, the city enjoys climate that can best be described as Mediterranean.

In April, temperatures should be in the high 60s and low 70s during the day, dipping into the 50s at night. But a chill or a hot spell isn't unknown. Skies almost certainly will be azure blue and nearly cloudless. That fabled fog isn't likely to be experienced, except perhaps in the evening.

The weather has been known to change from area to area, even from block to block: fog along the Pacific Coast, sun on Nob Hill, a sprinkling of soft rain at Twin Peaks, winds rushing through the Golden Gate.

WHAT TO WEAR? Unlike other California cities, San Francisco leans toward the formal. Montgomery Streeters (the West Coast version of Wall Streeters) would be out of place and terribly uncomfortable without subdued, all-wool, three-piece suits, button-down Oxford shirts and no-nonsense wingtip shoes. Women favor suits, and, if you are part of the Pacific Heights set or aspire to that distinction, designer dresses. Only tourists would wear traffic-stopping outfits with (gasp!) Bermuda shorts. San Francisco does not permit the wearing of polyester or, on men, short-sleeved shirts. (There is a sartorial inspection at the border.)

GETTING AROUND. Despite the number of automobiles that clog city streets, San Franciscans will not admit to owning them, blaming vehicular pollution on auslanders and odd birds who live across the Golden Gate in Marin County where one is permitted to drive only BMWs and Saabs.

In truth, cars aren't needed to get from A to B and even C. The visitor can choose from buses, trolley cars, the Bay Area Rapid Transit, taxis, the Muni Metro rail cars and, of course, the cable cars.

But because the city is remarkably small in size, walking is a pretty good way of getting around.

The Powell Street cable car clangs past ANPA Convention headquarters hotel, the Fairmont. It will take you to North Beach, where there is no beach but a number of decent Italian restaurants. If you take the California Street car, you'll get to the Embarcadero Center and Tadich's restaurant. The cable car, while fun, is nearly always crowded, takes forever to get anywhere and costs $1.00. Buses cost 75 cents and taxis are sometimes plentiful, but don't count on them.

Best bet: walk. You'll get used to the hills.

WINING. This is a tippler's town, with a bar on nearly every corner, also a laundromat and a grocery store, but let that go. You can find saloons to cater to every lifestyle and ethnic group, from gay socialist stockbroker to unattached heterosexual Japanese dockworker.

Here are a few pleasant and slightly more conventional watering holes:

- **The Compass Rose** and **Dewey's** in the St. Francis. Comfortable and convenient. The **New Orleans Room** in the Fairmont is also pleasant, as is the **Lower Bar** at the Mark Hopkins.
- **Top of the Mark**, Mark Hopkins Hotel, Nob Hill. Of course, you must drop by: everybody does. The view is magnificent.
- The **Redwood Room** at the Clift Hotel, Geary and Taylor. This is a wonderful old lounge, with beautiful redwood paneling, comfortable chairs and a decent pianist. One of my favorites, down the hill from the Fairmont.
- **L'Etoile** in the Huntington Hotel, Nob Hill. The lounge is where it's at. Drinks are fine, but the main attraction is pianist Peter Mintun, who plays your favorites from the '20s, '30s and '40s.
- **Perry's**, 1944 Union St. It's among the first of the town's new-old bars and a hangout for people who like to hang out. It has stamped metal ceilings, old wood, tile floor, great hamburgers.
- The **Pied Piper Bar**, Sheraton Palace Hotel, Market and New Montgomery streets. This is old San Francisco incarnate. Bright and boisterous, the place is dominated by a massive Maxfield Parrish painting for which the bar is named. Until 1964, women were barred from entrance. Some of the artifacts date from the opening of the Palace in 1875. By the way, nobody calls this hotel the Sheraton Palace. Just "the Palace," please. And the Westin St. Francis is just "the St. Francis."
- **Buena Vista**, at the foot of Hyde. Irish Coffee was popularized here. As the story goes, in 1952 Chronicle columnist Stan Delaplane was served a coffee-Irish whiskey-whipped cream concoction at a Shannon Airport bar. He brought the recipe back to the BV and the rest is history. At last count, the bar has served more than 10 million of them. The BV probably serves something other than Irish Coffee, but I'm not sure what.

Cochnar is executive promotion editor for the San Francisco Chronicle.

• **Cliff House** at the ocean on Point Lobos Avenue. The place, in one configuration or another, has been around since 1907. It's crowded with tourists but that's okay, because the view of the sunset through what they call God's Window is worth it.

• **Hard Rock Cafe** Van Ness and Sacramento. This is the SF version of the Los Angeles and New York establishments. Unlike LA's, the Cadillac here is not buried in the facade but instead hangs from the ceiling. The place is indescribably noisy and seems always to be packed.

There are plenty of other neat places around town, but these few should get you started. You really are supposed to attend the sessions, you know.

DINING. Here's where I get into trouble. Eating out is important in San Francisco. There are more restaurants per square mile than any other city. San Franciscans spend more money per capita on restaurants than anybody else. There are guidebooks galore, and both papers run frequent restaurant reviews.

In Paris, it is said, it is practically impossible to get a bad meal at a restaurant. In San Francisco it's not hard at all. There are plenty of fine restaurants here, but there are also a fair number of gastronomical disasters. I won't mention the real dogs but instead concentrate on a handful of places that have established themselves as first-rate.

I will admit to not being a devotee of Asian restaurants, of which this city has many: Chinese, Japanese, Vietnamese, Cambodian, Thai, Filipino. But you'll find recommendations in the guides that will be in your convention registration kit.

This list is in no special order and runs from moderate ($11 to $25 per head, without wine) to expensive ($26 and up, without wine).

• **Le Central** 453 Bush St. (391-2233) An effectively done up French bistro, the restaurant is comfortable and unpretentious. The roast chicken is absolutely the best in town, and if you like boudin noir (blood sausage), this is the place. (Moderate)

• **Tadich Grill** 240 California St. (391-2373) You don't need the phone number, because Tadich takes no reservations. If you're not there by 6 p.m., be prepared for a long wait. The menu is long, but your best bet is to stick with the simply prepared—and very fresh—charcoaled grilled fish. (Moderate)

• **Jack's** 615 Sacramento St. (986-9854) Jack's has been around for more than a century and for good reason. The waiters are bibbed and tuckered, and the menu—heavy on the fish—is printed daily. Best bets, in addition to the fish, are the steaks and chops. Jack's, along with John's (of Sam Spade and Dashiell Hammett fame) and Sam's, is in the triumvirate of old-school San Francisco restaurants. Jack's is the best of the lot. And it takes reservations. (Moderate)

• **Prego** 2000 Union St. (563-3305) This is a new-school Italian place, emphasizing pasta dishes and fancy pizza. The bar is always crowded, and the waiters know what they're doing. (Moderate)

• **Campton Place** 340 Stockton St. (781-5155) This might be the best restaurant in the city, or it might not. At the least, it's very, very good, driven by a personable and very imaginative chef. It serves up things like grilled quail and blue corn cakes, all displayed on Wedgwood. The service and setting match. There's nothing else like it. A real experience. (Expensive)

• **Square One** 190 Pacific Ave. (788-1110) and **Stars** 150 Redwood St. (861-7827). These are separately owned, new-wave examples of California cuisine, each operated by an Alice Waters disciple (of Chez Panisse fame) and each offering excitingly inventive menus. (Moderate to expensive)

• **Amelio's** 1630 Powell St. (397-4339) It's been on the San Francisco scene for many years but has never been better. (Expensive)

• **Modesto Lanzone** Opera Plaza, between Van Ness and Franklin (928-0400) Modesto's original place is at Ghiradelli Square. This is the better one, possibly one of the best Italian restaurants in town and certainly one of the most beautiful. The chef is from the north and has a light hand (no sloppy red sauces here). (Expensive)

• **Donatello** 501 Post St. (441-7182) This small restaurant is so celebrated that the hotel in which it resides, the Pacific Plaza, has been renamed the Donatello. Pastas are super, and so is the veal, all served up in a splendidly subtle atmosphere. (Expensive)

• **Washington Square Bar & Grill** 1707 Powell St. (982-8123) Just a decade old, the "Washbag" is an authentic institution. One of the owners, Ed Moose, is a former AP reporter and thus has a soft spot for journalists. The low-keyed establishment oozes success. The Italian-oriented menu offers an interesting taste of the city, from calamari and pasta to veal and steak. In all, a friendly and comfortable oasis in the heart of North Beach. (Moderate)

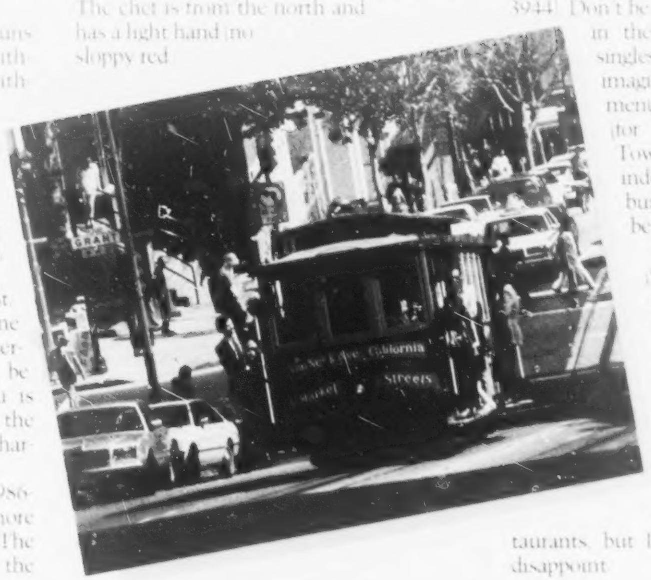
• **The Mandarin** Ghiradelli Square (673-8812) This is the Chinese restaurant for people who aren't enamored of Chinese food. What's offered is well-prepared, and the setting, unlike the Chinese restaurants in Chinatown and on Clement St., is exquisite. No rush, no fuss. (Expensive)

• **Trader Vic's** 20 Cosmo Place (776-2232) Although the Trader is gone now, his memory lingers on. Toût society goes to Vic's, and it shows. What's offered is beautifully prepared and nicely served in pleasant surroundings. Ask to sit in the Captain's Cabin, so to avoid frou-frou Polynesian decor in the main room (unless, of course, you are into frou-frou Polynesian decor). And you don't have to order those silly drinks with the parasols either. (Expensive)

• **Balboa Cafe** 3199 Fillmore St. (921-3944) Don't be put off by the "meat rack" in the front room; beyond the singles' bar is a wonderful and imaginative restaurant with a menu designed by the legendary (for San Francisco) Jeremiah Tower. The daily specials are indeed special, and the hamburgers are sub-lime—the best in town. (Moderate)

• **Ciao** 230 Jackson St. (982-9500) This is a new-tech Italian place that's sleek and stylish, with food to match. (Moderate)

Oh, I could go on, but there are other guides that will provide more detail. I'm not offering money-back guarantees on any of these restaurants, but I do think that none will disappoint.



Speeches

James Hoge

Robert P. Clark

Helen Thomas

John Irvin

Single copies of the following speeches are available from the ANPA Public Affairs Department at
The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

The Challenges Ahead

ANPA Chairman and President Richard J. V. Johnson, president, Houston Chronicle. Inland Daily Press Association Mid-Winter Convention, Houston, Feb. 25.

The Competitive Status of the Bell Operating Companies: Diversification and Its Impact on Consumers

ANPA Telecommunications Committee Chairman Uzal H. Martz Jr., president and publisher, Pottsville (Pa.) Republican. Testimony before the House Subcommittee on Telecommunications, Consumer Protection and Finance, Washington, D.C., March 13.

Newspapers: A Progress Report

James Hoge, president and publisher, Daily News, New York City. Women in Communications meeting, New York City, Jan. 23.

The Slippery Subject of Credibility

Robert P. Clark, vice president/news, Harte-Hanks Newspapers, San Antonio. Georgia Press Institute seminar cosponsored by the Georgia Press Association and the Henry W. Grady School of Journalism and Mass Communication, University of Georgia, Athens, Feb. 21.

Presidents and the Press

Helen Thomas, United Press International White House bureau chief. Remarks made in receiving the annual William Allen White Foundation Award for Journalistic Merit, University of Kansas, Lawrence, Feb. 10.

Politics and TV . . . Some Suggestions

Don Hewitt, director and producer, CBS News. Remarks made in receiving the annual Sol Taishoff Award for Excellence in Broadcast Journalism, National Press Foundation awards dinner, Washington, D.C., Feb. 25.

The Defense Partnership and the Obligations of Leadership: Shared Responsibility in a Free Society

U.S. Secretary of Defense Caspar W. Weinberger. Institutional Investor seminar, Palm Beach, Fla., Jan. 10.

The Trading Game

Howard Hart, president, Canadian Pulp and Paper Association, Montreal. CPPA annual meeting, Montreal, Jan. 31.

The Role of Advertising in Worldwide Media Development

International Advertising Association's Global Media Commission white paper released Jan. 6, New York City.

From the ANPA Pressroom Options III Symposium, Chicago, March 18-19:

Offset vs. Flexo

John Irvin, director operations, Times Publishing Co., St. Petersburg, and Boykin Wright, vice president operations, The Miami Herald Publishing Co.

Decisions on New Press Equipment

James O'Dell, vice president and director operations, Sentinel Communications Co., Orlando.

Offset Developments 1986

James D. Hitchman, assistant vice president production, Ottaway Newspapers Inc., Campbell Hall, N.Y.

The Changing Scene—A Blend of New and Old

Steven L. Derman, director operations, The Hartford Courant.

Newsprint Specifications and Color

William J. Hee, manager purchasing, Gannett Supply Co., Arlington, Va.

Solving the Goss Folder Problem

Leonard Subach, manager double-width folders, Rockwell International Corp., Graphic Systems Division, Chicago.

Listen up: Newspapers, radio in perfect union

Since the first one went on the air in 1969 in St. Paul, there has been a proliferation of services devoted to reading newspapers and other current publications over the radio for people who are blind or have other handicaps.

Today, there are 115 non-profit "radio reading services" in the United States. For the most part, they operate on sub-channels of public FM radio stations and make special receivers available without charge to "print handicapped" people.

"The most important thing that any reading service provides is its local newspapers," says Rosanna L. Hurwitz, president of the Association of Radio Reading Services, an international organization.

The three-year-old Western Massachusetts Radio Reading Service is typical of the program. It has about 100 volunteers who read, among other things, both Springfield newspapers.

Hurwitz hopes that the services will continue to grow. While they currently reach about 150,000 people, estimates of the number of eligible range from 3 million to 11 million, she says.

Nancy Palmieri/Springfield Newspapers

Radio reading at the service.

For Hank Imwold of Linthicum, Md., newspapers provide more than just food for thought. They also serve as a good mulch for his vegetable garden. The newsprint helps control weeds, holds moisture and is available in large quantities at low cost.

The newspaper market in Dedham—and Waltham—is the liveliest anywhere

Like orphans passed through a series of foster homes, two Massachusetts dailies have had five owners in the past 20 months. But now, as part of a 19-paper acquisition by Harte-Hanks, The Daily Transcript in Dedham and The News-Tribune in Waltham hope their ownership will endure.

Their pass-along phase began in August 1984, when the Gillett newspaper group in Nashville acquired the Post Corp. of Appleton, Wis., which had owned the papers since the 1970s. Four months later, Gillett sold the Massachusetts dailies to Thomson Newspapers, which in another eight months turned them over to New Jersey-based Garden State Newspapers, which in turn sold them to Harte-Hanks.

No longer orphans, the Transcript and the Tribune have joined The Middlesex News in Framingham, owned by Harte-Hanks since 1971, to form a regional family of three dailies and 10 weeklies, with total circulation approaching 300,000.

And more siblings may be added. "We are interested in acquiring additional properties in this area," says James W. Hopson, publisher of The Middlesex News and president of Harte-Hanks' Northeast Region.

Recalling the Resistance

Babes van Dillen Clinton, wife of J. Hart Clinton, publisher of The Times of San Mateo, Calif., is author of a newly published book about her experiences as a member of the resistance movement in Holland during the Nazi occupation in World War II. Called *Give Terry a Bone*, the book is based partially on diaries she kept during the five-year period.

Copies are available for $12.50 plus $1.50 postage from Blue Tulip Press, 110 South El Camino Real #113, San Mateo, Calif. 94402.

Why is Bill Applebee in newspaper pagination?

With more than four years in daily production, the outstanding success of full-page pagination at the Pasadena STAR-NEWS has earned the Southern California newspaper worldwide recognition and a place in the history books.

Publisher William R. "Bill" Applebee says the STAR-NEWS has achieved exactly what it expected from Information International's Newspaper Pagination System.

"Greater editorial control, extended deadlines, improved appearance, significant cost savings, higher profits—all thanks to pagination. Triple-I's people and products have come through for us since day one of production. Add it all up and that's why the Pasadena STAR-NEWS is in pagination to stay," says Applebee.

Find out why Information International systems have an impressive array of production proven, cost-justifiable benefits.

Call triple-I today.

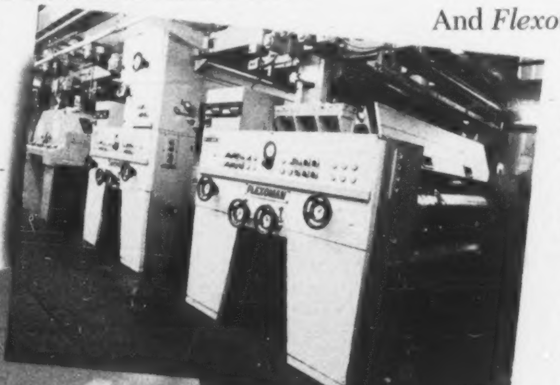
Greetings from MIAMI

There'll be a new attraction in Miami this year.

It's brand new flexo press units at the *Miami Herald*. Less than two years ago *The Herald* bought two M.A.N.-Roland *Flexoman*® units for an experiment with flexography. The results were so gratifying that *The Herald* is adding seven more units to their press room.

Why? Because *Flexoman* produces superb quality. The smoother solids and vibrant colors appeal to advertisers and readers alike. And the quick-drying inks eliminate rub-off and set-off.



The *Flexoman* offers savings, too. Because press units are simpler, using one anilox roller instead of an ink train, there is less iron to pay for and less iron to move. Power consumption goes down. Web breaks are less frequent. There are no time-consuming and waste-producing ink and water adjustments. All contribute to economical running.

And *Flexoman* units are more compact than letterpress or offset units (more compact than most other flexo units, too). They slip in easily, and installation won't turn your pressroom into a machine shop.

The new attraction in Miami may hold exciting potential for you. Perhaps we can arrange a visit. Call or write to M.A.N.-Roland USA, 333 Cedar Avenue, CN 1112, Middlesex, NJ 08846-0604; (201) 469-6600.

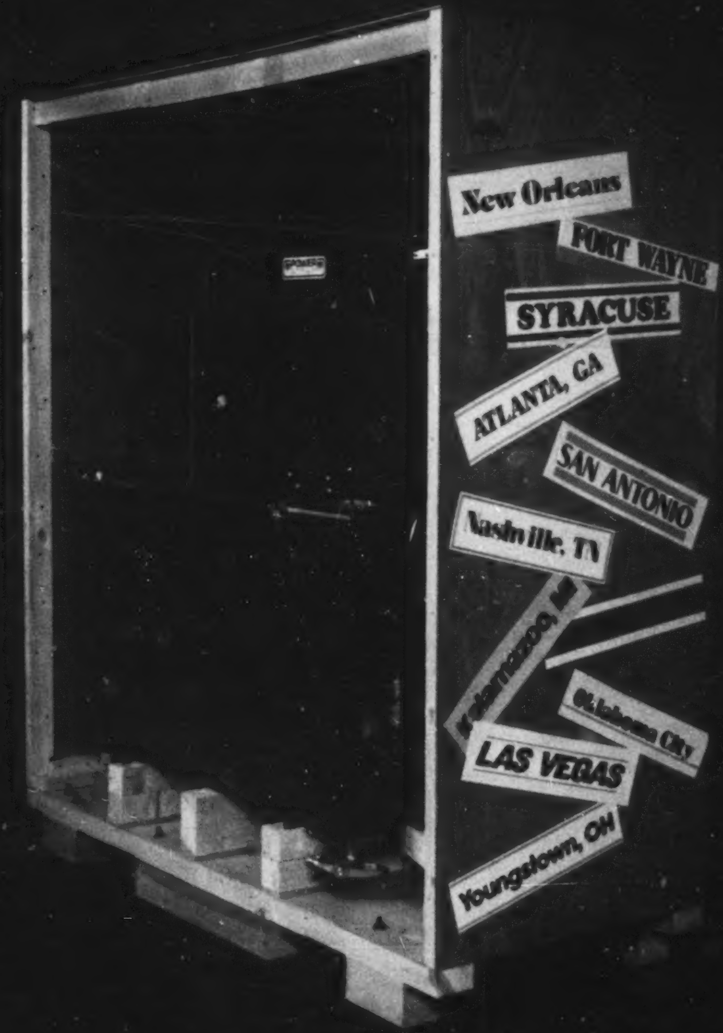
"It's Happening Across the Country..."



Safe, reliable
35-bundle-per-minute
strapping is happening
in newspaper mailrooms
across the country,
thanks to the
Power Strap PSN-4.

Simplified design and controls keep PSN-4 performing efficiently and reliably.
PSN-4 delivers the features you need for Power Strap Performance:

- Full width infeed and outfeed belts maintain positive bundle control for accurate strap conditioning. This combined with Power Strap's bundle conditioning system makes the PSN-4 the best machine on the market to handle inserted products.
- Unique controlled high-tension strapping system that handles any size product without hazardous compression bars or clamps.
- Advanced design heat seal unit that provides positive strap welding and is controlled by an integrated microprocessor.
- Fast and easy spool reloading that doesn't require equipment shutdown.
- Automatic strap feeding with microprocessor controlled monitoring and clearing.
- Can be configured in your system as a single machine or multiple units for cross tie operations.
- The compact design reduces the floor space requirement.

Make Power Strap PSN-4 Performance happen in *your* mailroom. Call or write today for more information.

INDEX

VOLUME 8, NUMBER 5
MAY 1986

Convention Report *All the events of ANPA's 100th Annual Convention in San Francisco reported as they took place, on a day-by-day basis. Reflecting today's headlines, panel discussions covered such things as terrorism, the U.S. space shuttle program and the influence of countries of the 'Pacific Rim.' Key individual speakers included former President Richard M. Nixon and New York Gov. Mario M. Cuomo. Workshops focused on important industry topics—from newsprint to newsracks, from classifieds to circulation.* **36**

Private vs. public *Feelings vary over whether it is better for a newspaper to be privately or publicly held; but management quality is the key.* **6**

Different ways of working *Although not in the forefront of the alternative job movement, newspapers have some out-of-the-ordinary working situations.* **12**

Zing went the stringers *Once prevalent, the use of country correspondents at small- and medium-size papers is on the wane.* **16**

New Zealand newspapers *Some of the pressures that forced dramatic change in the U.S. press are beginning to be felt half a world away.* **23**

Minority management *The Institute for Journalism Education has set its sights on training minorities for newspaper management positions.* **28**

Internships *Programs providing work experiences for journalism students have proliferated. Papers now must compete for the "best and brightest."* **30**

Profile: Dennis Bell *Driven in part by anger, this Newsday reporter has won a Pulitzer—and he's only been in the business six years.* **34**

Essay: Commercial free speech *Ad agency executive Louis T. Hagopian asks newspapers to join in defending the "freedom to advertise."* **35**

Union talks collapse *Once again, negotiations between the GCIU and the ITU have failed to result in a merger plan.* **72**

Exposition preview *A look at some of the equipment that will be on the floor of the ANPA Operations Management Conference & Exposition in June.* **78**

Cease fire in Detroit *Approval is expected for the proposed joint operating arrangement between Detroit's two daily newspapers.* **86**

CHAIRMAN'S CORNER

ANPA committees help us focus on the right priorities

I'm pleased to be able to address you from this Chairman's Corner forum for the next year. This is my 10th year as an ANPA director and my fifth as one of your officers. I've also served as chairman of the ANPA Foundation, so it's obvious that I have found participation in ANPA affairs to be worthwhile for me personally and to be beneficial for my company.

Alvah H. Chapman Jr.

I am honored that you have elected me as your chairman and president, and I commit my best leadership to ANPA this year.

My predecessor, Dick Johnson, the current Board of Directors and the staff leadership of Jerry Friedheim have our Association on the right track and pursuing proper priorities. Each of you has had an opportunity to work on our important standing committees or to contribute in other ways to selection of those priorities. But we need to hear from you, in particular anytime you see us straying off the course you think best for us all.

During the coming year, I hope to target our attention with some fine tuning, rather than any dramatic course shifting. The evolution of both economic and legislative events and of technology makes it essential that we track the twists and turns of opportunity. Not to do so is to be a business left behind; we've never been that, and we don't intend to be so now.

So we will be giving consideration this year to whether we are following technological opportunities wisely—whether we have a handle on what's coming up and on what we might *make* come up. The leaders of our technically oriented committees are assessing for the Board and me whether our current monitoring systems are satisfactory. If they aren't, we will obtain more specialized scientific advice.

And while we eyeball the future, we also will serve the needs of today. Distribution of our newspapers has risen to the top of our agenda of current challenges, and I have asked our Circulation and Readership Committee (formerly known as the Industry Affairs Committee) to bring us recommendations about the broad-based marketing techniques and opportunities we ought to be developing in that arena. We'll search for more than just technology; we're after a "total system solution" to newspaper distribution.

In addition, we will emphasize getting ANPA wisdom out to you and your colleagues where and when you need it. We'll work on hands-on, on-site consulting, trouble-shooting and training programs that can bring ANPA staff and committee experts to you whenever you need them and in whatever area of newspaper operations you need them.

And we'll especially continue our targeting—in cooperation with the other effective groups active in our business—on all aspects of editorial and advertising excellence, on minority opportunity, on postal challenges, and on community-wide programs to provide literacy and reading.

ANPA lets us bring the geographically diverse North American publishing business together to address our goals. And your help is indispensable. Please let me know how you feel you can best contribute.

and these newspapers rely on Fincor Press Drives.

Today Fincor has more than 3100 double-width press drives either on edition or on order around the world. We help print some of the most famous mastheads in journalism and also some of the not-so-famous. Fincor is the leading supplier of press drive systems to the printing industry because we build reliable equipment that avoids costly downtime. It's that simple.

We also provide the kind of service that newspapers, large or small, have to have. Competent Fincor technicians, on call around the clock, to rush technical assistance or vital parts wherever or whenever they're needed.

There are other Fincor products and services, such as Single-Width Press Drives, Ink and Dampener Controls, Press Conveyor and Mailroom Drives; Custom Engineered Systems, Maintenance Contracts and Customer Training Seminars.
